In 1776 Americans could see that all human interests—economic, social, and spiritual—are opposed to the theory of centralized class government. So they declared, fought for, and established the independence of this Federal Republic. But, in 1949, Americans are far less familiar with their traditions, and far less aware of the practical value of these traditions, than they used to be. For all the current talk of freedom, Americans today reveal in many ways that they actually welcome the encroachments of a paternalistic governmental elite.

III

Over a century ago that shrewd and sympathetic observer of American democracy, Alexis de Tocqueville, remarked:

"I know of no country in which there is so little independence of mind and real freedom of discussion as in America. * * * The majority lives in the perpetual utterance of self-applause, and there are certain truths which the Americans can learn only from strangers or from experience."

That governments are constituted to conserve, rather than to squander, the human and material resources entrusted to their protection would seem to be one of these truths. But we have come to believe that governmental dissipation of wealth is somehow admirable. Now, both from experience and from strangers, we shall perhaps relearn some political fundamentals.

First the Russians and now the British have told us, in so many words, that our feverish effort to discard something stigmatized as "isolationism" was, in their eyes, ridiculous. First Moscow and then London have informed us that from now on we can restrict our trading to the dollar area, whether we like it or not. The official "aim" is still "a pattern of world trade in which the dollar and nondollar countries can operate together within one single multilateral system." But the actual practice has no relation to the asserted aim.

If there is a continuation of this "disequilibrium"—as the British treasury euphemistically describes it—then our editorial writers will soon have to revamp their use of words, so that "isolationist" is no longer employed as an epithet. For years the practice has been to use the term in derision of those who think that the United States can do little for mankind unless it keeps its own inheritance bright. Now London politely says that the net result of our globaloney is "aggravation of deep-seated maladjustments."

When asked to be specific on the evils of "isolationism" the standard reply has been that the world has shrunk with the progress of science and invention. That is of course true, but because one may now travel to Europe overnight it does not follow that the American people should scrap their whole theory of government, to adopt the patterns of European socialism. Having done so much in this direction, it is disconcerting to be told by Sir Stafford Cripps that the effort was futile.

IV

There is nothing obscure about the distinctive American contribution to political thought.

It is found in the essentially Christian belief that the individual is naturally honorable, and Caesar (or the state) naturally tyrannical. To prevent subjection of the individual by the state, the powers of the latter should therefore always be balanced and circumscribed. The responsibility of the citizen—who with us is not a subject—is to show himself worthy of this idealistic system. In the memorable words of James Madison, we "rest all our political experiments on the capacity of mankind for self-government."

This virtue of self-government has been highly developed by the American people, and is still strong at the grass roots throughout the entire Nation. Yet, for some strange reason, it has become fashionable to argue that men can no longer govern themselves—that they need the controls of an all-powerful national, or even international, bureaucracy. Logically, it would seem that as the world shrinks in terms of communication its localities need more rather than less protection against the concentrated governmental tyranny which science makes both more probable, and more terrible.

Now, as the result of continuous frustration, two conclusions are forced upon us. One is that our political system is simply not designed to produce supermen in the field of world planning. The blunders of our officials have been so grotesque that we cannot fairly hold them personally responsible. They have been trying to do what our system of government makes impossible.

The second conclusion, currently rammed home by the British planners, is that other governments have no intention of scrapping their political philosophy, merely because we have lost faith in our own. Whenever our internationalism comes up against Russian or British isolationism, it is the latter which wins out.

In short, the alien philosophies we seek to adopt are bringing us nothing but domestic confusion and foreign contempt. But we may learn, as de Tocqueville said, from strangers and from experience.

Does the Marshall Plan Aid Socialism?

EXTENSION OF REMARKS

OF

HON. JAMES P. KEM

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. KEM. Mr. President, an amendment has been proposed to the ECA appropriation bill to forbid Marshall-plan assistance going to any participating country which, after the passage of the act, shall socialize or nationalize any of its basic industries.

My attention has been called to an article which appeared in the Christian Science Monitor of June 27, 1949, written by Mr. Roscoe Drummond, which purports to give the views of Paul Hoffman, ECA Administrator, regarding this amendment. Effective July 15, Mr. Drummond became Chief of the Information Division, Office of Special Representative, Paris office, ECA. It may be assumed, therefore, that the article is not inconsistent with the official views of ECA

I have written a letter to the editor of the Christian Science Monitor in which I discuss the propositions presented in this article. Some time ago I suggested to Mr. Hoffman that he and I discuss this question publicly. He declined. I think the article and letter may be of interest as indicating the respective points of view that would probably develop in such a public discussion.

I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Drummond's article as it appeared in the Christian Science Monitor and also my letter to the editor of that newspaper.

There being no objection, the article and letter in reply thereto were ordered to be printed in the RECORD, as follows:

DOES THE MARSHALL PLAN AID SOCIALISM?—NO!

(By Roscoe Drummond, Chief, Washington Bureau, the Christian Science Monitor)

A frequent and beguiling criticism of the Marshall plan is that it helps the aided countries to nationalize their industries and thereby promotes socialism.

I have listened at length to the testimony of this point by ECA officials, including Administrator Paul G. Hoffman—who is a free-enterpriser from way back and would not want to inflict socialism on any country—and I am persuaded that the contention that the Marshall plan is promoting nationalization is without foundation in fact.

But it is a beguiling criticism because it has a surface plausibility, because it looks as though it might be true until it is examined, and because it is used glibly by a few Members of Congress who are eager to lay hold of any club with which to belabor the Marshall plan, which they have fought from the start.

This dispute will come into the open visibly in the Senate soon, when at least one senatorial opponent of ECA will seek to attach to the new appropriations a resolution which would require all countries to pledge as a condition of Marshall-plan aid that they will not nationalize any industry, or any part of any industry, under any circumstances at any time.

The answer which Mr. Hoffman has given to this proposal, and which thus far has been supported by a majority of both parties in both Houses of Congress, is:

That American assistance under ECA has not and is not either underwriting or furthering industrial nationalization in any of the aided countries.

That, in effect, the Marshall plan is a deterrent to nationalization, and that nationalization would have gone further in Europe today if it were not for the Marshall plan.

That the United States should not assume to dictate the internal economic affairs of any country, and that to attempt to do so not only would be morally wrong but would play right into the hands of Soviet propaganda by indulging in the very economic and political imperialism which Moscow charges—and falsely—is the real purpose of ECA.

That the United States should not consider attempting to impose upon any other nation a condition for financial assistance which it never for one moment—and rightly—would dream of accepting for itself.

The concept of the Marshall plan is one of intelligent generosity. It seeks to build European economic stability and health as an essential prelude to a stable peace and in recognition of the fact that European prosperity and American prosperity have been proved to be indissolubly linked.

Suppose, for example, conditions were reversed and France, say, were in a position to make needed money available to the United States. Obviously, the United States Government, however much it might need it, would refuse to be a party to any commitment through which a foreign power would tell the United States how to run its internal economic affairs.

But even if such a condition to ECA aid were proper and workable—and everyone connected with the ECA is convinced it is improper and unworkable—is it needed to insure that ECA funds do not promote nationalization?

It is the conviction of those closest to the facts that the condition is unnecessary and that the very existence of the Marshall plan is a shield which works against industrial nationalization.

Nationalization springs from depressed economic conditions, not from prospering economic conditions. In Britain, for example, it has been the depressed industries to which nationalization has been applied. Remember that in depression times in the United States, in the 1930's for example, businessmen rushed to Washington pleading for Government assistance and willing to accept the resultant Government regulations. But when prosperity returned, the first reaction of American business—very understandably—was to get rid of regulation as much and as fast as possible.

In Britain and in western Europe, the Marshall plan is helping to bring about improved economic conditions. These improved economic conditions inevitably are creating resistance to Government regulations and nationalization. That is why the effect of ECA is to lead away from, not toward nationalization. ECA funds do not at any point finance British or European nationalization. For the most part, they buy American goods needed in Britain and Europe.

If any country ever would accept the proposition that as a condition of getting Marshall plan aid it would run its internal economic affairs the way the United States wanted it to, that country ought not to get ECA aid because it would have shown it had lost the spirit of independence without which it hasn't any chance of recovery anyway.

DOES THE MARSHALL PLAN AID SOCIALISM?—YES

(Letter to the editor of the Christian Science Monitor from Senator JAMES P. KEM)

To the EDITOR:

I have proposed an amendment to the ECA appropriation bill now pending in the United States Senate. The purpose of the amendment is to forbid any Marshall-plan assistance going to any participating country which, after the passage of the act, shall socialize or nationalize any of its basic industries. No attempt is made under the amendment to unscramble what has been done. The intention is to prevent the use of Marshall-plan money in promoting any further nationalization.

My attention has been directed to an article which appears in the Christian Science Monitor of June 27, 1949, written by Mr. Roscoe Drummond, in which "the answer which Mr. Hoffman has given to this proposal" is set out. This "answer" presents three propositions which I should like to discuss very briefly:

(1) It is said that American assistance under ECA has not and is not either underwriting or furthering industrial nationalization in any of the aided countries.

The Socialist experiments in western Europe have been made possible only by Marshall-plan aid. Take the case of Great Britain, the largest beneficiary under the program. Here are five specific ways in which Marshall-plan aid has served to underwrite and further the socialization program in that country:

(a) When an industry is taken over by the Socialist government, the owners re-

ceive British Government bonds in payment. This automatically increases the British national debt. Marshall-plan counterpart funds—already over $400,000,000 worth of them—have been used to retire part of the British national debt.

(b) Under the Marshall plan, raw materials and machinery are furnished directly to the socialized industries of Great Britain. A large quantity of mining machinery, for example, has gone to the socialized coal industry.

(c) The socialized industries of Great Britain have operated, for the most part, at a loss. These losses must be made up. The British do it by short-term borrowing. Marshall-plan counterpart funds have been used and used profusely to retire British short-term debt.

(d) It is generally admitted by observers, including ECA Administrator Hoffman, that socialism slows down the production process. Under socialism, Britain is not producing goods in sufficient quantities at prices which the people of other countries are willing to pay. As a consequence, she has not been able to earn enough dollars through exports to pay for her imports. The Marshall plan makes up the resulting dollar shortage, about which we hear so much.

(e) Had it not been for the Marshall plan, the nationalization program of the British Socialist Party would have brought a standard of living to the British people they would not have been willing to accept. The Socialist politicians have been able to say to their people: "You get more money for less work than ever before." The Marshall plan has been used as a slush fund to keep these same Socialist politicians in power.

Winston Churchill recently said: "We have this extraordinary spectacle of a British Socialist Government living on Capitalist America while at the same time they denounce the American system. Does anybody in his senses suppose that could go on indefinitely? And what would happen to the British Socialist Government if the American subsidy did not arrive punctually?" We have Mr. Churchill's word for it that: "The Socialist Government and Socialist policy are living on the United States from month to month and from hand to mouth."

(2) It is said that, in effect, the Marshall plan is a deterrent to nationalization, and that nationalization would have gone further in Europe today if it were not for the Marshall plan.

Let us look at the record. The original Marshall plan law was signed by the President on April 3, 1948.

On April 12, 1949, a 5-year program for the Socialist Party in Great Britain was announced. In addition to the activities already socialized, including the medical profession, it is proposed that the government now take over—the cement industry, all suitable mineral deposits, cold storage facilities not already publicly owned, sugar manufacturing and refining, and appropriate sections of the chemical industry—and two great insurance companies, both of which have vast investments in other business enterprises. This program was approved on June 10 at a convention of the Socialist Party held at Blackpool, England. On May 1, of this year, the British Government took over the gas industry. On May 9, the House of Commons passed a bill to socialize the all-important iron and steel industry.

Does this look like the Socialist Party is turning back from its program in view of the golden flow of Marshall-plan dollars? If so, it is pertinent to ask what would have been the progress toward nationalization in the absence of the Marshall plan? And it is also pertinent to ask how would the British have financed the plan without American money?

I noted with interest Mr. Drummond's statement in his article that "Nationalization springs from depressed economic conditions, not from prospering economic conditions. In Britain, for example, it has been the depressed industries to which nationalization has been applied." Yet in an Associated Press dispatch carried in the Christian Science Monitor on July 13, 1949, it is stated: "The British iron and steel industry sent its production to the highest level in history for the first 6 months of this year. A total production of 7,949,000 tons was a new record and was 384,000 tons more than the first half of last year." Obviously the British iron and steel industry cannot be classified as a "depressed" industry. Nevertheless, the Socialist government is proceeding full steam ahead with its plan to nationalize this industry.

(3) It is said that the United States should not assume to dictate the internal economic affairs of any country.

This is the old argument that we should not place any strings on Marshall-plan money. It just doesn't hold water.

The money that the United States Government is giving to foreign peoples is only available from taxes taken from American citizens. There is no reason why the American taxpayer should pay for further socialization in western Europe if the American people believe it would be harmful to the participating nations and our own country.

The whole Marshall plan is an interference in the internal affairs of the countries of western Europe on a gigantic scale. The Marshall-plan law itself provides for bilaterial agreements between the United States and the participating countries. These agreements contain many restrictions on the use of our money.

At the outset of the Marshall plan, we said to Spain: "We don't like your government. You can't have any Marshall-plan money unless you change it." We interfered in the Italian election in 1948. The American Ambassador made campaign speeches there. I do not mean to criticize what we did there—but I do say it is too late to throw up our hands and say with sanctimonious piety, "Of course, we do not wish to interfere in either the government or the economy of a foreign country."

It is said in this connection that the British are a proud people. Greece has a glorious history too, but she has not been too proud to agree to restrictions. In early 1946, Britain loaned £10,000,000 (about $40,000,000) to the Greek Government. Britain placed 10 drastic restrictions on the use of her money. Among other things, the Greek Government was required to establish a system of price controls on rationed items and to give the British control over the issuance of new bank notes.

When the loan to Greece was being debated in the House of Commons, Mr. Lipson of Cheltenham, had this to say: "We ought to give the matter further consideration before we indulge in acts of generosity of this kind. We call it a loan. That is a euphemism for a gift. It is quite obvious that if Greece goes on as she is doing she will not be able to repay this loan. * * * The people of this country ought to have more explanation before a sum of money like that is lent to another country, and ought to be assured that the money will be wisely used."

It seems that when the shoe is on the other foot the British do not hesitate to place strings on the use of the money of their taxpayers.

In view of these facts, I cannot avoid the conclusion that when we think this thing through—at long last—we shall decide not to permit our money, earned under an American system of free enterprise and personal initiative, to be frittered away further in European experiments in socialism.

Sincerely yours,

JAMES P. KEM,
United States Senator.

WASHINGTON, D. C., *July 18, 1949.*

Socialized Medicine

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have published in the Appendix to the RECORD an essay on socialized medicine written by Miss Joyce Keller, 17-year-old Bluffton, Ind., high school student.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

SOCIALIZED MEDICINE

(By Miss Joyce Keller)

Since very few people go from cradle to grave without somewhere along the line needing the assistance of those in the medical profession, this subject of socialized medicine should be of deep concern to everybody. Certainly the outcome will affect the lives of everyone.

Behind the bill are the President, the labor bosses, the left-wing New Dealers, the professional liberals and a solid phalanx of commentators and columnists of the bleeding-heart variety. This is their aim: To make available enough medical services to go around, and to see that everybody has a chance to obtain these services. No more doctor or dentist bills. X-ray, laboratory work, and dental plates for free. Hospital and nursing services free, if you need them. Prescriptions filled without costs, etc.

Before you accept this sugar-coated pill, you had better examine it carefully. Don't be deceived by the word "free" because you are going to pay for it. The Government proposal for socialized medicine would cost the Nation more than $18,000,000,000 a year "just as a starter." Nobody can say for sure what the cost of "free medical care" would be for the individual wage earner, but it is estimated it would take from $4 to $8 out of every $100 of salary. In addition to this tax taken out of your pay checks, you would continue to pay Federal income tax, gross income tax, property tax and all the other taxes you are now paying. Things you buy would also cost more. In order to meet this extra tax imposed on them, the management of businesses would be forced to increase their prices. This measure outlines a compulsory pay-check deduction for every worker in the country to purchase a commodity, which to date, he has been able to purchase when and if he desired it.

A survey was recently conducted of 734 cancer cases trying to determine why these patients had delayed in consulting physicians after the actual onset of their sympton. This is what they learned: Of these 734 cases—

Forty-one percent delayed because they considered their symptoms insignificant.

Thirteen percent delayed because their symptoms subsided temporarily.

Five percent delayed because of their fear of serious findings.

Five percent delayed for miscellaneous reasons.

Thirty-four percent did not delay at all but went immediately to the doctor.

And only 2 percent delayed for financial reasons.

People often ignore the fact that the section of the population which is unable to pay for adequate medical care is equally unable to pay for the essentials of sustaining health standards—food, fuel, clothing, shelter, and a job with adequate wages. These

are so essential to the preservation of health that no plan of medical care will work if these requirements remain unfilled. You may ask if there is any way of providing these people with adequate medical care. Yes, there is.

In Michigan, for example, a man may have complete hospital costs paid, and all his surgery and obstetrical costs paid by the Blue Cross-Blue Shield, if he has an income of less than $2,500 a year—with not a penny of extra charge. It costs him only $75 a year for himself, his wife, and all his children. This is equivalent to $6.25 a month or 20 cents a day. That is the cost of one single package of cigarettes at 20 cents a pack. How many families cannot afford a package of cigarettes daily? We must admit though that there are many people who cannot afford, or who will not afford, Blue Cross insurance or any other type of insurance. These low-income groups can, however, be insured by their local welfare departments of the Government. It would be better to start at the bottom, and if we are to spend billions of dollars of our money it would be better to spend it on education, in matters of living conditions, nutrition, sanitation, immunization, in slum clearance, and in the prevention of disease rather than in the mere curing of disease.

The medical profession in this country has labored not a year, not for 5 or 10 years, but for a hundred years to try to find the proper solution that will preserve scientific medicine and preserve the art of medicine as it should be practiced, and serve the human interests of this Nation to the fullest possible extent. Because of the physician's education and training, only the medical profession is in the strategic position to decide what system of medical care is the best one.

There is no doubt that the quality of medical care under any system of socialized medicine has been definitely proven to be poorer under socialization than it is under the general practice that we have at the present time. A career is always preferable to a job. It stimulates earnestness in giving service and at a high quality. The new proposed system emphasizes quantity rather than quality of service. When physicians become employees and permit their services to be peddled as commodities, the medical services deteriorate and the public which purchases such services is injured. History shows that all schemes of furnishing complete medical care for large portions of the population on a prepaid basis, whether by private or governmental means, have been overwhelmed by a deluge of individuals with trivial or nonexistent complaints. The doctor's work is reduced to drudgery. He lacks time to examine carefully and care for his patients.

Socialized medicine is, in itself, a dreadful thing that has resulted in the deterioration of medical standards in every country in which it has been tried: Germany, Russia, England, New Zealand, and many others. As an example, take the office of a doctor in England. The doctor raises this question to the group of patients in his office: "How many persons here have headaches?" He then writes a common prescription for all of them. We all know that very few, if any, of these will gain relief from their headaches, because a headache may arise from many causes—eyestrain, a hangover, sinus trouble, psychic disturbances, brain tumor, or many others. The other patients he gives little more than a look and a promise. If they are really ill—and find that under the slap-happy methods of the overworked doctors they are not getting better but worse—they finally will, in desperation, consult one of those private physicians who refuse to join the assembly line, and atop all he has already paid, week by week, must pay a private fee. Is this the ideal medical care and competent treatment of illness and disease this marvelous medical plan will give us?

In the other countries where socialized medicine is practiced, it has been a powerful factor in the general lowering of standards of the medical profession. The fees received from this practice are so low that physicians are forced to seek devious ways and means to increase their income. This is done by treating patients superficially in order to handle as many as possible. For many, medicine is not any longer a profession, but a business based on cold calculations and the principles of mass production. Gone is the interest in performing thorough, scientific, honest work. There is certainly no reason for us to envy the health conditions of the people of those countries where "free medical service" is available for all.

There is no doubt that this service would be another step toward the breakdown of American democracy. "Socialized medicine is the keystone to the arch of the socialized state." If this compulsory system is adopted by our lawmakers, what is to stop the process from extending into other fields?

Address by Hon. Edward Martin, of Pennsylvania, Before Jewish War Veterans

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Jewish War Veterans of the United States, Department of Pennsylvania, at their 1949 convention, at Philadelphia, Pa., on June 18, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am highly honored by your invitation to address this convention of loyal and patriotic American veterans.

You have come here from all parts of the Commonwealth of Pennsylvania. As individuals and as an organization you are rightfully proud of the ancient heritage of your Jewish faith.

You represent the finest attributes of American citizenship—devotion to the religion of your fathers and true allegiance to the ideals of our Republic.

Your organization has grown in power and influence because patriotic Americanism is the keynote of your service in peace as it was in war.

Every element in American life can rally behind your courageous and vigorous fight to perpetuate the principles of individual freedom, equal justice, and equal opportunity.

There is a wealth of patriotic inspiration in a meeting such as this held in the City of Brotherly Love where William Penn launched his holy experiment in free government.

Here for the first time in the world the founder of Pennsylvania enunciated the principles of social and political justice for all men, regardless of their form of worship.

Here the Declaration of Independence was adopted, giving the world a new concept of freedom, based on the proposition that life, liberty, and the pursuit of happiness are the most precious gifts of God to all mankind.

Here the Liberty Bell, sacred symbol of American independence, rang forth the exalted message from the Old Testament:

"Proclaim liberty throughout the land, unto all the inhabitants thereof."

Here in the darkest days of the revolution a great Jewish patriot, Haym Salomon, paused in his worship on the holiest day of his religious faith, the day of atonement, when General Washington appealed for funds to maintain his ragged and starving army.

Students of history have recorded the heroism and sacrifice by sons of Israel who were in the front line of the Continental Army in the struggle for independence.

From Valley Forge to the beachheads of Normandy and the islands of the Pacific, the roll of American heroes of the Jewish faith who made the supreme sacrifice is long and impressive.

Their memory calls upon all Americans for greater faith in all religions and deeper devotion to the sacred principles for which they gave their lives so heroically.

May they have eternal rest, everlastingly honored by the Republic they died to save.

Four years have elapsed since the guns were stilled in the most terrible conflict in world history. We had high hopes that our victory over tyranny and aggression would restore peace and good will the world over.

Instead we are still living in a time of confusion in world affairs and domestic unrest and mistrust.

We are faced with grave problems. The decisions we make today will shape the course of history of our country and the world.

I bring these matters to your particular attention because no group in our citizenship has a deeper realization of the dangers of a divided America.

No other group has a better knowledge of the perils to individual liberty that arise from hatred, prejudice, and intolerance.

Your ancestors through the centuries have suffered savage persecution at the hands of fanatics and bigots.

Still before us is the stark, murderous barbarism of Nazi insanity. Even today persecution again brings death and torture to innocent victims behind the iron curtain in godless Russia.

How fortunate we are that the God-given freedoms we enjoy in this blessed land are not the special possession of any class or creed. They are the sacred heritage of all men. They cannot endure unless we are a united people—all Americans—living in peace and harmony, respecting each other in good will and understanding.

That is the true spirit of America. It does not thrive under compulsion. It flourishes only where free men meet on common ground, equal in prestige and equal in dignity, working together and striving together to make a better life for all.

No task your organization has undertaken is more important than strengthening and revitalizing that spirit.

That is why I urge you, as Americans and as veterans, to redouble your vigilance against every un-American philosophy that would undermine and weaken national unity.

There is no room in America for hatemongers and bigots who poison the air with their vicious doctrines.

No true American spreads racial and religious discord.

No true American joins hooded mobs burning fiery crosses.

America has no room for plotted Bunds, for Nazis, Fascists, Communists, or any other conspirators who would tear down the American flag and would destroy all the freedoms that we hold sacred.

One of the tragic developments in American life is the tendency to take this menace too lightly.

Under the evil teachings of Communist and Fascist propaganda, misguided men and women have been diverted from truth and honesty.

They have forgotten that one who accepts communism or any other subversive teaching is not faithful to American ideals and does not belong in America.

Disguised under false patriotic titles the godless philosophy of communism has invaded schools, colleges, labor unions, and churches. Yes—even our Government itself.

In fighting communism or fascism or nazism you are fighting the same enemy in different colored shirts. You are battling to preserve the more precious element in the American way of life—freedom and dignity of the individual.

It is a hard, tough fight but it must be carried on with relentless determination until the safety and security of our Nation is freed from every corrupting influence.

There is another danger that threatens American freedom and therefore demands our immediate and serious attention.

I say to you bluntly, it is the danger of national bankruptcy. We cannot escape it unless we bring to an end the present wave of unrestricted and extravagant spending by government.

Today waste and inefficiency are taking billions of dollars from the pockets of the taxpayers.

On June 30 we will end this Federal fiscal year about a billion dollars in the red in spite of record-breaking national income and Federal revenues above $42,000,000,000.

If the same spending spree continues, I predict we will have a deficit next year of $6,000,000,000 or perhaps more.

Without regard for this danger that now confronts us, new and enlarged spending programs have been proposed that would eventually take another $40,000,000,000 a year from the wages of the workers and the profits of business and industry.

This cannot and must not continue if we are to remain a free people.

Without a strong, stable, expanding economy and sound fiscal policies, American freedom cannot survive.

My comrades, I appeal to you to join in a crusade for a solvent America because that means a free America. Excessive taxation to support the high cost of government can destroy our country.

I need not remind you that individual liberty and freedom of opportunity are the greatest blessings that we enjoy.

I need not remind you of the terrific price those of your faith have paid in their struggle to attain those priceless rights.

I appeal to you to reject the brazen plan of the demagog who offers a something-for-nothing program. Beware of the politician who tells you the Government can provide everything to make life comfortable and secure from the cradle to the grave.

Within your own lifetime you have had convincing proof that national bankruptcy and dictatorship are inevitable when people abandon self-reliance, work, and thrift. You have seen disaster overtake nations that followed false leaders and accepted their promise of security and a life of ease.

Hitler made that promise. Mussolini held out the same deceptive hope.

And the result was misery, suffering, enslavement and finally destruction because the people relied upon the government and not upon their own efforts.

Remember that in those days of darkness the minority groups were the first upon whom cruel suffering was inflicted. The minority groups were marked for mass murder in the most beastly crime of modern times.

Through centuries of persecution those of your faith have cherished freedom and human dignity.

Faith in God and reliance upon His promise to restore to them the holy land sustained them in their struggle.

A little more than a year ago, all men of good will rejoiced in the birth of a new nation—the Free State of Israel.

As good Americans, we are proud of the heroism and willing sacrifice of those who fought for the liberation of Palestine. They made a vast contribution to the cause of freedom.

If we Americans keep awake to the dangers that threaten our freedom and fight to keep America strong, this great Republic can continue as a shining light of liberty and happiness in all the world.

The Three-Horse Team

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject The Three-Horse Team, delivered by me on July 15, 1949, in Kansas City, Mo., at the aviation celebration of the chamber of commerce.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE THREE-HORSE TEAM

I am pleased to be a guest tonight of the Kansas City Chamber of Commerce as it celebrates the twentieth anniversary of the inauguration by TWA of its transcontinental service through this throbbing hub of air transportation.

When we think of the age of this planet, 20 years is less than a flyspeck on the calendar of time; but when we think of the terrific progress of man's conquest of the air, these 20 years you celebrate tonight stretch out and mark a whole era in history.

In that triumphant period TWA has even had to change its name three times to keep pace with the ever-spreading air service it provides. Twenty years ago it was Transcontinental Air Transport; as it extended westward it became Transcontinental and Western; then when it burst its seams domestically and soared into the international field it was christened Trans World Airlines. Until it undertakes round trips to the moon or one of the planets its present name ought to stick.

Most of you were not yet born, but I remember well when a couple of screwballs from Ohio kept the *Kitty Hawk* in the air for an interval measured in seconds. But the wildest dreamer in those days never visioned supersonic air speed nor nonstop 10,000-mile flights nor mass transportation of persons in the air. No one realized that that novel experiment in North Carolina would in my generation alter and change drastically all thinking and all life on this planet.

Any Chamber of Commerce today which does not visualize the tremendous impact of air transportation on the life and welfare of its city is as dead and as worthless as the occupant of King Tut's tomb. This is not true of the Kansas City Chamber of Commerce, or this great city would not be the headquarters of two of the 16 major trunk lines, TWA and Mid-Continent.

Last November, when the fortunes of politics rather unexpectedly designated me chairman of the Senate Interstate and Foreign Commerce Committee, the press asked, "What are your plans and what will you do?" My reply was that, among many other things, I would do everything in my power to promote and improve the transportation potentials of these United States on land, on water, and in the air. I knew that commerce was the key which would unlock all the good things on this earth and that leadership in commerce would retain for these United States the world leadership her sons had won for her on the bloody field of battle.

For centuries commerce and trading have been the major influences in the progress of man. Intercourse with distant peoples has helped him emerge from the stone age to the scientific miracles of the twentieth century. Whatever good in any one era man has developed in religion, in culture, in science, or in art, through commerce these blessings have become the property of all.

AIR-LINE OUTLOOK AT CLOSE OF 1948

As the year 1948 closed its books on December 31 many question marks faced our most dynamic and spectacular transport facility—the air lines. On that day the air lines had every right to have fear in their hearts. The cost of doing business was going up hour by hour, and, try as hard as they might, red ink crept into and gradually took over their ledgers.

Competition was hitting them hard. Their credit was exhausted and their day-by-day revenues would not begin to sustain them. The CAB had slowed down to a snail's pace in awarding back mail pay long overdue. The outlook for a general recession in business was generally recognized as a virtual certainty. Its intensity and endurance were the only unknown factors. The mass-production lines were turning out much larger and much more efficient planes which the air lines could not afford to purchase, but if they were to remain in business neither could they afford not to purchase. What a dilemma. What a situation they faced.

In that dark hour I announced that the Senate Committee on Interstate and Foreign Commerce would undertake at once a thorough investigation of every phase and aspect of the air-line industry. This awakened the CAB, and in that ivory tower things long delayed began to happen. Today the picture is quite different.

Fixed charges and operating expenses now have registered slight declines. The morale of employees has shown marked improvement. The long-looked-for buyers' market has returned, and the almost forgotten traveling salesman is calling on the trade again. Merchants are playing their inventories close to the belt and watching the market with an eagle eye. This necessitates frequent and quick journeys, and so they travel by air. The new, commodious, efficient planes are leaving and arriving with more dependable regularity and nearly everyone can have a seat now without advance reservation. Air safety has made tremendous gains. The recent aircraft disasters in far parts of the world should not be confused with the excellent record of our certificated domestic air lines. For more than a year our domestic scheduled carriers have had no fatal accidents. The romance of flying went out with the war and now air transportation has its second wind and is settling down to a sustained business operation. Hope and faith have returned and charity is on its way out. January 1, 1949 was the turning point.

On June 29, my committee heard the seventy-ninth witness in the longest and most comprehensive aviation hearings in congressional history. Government agencies, air-line officials, airport management, organized labor, attorneys, economists, investment bankers, consultants, critics, and everyone who had anything to contribute were heard at length. However, our most important witness, the Secretary of National Defense, said he would not be ready to testify for some weeks. While this is a disappointment, we understand the necessity for the delay and we will wait patiently.

Due to the extremely heavy burdens of Congress at this particular time, our committee has not had an opportunity as yet

to study and analyze the recently completed hearing material and so has not reached a conclusion with respect to it. Therefore, the statements I make tonight are my own and do not necessarily reflect the thinking or the judgment of the Senate Committee on Interstate and Foreign Commerce.

In its efforts to be intelligently helpful, the committee has employed a small, but competent staff who during the balance of this year will continue a searching study into all phases of air-line operation, in order to assemble vital facts and pertinent statistics for the guidance of the members of the committee.

While the picture is much brighter today than it was 6 months ago, the air lines are not yet out of the woods. Much, very much, remains to be done by our three-horse team—the CAB-CAA, the air-line industry, and the Congress. If we pull together in friendly cooperation, we will keep them flying.

Most economists are agreed that the war boom is over. Industrial production is going down rapidly and unemployment is increasing steadily. Nearly 4,000,000 are unemployed and more than 4,000,000 more are only partially employed.

Gloomy reports from England continue in spite of all the billions the United States during the past 10 years has poured into that hapless country. In spite of all this generosity we now have the British plan to engage in barter trade on a huge scale with Argentina, Russia, and the Russian satellites, and quit purchasing here unless we make them bigger and better loans. Since the start of World War I, 35 years ago, the United States has given Europe $101,000,000,000 for which it has received not one thing. Even though we were willing to do so, we cannot give away our precious resources on such a lavish scale and not suffer shortages and heavy debt penalties ourselves. Every industry in the United States, and more especially the transportation industries, must give full thought to these unpleasant factors. This is a time in this country which will separate the men from the boys.

Immediately after the close of hostilities the bubbling spirit of unbridled optimism swept air transportation off its feet and a hectic wave of expansionitis ran its course. To keep pace with the potentials of the cruel mirage of unlimited volume and huge profits, air-line management imagination soared into the stratosphere and orders for large, luxurious, newly designed aircraft running into millions of dollars were placed; additional personnel were hurriedly hired and trained for the business that did not develop.

In 1945 the entire domestic route miles amounted to approximately 63,000. By 1948 it had grown to 139,000 miles. In 1946 the 16 domestic scheduled air lines were operating a total of 400 planes. In January 1949 this figure rose to 790, of which 313 were 4-engine planes with tremendously increased seating capacity. When it became evident the anticipated increased traffic had not developed and would not be developed, rapid maneuvers to reduce expenses to avoid complete financial collapse were taken. Great credit is due the air lines for the speed with which they reversed their field and ran for cover. Nevertheless, they have not gone as far, nor as fast, as the economic pressures demand.

CONSOLIDATED SERVICES AND FACILITIES

In Washington, the seven air lines serving it have established consolidated ticket offices in the United States Capitol, the Pentagon, and in the Navy Department. Only one manager, seven ticket agents and one auditor are necessary to run these three offices for the seven air lines. In 1948, they transacted more than a million dollars worth of business, and a careful check shows that almost half was for personal travel and not for official Government travel. According to one recognized aviation trade journal, this volume of business was done without a squawk from any air line about favoritism, service, etc.

The obvious query arises, Is this joint use of facilities and consolidation of services plan being carried out at each airport, and if not, why not? The attitude of the industry can best be summed up in the words of Mr. Patterson, president of United, who in his testimony before this committee said, "If we are really to have competition and real competition—we cannot be in consolidated ticket offices with employees working for all parties concerned. You just cannot have competition under those circumstances. They become order takers."

I am not subscribing to the theory that the combined office plan could eliminate all the individual ticket offices in every city, but I believe it can be done to a far greater extent than now practiced without injurying sales.

Once a passenger has determined the line he desires to travel, competition does not require duplication at the airport of ticket office, information booths, and other travel services. It is obvious that tremendous savings could be realized if ramps and loading equipment, such as tractors, tanks, and all of the other devices were pooled as one unit instead of maintaining a separate system for each carrier. The same applies with equal force to gasoline and oil and to air-ground communication systems. One group of personnel could operate all such services for all air lines instead of maintaining separate crews. We must not forget that more than 50 percent of an air line's expenses are the wages and salaries of its employees.

Following the war an interesting and revealing experiment in the consolidated operation of an airport took place at Willow Run. Unfortunately, it was not a conspicuous success due to petty quarrelling and jealousies and the sabotage of the personnel of the various air lines involved. Nevertheless, John Brown, an analyst for the corporation which conducted the operation, testified that there was a saving of 30 percent in manpower and in terminal building space. He also maintains that individual air lines received better and quicker service under the consolidated operation. A more aggressive approach by the air lines in this direction would, I believe, produce savings without sacrifice in service. If the CAB eliminated some of these lone-wolf duplicating operations as legitimate expenses in determining mail pay, we would have a very different story, as I see it.

INTERCHANGE ARRANGEMENTS

Interchange of equipment provides another way to save money. It would provide through traffic arrangements without extending the route of a carrier and without increasing overhead cost to the extent that would be necessary in the event a route was extended by a carrier. The theory of interchange is very appealing to the passenger because he remains aboard the same plane over two or three different routes of different carriers.

The advantages are threefold: (1) cost of operations are much lower than in extending a route of a carrier; (2) it may be a means of strengthening a short-haul or regional carrier, who ordinarily does not receive the benefits of traffic moving beyond his terminal; and (3) elimination of what is now branded excessive competition between points, since instead of duplicating routes, such an interchange avoids the necessity of duplicating or extending routes, but at the same time offers substantially the same service to the public. It can well be said that had interchange agreements been entered into more extensively during the postwar expansion period, we might have had a more constructive development of the air-route pattern without duplicating route certifications. This might well have contributed to the elimination of the losses sustained by many carriers during the past 3 years.

COACH SERVICE

In my opinion, air transportation is about to become the most attractive and economic transportation in history. It has already outdistanced all competitors in the element of speed. I still look for a tremendous increase in air traffic volume. During the past year or so we have seen three basic approaches in this direction.

First, we have the so-called coach service offered at off-hours by the scheduled carriers, and at more convenient hours by the irregular carriers at approximately 4 cents per mile compared to the standard 6-cent fare. Second, the inauguration of the family plan system wherein reduced rates are made available on off-days during the week; and third, the excursion fares offered to points by various scheduled carriers during the off seasons.

No matter how you view these proposals, they all simmer down to reducing fares as an inducement to the public to use air transportation so that the carriers might build higher load factors, increase utilization of equipment, and augment their badly needed revenues. Of the three, no one will deny the fact that air coach service has had the most spectacular effect on the development of real mass air transportation.

For some months nonscheduled operations have been conducted by the so-called irregular carriers at reduced rates between main traffic points, such as San Francisco to New York, Los Angeles to New York, New York to Miami, and Puerto Rico to New York. In each instance, the public responded with enthusiasm.

In September 1948 Pan American Airways was the first scheduled carrier to increase seating capacity, remove some of the frills, and inaugurate the coach type service between Puerto Rico and New York. They reduced the one-way fare from $100 to $75 in order to compete with the nonscheduled carriers who were carrying hundreds and hundreds of passengers. The phenomenal success of Pan American can best be illustrated by referring to its operations in the first quarter of 1948, when it was operating a deluxe service only. At that time it carried 4,360 first-class passengers between New York and San Juan. During the first quarter of 1949, it carried 7,399 first-class passengers and in addition 10,984 coach passengers. The record shows there was little diversion of first-class passengers to the coach service. A new market of mass air transportation was opened up, and for the first time was exploited by an established operator.

A "wait and see" attitude had been adopted by the domestic carriers until Capital Airlines, in November 1948, with the approval of the CAB, inaugurated a New York-Chicago coach service. It proved to be an immediate success in spite of the fact that this service was available only in the inconvenient early morning hours. The customary lack of travel between midnight and 7 a. m. requires facilities and planes to remain idle, and idle plants and planes eat profits. The fare between those two cities for this early morning travel was reduced from $44.10 to $29.00. The development of the traffic was spectacular, as were the load factors. In the entire year 1948, Capital Airlines carried only 1,002 passengers in its regular first-class service between Chicago and New York, while in the month of December 1948 alone, the second month of its coach service operations, it carried three times as many passengers, or 3,072 in air-coach service. In the first 4 months of 1949 Capital carried 10,242 air-coach passengers. Again the growth was not at the expense of its regular scheduled service; in fact, it had exactly the contrary effect. It helped strengthen the first-class service.

Northwest's air-coach experiment has enjoyed the same phenomenal success and has averaged 80 percent load factors on some of its coach flights. Mr. Hunter, its president, testified the air-coach passengers come from "an entirely different market; they look different, they come out to the airport differently, they come out to the airport with their own lunches, bananas, and orange peels clutter up tourist coaches." Northwest contends that its surveys indicate that 40 percent of its air-coach passengers would not have traveled by air if it were not for the low fares. Similar statements have been made with even higher percentages by practically every nonscheduled operator who has appeared before our committee.

The CAB still regards coach service as a limited experiment and permits it to be conducted only to evaluate its soundness. It has liimted the scope of the experiment so as not to lead to a general break-down of the fare structure of the regular service. Low coach service to date has been approved by them for only six carriers. While the Board is slowly accumulating data for evaluation, there are definite signs that this is one way of opening up a new class of traffic.

AIR FREIGHT SERVICE

While it cannot be denied that air freight has a real place in the field of air transportation, practically every certificated carrier appearing before our committee roundly and caustically criticized the recent action of the CAB in tentatively certificating four all-cargo carriers. The question is whether the potential is sufficient to warrant the certification of specialized freight carriers at the possible expense of the present certificated carriers in that field.

However, severe criticism has been directed toward the certificated carriers for failure to develop the air-freight business after the war. The amount of freight carried by them before the independent cargo carriers entered the field was negligible. Whatever the reason, the total freight tonnage carried was small. The keen competition between the independents and the certificated carriers has increased the volume of freight tremendously. In 1946, 16 certificated carriers transported approximately 18,000,000 ton-miles of cargo, while the noncertificated carriers transported 25,000,000 tons. But in 1948 the certificated carriers transported 70,000,000 ton-miles, while the noncertificated carriers, which had decreased in number, handled only 48,000,000. This is only a small fraction of the recognized potential.

During this period the noncertificated freight carriers have lost millions of dollars. Nevertheless, while the CAB has tentatively certificated four all-cargo carriers to operate, the Board made it a vital part of the proposed franchise that the operation would be without mail pay. We in Congress are very much interested in the decision by the Board, and particularly the opinion wherein it states that no mail pay is to be given to the tentatively certificated cargo carriers.

AIR-MAIL PAY

During the past 3 years Federal appropriations for mail pay have been increasing and numerous questions have been asked as to why, during this period of unprecedented prosperity, air lines should require additional mail pay when there was no substantial increase in the volume of mail carried. In 1946 the total mail pay for domestic and international carriers was $42,967,000; in 1947, it was $69,489,000; in 1948, it was $111,521,000; and in 1949, it is expected to reach the huge total of $125,000,000. Clearly the CAB is underwriting the air line commercial losses with mail pay. No one knows how much of these payments are subsidy and how much is compensatory.

Last January some air-line officials took the position that there is nothing wrong with the industry, which bigger and better mail pay will not cure. During the hearings, a few air-line presidents accused the United States Government of bad faith because their mail pay was being held to a minimum. However, many air-line presidents urged that compensatory mail pay be separated from subsidy to create an incentive to all air lines to get on a self-supporting basis, and to remove the stigma of subsidy from the air lines which are now earning every cent of their mail pay. It is my considered view that to mix mail pay with subsidy is a sloppy and wasteful way to do business. The CAB should recognize the element of abuse inherent in it and correct it. Naturally, the privilege of awarding mail pay without specific standards and without limitation gives CAB a lot of power over the air lines which it might well like to retain.

With greater commercial business of all kinds since the war, the trend toward increased financial dependence upon Government support in mail payments, airport facilities, and navigation aids, is one of the basic paradoxes that has given rise to the investigation we are not conducting. On its face there would appear to be something radically wrong with air-line management, the CAB, or the statutory provisions for promoting air transportation.

It seems to me that if we are to find out if the air lines are a subsidy-ridden industry devoid of incentive to be commercially successful—which they vigorously deny—the first thing to do is to find out the fair compensation that should be paid for the services rendered and how much subsidy is now being paid, and precisely for what it is being paid.

Captain Rickenbacker of Eastern and C. R. Smith of American have proclaimed that the present method of meeting of the carrier's need through air-mail payments penalizes the efficient carriers. C. R. Smith put it this way to the committee:

"The complete lack of standards in payment for the transportation of mail obviously represents a discouraging situation to the efficient operation. One company transports mail between two terminal points, with modern equipment and adequate schedules. Another company operates along the same route, serving the same terminal points, but providing a mail service of substantially less utility than the first. But the second of the operators receives 2 to 10 times as much as the first operator for transporting a pound or ton of mail between the two identical points. And not only that, if the first operator finds a way of reducing his cost, he is quite apt to have his rate reduced. He may, at the same time, find the rate of his competitor increased by reason of greater need for additional mail compensation.

"I know of no system which will produce less incentive, or act so much as a drag on the exercise of the highest degree of management ability. Often, rather than an incentive to do your best, the present system of mail payment seems to offer reward for lack of result."

There is much merit in this position, and much to be said for the establishment of mail rates which will provide identical rates for the performance of identical services, provided, of course, the services performed by any two carriers can be identical.

Since the war, the method provided in the Civil Aeronautics Act of determining air-mail payments for future periods seems to have broken down and the Board has resorted to the establishment of temporary rates, which place the carriers on cost-plus, a basis never contemplated by the framers of the Civil Aeronautics Act.

I am of the opinion that it is very important to arrive at the amount of subsidy in some acceptable manner in the near future, and if the CAB cannot or will not do so, it will be necessary for the Senate Committee on Interstate and Foreign Commerce to make such a determination.

Congress should do what it can to point the way to a healthy and self-sufficient network of aggressive air lines adapted to the present and future needs of the commerce, the postal service, and the national defense. In directing the CAB to encourage the development of commercial aviation, the Civil Aeronautics Act has not differentiated among these three cardinal objectives. Clearly these are three distinct national-interest objectives, and they should be differentiated for the purpose of determining the amount of the payments made.

While it is true that none of the three objectives are susceptible to valuation in terms of dollars, nevertheless, a reasonably acceptable approximation can be reached. It is my belief that if the national defense of the country makes it advisable to augment civil aviation facilities beyond their natural economic level, then this objective should be recognized as a cost to be attached to the military budget. Sound Federal bookkeeping requires that the expenditure of public funds for the postal service, the national defense, and commercial transportation services should all be specifically labeled as such, and no longer be wrapped up in one package and called mail pay.

In classifying the support to be given the certificated carriers, we have four distinct groups with four distinct sets of problems:

First. The Big Four—American, United, TWA, and Eastern. They received identical compensation for the transportation of mail which the Civil Aeronautics Board deems to be a service rate. The Big Four contend there is no subsidy in this service rate, although early in 1949 three of them received additional retroactive payments which made their corporate balance sheets much more attractive.

Second. The regional carriers, into which classification fall the rest of the intermediate and small trunk-line carriers, are known as need carriers. There is no uniformity in the need rate paid to these carriers for the transportation of mail as the rate is based on the anticipated deficits from their commercial revenue over their anticipated allowed expenses based on their past operating record.

Third. The feeder lines. Twenty-one of these local and feeder carriers have been certificated by the Board for a 3-year experimental period. The objective of the Board in creating the local carriers was to provide adequate air service to the local communities throughout the country. Nonetheless, their dependence upon the Government has been considerable and now their mail pay bill is approaching $15,000,000 annually. When and if all of them get under operation, their payments may exceed $23,000,000.

Fourth. International air carriers. The problems of this class of carrier differ from that of domestic carriers because of our national interest abroad. Previous to World War II, only one United States flag line (Pan American) operated overseas. Today there are 12 United States flag lines in international air carriage, exclusive of at least seven additional noncertificated carriers operating under temporary specific exemption.

Superimposed on these four types of certificated carriers are the irregular and contract carriers, and the cargo carriers recently tentatively granted temporary certification without mail pay.

I am gratified, of course, that the CAB has announced that it will undertake a detailed examination of the cost to the carriers of handling the mail for use in determining compensatory rates and of the factors which enter into the determination of fair compensation for carrying the mail. This intent was announced in the Board's Statement of Economic Program for 1949,

and I certainly hope that it was not just another New Year's resolution.

Some carriers have testified that the cost of rendering service to many of the smaller nonprofitable points has caused their losses, which service, if discontinued, would put their whole system in the black. For example, one carrier serves 38 small cities on its system. Those 38 cities provide the carrier with 8 percent of its total revenue. However, it is necessary that 40 percent of its mileage be flown to acquire that 8 percent of revenue. For serving those 38 small cities the carrier receives $20,000 a month in mail pay. The carrier claims that if it could discontinue service to those 38 cities it would save $4,000,000 a year for the company.

The argument contained in the foregoing example is a logical one. However, this company petitioned the Board for the right to serve these cities, and it convinced the Board that these points should have service. The Board did not arbitrarily say to this company "you serve these points." This problem of over-expansion of route systems and service to nonprofitable points is not solely the Board's fault; the carriers share the responsibility for wanting to be certificated to serve every community in sight before a possible competitor got there. Expectations of receiving generous mail pay for such operations may have contributed some incentive.

CAB DELAYS AND EXPENSE

In April I made a report to the United States Senate on communications in which I criticized the Federal Communications Commission by stating:

"Through the Commission's failure to make decisions, great harm has been done, not only to individuals, but to whole communities * * * in many instances, failure to take any action is far more deadly and disastrous than an adverse action might be. When pending matters are delayed year after year the Commission's victims are tied up without recourse. They can make no plans for the future and they cannot go to the courts for relief."

To a great degree this same condition appears to prevail in the Civil Aeronautics Board. For instance, at the present time the eyes of the entire industry are focused on the Air Freight case. A prehearing conference report was issued in April 1946, and a final decision has not yet, after 3 years and 4 months, been issued. I realized that this is an important decision in which complex and complicated issues are being considered, but to wait more than 3 years to have an application decided is far too long.

The delays, expense, and time consumed in trying such a case can lead the average citizen into financial ruin. Mr. Slick, of Slick Airways; Mr. Playford, of United States Airlines; Mr. Prescott, of the Flying Tigers Airlines, and Mr. Willis, of Willis Air Service have all testified that it has cost them so far between $70,000 and $100,000 each to prosecute their applications in this case. I wonder how much the ATA and the certificated carriers have spent in opposing them? The responsibility for completing such policy decisions as the Air Freight case rests with the Board. Perhaps it would be helpful to require the CAB to report to Congress the status of all applications periodically that are over 6 months old.

AIR-LINE FINANCE

Many a ship has been wrecked on the rocks of unwise financial policy. Some of the air lines have failed to learn this vital lesson. One basic rule of sound corporate financing is to provide a balanced structure. This means maintenance of a reasonable ratio between debt financing and equity financing. Of course, it would be ideal if every corporation—air lines included—could finance itself primarily by the issuance of common stock. There would then be few fixed charges to meet, and stockholders, although disappointed, could not reasonably demand that dividends be declared unless the company had earned them.

A year ago the composite debt-equity ratio of the 16 so-called trunk air lines was 58 debt to 42 common stock. This is definitely too high. One air line's ratio is 95 to 5; another 75 to 25; and several others 85 to 15. On the other hand, a few of the trunk lines are in the fortunate position of having put their financial houses in order by the issuance and sale of adequate common stock when the market was absorbing such issues readily.

Since it is unrealistic to expect a new, unproved and rapidly growing industry like the air lines to finance themselves solely through the issuance of stock, the question arises: "What is a safe and proper ratio between long-term indebtedness and equity financing through preferred and common stock?" No hard-and-fast rule can be laid down because the circumstances of the various carriers obviously differ. The consensus of informed opinion, however, condemns the use of long-term debt in any percentage greater than 50 percent of the dollar amount of the total capital structure.

The proposal has been made that all future issues of air-line financing require a "no objection" report from CAB before being consummated. As might be expected, air-line executives are unanimous in opposing such control. They point to the delays encountered in all their present contacts with the CAB, and predict that the vesting of control over security issuances in the Board would generate similar delays in this new field. Moreover, since the timing of security sales is all-important and market conditions fluctuate so rapidly, not only from month to month but from day to day, the inevitable delays incident to CAB approval would make future air-line financing extremely slow, unpredictable, and costly.

Against these arguments stands the disagreeable fact that in the absence of such restraints a majority of the air lines have recently put themselves into a difficult and tight financial situation with the threat of bankruptcy just around the corner. From the standpoint of American business theory, and my own personal philosophy, I am reluctant to advocate further encroachment by Government upon the domain of business management's normal functions, but the unpleasant facts disclosed by our current inquiry cause me to favor the imposition of CAB control over security issues.

But there is another side of this problem. As a condition precedent to making a loan to an air line, the RFC now is required by law to obtain from the CAB its approval and, except for equipment loans, its certification that the borrowing air line is expected to be able to meet its fixed charges. To the average citizen this would appear to be entirely normal and proper. The CAB is a specialized aeronautical agency presumably endowed with expert knowledge concerning air-line operation problems and traffic potential, including their financial requirements and the justification for borrowing additional funds. What more natural than that Congress should require such approval to enlighten the RFC in deciding whether or not to approve the loan and disburse the funds? The joker in the picture lies in the apparent connection between loan approvals and mail subsidies.

The implications are obvious. Civil Aeronautics Board approval is a condition precedent to an RFC loan. By law CAB has both the power and the duty to set air-mail rates at figures high enough to cover the reasonable expense of air-line operation under economic and efficient management. Interest on indebtedness, whether incurred through a bank or through RFC, is a legitimate item of expense, as is the gradual amortization and repayment of the principal of such a loan. Can we honestly expect the RFC—realistic and hard-headed bankers evaluating the loan application of an air line—not to be governed by the fact that the CAB through air-mail payments can fix rates sufficiently high to service and amortize any loan, even though such loan be economically unjustifiable?

In the light of these facts, can we avoid the question, has the CAB committed itself in approving an air line's loan application to the RFC, to see that air-mail rates are fixed at a sufficiently profitable level to assure the repayment of the loan? This is a grave question. The RFC has more than $70,000,000 of air-line and air-line-equipment loan applications (or conversations preliminary to loan applications) now pending. This whole financing and refinancing problem could become quite serious.

SAFETY

The principal deterrent to air travel is the public's belief that it is not sufficiently safe; and the next most important deterrent is that air lines are not sufficiently punctual and reliable in meeting their schedules.

It is always annoying and sometimes disastrous for a prospective passenger to find that the scheduled flight, around which he has constructed important travel plans, has been canceled. In 1948 a total of 11,400,000 scheduled flight-miles was canceled by domestic trunk lines. Seventy-three percent of these were canceled in the five winter months. Lines flying northern routes are particularly vulnerable. During January 1948 one air line was forced to cancel over 26 percent of its scheduled mileage. On this line the odds were only 3 to 1 that a passenger during that month would have been able to complete his contemplated flight. Modern business organizations run on a tight time schedule. Unless the air lines can meet the demand for reliability of schedules they cannot hope to serve their maximum market, particularly among business travelers. A few disrupting cancellation experiences are sufficient to make many existing and potential customers change their minds in favor of the comparative reliability of railroad schedules.

Much is being done to improve regularity and safety. By far the most important attack is being sponsored by the Civil Aeronautics Administration. This is the technical safety program worked out by the Radio Technical Commission for Aviation, and known as the SC-31 program. In addition to the instrument landing system (ILS), ground-controlled approach system (GCA), and precision beam radar, this expert committee recommended the universal adoption of three new technical devices, in order to increase the reliability and safety of aircraft operations:

1. The omnidirectional range, or omnirange: This device enables the pilot to fly by eye instead of by ear. He holds his course by watching the movement of an indicating needle on his instrument panel.

2. Distance measuring equipment (DME): This equipment will enable the pilot to read directly on his DME dial the exact distance in miles to or from the omnirange to which his instrument is tuned.

3. Course line computer: This device makes it unnecessary for the pilot to fly straight toward or directly away from the omnirange. Instead he can fly a straight course between any two selected points.

In 1948, the domestic air lines operated at a net loss of $20,702,000 prior to receiving increased retroactive mail pay. Had the SC-31 program been functioning, even in its transitional state, the Civil Aeronautics Administration estimates that the air lines would have broken even in 1948.

No one can estimate the tremendous boost air travel will receive when these devices

make air travel safe and dependable. It is encouraging and significant that in spite of the recent air-line tragedies among the independent and foreign carriers, no major domestic certificated air line has had a fatal crash during the past 10 months. Eventually air travel is likely to be the safest method of all travel. For us in Congress, that is our hope.

FEDERAL AIRPORT PROGRAM

In 1946, Congress enacted a statute establishing a national airport plan for the construction or improvement of civil airports throughout the country over a period of 7 years on a matching-funds basis involving an aggregate 7-year Federal expenditure of $500,000,000. This program is well under way. These civil airports are being constructed according to the most modern plans and specifications. Including airports constructed under this program, the total number of civilian airports in this country today is approximately 6,000. A great majority of them have short runways, however, and can handle only small planes. Only about 1,000 can handle planes the size of the DC-3 or larger. Cities and towns have shown a commendable willingness to provide their share of the funds necessary to match the Federal funds appropriated by Congress.

Your own municipal airport here in Kansas City has cooperated with and benefited from this program. I am informed that the present improvement project on your municipal airport will cost over $500,000 and that it is well on the way to completion. Furthermore, that the list of proposed large airport projects submitted to the Congress by the Civil Aeronautics Administration for construction in the fiscal year 1950 includes a proposal to expand one of the Kansas City airports from a class 4 airport to a class 6 major air terminal at an initial cost of $1,100,000. If and when this proposed enlargement is constructed, Kansas City will have airport facilities substantially equal to those of any city of its size in the country.

REVAMPING AIR ROUTE PATTERN

One of the more important questions which the board and our committee will have to weigh is the reconstruction or revamping of the present very unsatisfactory air route pattern of this country.

The domestic air route pattern has grown up like Topsy, without much rhyme or reason. It gives the impression that neither the domestic air route pattern as a whole, nor the individual systems of the 16 trunk carriers, shows evidence of a well-planned, orderly air-line system designed to fit into a balanced over-all transportation network.

The duplication and triplication of competing air service over many routes has led, in the opinion of such industry leaders as C. R. Smith and Eddie Rickenbacker, to "wasteful competition and low load factors and in substantial and continuing operating losses" and has left the country "with a pattern of routes and services which cannot be supported on a self-sustaining basis by the existing or probable volume of traffic."

Throughout the growth of the air-line industry the CAB has had neither format nor conception of a national route structure which would generally prove to be economically sound for carriers to operate. I believe that all business, whether it is strictly private enterprise or under Government regulation, should anticipate the future with well-considered planning. There is no excuse for failure to plan in an industry which grows and expands only by permission of a Government agency.

Some of the trouble may be due to the illogical grandfather routes, which Congress perpetuated in 1938, but since the enactment of the Civil Aeronautics Act the Board has doubled the certificated domestic air routes and has greatly increased point-to-point competition. The criticism, however, cannot be dismissed that the illogical route pattern is due in part to the case-by-case method and to changing personal philosophies of CAB members, the hotly contested struggle for new routes and guaranteed mail subsidies, the overoptimistic traffic and cost estimates on the part of the Government and industry alike, and last, the absence of clear standards as to what kind of an air-transportation system the Congress really wanted the CAB to promote.

Our Senate committee has been told by a segment of the industry that a route moratorium is desirable. Some of the Big Four carriers have advocated this and there would probably be unanimity in this view among the Big Four, if Eastern Air Lines did not have an application pending before the Board for an extension to the west coast. It appears that regional carriers are opposed to a route moratorium. They desire to tie up loose ends of their route systems with extensions and new routes into areas where the grass looks greener. It is their ambition to grow bigger.

In the feeder experiment, it is too early to make an evaluation along this line, although one feeder certificate has been terminated and another threatened. It is not surprising to find these operators petitioning the Board for case-by-case route adjustments and extensions. It is my hope that the CAB will adopt an over-all policy in determining the extent to which the feeder line is to be continued.

AIR-LINE CONSOLIDATIONS

Many witnesses coming before our committee say there are too many air lines and that many of the illogical conditions in the domestic route pattern can be cured by merger or consolidation of carriers and by the elimination or transfer of separate routes and points. Reconstruction of the present domestic route pattern is both important and urgent.

Witnesses have told the committee that over certain segments of their route system there is too much competition; that the CAB has certificated too many lines to operate between certain points or areas; that if one carrier is eliminated, the one or more remaining carriers could conduct a profitable operation and provide adequate service. If we have excessive competition it is because the CAB authorized this competition and after once authorizing it, even though they may have erred in judgment, the situation remains to be corrected. An air line losing money under these conditions is not too concerned because such losses are generally considered in the computation of the carrier's mail rate.

Following his appearance as a witness, Capt. Eddie Rickenbacker of Eastern Air Lines made a sweeping proposal to me in a letter. He magnanimously offered to take over the entire domestic system of five carriers operating east of the Mississippi and competing generally with Eastern, and stated he would render the same quantity of mail and passenger service presently offered, and do so without mail subsidy payments, at an estimated saving to the taxpayer of over $10,000,000 annually. This touched off shouts of monopoly, and counterproposals by the lines which would be gobbled up.

A more fundamental question to be considered is to what extent regional monopolies such as Captain Rickenbacker suggests, can be encouraged without undue sacrifice of the quantity and quality of service obtained through competition. One must consider whether competition should be restricted to large traffic terminals which can be operated without subsidy. Before any of these decisions can be made we need to know what routes are now being subsidized and the economic potential of each route segment. A major problem will be to determine whether a reduction in the number of individual carriers, or the transfer and elimination of specific route segments will preserve the necessary quality, service, and schedules, and at the same time produce a more nearly self-sufficient system. Not without reason, Captain Rickenbacker contends, "competition which requires subsidy is wholly unjustified."

Changed economic conditions in the industry and new long-range flight equipment dictate drastic route pattern changes. However, before we can expect to bring substantial order out of chaos through mergers, consolidations, and route transfers, it is clear that the Congress, as well as the Board, may have to give consideration to the fundamental objectives to be achieved, and the means to be used to induce carriers to transfer routes, and to merge or consolidate on reasonable terms and in the best interest of the public. In any event I believe action along this line is needed now. I urge air-line management to consider carefully possible mergers, and hope that I personally may hear more of industry thinking on this important question.

Related to this, consideration must be given the possibility of improving the revenue-expense ratio of carrier systems by increasing traffic density through various means such as:

(a) Elimination of uneconomical parallel competition.

(b) Elimination of notably uneconomical intermediate stations.

(c) Revision of company route patterns so as to promote more advantageous scheduling.

(d) Elimination of stations located at uneconomical distances from traffic centers.

The committee expects to go into these problems in the course of its inquiry. It had hoped to receive substantial help from the Civil Aeronautics Board. More than a year ago, pursuant to recommendations of the President's Air Policy Commission and the Joint Congressional Aviation Policy Board, the Civil Aeronautics Board undertook an exhaustive study of competition and the existing route pattern which was expected to indicate the inherent weaknesses of the present route pattern and point the way to its correction. In its statement of an economic program for 1949, the Board stated that it expected this study would be available July 1, 1949, but I have been advised by the chairman that we must expect further indefinite delay. In the meantime, the serious faults in the present air-route structure demand correction and this committee intends to find a way to accomplish it—this must be done if the unsatisfactory financial situation of many individual carriers and their mounting dependence upon Government financial support is to be remedied.

Furthermore, it is of the utmost importance for the Board to use all its economic and judicial wisdom in considering all factors in the granting of international routes because of the effect on our national interest. Whether we have too many United States flag international carriers is a problem currently being studied by the Board in the PAA-AOA merger case.

PUBLIC UTILITY OR FREE ENTERPRISE

Congress ought to make up its mind whether the air lines are to be a regulated public utility or live under the cruel law of the survival of the fittest. Today air lines are neither beast nor fowl and, therefore, receive support from the Public Treasury to insure competition. I find keen cutthroat competition everywhere—shown by excessive scheduling, luxurious passenger "extras," and extravagant promotional advertising of all kinds. To me excessive competition purchased with Federal funds is ridiculous. It seems to me the present "Dr. Jekyll and Mr. Hyde" arrangement of Federal support with "limited competition" must be reexamined. I am impressed with this statement of Juan Trippe, president of Pan American Airways:

"As I see it, the Congress and the Civil Aeronautics Board must make up their minds

whether or not they want to return the airline industry to its intended status as a regulated public utility. If they don't, the relevant provisions of the Civil Aeronautics Act of 1938 should be eliminated. The air lines, as unregulated businesses, would then be free to operate where business was good and to abandon service where business was bad. They would be free to make high profits or go bankrupt, as the case might be."

I have grave doubts whether the air lines can consistently resist the temptation to buy greater flight capacity at a rate faster than the commercial demand will absorb as long as the CAB is virtually obligated to cover the losses by mail pay arising from management's well-meaning optimism. Either the industry must submit to full Government regulation with less competition or run the risk of financial failure resulting from its own mistakes. At the same time a way must be found to provide adequate air service to local and intermediate cities that will benefit and can reasonably support air service.

CONCLUSION

During this postwar crisis in the air-transportation industry there have been plenty of justifiable criticisms of the air lines, the Civil Aeronautics Board, and the Congress. The carriers have been accused of overexpansion and inadequate cost controls, while the Board has been denounced for being too quick to authorize competitive services and too slow in determining the mail rates. The Congress has been blamed for not giving the Board sufficient guidance, power, or funds to do a job that has been too big for a comparatively small and underpaid staff.

But the picture grows brighter. The airlines, more and more, are getting down to earth in their operations and planning. The Board has been functioning more proficiently, and has announced an aggressive economic program for 1949, which seems to forecast a progressive approach to some of the fundamental problems.

The air services of the United States have come a very long way since TWA made its first transcontinental flight 20 years ago, and there are tremendous opportunities ahead for further growth and improved public service. It would be impossible to try to define the limits of future expansion. But I can tell you that Congress is awake to its responsibilities with its role as part of the three-horse team, responsible for the quality and quantity of American civil aviation. I am certain Congress will do its best to help the Civil Aeronautics Board provide wise regulation. The balance of the job, the heavy part of the load, rests squarely on the broad shoulders of the air-line industry itself.

There are far more problems than answers. Nevertheless, I repeat, the air-line industry, the CAB, and the CAA, and the Congress must cooperate in solving them. As chairman of the Interstate and Foreign Commerce Committee, I want to do my full part toward this end without fear or favor, and with only the public interest to serve. I am confident that, working as a team, we three can make American aviation safe, sure, and solvent.

The Administration's Fiscal Policies

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an able article written by Mr. Vermont Royster in the Wall Streat Journal of July 18, 1949, entitled "No Day of Ending."

There being no objection, the article was ordered to be printed in the RECORD as follows:

NO DAY OF ENDING—TRUMAN ADMINISTRATION HAS BECOME HOPELESSLY ENMESHED BY DEFICIT FINANCING; IT CAN NEVER SLOW SPENDING

(By Vermont Royster)

The Truman administration, following the stars of the new economics and old-fashioned politics, has drifted into a position from which it can never propose a balanced budget.

Nor, though it promises everything else, can it ever promise the people an end to high taxes, to inflation, or to economic emergencies of one sort or another. So long as these present stars are ascendant, we must keep acclimated to the winds of perpetual crisis.

Thus the administration, if it has its way, must go on and on spending billions, scraping up what it can from taxes and capital levies, cheapening the dollars to get more of them, handing out more and more lulling benefits—it must keep on until someday it finds it can go no further. That day, it hopes, is still far off.

The administration's position is simply stated.

The Government cannot balance the budget in boom times because it must spend billions to subsidize food, housing and other necessities against the high prices; it must help people get the things they can't afford because of inflation.

The Government cannot balance the budget in depression times because billions are then needed for relief and for priming the pump.

The Government cannot balance the budget in in-between times (which is what Mr. Truman thinks we have now) because billions are required to do both things at once. And always, boom or bust, there are a host of social services which the Government must be continually enlarging to reassure the people that it is doing something for them.

On what day, then, do Mr. Truman or his advisers think it will be possible for the Government to stop spending more than it receives?

THE HOPE IS WISTFUL

Quite possibly the President does not know how he got into this position. He may not even know he is there, because he still speaks wistfully of the day when he can balance the budget. But it was, in fact, inevitable that he should arrive there.

It became inevitable the day the politicians succumbed to the ingenious theory that a government could control an economy, avoid both booms and busts, by a simple bit of money mechanics. That theory, of which Lord Keynes was the prophet, held that the government should pump out money in depressions and vacuum it off in booms. The Government's fiscal actions—its spending, taxing, borrowing—should be viewed solely as a device for compensating whatever was at the moment wrong with the economy.

A lot of economic jargon obscured the simple economic flaw. That is that the Government can only distribute what it takes away. It creates nothing, and, therefore, it cannot add an iota to the total wealth of a nation. Even when it seems to be making new dollar bills it adds nothing new because it decreases the value of all dollars by an equal amount. At best it robs Peter for Paul.

But the surface logic gave it a strong appeal for politicians. It gave them a theoretical justification for doing in the depression what they always want to do anyway, that is, spend money wholesale. The political flaw was that playing with this spending theory was like playing with an opium pipe.

The progression in this country was interesting. A little inflation was all right; it could be controlled. The deficits would be short-lived because inflation, by raising prices and wages, would increase business and the Government will balance the budget from the increased revenue resulting from a greater national income. There was in those days some conscience about the matter; inflation was never offered as anything but a temporary expedient.

CLEVER JARGON

This timidity showed in the high-flown names for what was being done. The theory was variously known as "compensatory spending," "cyclical control," "monetary management," "balancing the economy." None of the titles suggested that deficits and inflation were anything but temporary.

Briefly, in the late thirties, there was a moment of sanity. There was a feeble attempt to stop the spending merry-go-round. But to the politicians it quickly became clear that if it was stopped everybody could see we had gotten no place at all; that our previous feeling of economic pick-up had been merely dizziness. The carousel must not be allowed to revolve at constant speed; it must go ever faster. The war did that—and it also made it harder to stop.

Soon we began to hear that the Government must provide "full employment"—continuously. It must "keep production up," it must keep "purchasing power" rising by spending and support yearly wage increases, it must cushion farm prices. It must hold up not only the domestic economy but the world economy as well. And it must somehow keep people ahead of the inflation by providing them with shelter and medical care and subsidized food. Nothing must be allowed to slow down.

SHIFT TO A MINOR KEY

The tune changed key. Nowadays the melody is that the Government can make you rich by spending your own money.

For again the theorists came to the rescue of the politicians with moral support for continued inflation. We began to be told that Government debt is a minor bookkeeping matter. Internal government debt "should hardly be called a debt at all"; "we only owe it to ourselves." Immorality was rationalized until it ceased to be thought immoral. This was all the cue the politicians needed.

In one respect, the administration acted expediently in abandoning the pretense of economy and turning again openly to inflation spending. To stop inflating would probably be political suicide.

For as soon as the Government stops inflating—even if it only allows past inflation to be absorbed in a new wage-price structure—the sham would show up. The wage earner would find that after running himself to death he has actually got nowhere. People would very quickly see that the welfare the Government is providing is exorbitantly costly. They would see that there are no free services, that they pay for them in both taxes and the hidden levies of inflation.

The administration has abandoned new taxes, for the cost here is too obvious. It has become reconciled to deficit financing, for the cost there is obscured, at least in the beginning. Inflation is a quiet thief; the victim does not know he has been robbed until it is too late.

If left unchecked, this will go on, with dollars getting worth less and less, until eventually there will be no room for more inflation. This is the tragic, classical course. The only alternative is for people to nerve themselves to the shock of stopping these repeated hypodermics and to fire the doctors. This is the hard way of political reformation.

But with the present administration there can be no day of ending.

The Future of Europe's Medical Profession

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, Mr. Ray Sprigle, a Pittsburgh newspaperman who holds the Pulitzer prize, a headliners' award and many other honors for his fact-finding ability, has been touring displaced person camps in Europe and writing vigorous stories of the tragic plight of these men and women who seek only the chance to live in freedom.

Mr. Sprigle's article of July 13 tells of the situation of many doctors in these camps, particularly at the Blomberg DP camps in the British zone of Germany. Those who have been lucky enough to gain admission to free nations have been accepted in the role of laborers, janitors, wood cutters, and so on.

Mr. Sprigle makes some excellent suggestions to the Commonwealth of Pennsylvania and to the American Medical Association for working out arrangements whereby the precious skills of some of these doctors can be used to great humanitarian advantage here in the United States.

I ask unanimous consent that the article Many Doctors Idle in DP Camps be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MANY DOCTORS IDLE IN DP CAMPS—PHYSICIANS EAGER FOR ANY KIND OF JOB AS SHORTAGE OF MEDICAL EXPERTS GROWS IN THIS COUNTRY

(By Ray Sprigle)

BLOMBERG DP CAMP, BRITISH ZONE, GERMANY.—That evening in the spring of 1942, when the ward chiefs turned in their nightly bed check, Dr. Ansis Karps, head of the Riga Hospital for Mental Diseases found that he had a few more than 800 patients in his institution.

The next morning he was still superintendent, but he had exactly no patients. Because that night a German SS detachment backed up a fleet of trucks to the hospital entrance, loaded every patient, hauled them to a nearby wooded section and there machine-gunned most of them to death. A few escaped in the darkness. German soldiers had excellent sport the next few days hunting them down like rabbits.

In a single month the Germans killed every mental patient in Latvia that they could lay their hands on. The same in Estonia and Lithuania. And for that matter, the same in Germany, too. But in Germany the SS used comparatively humane euthanasia while the patients slept. For the lesser breeds machine guns were cheaper and more expeditious.

DISCUSS DOCTORS' DARK FUTURE

Dr. Karps and I sit here in the doctor's smoking room of this little hospital which is part of Blomberg camp, while we discuss the dark future of the members of Europe's medical profession. This Blomberg DP camp is like no other we have visited in our 5,000 miles up and down Europe. The DP's, there are 880 of them, are housed in quite comfortable residences in Blomberg. And also, like no other town in all Germany there are no Nazis in Blomberg. The British, with a fine sense of justice, just turned every Nazi in Blomberg out of his house 4 years ago and moved the DP's in instead. Everybody's very happy about the whole thing—except possibly the Nazi leaders of the community who are still scattered all over the landscape—mostly living with relatives.

Across the table from us is Dr. Alexander Dumbrys, lately one of the most famous surgeons in Lithuania. He was chief surgeon of Ukmerge Hospital, and assistant professor of surgery in the University of Kaunas.

SPECIALIST TO DRIVE AMBULANCE

While we talk, in drops Dr. Jonas Elvikis, one of the outstanding specialists on tuberculosis in Europe. He is TB officer in the little hospital here. No longer does he lecture to half a hundred medical students in the clinical theater of the medical school of the University of Kaunas where he was associate professor for internal diseases.

Dr. Dumbrys and Dr. Elvikis both have received wonderful news in the past week. Both are going to the United States. Their "assurances" are being processed now.

So, once more they will take their part in a larger field, to take up their careers of fighting human suffering. * * *

Well, not that exactly. You see Dr. Dumbrys, it is true, is going to a hospital, to Alexis Hospital in Elizabeth, N. J., but not as a surgeon. This European specialist will be assigned to other duties. He will drive the hospital ambulance.

THOUSANDS OF DOCTORS IDLE

And Dr. Elvikis, he is going to a hospital in America, too. To a great Chicago institution. It is hardly likely that the good doctor will be able to devote much of his future career to the fight against the white plague. Because Dr. Elvikis is going to be a night watchman in the hospital.

And here in this dingy little hospital room in this dingy little German city is the complete picture of the tragedy that has overtaken the medical profession of most of Europe.

Nowhere in the world apparently are the famous medical specialists of Europe wanted—least of all in America that is literally crying for more doctors.

In all the DP camps of Europe thousands of doctors wear out the weary years of waiting while their careers rot. Hundreds of them have tried by every subterfuge they can think of to erase from their DP camp records that dreadful blot on their dossiers that damns them—the notation, "doctor" or "surgeon." Because Australia or Canada dont even want them for wood choppers if they are doctors.

LATVIAN LECTURES AT PITT

In the almost 2 years of its existence IRO has succeeded in resettling only 300 of Europe's displaced physicians and surgeons. Of these, some 200 have gone to Australia as common laborers. All over the world some of the foremost medical brains of the profession of healing are devoting themselves to the best methods of handling a coal shovel and some of the world's most skillful surgeons' hands are being destroyed on ax helves or pick handles.

Of the 300 resettled less than 10 have been resettled as medical men. Notable among this half dozen or so is Dr. Jacob Priman, sometime professor of anatomy in the University of Latvia.

He is lecturing on anatomy in the University of Pittsburgh. His friends here in Blomberg camp tell me he's living at 4105 Aliquippa Street and they often hear from him. Dr. Karps, who studied with him has hopes that Dr. Priman may be of assistance in getting him an assurance—if not as a doctor, then maybe as a furnace tender. I've got a better idea than that.

MENTAL HOSPITALS NEED EXPERTS

This is for Jim Duff—Gov. James H. Duff. For the past 3 years I've been writing about the low estate of Pennsylvania's mental hospitals. In every hospital I visit the story is the same—the utter impossibility of getting enough competent help.

All right then. Right here in these camps that I've been visiting for the last 30 days is the greatest reservoir of outstanding mental specialists the world has ever seen. They're not even hoping for jobs as doctors. They're long past that. But think what marvelous chief attendants they'd make in the wards of Pennsylvania's hopelessly undermanned mental hospitals.

So why doesn't Pennsylvania's Governor order a couple of his mental chiefs to draw themselves expense vouchers and hotfoot it over here to Bad Kissingen where IRO has its headquarters and pick out about a hundred or so of the best mental hospital attendants in the world? Charley Rayner, IRO boss at Bad Kissingen, will afford them every facility.

TWO THOUSAND DOCTORS, SURGEONS AVAILABLE

They could stop off at Washington where Herb McGushin of IRO and Alex Squadrilli of the United States Resettlement Commission will see to it that red tape is cut to a minimum. Thirty days at the outside ought to see these displaced mental specialists on the job back in Philadelphia and Norristown and Mayview and Woodville. The thing ought to be worth thinking about anyway.

Scattered through these DP camps, mostly in the United States sector are still 2,000 outstanding physicians and surgeons. Incredible as it seems, with all the world in need of doctors, these are the men whom nobody wants.

Dr. Dumbrys put it pretty well when he told me:

"The healing art should know no frontiers and no nationalistic boundaries. It is our own fault. Some of us may have been good physicians but we had no vision. It was the same with us in Lithuania.

"MEDICAL FENCE IN LITHUANIA

"We put a medical fence around our little country. It was rare indeed that an Estonian or a Latvian could produce a license to practice in Lithuania. We wanted the field to ourselves. All over the world it was and still is that way. That is why 2,000 of us have no place to go, why our knowledge and skill is being wasted despite the world's need."

Well, here's another idea—this one for my good friend Dr. Wendell Gordon, one of the officials of the Allegheny County Medical Society and highly regarded in the councils of the American Medical Association.

We've often discussed the need for more and better medical service for many areas in the United States where doctors are loath to settle. It seems that here again the AMA is missing the boat.

CHANCE IN NEGLECTED AREA

Why wouldn't it be a good idea for the AMA to send a commission of physicians and surgeons familiar with examination and licensure proceedings to Europe? Let them determine the qualifications of a selected group of these displaced medical men.

Then let AMA itself provide the necessary "assurances" for a sufficient number of properly qualified men. Put them under a 2 or 3 year sponsorship of the association, perhaps under contract. Spot them throughout the country where physicians are most direly needed but where our own doctors do not want to go.

It would provide adequate medical service for Americans who haven't got it now. And it would thoroughly spike another argument of the socialized medicine boys who keep harping about the refusal of young doctors to set up practice where they are most sorely needed but also where they would have a reasonable certainty of starving to death.

Why not think about it?

Bradford, Pa., Flood-Control Project

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement submitted by me on July 13, 1949, to the Senate Committee on Public Works in support of the Bradford, Pa., flood-control project.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, I greatly appreciate the privilege of submitting to your committee this statement in support of the Bradford, Pa., flood-control project.

I am hopeful that after you have heard the testimony of the representatives of the Bradford area you will concur in the opinion that this proposed improvement is completely meritorious and that you will recommend including its authorization in the omnibus flood-control bill.

The record of recurring floods in the Bradford area presents convincing evidence of the great need of relief from the tremendous losses to which the people and its industries have been subjected.

To touch briefly on the importance of the Bradford area, I would like to point out that it is a center of production, refining and processing of the world-famous Pennsylvania grade crude oil. It is the oldest oil-producing region in the world, where the skills and techniques now used in every other oil field were developed.

It is now the center of research in secondary recovery methods by which production in the Bradford area has been increased by 194 million barrels a year. This will be substantially increased as new developments and advances are made in secondary recovery methods.

In addition to the extensive oil industry, Bradford and McKean County have developed large scale and diversified manufacturing of oil well supplies, machinery and parts, metal and glass products, chemicals, leather and rubber goods, aircraft and parts.

I point to these facts to show that Bradford is going forward and that protection from the severe flood damage it has suffered is amply justified from an economic standpoint.

Other witnesses who will appear before you will submit statistics showing the extent of the damage to property by reason of floods. I would like to call to your attention the fact that the entire cost of the project would be more than covered by the savings that would be made in a 6-year period.

That estimate is based on damage to physical property alone in the last 3-year period covering 1946 to 1948, inclusive. It does not take into consideration the large amount of additional damage represented by loss of wages, loss of production and decline in real estate values in the districts of greatest damage where flood insurance is not obtainable.

The project has been approved and concurred in all along the line by the Corps of Engineers from the District Engineer through the Division Engineer, the Board of Engineers for Rivers and harbors and forwarded to Congress by the Chief of Engineers.

The Commonwealth of Pennsylvania has submitted its approval to the Department of the Army clearing the way for participation by the State in its share of the cost. The local subdivisions have likewise submitted assurances of participation in their share of the cost.

My own study of the proposal has convinced me that the improvement is urgently needed to promote the welfare and further progress of this important district.

Harry Bridges

EXTENSION OF REMARKS
OF
HON. HUGH BUTLER
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a news item entitled "Bridges Is Named WFTU Union's Head," and an article by Louis Stark, both published in the New York Times of July 20, 1949, and that preceding the news item and the article there may be printed a statement by me in connection therewith.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. HUGH BUTLER, OF NEBRASKA

Mr. President, I ask unanimous consent to insert in the RECORD a news article which appeared in the New York Times this morning, entitled "Bridges Is Named WFTU Union's Head."

This article deals with the fact that Harry Bridges, president of the International Longshoremen's and Warehouse Men's Union, has just been elected president of the International Union of Seamen and Dockers, a subsidiary of the World Federation of Trade Unions.

The WFTU, as it is called, is the worldwide federation of Communist trade unions. It is strictly a creature of Moscow and has been so identified by the House Committee on Un-American Activities. Although the CIO was formerly a member of this organization, it finally realized that it is impossible to cooperate with Communist-led organizations. The CIO renounced its affiliation with the WFTU last spring, and since that time it has opposed having any dealings at all with the organization. Much earlier, the A. F. of L. had likewise branded the WFTU as an instrument of world revolution directly under the control of the Kremlin.

Harry Bridges, as president of the ILWU, has been responsible for an 80-day shipping blockade of the Territory of Hawaii, in which over 540,000 Americans have been sacrificed to his ambitions. On June 24, I submitted a report to the Committee on Interior and Insular Affairs, documenting the Bridges blockade of Hawaii as a maneuver of world communism.

Harry Bridges' election yesterday as president of the WFTU shipping union came at a time when Bridges was in Washington seeking the intervention of the Government of the United States to save his union in Hawaii in the current strike situation, through requiring the employers to grant at least a major portion of his demands. I submit that no officer of the United States, even the President, has any right or authority to exercise the powers of his office in behalf of a union officer publicly acknowledged as president of a WFTU subsidiary.

Harry Bridges and his union have refused to avail themselves of the rights and privileges guaranteed to them by the labor laws of the United States through their repeated refusal to sign non-Communist affidavits. As a Communist-controlled organization, the ILWU is beyond and outside the law. Under these circumstances, no representative of the United States Government has any right to force the people of Hawaii to recognize or sustain such a union. The threat to our national security created by this situation is very concisely expressed in a statement made by the well-known analyst, Mr. Hanson W. Baldwin, in the New York Times of January 9, 1947.

"Complete control of these unions by the Communists could hog-tie America in time of international crisis. * * * The Congress must make impossible a repetition of last summer's catastrophic blow to Alaska and the Aleutians, a geographical area of tremendous strategic importance. Any shipping strike that virtually strangles Alaska as the recent strikes did, and that also imperils an adequate defense in the Hawaiian Islands cannot be tolerated."

Despite the cold war we are supposed to be waging today against the forces of communism, that situation still exists. It is still true that Communist unions could hog-tie vital parts of America in time of crisis or war. That will continue to be true so long as Harry Bridges completely controls the ILWU, and through it the shipping of Hawaii, Alaska, and the Pacific coast.

BRIDGES IS NAMED WFTU UNION'S HEAD—LEFTIST SEAMEN'S AND DOCKERS' BODY, FORMED AT MARSEILLE, PICKS MARITIME CHIEF

PARIS, July 19.—Harry Bridges, shoremen's union on the United States west coast, was elected yesterday president of the International Union of Seamen and Dockers, which has just been created in Marseille under the aegis of the Communist-led World Federation of Trade Unions.

Mr. Bridges, who is under indictment in the United States for perjury and conspiracy because he allegedly concealed membership in the Communist Party when he became a naturalized American citizen in 1945, was elected unanimously by representatives of maritime unions from 25 countries.

Serving on the executive board with him as vice presidents will be a Russian, an Australian, an Italian, and eventually someone from Communist China. The seat of the new union will be Marseille.

Louis Saillant, head of the WFTU, said the new union would have 750,000 members in an address at the closing meeting last night. He asserted:

"For the first time in history a true international union is created. It is a powerful tool for peace. On all the oceans, in all the ports of the world, 750,000 seamen and dockers are henceforth fighters for peace."

Mr. Saillant and other speakers praised the social progress being made in the Soviet Union and the "popular democracies." He said that the formation of the new union was judged necessary to fight against the harmful effects of capitalism and the menace of war.

It was resolved that the first task of the new organization would be to bring "immediate and effective aid" to striking London and Canadian dockers.

(By Louis Stark)

WASHINGTON, July 19.—Harry Bridges said tonight that he hoped that the national Congress of Industrial Organizations would recognize his union's interest in affiliating itself with a new world maritime labor body sponsored by the WFTU.

The chief of the CIO longshoremen's and warehousemen's union said he had been advised by his San Francisco office today that he had been named president of the newly formed maritime labor organization.

As to whether his leadership in the new organization and his union's affiliation with it conflicted with CIO policy Mr. Bridges said he felt unable to say.

However, in the absence of Philip Murray, CIO president, officers at CIO headquarters said that the latest developments merely "aggravated the picture." They indicated that Mr. Bridges already had defied the national CIO policy by insisting that he had a right to oppose severing ties with the WFTU. Now, they said, he will apparently defend his right to maintain an organic tie with a WFTU affiliate.

The CIO, one of the founding unions of the world labor federation, left that organization last spring when it decided that the federation was Communist dominated. Subsequently the WFTU decided to form special trade organizations of specific crafts. One of them is the new maritime labor body that has been meeting in Marseille.

Mr. Bridges' defiance of CIO policy, as interpreted by high CIO officials, will go to the CIO executive board just before the next convention of the national organization in October or November. The board will then make recommendations to the convention which may call for the ousting of the dissident left-wing unions.

Monongahela River Navigation Improvements

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement submitted by me to the Senate Committee on Public Works in support of additional authorization for the Monogahela River navigation improvements, on July 14, 1949.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

It is impossible to overemphasize the importance of the Monongahela River in the economic life of the Nation.

For many years the Monongahela has carried a volume of tonnage exceeding that of the Panama Canal and greater than that of the famous Suez Canal.

Ninety percent of the traffic on that busy river is coal and coke for the steel-production empire of the Pittsburgh district, the greatest steel center of the world.

The enlargement of navigation facilities on the Monongahela River will provide far-reaching benefits, not for the Pittsburgh district alone, but for the whole country.

It will open for development vast coal fields in northern West Virginia, the last big reserve of metallurgical coal, which is becoming scarce.

It has been estimated that the fields which would be opened for development by this project have more than 1,600,000,000 tons of coal in the ground. This is a reserve sufficient to insure Pittsburgh's supply for many decades to come.

More coal, faster and cheaper, is the lifeblood of steel production. It means prosperity for Pittsburgh and the Nation.

Furthermore, the upper Monongahela project is most important as a vital factor in national defense. In the event of another war emergency it will assure this country of a continuous supply of metallurgical coal to support and expand the Nation's steel productive capacity.

While coal is the most important cargo in the Monongahela's tremendous traffic, it is by no means the only one. Coke, fluorspar, iron and steel, petroleum products, sand, gravel, and sulfur are carried in great quantities to and from its shore-line plants.

The Monongahela has been a vital American waterway since the earliest days of our Republic.

I respectfully submit that favorable consideration of the projects now before this committee would be an essential step in the further development of its usefulness in the national economy.

Release of Conscientious Objectors

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Hartford Courant, and also an article from the Christian Century of July 13, 1949, both in favor of immediate release of conscientious objectors.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

INDEPENDENCE DAY EDITORIAL

[From the Hartford Courant]

Not a man is being drafted for the existing, unused draft law. The war ended 4 years ago. Yet somewhere in these United States today are 42 young men who are locked up because they refused for religious reasons to obey the peacetime draft. More than half of these young men are Quakers. Most of the others are men who belong to churches from whose teachings they have evolved such a deep-rooted opposition to war that they chose prison rather than betray their religious principles.

A time of national emergency is one thing. But the failure to respect the right to religious freedom cannot be justified now. Members of the Quaker faith have consistently upheld their opposition to war, and their faith has been respected for four centuries. Indeed, their peaceful activities during and following the modern wars have more than justified the admiration of the world.

The sentences the conscientious objectors are serving are severe enough. But apparently discrimination continues, for while white slavers and counterfeiters are paroled, not one of these young men, mostly farmers and students, has yet won a lessening of his sentence. It all adds up to a policy of petty spitefulness that ill becomes a powerful Nation that preaches to the world that it is the citadel of religious freedom.

Is this handful of conscientious objectors a threat to national security? That is ridiculous. Does a national emergency exist that justifies keeping these 42 young men behind bars? That is also ridiculous. Then why not release them?

[From the Christian Century of July 13, 1949]

The biggest peril to religious liberty (in the conscientious objector prosecutions) is not the imprisonment of 42 men, who knew what they were doing when they refused to register on grounds of conscience. It is the lethargic indifference of the majority of citizens, including church people, to the steady encroachment of the state on the liberties of us all. These conscientious objectors are attempting to warn the American people concerning the gravity of these encroachments, and few pay any attention to what they have to say. A healthy protest demanding the liberation of these men might help to clear the air. So long as one man remains in prison because his conscience cannot sanction participation in military service, none of the rest of us is free. The Department of Justice has ordered its attorneys to register men who cannot conscientiously do so themselves, so presumably the number in prison will not go above 42. It should wash its hands of the whole business by freeing those whom it has placed behind bars because they could not violate their conceptions of Christian responsibility.

(NOTE.—Since these two editorials were written, some men have been granted parole, and additional men have been sentenced. As of July 15, 1949, the total in prison stands at 48.)

New England's Undeveloped Water Power Resources

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How Much Power?" published in the Boston Herald of July 18, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW MUCH POWER?

The Federal Power Commission's recent memorandum to Senator SALTONSTALL throws some additional light on the question of New England's undeveloped water power resources. But it is far from reconciling the differences between public and private figures, which it set out to do, and its main effect is to give added weight to demands for an official survey.

The power survey committee of the New England council has recently estimated the region's new hydroelectric potential at only 500,000 kilowatts. The FPC claims that more than 3,000,000 kilowatts can be developed, or five times the private group's figure.

A large part of the difference, as FPC now frankly points out, results from the assumption on the part of the council that power developments will be privately financed at relatively high cost, and the assumption by FPC that cheap Government financing will be employed. Obviously a great many marginal developments would be feasible in the latter case, and not in the former.

About a third of the projects envisaged by FPC, moreover, would be justified by attributing part of the cost to flood control and other public purposes. The private survey did not include any such multipurpose projects. All of the above differences stem

largely from the different starting points of public versus private power.

But a broad gap still remains. The FPC inciudes a number of potential developments which, on any basis, the private group would reject as unfeasible. For example, it includes the Passamaquoddy Bay project, which the FPC itself considered too costly before the war. And in its latest report it admits that 65 percent of its proposed developments are in Maine, where the power could not be used, and from which, under present law, it could not be exported.

The one thing that the FPC memorandum does demonstrate beyond dispute is that those who have been counting on large scale public water-power developments to provide an industrial panacea are doomed to disappointment. Not more than a third of the FPC projects are of proved value and many are tenuous in the extreme. It is not likely that FPC's own estimates of minimum new power needs here could be met by hydro during the next decade.

This does not mean that the true possibilities should not be investigated. Indeed, we are rapidly coming to the conclusion that the false hopes raised by the more rabid public power advocates must be counteracted by a new study. But there is obviously no value in having another survey by the FPC (or the private utilities) now. Congress should authorize an impartial study in which the interested parties would be heard, but would not dominate.

Ordinary New Englanders have a right to unvarnished facts.

A Program for Asia

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "A Program for Asia."

There being no objection, the article was ordered to be printed in the RECORD as follows:

A PROGRAM FOR ASIA

United States policymakers were known to be worrying, somewhat belatedly, over the Communist advance in Asia; but even after weeks of behind-the-scenes study and discussion no new program had emerged. The immediate question was whether to extend diplomatic recognition to the Communist-dominated government now being formed in China. Washington tended to discuss this in terms of procedural technicalities. Actually, the arguments pro and con would be meaningless until a broad political policy was decided upon.

Refusal to recognize a Chinese Communist Government, for instance, would be an inane gesture if the general Asiatic policy was to be one of drifting with the Communist tide. On the other hand, recognition would be hypocritical if the general policy was to begin active resistance to communism in Asia.

The United States can continue its present passive attitude toward Asiatic communism. This is a well-worn track and needs no further exploration. It means a little money here, and a diplomatic note of protest there. It is easy, cheap—and useless. Judging by past experience, this policy would end with Communist domination of Asia.

On the other hand, a policy of active resistance to communism in Asia is hard to envisage because it is so remote from United States political experience. It would be much more difficult than United States anti-Communist strategy for Europe as worked out in the Marshall plan and the Atlantic Pact.

TO STEM A TIDE

A policy of active resistance in Asia might include:

The use of United States sea-air power against communism, under all circumstances, to hold key coastal and off-shore positions—Japan, Korea, Formosa, Hong Kong, the Philippines, Indonesia, Singapore. Militarily, this program is within present United States capabilities. It would not save Asia, but it would save the Pacific, at least temporarily.

Coordination, under United States leadership, of British, Dutch, French, and Portuguese policy in Asia: Out of desperation, the French and the Dutch, in the past few years, have taken some unwise steps; these could have been avoided if the inevitable retreat from imperialism had been organized jointly with strength and confidence.

Creation of a regional grouping of independent, non-Communist Asiatic nations to work in cooperation with the United States and the western nations for the economic and political progress of all non-Communist Asiatic areas, free and colonial: This would involve development programs sponsored by the United States and other nations, using public and private capital. The key to this program is the example of recent British-Indian relations. When India surprisingly decided 2 months ago to stay in the Commonwealth with Britain, the Communist press howled with disappointment and rage. Well it might. India's decision does not balance the loss of China, but it does point the way to a constructive relationship between the western and the Asian democracies. Some immediate tasks of an anti-Communist democratic grouping would be: Retrieving Burma from its present chaos; helping the Indonesians make a go of independence; stopping the economic and political "slide" in the Philippines.

Help from the United States and its allies in all areas under military attack by Communist-led forces: This would include vast regions of west and south China, Burma, and Indochina. Goal: The liberation of Asiatic areas now held by Communists.

A pledge by the Western Powers that all Asiatic peoples will be free and self-governing as soon as possible.

Recognition by the Asiatic nations that the right to national independence does not include the right to place themselves under the Communist imperialist dictatorship. No moral contradiction is involved here; the individual's right to his own life does not include the right to suicide. The Chinese Nationalist Government, for instance, has been committing suicide. Its absurd raids on Shanghai by a poltroonish air force can only have the effect of making more and more Chinese turn toward the Communists.

WITH BOTH FEET

Such a program would be a large order indeed. Perhaps it would be beyond the vision and determination of American leadership, as the steps necessary to stop Japan before Pearl Harbor were beyond it.

Half of such a program, however, would be worse than none at all. There is no use trying to hold Indochina, Burma and Siam out of Communist hands if the United States is going to build up the Communist regime in neighboring China by trade and recognition. There is no use squandering money on aid to the kind of anti-Communists who cannot make the aid effective.

If the United States goes into Asia, it has to go in with both feet, with money and authority, with the will to help Asians build their own strong, free societies and with the responsibility of preventing them from committing national suicide under the strains of that painful process.

The North Atlantic Treaty

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial written by Alfred D. Mynders, editor of the Chattanooga Times, which appeared in the July 13, 1949, issue of that publication.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. KEFAUVER'S APPEAL

In his first major statement on foreign policy, Senator KEFAUVER has called for prompt ratification of the North Atlantic Treaty. Mr. KEFAUVER sees the pact primarily as a device to give free peoples of the North Atlantic area time to work out a union strong enough to attain and preserve the true peace which the world so desperately needs.

The State's junior Senator boldly advocates and fi mly believes in the formation of a limited federal union of the western democracies. In this aim he finds himself in distinguished company. Men like former Supreme Court Justice Owen J. Roberts, former Secretary of War Robert Patterson, and Mr. Will Clayton favor such a program.

Mr. KEFAUVER says he believes the people of the United States generally would support this type of superstate to which the United States and other nations would surrender a portion of our sovereignty.

We do not know the extent to which public opinion has jelled on this point. Perhaps it is not as firm as Senator KEFAUVER believes. But it is evident, as he says, that the people of the United States are ahead of the Congress in their thinking on means to preserve and strengthen the ideals of democracy in a free and peaceful world.

It is also evident that Mr. KEFAUVER, in his scholarly address, has made a persuasive appeal for an Atlantic union.

He recognizes the urgency of favorable Senate action on the pact in support of the "prime purpose of our foreign policy," which he sees as the effort to "secure our free way of life without having to fight a recurring world war to do so."

Failure to ratify the treaty after we have signed it "because it fails to remove entirely the uncertainty that makes for war, would not lessen that uncertainty, but increase it to the highest degree."

He points out the unquestionable fact that the treaty represents a departure from precedent, but "if wisdom counsels us not to abandon lightly policies that have long proved good, it tells us, too, not to cling to them blindly when they are producing worse and worse disasters."

He adds: "We cannot be more entangled by a treaty than we already are by the facts of modern life, and it behooves us to remember that these conditions of life tend to entangle us more and more every year, not less and less."

There is a dilemma, he says, in making the pact as strong as possible without endanger-

ing our constitutional processes. On the other hand, it will do no good to write in reservations which serve only to weaken the treaty. "The situation is such that we are bound to be entangled in any major war, treaty or no treaty and no matter what reservations are added to it."

Mr. KEFAUVER takes a dim view of the efficacy of alliances aimed at preventing or even winning wars. "The great weakness in the alliance method which is responsible for this sorry record is the uncertainly that lies at the heart of any such treaty."

He believes the North Atlantic Treaty possesses this same weakness, but if it is followed by the convocation of a so-called constitutional convention looking toward the formation of an Atlantic union, then it will indeed serve as a war deterrent until a stronger preventive method can be worked out.

The convention he proposes will not commit the United States to anything save to explore, "as earnestly and carefully and honestly as we can," the possibility of an Atlantic union on the basis of American constitutional principles.

We are not convinced that an Atlantic union is the only, or indeed the feasible, way to gain and maintain world peace. We do recognize with Senator KEFAUVER that: "To overcome dictatorship and would-be world conquerors without war has proved a far harder thing than to vanquish it by war. It requires wisdom, vision, boldness, sacrifice even more than does victory by war."

Mr. KEFAUVER is speaking with the boldness he advocates. Perhaps he also has the vision of the way to gain the ends we all so earnestly desire. In any event, his Senate address provides the Nation with a thought-provoking thesis worthy of closest consideration.

Robinson Versus Robeson

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. O'CONOR. Mr. President, in these days of divided loyalties and allegiances among so many people in so many countries, the testimony of Jackie Robinson of the Brooklyn Baseball Club, before the Committee on Un-American Activities, on behalf of the millions of loyal Negroes in this country was a wholesome thing.

Every Senator here who has had much contact with the Negro communities of his State knows that Paul Robeson, who has prospered under the American system, did not represent the attitude of the Negroes of America when he blared forth his belief that this large group of citizens would refuse to support the United States in the case of war with Russia. Nevertheless, to complete the record, it was highly desirable that another member of Robeson's race, whose eminence in one field compares favorably with that of the singer's, should state in clear and unmistakable terms his conviction that Robeson had maligned his fellow countrymen by impugning their patriotism.

The editorial in today's Washington Post, entitled "Robinson Versus Robeson," discusses the matter so well that it should be brought to the attention of all our people.

I therefore ask unanimous consent that it be inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROBINSON VERSUS ROBESON

It seems to us that the Negroes in the United States owe a good deal of gratitude to Mr. Jackie Robinson of the Brooklyn Dodgers for defending them the other day against the insulting libels of Mr. Paul Robeson. Mr. Robeson has made no secret of the fact that his own loyalties are pledged to a Communist regime, which has reduced millions of human beings to a condition of servitude infinitely more degraded than that of Negroes in any Southern State. But then Mr. Robeson's recent conduct has been such that if he had said that his first loyalty was to his own country, it would have been difficult to believe him. When he said, however, that his views are shared by Negroes generally, he was actually betraying them in the interest of Communist tactics to the advocates of white supremacy.

Nevertheless, it took a good deal of courage for Mr. Robinson to speak his mind about Mr. Robeson. A great deal of pressure, as Mr. Robinson admitted to the Committee on Un-American Activities, was brought to bear on him in an effort to dissuade him from doing so. As the first of his race to rise to unquestioned eminence in a field from which it has hitherto been excluded, Mr. Robinson has been placed in an extremely delicate position. The nature of his work places him in intimate daily association with white men, many of them Southerners, with whom it is necessary to remain on terms of friendship; at the same time his great success has made him a symbol of Negro aspirations.

Thus it might have seemed the part of discretion to have kept aloof from matters of public controversy, thereby avoiding the possibility of making enemies among either whites or Negroes, and to have allowed his professional exploits to speak for themselves. Mr. Robinson's statement to the committee was, however, a masterpiece of candor. He left the committee under no illusions concerning how Negroes, even those who are prosperous and successful, feel about the disabilities imposed on them by social prejudice in the United States.

But at the same time Mr. Robinson was bold enough to acknowledge that there are freedoms which even Negroes enjoy in the United States and which they find preferable to a regime which would deny them any freedoms. He also acknowledged that the equities in American life that Negroes have already won, and the further equities they are demanding, involve a recognition of their responsibilities as citizens. "I can't," he told the committee, "speak for 15,000,000 people any more than any other one person can; but I know that I've got too much invested for my wife and child and myself in the future of this country, and I and many other Americans have too much invested in our country's welfare, for any of us to throw it away for a siren song sung in bass."

Already Mr. Robinson is paying the penalty of his courage. He has become the target of abuse in the Communist Daily Worker, and the cry is likely to be echoed in other quarters of the extreme left—an unpleasant situation for a man whose business, as he said himself, is not politics but baseball.

The Responsibility of Greatness

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Post of Thursday, July 14, 1949, entitled "We Must Buy Peace." This article is written about the debate on the Atlantic Pact in the United States Senate and it deserves the consideration of Members of Congress and the American people.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE MUST BUY PEACE

It is a pity to see so much debate on the Atlantic Pact consumed by talk on the negative side of the obligation. Senator DULLES said there was no more reason for the United States to arm France than for France to arm the United States. Nor is there any prior commitment to supply arms to a particular country or any prior commitment to support a particular arms program. All this is incontestable. The pact is an "all-for-one and one-for-all" treaty providing for a common defense in organized form. The emphasis is on organization. Article 9 sets up a council, which, after ratification of the pact, shall "consider matters concerning the implementation of this treaty," particularly the appointment of a defense committee which in turn shall recommend mutual-aid measures.

A military mutual-aid program and the pact are thus two halves of the same walnut. Senator TAFT scored a point when he said that if none of the parties understood that any arms obligation was implied in the treaty, then none of the parties could object to reservation to that effect. His point has been taken up by Senator WHERRY. The Nebraskan proposes a declaration of intent that no legal or moral obligation exists to send arms to Europe till the attack actually occurs which Article 5 recognizes as an attack on all the signatories. This would be a crippling amendment. It would deny to the defense organization the preparedness and the training with which to defend Europe, for neither preparedness nor training is possible without arms. A declaration of intent had much better be pinned on Article 9, and read that only a collective military establishment will be munitioned under the Atlantic Pact. That would needle the Europeans to continentalize their defense—a step in the development of a real unity of the Atlantic community.

Let us think on the eve of a vote in terms of affirmations. Toward the end of Tuesday's debate, under pressure from straight thinkers like Senator MORSE and oppositionists like Senator DONNELL, Senator DULLES appeared to admit there is an obligation to a defense organization, or the collectivity—to be determined later. Surely this is inter alia to ship arms. The Atlantic Pact is the military corollary of the Marshall plan. Through ECA the United States is supplying the major portion of the sinews in return for a pledge of self-help. The interest of this country would

not be served by insisting that the other parties in the defense group should find their own paraphernalia. They cannot afford it. Their economic recovery would be imperiled. What has been stressed all along is that there shall not be too much diversion of western European energies into the making of munitions. Undoubtedly the signatories expected America to be the main arsenal if only to standardize weapons.

We regret Senator TAFT's decision to vote against the treaty because he does not want to commit himself to the obligation implied in it. He would subscribe, evidently, to the unnecessary piece of paper that the Atlantic Pact would become under the Wherry amendment. Surely these are days that call for affirmations. The "craven fear of being great" is unbecoming to a Nation upon whose shores there is banked so much world power—power that will not keep the peace unless accompanied by a policy firmly declared beforehand and bolstered by collective preparedness. History records that the lack of such a policy by America's predecessor, Britain, condemned humanity to the agony of two world wars. What a statesman Senator TAFT would be if the bent of his mind were affirmative. These are dangerous times when, with an aggressor walking the earth, the United States needs to say a resounding "Yes" to the responsibilities of power. But Senator TAFT's public cerebrations on foreign affairs, winding up as they do in votes which lack the interconnection of a principle or a policy, leave a trail of uncertainty which diminishes his leadership.

Editorial From Los Angeles Daily News

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. DOYLE. Mr. Speaker, the following is an editorial which appeared in the Los Angeles Daily News, Saturday, July 16, 1949. I think it is especially appropriate to call it to your worthy attention and consideration.

NOTHING TO FEAR BUT FEAR

When the late President Franklin D. Roosevelt said in the early thirties that "we have nothing to fear but fear itself," he may not, as certain Republican opponents have asserted, been wholly original. He was, however, forcefully truthful.

That statement is singularly appropriate at this time when there is so much talk about the grave possibility of another recession. Psychologists long have known that fear begets fear and by the same token, inversely used, confidence begets confidence.

Alfred P. Sloan and C. E. Wilson, the two highest-ranking executives of the General Motors Corp., recently have echoed the Rooseveitian pronouncement and given new assurance that industry and our economic life generally are sound. General Motors itself has demonstrated the validity of the statement by its chiefs by reporting an output of 265,280 cars for the latest month for which complete figures are available. This is the largest volume of production in GM's history.

There have been other assurances. Hardheaded businessmen, not versed in political propaganda but intensely interested in facts, are telling us something like this. We paraphrase and do not quote directly:

Business, which in effect means national income, goes up and down. That is the nature of business. The current national income as last reported is approximately $217,000,000,000. Yes; that's a drop of $4,000,000,000 from last year's peak. But it is also three times as much as the $70,000,000,000 prewar peak. It would be as impossible to force national income to remain static as it would be to force personal income to remain at the same figure and for the same reason.

A change in income, however, is not always too significant. It is not always the best gage of how things are going. It is not a fever chart unless the change is sudden, great, and lasting. A rise in incomes does not prove a rise in prosperity or the standard of living by any means. In China it takes 100,000,000 Chinese dollars to buy what one Chinese dollar would buy 20 years ago. It is a poor Chinese indeed who is not a millionaire. Yet, a Chinese may have $10,000,000 and go without breakfast.

We are giving away and lending much money, we Americans. Opinions differ as to the rightness and the value of doing it. Those who advise the administration and Congress are of the opinion that we should do it, in fact must do it, and that it pays. We believe so, too, within limits.

But giving or lending money that enables most of the world to compete with us as buyers of commodities we produce means the price goes up and the relative amount each of us can buy goes down. Hence, a national income of $217,000,000,000 may not mean we are richer or better off. It may mean merely that the available supply of what is for sale brings into the tills more in dollar units.

If the national income goes down $4,000,000,000, or any given number of billions, there may still be as much to buy and it may be worth as much. There are simply fewer monetary units to buy it with which, in turn, may mean only that each unit can buy more. In fact, unless there is a serious slump in production that is exactly and only what it means.

The important thing in America is to keep as many persons usefully employed and self-supporting as possible. When we can reckon national income in terms of food consumed, clothing worn, gasoline consumed, movies visited, fun had and other useful and pleasant things and a few of the cultural items, then we are talking about real income. If and when we get a large section of the population, say the 15,000,000 or so we had during the depression of the thirties, that are short on the necessaries and totally minus on the cultural things, we have a drop in income that should concern us.

Our Congress and our State government should never lose sight of the importance of two duties. Duty No. 1 is to keep a sharp look-out for new ways of developing our resources and sustaining old ones so that prosperity, including jobs, may remain at peak. The other duty is to provide, sustain, and develop those legitimate social remedies for social disasters that we have not yet found a way to prevent.

In California we have been backward in this regard. Nearly every effort to provide an agency for surveying and developing resources, especially human resources, such as have been suggested by both Gov. Earl Warren and leading Democrats in the legislature, has been ignored or turned down. California still must depend largely on the Federal Government for long-period relief aid aside from a pension system which we may not have with us much longer.

For many decades to come America will prosper through business and private enterprise. If conditions force us into further extensions of social security they can be directed to aid private enterprise and not destroy it.—L. E. C.

A Defense of the ITU

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I have received a communication from the Youngstown Typographical Union, No. 200, in Youngstown, Ohio. They have brought to my attention certain facts which, in my opinion, ought to be inserted in the CONGRESSIONAL RECORD, in view of the fact that in the course of the recent debate on the repeal of the Taft-Hartley law their reputation was attacked. I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the Appendix of the RECORD, as follows:

YOUNGSTOWN TYPOGRAPHICAL
UNION NO. 200,
Youngstown, Ohio, July 13, 1949.

Hon. HUBERT H. HUMPHREY,
United States Senate,
Washington, D. C.

DEAR SENATOR HUMPHREY: My attention has been called to a speech made by Senator TAFT in the United States Senate June 9, 1949, in which he stated in part:

"It is not the employer about whom I am concerned. The employer is of very little concern to me. What I am concerned about is the individual man. The union has so limited the number of people who can become printers that today we have a shortage of printers. If that policy were pursued in all industries, we should have so much unemployment that the Government itself could not support it.

"As an example, take the case of a printer who came from a small town in Ohio, where there was only one shop, a nonunion shop. He learned his printing in that shop. He went to Youngstown and sought a position on the newspaper. He was sent to the union and the union told him, 'No; we will not take you into this union. You learned in a nonunion shop. If you want to go through 6 years of apprenticeship, all right. Otherwise you cannot be a printer in Youngtown.' Every shop in Youngstown is a union shop.

"It is that arbitrary power against the individual to which I object in the closed shop. It is a matter of civil rights of members of the union and of various persons who seek employment. Those rights are just as important as any of the other civil rights which have been discussed on the floor of the Senate."

To the best of my knowledge, no printer has ever been denied membership in Youngtown Typographical Union, No. 200, in the more than 65 years of its existence because he learned his trade in a nonunion shop.

It is not now, nor has it ever been, the policy of Youngstown Typographical Union to deny membership to men or women who learned their trade in other than union shops. Nor has it ever been the policy of any union affiliated with the International Typographical Union to bar any printer because he learned his trade in a nonunion shop. I myself joined the union in 1912, after having learned my trade in a small town, a nonunion town. I made application direct to the International Typographical

Union, giving my experience, age, time spent at the trade, etc. I was accepted into membership without any question. During 37 years' continuous membership no one has ever asked me whether I learned my trade in a union or nonunion office. I was taken by the members for what I am—nothing else.

The following list of applicants for the past 12 years, taken directly from our files, shows the complete error of Senator TAFT's statement.

The column headed "Initiated" shows the date on which the applicants formally were taken into the union following their acceptance by a vote of the membership.

You will note that of a total of 39 applicants only 2 were rejected, 3 withdrew their applications before being acted upon, and 34 were accepted. Of these 34, 15 learned their trade in union shops and 19 learned their trade in nonunion shops. I believe this record is certainly conclusive evidence that Youngstown Typographical Union does not put the bars up because a man happens to have learned his trade in other than a union shop.

Name	Initiated	Learned trade	Union
R. Roath	Jan. 26, 1937	Vindicator Printing Co., Youngstown, Ohio	Yes.
Harry Kacher	Feb. 1, 1937	Barberton Herald, Barberton, Ohio	No.
Robert Pushish	Feb. 3, 1937	R-B Printing Co., Cleveland, Ohio	No.
George Williams	Feb. 13, 1937	Truscon Steel Co., Youngstown, Ohio	No.
J. R. Bartholomew	Feb. 18, 1937 (rejected, insufficient experience).	Youngstown Schools	No.
Patrick Valentino	June 24, 1937	J. Young Printing Co., Akron, Ohio	No.
James Coplin	Withdrew application July 19, 1937.		
Henry Kappelhof	Withdrew application July 17, 1937.		
John Hill	do		
John Peter Robek	Nov. 11, 1937	Youngstow. Printing Service, Youngstown, Ohio.	No.
F. M. Little	Nov. 23, 1937	Vindicator Printing Co., Youngstown, Ohio	Yes.
M. P. Tannehill	Apr. 26, 1937	Youngstown Printing Company, Youngstown, Ohio.	Yes.
Dominic Camp	June 9, 1938	Beil & Evans Printing, Youngstown, Ohio	
James McVerry	June 8, 1939	Vindicator Printing Co., Youngstown, Ohio	Yes.
Harold Thomas	July 14, 1939	do	Yes.

Edward Games	Sept. 24, 1940	Youngstown Sheet & Tube Co., Youngstown, Ohio.	No.
Alva Riley	July 23, 1940	Telegram Printing Co., Youngstown, Ohio	Yes.
Joseph Fleming	Oct. 28, 1941	Vindicator Printing Co., Youngstown, Ohio	Yes.
Alex D. Cochrane	do	Gulf States Steel Co., Birmingham, Ala	No.
George Krok	Dec. 23, 1941	School Print Shop, Youngstown, Ohio	No.
Alfred Bahr	August 1941	Vindicator Printing, Youngstown, Ohio	Yes.
Stephen Seifert	April 1943	United Printing Co., Youngstown, Ohio	Yes.
Ralph R. Shanks	May 23, 1943	Struthers Print Shop, Struthers, Ohio	No.
Sally Coplin	Rejected, April, 1944	Moscow, Russia	?
Edward Games	Oct. 27, 1944 (reentry)	Youngstown Sheet & Tube Co., Youngstown, Ohio.	No.
Alex E. Calvin	Jan. 25, 1945	Martinsville (Ind.), Democrat, Martinsville, Ind.	No.
James A. Martin	Dec. 23, 1946	Martin Printing Co., Robings, Calif	No.
Albert T. Marsch	May 1945	Youngstown Printing Co., Youngstown, Ohio	Yes.
Louis A. Gaal	Oct. 28, 1945	United Printing Co., Youngstown, Ohio	Yes.
Harry Gerber	Nov. 27, 1945	Vocational School, Bayonne, N. J	No.
C. H. Petrarca	Dec. 29, 1945	Eagle Printing Co., Youngstown, Ohio	No.
J. F. Painter	May 26, 1946	Louisville Herald, Louisville, Ohio	No.
William G. Glaros	Sept. 22, 1946	Sun Printing Co., Youngstown, Ohio	No.
George J. Glaros	do	Glaros Printing Co., Youngstown, Ohio	No.
Mary Jimenez	Oct. 2, 1948	Italian-American Printing, Youngstown, Ohio.	No.
Carl D. Jones	Dec. 28, 1947	Vindicator Printing Co., Youngstown, Ohio	Yes.
Alva V. Riley	Aug. 20, 1948	Telegram Printing Co., Youngstown, Ohio	Yes.
James F. Martin	Dec. 6, 1948 (reentry)	Martin Printing Co., Robings, Calif	No.
C. W. McWilliams	Jan. 2, 1949	Vindicator Printing Co., Youngstown, Ohio	Yes.
Ralph A. Valentino	Feb. 6, 1949	Kaufhold Printing Co., Akron, Ohio	No.

Another statement of Senator TAFT is not true. He says that "Every shop in Youngstown is a union shop." I wish that were true, but, as in most other cities, there are plenty of nonunion shops here. And it is certain that any competent printer who learned his or her trade in any of these shops would be welcomed into the union if he is competent and of good character.

The following list of union and nonunion shops in Youngstown gives the number of printers in the union shops. I am unable to give an approximate number in the nonunion shops, because that would merely be guesswork. There may be a few nonunion shops I have overlooked.

UNION SHOPS IN YOUNGSTOWN

	Approximate number printers
Bell & Evans Co., 850 Market St	6
City Printing Co., 114 S. Champion	3
Glaros Printing Co., 234 Rayon Ave	2
Hardy Planographing Co. 3931 Market St.	1
Royal Printing Co., 208 W. Wood St	1
United Printing Co., 450 W. Federal	9
Youngstown Printing Co., 787 Wick Ave.	6
Youngstown Vindicator, Vindicator Square	90
Youngstown Typesetting Co., 1505 Market St	2

NONUNION SHOPS IN YOUNGSTOWN

Coplin Printing Co., 225 Wood Street.
Duplex Service Co., 622 Market Street.
Griffiths Press, 109 East Boardman Street.
Kelty Printer, 2827 Ridley.
Quality Printing Co., 211 Kyle Street.
Standard Printing Co., 289 Arlington.
Sun Printing Co., 1730 Market Street.
Williams Printing Co., 313 East Boardman Street.

INDUSTRIAL SHOPS (ALL NONUNION)

Sheet & Tube Co., 2679 West Federal Street.
Truscon Steel Co., 1315 Albert Street.
General Fireproofing Co., East Dennick Avenue.
Youngstown Manufacturing Co., 70 South Prospect.

I understand Senator TAFT also has been broadcasting over the radio the story of the nonunion printer from a small town in Ohio. But this is the first time, to my knowledge, that he has named Youngstown as the city where he wished to make application to join the union.

Youngstown Typographical Union, No. 200, deeply resents those statements made by the Senator from Ohio with reference to our union and our great international union.

Confronted with the evidence which we have presented, we believe Senator TAFT should retract his statements and the inference he has drawn in trying to lead the Senate and the country into believing Youngstown Typographical Union and other typographical unions bar nonunion printers from membership in our organization.

Youngstown Union is only one of about 900 local unions affiliated with the International Typographical Union, but we are glad that Senator TAFT pointed his finger at us, because it gave us an opportunity of showing how ridiculous some of these false charges against our great union really are.

If Youngstown Union can be of any service to you, be assured we are ready and willing to help you in any way possible.

Thanking you again for anything you can do in bringing these facts to the attention of the Senate, and for the splendid efforts you are putting forth for the cause of labor, I remain,

Very respectfully yours,

M. M. MARTIN,
President.

P. S.—If you think it necessary, I shall be pleased to furnish you with sworn affidavits of those persons who were admitted into the union although trained in nonunion shops. I have these affidavits in my file.

The Responsibility of College Graduates as Citizens

EXTENSION OF REMARKS
OF
HON. CHARLES A. PLUMLEY
OF VERMONT
IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. PLUMLEY. Mr. Speaker, under permission heretofore granted me, I wish to include in the RECORD the commencement address delivered on June 13, 1949, at Middlebury College, Middlebury, Vt., by the Honorable Samuel B. Pettengill, graduate of Middlebury in 1908 and our good friend and former colleague.

The address follows:

THE RESPONSIBILITY OF COLLEGE GRADUATES AS CITIZENS

A great lawyer of the old South said, "He who saves his country saves all things, and all things saved shall bless him. But he who lets his country die lets all things die, and all things, dying, curse him." No one has a future outside of the future of his country. I shall, therefore, talk today on the responsibility of college graduates as citizens of their country and their community. This is a good day to discuss it. Tomorrow is Flag Day—a day of dedication to our Republic.

Buckle, the great English historian, says that the advance of civilization depends solely on the knowledge possessed by the ablest, and how far that knowledge pervades the whole society. Otherwise the uninformed and mediocre control the course of events.

This theme should be stressed on every campus and in words that bounce along the sidewalk. Our country is fast drifting into a condition of deep concern to all of us, but especially to young men and women. The Government is rapidly passing out of the hands of the American people. A vast and arrogant bureaucracy, greedy for lifetime jobs on public pay rolls, is fighting every effort to reduce their powers or prevent their waste of the people's money. This Frankenstein challenges Congress itself. It

is the superlobby of all history. The bureaucrats are becoming the "untouchables" of the western world. Sober and patriotic men like Senator BYRD, of Virginia, and former President Hoover are given little or no support in their struggle to keep our country solvent, upon which depends the fortunes of every one of you. While workers in private industry are now being laid off daily, the Belshazzar's feast of Government spending and taxing goes on. The thoughtless mob follows the pied pipers of the social-welfare state.

Never before has there been such a desperate need for analytical, discriminating minds able to "debunk" the sloppy slogans of the crowd which never thinks, but only feels. The abdication of college men from their responsibility to give leadership in political affairs is almost universal. How many college graduates can you name who are mayors of a city?

ABRACADABRA

For thousands of years mankind has been raised from childhood on stories of good fairies, the magic wand, the magic carpet, the magic key, the lucky stone, "Jack-the-Giant-Killer," "St. George and the Dragon," "David and Goliath," the Medicine Men of the American red Indian or the voodoo of the African savage. Always some easy escape from difficulty, if one can but find the right magician or political party. These superstitions help to explain why we are returning today to the divine right of the state when our fathers once rejected the divine right of kings.

That the 12-year-old mind believes the prevailing nonsense can be understood. But that college graduates promote the myth of the state, indicts our educational system. Yet certain "intellectuals" are more responsible than blacksmiths and farmers for the naive belief that the Federal Government has a magic cornucopia; that it can "aid" the States with funds which it does not get from the States to return to them, less the political brokerage; that society can get something for nothing; that any social service is "free"; that if the Government prints enough dollar signs on pieces of paper called money or bonds, it can make a Nation rich. Printing-press money is the magic key today. The age of witchcraft has come back. John Law and the Mississippi Bubble have returned. Ponzi is here again.

The politicians, of course, thrive on these nursery tales. Their jobs depend on them.

But in their failure to expose this black magic, too many college men and women have defaulted as citizens. As the New York Times has pointed out, thousands graduate with little knowledge of American history; few have any grasp of the meaning of constitutional liberty. Thousands swallow political propaganda as if it were divine revelation. Thousands view politics as too sordid for the Phi Beta Kappa intellect, and wonder why a fine man like Charles Evans Hughes ever got into the dust and dirt of the political arena. They should remember Emerson's words: "The scholar loses no hour that the man lives." Sophistries which cannot stand the simple test of grade school arithmetic have become the abacadabra of the political medicine men. The experience of the ages and the convictions of great statesmen molded in the long struggle of men to be free are tossed recklessly aside. Shrill voices fill the air telling us that there is a magic substitute for work.

DEFAULTING AS CITIZENS

Because of this default of the educated mind—if you can call it "educated"—the tides of mass ignorance and class hatreds are sweeping America into the maelstrom of discredited European systems which our fathers thought they were leaving behind forever. When I think of the high proportion of college graduates who did accept the responsibility of citizenship in writing the Declaration of Independence, the Federalist Papers, and the Constitution of the United States—men who had pondered deeply all that history had taught of the blight of Caesarism, today's default of college men and women as citizens is tragic indeed.

Putting aside for the moment any sense of the obligations of patriotism, this belief in the magic of political medicine men is the direct personal concern of ambitious college men and women in three respects. One is in your capacity as the loyal alumni of alma mater. Big government is slowly throttling the privately endowed colleges. Second, big government is putting a ceiling on the attainment of those rightful ambitions which led you to spend 4 years on the campus. You are being ambushed in a cold war against success—against the thrifty middle class. And third, this concerns your responsibility toward the less fortunate—the uneducated.

At first blush you may say, "Well, aren't we doing all right under big Government? Look at our prosperity." All right, let's look at it—closely. Is it solid or do the magic mirrors of the medicine men make it look solid?

Consider the following: Today's prosperity is measured in 50-cent dollars. That makes it seem twice as big. It is based on the effort to catch up with the production of goods postponed by 4 years of war. It is the result largely of mortgaging, almost up to the hilt, the wealth and savings of four centuries of toil. A debt of a quarter trillion dollars is now called a great national asset. We are told that immense purchasing power is to be found in what we owe. No Svengali ever equalled such hypnotism as this. In large part, the recent boom is based on huge exports which will never be paid and which, perhaps, will never cease this side of financial collapse. The "break-even" point of business has risen which means that the cushion between good times and bad has grown thin. Due to artificial support given, however necessarily, to the price of Government bonds, no one knows what they are actually worth—how solid our foundation is. Our books of account have been doctored. The billions paid in for social security have all been spent. Forty-three new spending programs have been proposed to the present Congress to be superimposed on bigger spending under old programs.

THE BRAKES ARE OFF

Ninety percent mortgages of the public's money are being made on houses with payments strung out so that the first old-age pension check may possibly be used to pay the last installment of the mortgage. Government having taken from the people their century-old yardstick to measure the value of money—convertibility into gold—no one knows what the dollar or any foreign money is worth or will be worth. The brake which the people could once clamp down on profligate Government spending by demanding gold for paper is gone. The Chinese maze of 1,800 Government bureaus in Washington, all fighting like wildcats to perpetuate themselves, have reached a state of chaos, as the report of the Hoover Commission shows.

Pompous plans are in the hands of little men. Their eager desire to manage the affairs of other men varies directly with their inability to manage their own. Our political leaders were completely taken in by the masters of the Kremlin. As a result, the peace they promised the boys who died has been lost. After being grandiloquently told there would be no more balances of power, we now have the Atlantic Pact and are arming one-half the world against the other. We are now burdened with a weight of nonproductive armament no free people ever were called upon to carry or can, perhaps, carry and remain free. We are threatened with the permanent militarization of our country and the conscription of our youth, thus removing them during important years from contributing to the economic growth of the Nation.

These are some of the facts behind the propaganda.

This is Santa Claus without his mask. Behind him comes the tax collector.

A large part of the economy of the Nation rests on economic stilts and statistical falsehoods. Every country in the world, including our own, has repudiated its obligations in whole or in part, either outright or by devaluation of the currency. In order to cover up, the politicians and Socialists have seduced the masses with the superstition that Government can create purchasing power by writing dollar signs on pieces of paper called money. If that were so, counterfeiters—every good counterfeiter—should be honored as a public benefactor rather than be put in jail. As long as his money is accepted, it certainly creates a market for goods and jobs producing them. But don't you see that the counterfeiter is a thief? He creates no wealth, yet obtains it from those who worked to create it, with the result that they have less. Every government that prints money to pay its bills is a moral counterfeiter. It pours water into milk. It dilutes every dollar. Like a thief in the night, it reaches, its stealthy fingers into every purse—into every college endownment. It robs the poorest the most.

POINT OF NO RETURN

In the meantime the waste of the people's wealth goes on. Taxes are now above the point at which a free society can long survive if the fiscal history of centuries is worth anything. Taxes have already passed the point of diminishing returns.

A man from Vermont, Calvin Coolidge, once said in substance, "If you tax a man 30 percent of what he makes on Monday, 40 percent on Tuesday, 50 percent on Wednesday, and 60 percent on Thursday, he won't show up for work the rest of the week." Taxes are destroying the incentive to work. Every tax tells someone not to do something. They discourage the enterpriser and tell the investor not to risk his capital. Last year only $1 in $25 which went into the expansion of business represented risk capital—the lowest percent in history. Consequently, the limitless promise of human happiness which the "great multiplier" of science, technology, and power has made possible for mankind, is being curtailed.

THE CHALLENGE

If there is any group who should now accept the responsibility for exposing this evil spell, it is the young men and women because they have the longest to live and the most to lose. It is time for you to stick a harpoon into this political blubber.

I return now to my first point: that the privately supported colleges of America are in process of being liquidated. This should appeal to college graduates—as graduates—and to all of us as citizens because of the priceless spiritual and cultural contributions which these colleges have made to our country.

The endowments of private colleges made by public-spirited men and women when taxes on their earnings were light made it possible for every student to obtain his education at less than cost. That has enabled hundreds of thousands of poor boys and girls, myself among them, to go to college when they otherwise could not. Every graduate of these colleges—and America itself—has been a beneficiary of the system that permitted the ambitious to succeed, and then to help build the colleges that help build our country.

But money spent in taxes cannot be given to colleges. Did you ever buy groceries with a tax receipt? In the height of war prosperity, the per capita contribution to private

charities was one-third less than in the worst year of the depression. Moreover, in order to borrow as cheaply as possible, our debt-ridden Federal Government forces down the interest rates on money. As a result, college endowments earn less and less, while inflation adds to the cost of maintaining our colleges in the pay of every professor or janitor and in the price of all equipment. So, as a result of the cheap money policies of the "pied pipers" of the welfare state, colleges find their expenses going up and their income going down. Meantime, for the same reasons, their possible benefactors are being liquidated by income taxes up to 77 percent and their estates cut in two by inheritance taxes, which are a capital levy.

So, as in Germany under Hitler, colleges are to be subsidized by the state and their professors morally intimidated into silence or told outright to teach nothing critical of the politicians in charge. A congressional committee might investigate them. Or reduce their appropriations. Educators who defend intellectual freedom and at the same time clamor for Federal aid are political babes in the woods.

As Rudyard Kipling wrote:

"This is the law and the law shall run
Till the earth in its course is still
That he who eateth another's bread shall
do that other's will."

As President Wriston, of Brown University, says, "Professors in endowed colleges no longer look to endowment * * * They have become dependent on government funds * * * They are not likely to oppose the expansion of governmental activities."

FREEDOM MUST SURVIVE

As the difficulties created by the political medicine men increase, the needs of our colleges—of Middlebury—multiply. I hope there are men and women here who still believe in the philosophy of freedom—some unbuyable Americans. I hope they will give generously to the college on the hill so that it will not be forced to become a beggar at Washington, D. C. We must not sell our colleges or country short. We must fight to preserve our island of freedom in this rising sea of world-wide slavery to the state. We should do for our children what our fathers did for us. I want to pay back the scholarship I received from others—together with interest, and more. I intend to do so.

The second plank of the Communist Manifesto of 1848 called for a heavy progressive income tax, and its third plank, for the abolition of the right of inheritance. These doctrines are moving to their logical end here as elsewhere. The power to tax is the power to destroy, and is being used to destroy, either blindly or deliberately. We spend billions to fight communism abroad and adopt its major planks at home.

Spendthrift government is thus slowly strangling our free private colleges. It is, of course, all being done under the banner of "humanitarianism." But no dictator ever rose to power except on the claim that he was "a protector of the people."

POLITICAL CANCER

Aside from the Communists, few advocates of the welfare state are either smart enough to see or honest enough to tell what they are doing. President Peron of Argentina is the exception. He says frankly that the old American ideal of "equal justice under law"—words inscribed on the portal of our Supreme Court building in Washington—must be thrown into the ash can. He says that the welfare state exists for the express purpose of treating men unequally. In short, to tax the successful in order to provide bread and circuses for those who vote to keep the political humanitarians in power.

So naked power usurps the throne of the blindfolded goddess of justice. The cement of a free society—the old-time faith that all men will be treated equally before the law—and by the law makers—crumbles away. The flag of fraternal union is torn in a cold war as pressure blocs struggle for the favors of the welfare state, a war of all against all—the most deadly struggle known. This is democracy gone to rot. The question in legislative halls is not—What is right?—but who has the votes?

We have seen this alliance in Jersey City under Hague, in Kansas City under Pendergast, in New York under Tammany. Yet, for lack of leaders, millions are so naive as to believe this cancer will not—has not—spread into the heart of our Republic at Washington.

Two thousand years ago Plutarch wrote, "The real destroyer of the liberties of the people is he who spreads among them bounties, donations, and benefits." Something for nothing. Everything for nothing. When the "gimmes" outnumber the taxpayers, a nation begins its decline. Sixteen million people now receive Federal Government checks. Many, of course, are honestly earned, but the number grows ominously.

The Constitution says that certain rights such as trial by jury and habeas corpus are beyond the power of government. But there is no limitation on its power to tax. History has not yet proved that any republic can long endure when the unlimited right to vote is coupled with the unlimited power to tax. You should support a constitutional limitation on the peacetime taxing powers of government. England's sun began to set 37 years ago when Lloyd George promised "9 pence for 4 pence"—something for nothing. The pressure blocs and crushing taxation have done to England what war alone could not achieve.

WHO BUYS THE "FREE LUNCH"?

So here. It is reported that in the State of Illinois 48 percent of those drawing unemployment compensation quit their jobs voluntarily! The professional loafer and job jumper is encouraged to take a vacation on public pay. You can find similar conditions everywhere. The pressure blocs, aided by the bleeding hearts, demand longer unemployment vacations at higher pay. Strikers demand to be supported by taxpayers while on strike. Many veterans who came back from war wholly unscathed demand huge bonuses and lifetime care for non-service-connected disabilities at taxpayers' expense.

Members of chambers of commerce demand Federal pork for local improvements. They want someone else to build their schools and dredge Mud Creek. Labor unions demand more for doing less. The welfare state having promised to care for everyone from the cradle to the grave, the stampede to get on the gravy train gathers speed. The mayors of American cities have formed a lobby in Washington to get the easy money of the political medicine men.

Political charity beyond a certain point releases forces no democratic government can hold in check. It explains how the big city boss stays in power. He levies toll on the productive members of the community to distribute to his retainers. The latter wink at his personal graft so long as they get theirs. It is a sign of the times when high Federal officials are voted huge expense allowances free both from taxes and all public accounting.

Yet, after seeing enormous tolls collected from saloons, race tracks, red-light districts, prize fighting, slot machines, road building, and municipal supplies, in one city after another, people who claim to be educated hanker and yearn to turn the control of all business, trade, farming, commerce, and industry over to the bigger politicians on the Potomac who perpetuate themselves in office by similar methods, and with the same corrosion of public honor and private morality. Finally, some supergangster rides to power on the ruins of liberty. It is this evil course—camouflaged as the welfare state—which colleges and college men and women should expose with the passionate intensity of the prophets of the Old Testament.

Such is the "degradation of the democratic dogma" to use a phrase of Henry Adams. Here is the rotting cancer of our free scciety—something for nothing.

Economics has been called the dismal science. Nevertheless every sound book on that subject can be boiled down to a few words: There is no such thing as something for nothing; nothing is free; everything has its price; someone must pay it.

If you shy away from economics, all that is necessary is to bring the moral sense to bear on these questions. The Bible says "In the sweat of thy face (not of another man's face) shalt thou eat bread. * * * Thou shalt not steal * * * nor covet anything that is thy neighbor's."

I am amazed that so many men in the Christian ministry do not see the ultimate immorality of the welfare state. It is finally and politically based on this question: "What is my fair share of what you have earned?" The pulpit condemns a candidate who gives his own money for a vote. That is bribery. But when the candidate asks for the vote of A on the ground that he will take money from B to give to A, he is acclaimed a great humanitarian. Thus the wants of rogues become the rights of man.

THE FRUITS OF HONEST TOIL

I make no defense of wealth acquired by monopoly, force, or fraud. I am talking about the fruits of honest toil. Who has any legal claim to it superior to the man who worked for it? The thief and defrauder should be forced to make restitution to those they have despoiled. That is a function of government. But the political redistribution of honestly acquired wealth is a path no Christian nation should tread. It cannot survive the cancer of the soul of something for nothing. President Coolidge said that he was for economy in government not merely to save money, but to save men.

Political charity gives the recipients the power, by their votes, to continue to live at public expense. Why work when you can compel others to work for you, or sell goods to you, or rent houses to you at less than the price established in a free market? As Lord Acton said of Machiavelli: "In the name of the public's good he destroyed the conscience of the individual."

This brings us to the next point—your responsibility to the less fortunate—the uneducated—those at the base of the economic pyramid. "Would you let them starve?" is the question that is always asked as if it had no answer except to seize the power of government to rob Peter to pay Paul.

No, I would not let them starve. To care for the truly lame, halt, and blind is an obligation of Christian civilization binding on every conscience. But how is that best done? That is the only question.

I submit that as political humanitarianism runs wild, the loafers and the cheaters will rob our storehouse of wealth so that we will be less able to care for those in genuine distress.

Let us reduce this problem to simple terms. In every society in every age—true among the pioneers in a wilderness cabin or in a great city—it is the well who take care of the sick, the strong who take care of the weak, the able who care for the disabled, the foresighted who care for the foolish, those in middle life who care for the little child and the aged. Who else can care for them, regardless of how it is done, whether within a family or through a Government bureau? Because this is true, we should not overtax

the strong. We should give incentives to the ambitious, rewards to the industrious, security to thrift, honor to achievement, praise to success.

In 1928, Congress gave its highest civilian honor, the Gold Medal, to Tom Edison. In the official citation Congress placed a value of $15,000,000,000 as the worth of his brain to his country. At that time that was one-twentieth of the national wealth. Millions of jobs flowed from his workshop. If Edison made a few millions it was only because in a free market he gave more than he got. No one had to buy his inventions. They did so only because they were worth more to the buyers than the price they paid. Why should we take the heart out of such men, stifle them in the red tape of a politically planned economy, and tolerate the hissing against them by those with a foreign accent?

LABORATORIES—OR LEGISLATURES

Your jobs depend on the freedom of creative minds. Your jobs depend on a dynamic expanding economy which can only be tooled from private savings—not from public spending. High taxes are fencing you in.

We have had 400 experiments with socialism in America, such as the Plymouth Rock Colony, New Harmony, and Brook Farm. They all failed. They failed, because in time the industrious got tired of supporting the drones. So they quit. On a Nation-wide scale the result can only be the same.

Let the ambitious and industrious continue to build up our country. That is the only way the lame, the halt, and the blind can hope for better conditions. The spendthrift supports no charities—no colleges. He steals from them.

The strong should help the weak, but you cannot help the weak by weakening the strong. You cannot make sick people well by making well people sick. You cannot lift up the wage earner by pulling down the wage payer.

When the world's hard work could finally be done by machinery cheaper than the cost of keeping slaves alive, the emancipation of mankind from a life of hopeless, ceaseless drudgery began. Not until then did the weary and heavy laden have a chance. Life was once so hard and brutish that philosophers said no man could call himself fortunate while he lived. What has changed his condition so much for the better? It is the private property system, which the social welfare state would tax to destruction. It is the profit-and-loss system, with its incentives to succeed, when lightly taxed by government. It was not Karl Marx who took the women out of the coal mines in England a century ago. It was the steam engine and the power of machinery. Inventions and technology have done more to abolish slavery and child labor than the reformers. The laboratories do more for mankind than the legislatures. The plow that turns the sod under does more to feed the hungry than any act of Congress.

If some calamity forced us back to the same crude tools and horse and ox and man and woman power that we had when Franklin caught the lightning from the sky, our production of wealth would at once go down 90 percent; wages would go down in proportion; hours of toil would increase to the limit of human endurance, and nothing that Government or the political medicine men could do would prevent it.

The economic progress of mankind is chiefly measured by the substitution of giant slaves of iron and steel for the puny strength of animals and human backs. Under the hood of a 50-horsepower automobile is the strength of 500 men. Yet it is this system—sparkplugged by the hope of economic rewards—which has lifted more burdens from the backs of more people than any other system the world has ever known, that is derided in many college lecture halls today.

SUCKING THE NEST EGGS

How does all this concern you young men and women? You hope to climb the ladder of success. What do you hope to get for your effort? The satisfaction of achievement? Yes. Recognition? Yes. But you must have dollars to live. So let's look at these dollars.

The president of a great life insurance company said recently that the American people have taken out $70,000,000,000 life insurance more than they had in 1940 yet, collectively, they are no better off. Why? Because dollars have become cheap. And because taxes on dollars have gone up. If you bought a Government bond 10 years ago for $75, the $100 you get for it today will buy less than the $75 you paid. You have lost your interest and part of your principal. And you are 10 years older. If you save $1,000 and put it in a savings bank, you get from $10 to $20 in interest as against $40, 20 years ago. So you have to work twice as many years as your father did, when he was your age, to provide the same income for old age. As the welfare state goes up, individual security goes down. The cards are stacked against the independent, thrifty, hard-working American. His chance to get ahead grows less.

Except for the action of Congress last year, taxes are going up everywhere, every year. In some cities a man pays three income taxes. If he has invested his savings in building up his country, and gets dividends, he pays four income taxes. His savings earn less, they are taxed more, and what is left buys less. His pension or social security card buys less. Men old enough to retire are unable to do so. So they hold on to their jobs. This reduces the opportunities for young men and women.

This downhill course was speeded up by the cost and waste of war. But high taxes and cheap money were doing their deadly work before the war began, as any college president can testify.

THE RESPONSIBILITY

Young ladies and gentlemen of the class of 1949, I hope I make myself clear as to your responsibility to yourselves, your college, and your country. A lot of folks want to be taken care of, and a lot of other people want the job of taking care of those who want to be taken care of. But it should be your ambition, as honest men and women, to stand on your own feet, make your own way, demand to be permitted to keep the fruits of your toil, and not have the job of providing a job for those who want to take care of you.

Your future depends not only on your education, but upon your taking an active part in public affairs, in promoting a public opinion in a free society that is friendly to honest success. Modern science, technology, and power have placed in your hands searchlights to progress that make Aladdin's lamp seem dim. Don't let the medicine men take them from you.

I have one dream for my old college and my old State—that whatever is taught on other campuses or whatever is done in other States, that you will not bow the knee to the false gods of big government; that you will look shrewdly at the glib promisers who would strengthen society by weakening the individual. My dream for my old college and State is that they will continue to honor the sturdy virtues of those who laid your foundations in days long gone; that you will kindle a fire on these Green Mountains that will guide our country from darkness into light.

Editorial from Press-Telegram, Long Beach, Calif.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. DOYLE. Mr. Speaker and my colleagues, following is an editorial which to me is not only informative but significant in its record of the development of what is commonly called the West. Being a native son of the Golden State of California, I know that you will make all allowances for my again calling to your attention the presently achieved position of this western portion of our great country. Also I cordially invite and urge you to visit it at your earliest possible convenience.

The following editorial appeared in the Long Beach Press-Telegram, Friday, July 15, 1949. I am pleased to present it for your cordial consideration.

PACIFIC WEST IS STILL GROWING AS CITADEL OF AMERICAN YOUTH

World-wide lure exerted by the Pacific West persists—and it is good.

There is a great economic and political significance in the war and postwar move of population westward. In a decade the number of residents in California, Oregon, and Washington has doubled.

This represents the most prodigious migration and transformation in American history, and its import is not yet entirely developed. Since 1940 the Nation's population has increased 10.6 percent, but California has added 44.3 percent; Oregon, 49.3 percent; and Washington, 41.6 percent.

When Hitler's legions overran France and began to pump shells across the English Channel at the cliffs of Dover, 9,732,000 inhabitants of the Pacific coast learned that this region had become a citadel of shipbuilding, aircraft, and aluminum. Today, 14,144,000 persons dwell in these three States, some 10,000,000 of them in California.

Shortly after VJ-day, however, the west coast expected to lose its avalanche of newcomers. A flurry of departures back East, to the Midwest, and Southwest, coincided with diminution of activities in the shipyards and aircraft factories.

But for each welder or mechanic who moved out, a former soldier or sailor moved in. Then the migrants who had left the coast immediately after the war, began coming back. Women confessed to employment interviewers that other sections had not seemed so congenial after California sunshine and Oregon scenery.

Who are these newcomers to this region, and how will they behave in the West?

For the most part, they are young. Some 83 percent are under 44 years old, 41 percent under 35. Many are former veterans who trained in the West during the war and have decided that the California climate or the Northwest mountain lands carry more appeal than the temperature extremes of the prairie country. At least one-half of the migrants are from the industrial and agricultural Midwest and so constitute excellent settlers.

There is a profound political and economic independence.

California has 23 Congressmen at present, but probably will have 30 after the 1950 census. Washington will advance from six

to possibly eight, and Oregon from four to six. New York will drop from 45 Members in the House of Representatives to 42; Pennsylvania from 33 to 31; Illinois from 26 to 25; Kentucky from nine to eight. New Jersey, Missouri, and Oklahoma are also due to be affected adversely by the next apportionment.

Political might is shifting toward the Pacific, for after the 1950 census, the three States washed by the western sea will have a total of 50 electoral votes and so will have a greater say in national elections.

This development will also lead to changes in industry and economics. Already California, Washington, and Oregon are a greater market, in terms of people, than all of Canada. Indeed, California alone is altering the commerce of its neighbors. Once these States, to sell their products, had to sustain the costly train haul clear across the continent. Now the bulk of Columbia Basin lumber, cheese, apples, and flour is shipped to California's 10,000,000 buyers.

The West now follows the South in attacking freight rates which it feels have kept it a colonial dependency of the East. It has come to believe it should process its own raw materials, in which it is rich.

No longer is this area mainly one of lonely farms and isolated ranches. California now has 83 communities of 10,000 or more population. Only New York and possibly Pennsylvania have more of their citizenry on pavement.

The Capital of this Nation may still be on the Potomac, but, figuratively, it is much nearer the vast Pacific.

It is well with the West.

A Civil Rights Commission

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial which appeared in the New York Times of July 13, 1949.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

A CIVIL RIGHTS COMMISSION

Now for the first time Congress is considering the establishment of a permanent Federal Commission on Civil Rights. Full hearings are scheduled in several committees and Democratic leaders are hopeful that a bill can come to a vote at this session.

Three bills, two in the Senate and one in the House, are under consideration. An omnibus bill introduced by Senator MCGRATH provides primarily for creation of a Commission without the power of subpena. A specific bill, sponsored by Senator HUMPHREY, is concerned solely with a Commission which would have the subpena power. The subpena is stressed because without it the commission would be in the position of publishing facts based on incomplete evidence. A House bill, introduced by the gentleman from New York, Representative CELLER, is a counterpart of the Senate's omnibus proposal.

A permanent Federal Commission on Civil rights could be a central fact-finding agency concerned with assembling information on the status of basic individual and group rights, a function not now performed by any Government agency. Public hearings would be held to examine alleged denials or curtailments of rights guaranteed under the Constitution and the Federal codes. The Commission would compile information regarding existing legislation and public policy in this field, and make it generally available—as in the case of the widely publicized President's report which served as an inspiration for these proposals.

But the Commission would be more than an assembly line for collecting information (though the strong light of shining facts would also be an instrument to strengthen civil rights). The Commission would be prepared to offer recommendations for the improvement of civil rights practices and would call attention to emerging problems domestically and on higher levels. Furthermore, the Commission would notify the attorney general of alleged violations of civil rights laws. Thus the Commission's facts could be put to work effectively, under existing law, by the Government's enforcement department.

A permanent Federal Commission on Civil Rights was recommended by the President's committee in its report to the country 2 years ago. One way of insuring that a greater effort will be made to protect individuals and groups would be to create a Commission empowered to study—and recommend enforcement—on a permanent, year-round basis.

Farm Price Supports and the Pending Bill

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. JAVITS. Mr. Speaker, the interests of the consumer of food are of the most material importance in the current consideration of the Agricultural Act of 1949 by the House. Last March the American Magazine published an article by me on this subject in which I advocated the Hope-Aiken plan incorporated in the Agriculture Act of 1948, and containing the flexible support price program ranging from 60 percent to 90 percent of modernized parity as against the present flat 90 percent of parity, as being best for the consumer. I urged that the farmer should consider that he had the most to gain by cooperating in the attainment of a stable economy and the least to gain from getting temporarily a bigger share of the national income by high fixed support prices. The article is appended hereto:

WHAT'S KEEPING PRICES UP
(By JACOB K. JAVITS, Representative from New York)

Government figures say the cost of living generally at the beginning of this winter was up about three-fourths over what it was in 1939, the last normal year, but the cost of foods was up well over twice the 1939 prices. Why the disparity? Are government supports responsible? What has Congress done about it, and what is Congress going to do about it?

Uncle Sam does have a good deal to do with high food prices, and if you and I are going to have substantial relief in the cost of our food, Congress will have a lot to do with it in the law it makes. At present, laws administered by the Department of Agriculture designed to assure most farmers who grow our food and other basic commodities a living, are supporting prices. Although this fact is by no means the only reason for the high cost of living, it is a powerful force influencing the cost of living. There is a good deal, also, to be looked into in the additions put on the cost of food to the housewife by the whole chain of middlemen, by transportation costs and by labor costs. However, there is real evidence that a readjustment in Government farm price supports will imply constructive price adjustments for food and will help to counter the threat of a business and industrial recession.

The housewives never did get the point when, back in 1933, the Government destroyed more than 6,000,000 pigs, while many persons went hungry. Recently, people have been shocked by news of the deliberate destruction or waste of millions of bushels of potatoes. As they pay high prices for eggs, milk, and bread, and for cotton and woolen clothing, they feel they want to know why, when they hear that the Government is supporting these prices through its program.

Bumper crops are here now. More are coming. Already, we are warned of oversupplies in many farm products. Housewives have been waiting eagerly for these times, when they thought the law of supply and demand would relieve the strain on the budget. Now they realize that it is not that simple, and that man-made laws must cushion the shock of price readjustment, while striving to protect the consumer.

In 1949 the Federal Government will lend from $1,500,000,000 to $2,000,000,000—some authorities say even more—to help support the prices of food, tobacco, cotton, and wool. Every family not only will continue to buy these commodities, but will be taxed to finance this price-support program. It's all devised to help directly the 27,550,000 people who live on farms, at a heavy expense for the 118,000,000 who do not; and it's the job of Congress to see that it's worth it in terms of the interest of all.

The farmer has a big point in his favor in this price-support program. In the past, the farmers and their families have gone through dust storms, mortgage foreclosures, and poverty. Throughout World War II, they did a magnificent job in feeding our civilians, our vast Army, Navy, and Air Force, and a large part of the world as well; and after the war they kept our wartime allies, and even our erstwhile enemies, from starvation and anarchy. Few people will deny that every reasonable effort should be made to keep up the farmer's standard of living, to make sure that he gets fair prices for his products. The big depression of the 1920's had as one of its principal origins a collapse of farm-buying power. When the farmer suffers, we all suffer. However, neither we nor the farmer want an unfair share of the national income at the expense of all the rest. The farm price-support program has given us some unhappy moments, and the revision the last Congress made was certainly overdue.

The Department of Agriculture, under existing law, acts immediately in sections of the country where overproduction is breaking prices. There was a time, for instance, when producers of honey had too much; butter was expensive; honey, at a lower price, might be used as a spread for bread, but honey didn't reach a lower price. During the last fiscal year the Government bought $638,000 worth, resold it at a loss of $404,000, to buyers who would not allow it to compete with the regular markets, and the price of honey to the housewife stayed up.

The Government has on hand millions of pounds of frozen and dried eggs, purposely bought to be kept off the regular markets, and, as a result, the housewife gets few bargains in eggs. When far Western growers produced too many raisins, prunes, dried

apples, and peaches last year, the Government, during the fiscal year ending June 30, in support of the growers, bought $33,962,000 worth and resold them outside the domestic market at a loss of $15,563,000. The housewife paid high prices for dried fruit, and taxes helped pay that Government loss. Those are only a few examples of past performances.

Let's look at a few others:

The price-support program operates by two methods—loans and purchase. Loans are made on wheat, corn, tobacco, rice, peanuts, and cotton. If the Government establishes a support price of $2.05 on wheat, for instance, the farmer can borrow $2.05 a bushel on his wheat. If he can sell it at more than $2.05, he does so, takes his extra profit, and pays off the loan. If he can't, the Government takes the wheat and he gets the $2.05. Other commodities are generally bought outright. The worst situation has been in the enormous overproduction in potatoes. The action on potatoes is important, because it shows what might happen in other commodities in which we have similar overproduction.

The Government began buying potatoes in 1943. The years 1919–28, instead of 1909–14, were used for a base period. In those good years, potatoes brought an average of $1.12 per bushel. The parity price paid for millions of bushels which mostly were destroyed or wasted, has been as high as $1.86. Retail prices, of course, were higher. Potatoes are comparatively easy to raise and to harvest, and, with a good profit guaranteed, farmers went in for potatoes in a big way. In addition, new methods in production increased the average yield per acre from 139.3 bushels for the period 1937–46 to 212 in 1948. In San Joaquin County, Calif., one farmer harvested 1,188 bushels on 1 acre.

In the period 1942–47, the Government bought about 195,000,000 bushels of potatoes. It sold some and held its loss to $170,000,000. The average price paid on the 1948 crop was $1.55 a bushel. This year's crop is expected to bring an additional loss estimated at $125,000,000.

To get rid of the surplus potatoes, while housewives are paying around $2.75 a bushel for them, a few are used in school-lunch programs, some are sold to distillers for $5 a carload, some are turned into potato flour, which costs more than wheat flour and isn't as good. Some are dehydrated at great cost and shipped abroad. Some are being sold for livestock feed to farmers, who must guarantee they will not be eaten by human beings. A few were destroyed, but this action caused such protest from housewives that the Department of Agriculture now destroys no more, but wastes more money by shipping them and practically giving them away for industrial and other uses. It is fair to add that the Department of Agriculture has been asking for remedial legislation for the year.

The Government also bought $4,891,578 worth of grapefruit juice last year, to keep it off the domestic market. It bought $8,332,000 worth of dried milk.

Wool growers received $96,497,385 from the Government in the last fiscal year. Secretary of Agriculture Anderson reported last January that the Commodity Credit Corporation owned 460,000,000 pounds of wool. Under the present law—there is a change in the law which will take effect January 1, 1950—it can't sell under the parity price. Wool prices are up, foreign fine wools are higher than domestic, and the price of wool clothing remains high. Some of the Government's store has been sold, the Government is reported to have held 132,000,000 pounds on October 31 last, but American wool growers still raise quantities which are bought and stored by the Government because it is felt in the national interest that we must have sources of domestic wool.

Loans on tobacco last fiscal year were $122,426,000 and purchases were $1,543,019, but disposal of the crop was simplified by allotments for Marshall plan relief for European countries, which include 238,000 tons of tobacco. Although the Government lost only $59,799 last year on its tobacco purchases, the price was held up, and tobacco for America's cigarettes cost more.

Price-support losses by the Government in the fiscal year of 1947 were $42,784,595 and they rose to $125,382,594 in 1948. These figures do not include probable future losses on loans and on commodities that have been bought and stored. Government bookkeeping is so complicated that even Congress cannot discover all the details. Government losses for 1948–49 may well be higher because of the enormous production, particularly, of wheat, corn, and cotton. We have a grain harvest more than 1,250,000,000 bushels greater than in 1947, an increase in cotton of more than 3,000,000 bales.

It is estimated that the Government, through the "loan" plan, may pay storage charges on 300,000,000 bushels of wheat. The price will be about $2 a bushel. Estimates on probable corn loans run from 300,000,000 bushels to 500,000,000 at about $1.35 to $1.40 a bushel. The Government is expected to make loans on about 5,000,000 bales of cotton at $150 a bale. More than $1,500,000,000 will be tied up in those three crops.

The problem of price supports for farm products is a knotty one, and it has worked out badly on occasion. Farmers recall recent history as well as the rest of us, and realize that no one economic group can get too much power or misuse it in our country without a reaction. It is certainly not in the public interest for the farmer to get into any position where he might be penalized because the city dweller feels that he has been called on to pay tribute to the farmer. Yet many a white-collar worker, Government employee, pensioner, or teacher, whose income now has a purchasing power almost half of what it had before the war, would like a Government guaranty of his income, too.

Government farm-price supports, as we now think of them, started back in 1933. Extensive changes were made from time to time since 1933, but they were drastically revised for the first time in the closing days of the regular session of Congress in 1948. Let's see first the way the law stands now.

In the Agricultural Adjustment Act of 1933, Congress started the plan of supporting the farmer's prices. All of us know what happened to farmers in the days of sheriffs' foreclosures, milk strikes, and violence during the big depression of the early thirties. This plan was the Government's answer, and it has been with us since, though the conditions responsible for it have changed very materially.

An abundant supply of food is necessary, and production is encouraged by assuring the farmer of good prices. The theory of the price-support program is sound; without it, we would have no increased supply when we needed it—and perhaps not even a sufficient supply—of food. During the war, we guaranteed producers of war goods a reasonable profit, because we had to have the goods. Properly, we could make similar guaranties to the producers of food.

The Government's program is based on "parity," a word describing a formula that too few people understand. The purpose is to adjust the prices of farm products to meet the fluctuations in the cost of things the farmer buys. Here is the formula: The basic period for reckoning is 1909–14, when the farmer was making a good living. To get a parity price on an agricultural product, the experts first take the prices of 179 articles in 1909–14. These include clothing, food, farm machinery, building materials, furniture, fertilizer, seed, etc., plus an allowance for taxes and mortgage interest on farm real estate.

Next, they record the present-day prices of those 117 articles, and note how much they have increased. For instance, last June the average cost of those 117 items had gone up 2½ times over the 1909–14 level. Corn sold for an average of 64.2 cents a bushel in 1909–14, and wheat brought 88.4 cents. Multiplying those prices by 2½, you get the parity price of $1.61 for corn, and $2.22 for wheat. The Government makes loans available at 90 percent of parity for all supported products except cotton, which is priced at 92½ percent.

Under wartime laws, the farmer was to be protected particularly for the 2 years after the official end of the war—a period ending on December 31, 1948. It was expected that farm prices would slump in the postwar period. Instead, mainly because of high domestic income and the enormous demand for food from the war-devastated regions of the world, prices soared in most basic commodities. Little Government aid was necessary, and the farmer was better off than he had been in the period 1909–14. Corn went to $2.46 a bushel, and wheat's top price was $2.81.

Farmers, through those 2 years, were receiving greater cash income than anybody had forecast, and housewives were suffering because the costs of food and clothing were soaring. Congress, at its last regular session, had to wrestle with this problem. Farm pressure to renew the present price-support plan was great, and consumers' pressure against price supports was also great. Congressmen from the big cities, like myself, were made to feel very keenly that with farm income double and more than in normal years, and with the cost of living going out of sight, the Government should certainly not spend huge sums to hold up farm prices which might want to come down and help balance the whole economy. Yet we, too, had to recognize that stable farm prices were a key element in the Nation's prosperity, that city dwellers, as well as people in the war-ravaged lands, had to be assured of plentiful food supplies, and that the nature of the farmer's risks and what he had suffered in the past made minimum guaranties for him necessary. After a considerable struggle in the very last days of June of 1948, Congress passed the Agriculture Act of 1948, which the President approved on July 3.

The farm bloc won some concession in continuing the present price-support plan to December 31, 1949, but on January 1, 1950, a new and flexible price-support plan takes effect. This new plan makes two major changes in the present program. First, the parity price under the new formula reflects the relationship of the price of the individual commodity to the average of the prices received by farmers for agricultural commodities generally during the most recent 10-year period. This is done in order to modernize the parity-price formula to take into consideration changes in demand and changes in production, like increased yields per acre. Second, the guaranty is no longer for 90 percent of the new parity, but on a sliding scale between 60 and 90 percent, depending upon whether there is overproduction or underproduction based on a normal supply. So, if there is overproduction, price supports can be reduced and can go as low as 60 percent of parity; while if there is underproduction, price supports can be increased, but not any higher than 90 percent of parity. In most items, this will result in lower Government support prices. So, for example, the parity price for wheat, which last June was $2.22 per bushel, would under the new formula have been $1.82. The parity price for corn, which was $1.61 per bushel, would under the new formula have been $1.42 per bushel.

Farmers generally seem quite satisfied with the new flexible price-support plan to take

effect on January 1, 1950, which will lower support prices in the major commodities as well as make certain other reforms, such as enabling the Government to sell its stocks at prices lower than those it paid; in this way, also helping keep prices down. But many farmers and some farm leaders are not satisfied, and will make a drive on the President and on Congress to repeal the new plan during 1949 so that it cannot even get started, and to continue the old parity price program. Such a course, if joined in by the majority of farmers, could really put them on the wrong side of the public, with ultimate inevitable retribution.

But a fight is brewing on this new, more rational price-support program, because the President, in his successful campaign for reelection, promised the farmers support for high prices, at the same time he promised the city dwellers lower food prices.

The real hope of the farmer should be, not in governmental price supports, but in a higher level of consumption for all our people because they are more prosperous. This is very important right now, because, owing to abnormal conditions, so much of our wheat, cotton, and other basic commodities has gone for export. But a normal export business will cut these quantities materially—in wheat by as much as a half to two-thirds—and make our farmers even more dependent on the domestic market. This market is far from saturated, and has all the potentials for increased consumption our farmers need. The Secretary of Agriculture, in an interesting analysis, showed that if our consumptive objectives could give all Americans the amount of food now enjoyed by the Americans having incomes of $3,000 or more, our farmers would have nothing to worry about; but, as yet, about half of America's families are under this income level.

The farmer has the most to gain by cooperating in the attainment of a stable economy. This means even more to him than high support prices temporarily giving him a bigger share of the national income. For farmers, like the rest of us, are Americans first and everything else second. We have a right to expect that no responsible American farmer will seek to nullify the newer and more realistic price-support program of the 1948 act before it gets started, and that he will cooperate in the days ahead in further efforts to contribute to higher food consumption, lower food and clothing prices, and the stability of the whole economy. Under this stimulus, city dwellers will cooperate, too; without it, the far more numerous city dwellers may crack down on farm price-support programs, with resultant harm to us all.

Lackawaxen River Basin Flood-Control Project

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement submitted by me on July 14, 1949, to the Senate Committee on Public Works in behalf of additional authorization for the Lackawaxen River Basin flood-control project.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

On behalf of the people of Wayne County, Pa., and the communities in that area which have suffered extensive flood damage through the years I desire to express their deep interest in the additional authorization for the Prompton and Dyberry Reservoirs in the Lackawaxen Basin flood-control project.

As you know, the House Committee on Public Works has approved the additional authorization of $6,000,000 for this important program.

My purpose today is to endorse the additional authorization and to request favorable action in order that the planning of the Lackawaxen River Basin flood-control project may go forward for the protection of this important area of Pennsylvania.

Statehood for Hawaii

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mr. MANSFIELD. Mr. Speaker, on June 23, 1949, the Honorable HUGH BUTLER, a Senator from Nebraska, released a report on statehood for Hawaii under the title, "Communist Penetration of the Hawaiian Islands."

Without questioning Senator BUTLER's statements of fact in the report, former Senator Edward R. Burke, also of Nebraska and now counsel of the Hawaii Statehood Commission, answered Senator BUTLER and took sharp issue with the stated conclusions, pointed out the specious reasoning, and indicated that the subject of communism has no real bearing on the question of statehood for Hawaii.

Former Senator Burke's letter follows:

TERRITORY OF HAWAII,
HAWAII STATEHOOD COMMISSION,
Washington, D. C., July 5, 1949.

Hon. HUGH BUTLER,
Senate Office Building,
Washington, D. C.

MY DEAR SENATOR: Please accept my thanks for the copy of your report on Communist Penetration of the Hawaiian Islands which you were kind enough to have sent to my office. May I say further that I greatly appreciate the expression of your high regards for me endorsed thereon. I have read the report with deep interest. It seems appropriate that I should comment on some phases of it.

Others may question certain statements of alleged facts, but that is not my purpose. I shall assume that the individuals you name are Communists, and that the party objective is as stated by you. In fact, without the service of a private investigator, or the testimony of witnesses unwilling to permit disclosure of their names, everyone knows that there are some Communists in Hawaii and that they would like to dominate the life of the islands. All this has long been a matter of public record. See the Roberts report, report of House Committee on Un-American Activities, etc.

For my part, it is your stated conclusions with which I take sharp issue In my judgment you make a strong case, not for the indefinite postponement of statehood, but rather for favorable action at this session of Congress.

Of the people of Hawaii, you say:

"An overwhelming majority are hard-working, law-abiding citizens, devoted to the fundamental principles of responsible self-government in the American tradition. * * * The Territory of Hawaii stands high in the scale of education, achievement, culture, business acumen, and fine civic spirit."

Again you state:

"An overwhelming majority of the people of the Territory desire to see Hawaiian communism put down."

In view of these unequivocal statements of yours, which are fully substantiated by every investigator who has visited the islands, how can you possibly reach the conclusion that statehood should be indefinitely postponed because of the danger that the Communist Party would "control a clear majority of the delegates who write the new state constitution?" Who will choose the delegates who will sit in that convention and write the new constitution? The answer is obvious. The electors—of whom the overwhelming majority, you correctly testify, are "law-abiding citizens, devoted to the fundamental principles of responsible self-government in the American tradition." The delegates will be chosen by electors—of whom the overwhelming majority, to use your own language, "desire to see Hawaiian communism put down."

You cite Russia, Yugoslavia, and other countries behind the iron curtain to show that a militant minority may override the great majority. The cases are not at all comparable. Illiteracy is practically nonexistent in Hawaii. There is a free press. There is complete freedom of expression on all public questions. Personal and property rights of the citizen are protected by the courts as faithfully as in Nebraska. There are no restraints on free thinking and freedom of expression. Are any of these fundamentals present in Russia or the other countries you mention?

You must be familiar with the fact that a larger percentage of the electorate goes to the polls and votes in every election in Hawaii than in any State on the mainland. The ballot is secret. The voters are informed, made so by a completely free and vigorous press, a widespread radio coverage, and by untrammeled public discussion. Is it not fair to conclude that the delegates chosen to sit in the constitutional convention in Hawaii will beyond any question represent the views of that great majority of citizens devoted to the fundamental principles of responsible self-government in the American tradition and who desire to see Hawaiian communism put down?

There is a further consideration. When the new State constitution has been written it must be submitted for approval. To whom? Why, in the first instance, to these same intelligent citizens who, in overwhelming majority, are thoroughly devoted to American ideals. If by any chance, which is unthinkable, subversive influences should prevail in dictating any part of the new constitution, you must know what would happen. Such a constitution would be rejected by that great majority of voters who hate communism.

There is still a further safeguard. When a constitution has been written by the delegates chosen in a free and honest election by those loyal citizens of whom you speak so highly, when that constitution has been discussed and debated in every home and hamlet throughout the islands, and has met with approval by a majority of those same intelligent and loyal Americans, before it has any effect it must be submitted to the

President of the United States and approved by him.

In view of all this, is it not specious reasoning to argue that statehood should be postponed because of the danger that Hawaii might become a State under a constitution dictated by Communists? The fact is that the selection of delegates, the deliberations of the convention, the submission of the proposed constitution to the electorate for approval, all of this will create the most favorable atmosphere for that great majority of loyal and patriotic citizens of Hawaii to present a united front against any subversive groups that may be in existence.

You recite the efforts prior to the last election of the Communist leaders to take over one of the political parties in Hawaii. I doubt whether such an effort could ever, or long, be successful. I know a great many members of that party in Hawaii whose loyalty to America is beyond question. In any event, there is significance in the fact that you carry that recital only to election eve. You were in Honolulu on election day. Do you not think it should be stated that not a single follower of the Communist Party line was elected to any office of importance in the entire Territory? On that day the voters gave their answer to the fear of Communist power that disturbs you.

You say that the Communist Party in Hawaii favors statehood. If they are as smart and resourceful as you seem to think they are that might be their idea of the best way to defeat or postpone statehood. Whatever may be the truth of that, it is believed that more than 90 percent of the 540,000 people who live in the Territory, strongly favor immediate statehood. These believers in statehood are convinced that they will be fully as able—better in fact—to control communism sa a State than as a Territory. That seems to me sound reasoning. If so, this whole question of communism has no real bearing on the question of statehood at all.

Hawaii was an independent sovereignty. It gave its consent to annexation because it believed that in due course it would be welcomed into the Union as a State. Fifty years have passed. I leave with your conscience the proper answer to the question that seemed to disturb Chief Justice Fuller when he asked whether: "if an organized and settled province of another sovereignty is acquired by the United States, Congress has the power to keep it, like a disembodied shade, in an intermediate state of ambiguous existence for an indefinite period"?

Sincerely yours,

EDWARD R. BURKE, *Counsel.*

The Basic Principle of Fair Employment

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 20 (legislative day of Thursday, June 2), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial which appeared in the Minneapolis Morning Tribune, Minneapolis, Minn., on July 16, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BASIC PRINCIPLE

Opponents of fair-employment-practice legislation in Minnesota have sometimes pointed to the New York State law as a disconcerting example of what might happen here.

But here is what the New York Herald Tribune had to say about that law in an editorial this week:

"The successful working of New York's pioneering law has given impetus to a Nationwide movement to insure equal opportunity in employment. The law recognizes that economic opportunity is basic in improving the lot of the Negro and other minorities. A change in old hiring habits, too often influenced by unthinking prejudice, was required to provide that opportunity. Change is being gradually achieved in New York where employers, unions, hiring agencies, and the public are coming to accept the law's principles as just and necessary. That 1,450 complaints of discrimination have been settled or are in process of settlement without fanfare is warrant both of the soundness of New York's law and of its wise administration."

Here is a tribute to FEPC legislation made by a newspaper of conservative leanings which has had ample opportunity to judge its workings first hand.

A good many persons still think of such legislation as Communist-inspired. But is it not sound Americanism to write into the law this simple, basic principle of equal opportunity?

Rural Telephone Bill Will Aid Extension of Service

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 13, 1949

Mr. HAGEN. Mr. Speaker, the House is now considering the Poage bill, H. R. 2960, to provide rural telephones through the REA.

I have been genuinely interested in this measure ever since it was introduced, not only because it is needed in my district, but because I firmly believe it would be beneficial to this entire country.

We all recognize that our farmers should have telephones, and that it is even more necessary for them to have telephones than it is for the town or city dwellers.

Our present telephone systems, both large and small, have done a good job toward increasing their services to farm areas. And I know they have had to face many problems in trying to extend service, such as the shortage of materials, a condition which I understand has now been largely corrected.

This bill would be a supplement to the service by present telephone lines—a supplement which would provide the opportunity to private and cooperative lines to extend service in cooperation with the REA, and a supplement which would extend telephone service to farm areas where it is so badly needed.

When the bill was reported out by the House Agriculture Committee, I sent copies of the report along with the bill to the many farmers and townspeople who had written me previously about such a program. I asked them to review the report, and then let me know their views in line with the improved changes in the bill which were made by the committee and later here on the floor. The replies I received show that the people in my district believe the Agriculture Committee reported a good, beneficial and needed bill. The farmers and townspeople expressed the hope that the House would soon act.

I am glad the House is now acting. We will pass this bill, I feel sure, and will then look to early action by the Senate.

The Case Against Steel's Big Three

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely and revealing article by Mr. Thomas L. Stokes, which appeared in the July 18, 1949, issue of the Evening Gazette, Worcester, Mass. The article follows:

THE CASE AGAINST STEEL'S BIG THREE

(By Thomas L. Stokes)

WASHINGTON, July 18.—Occasionally motives are suddenly revealed, unconsciously and unwittingly, as when someone blurts out the hidden purpose in his mind before he can catch himself, before he has taken time to think.

Something of this sort is suggested in the initial refusal of steel's Big Three—United States Steel, Bethlehem, and Republic—to accept President Truman's proposal for voluntary arbitration of their dispute with the steel-workers' union. Instead, Big Steel insisted upon the letter of the Taft-Hartley Act with its injunction procedure to stop a strike, though other smaller units of the industry acquiesced.

Big Steel's attitude served to recall the charge so often made by labor that the real purpose behind the Taft-Hartley Act and its injunctive weapon was to cripple and hamstring labor, and eventually to crush unionism. Labor contended that such an aim, and such an effect, would become very clear in event of a depression when conditions naturally would make unions weaker and less able to defend themselves.

Big Steel's attitude in this case created suspicions and provoked criticism. It is often referred to in our industrial set-up as "the leader" because of its power and influence and its ramification into all sorts of other industry and finance, much of which is dependent on it. Its current example of leadership and stewardship certainly does not appear enlightened.

SENATOR MORSE OPPOSED

It brought a severe stricture from one recognized expert and authority on labor relations, Senator MORSE (Republican, Oregon). The Senator, a member of the War Labor Board and a foe of the Taft-Hartley Act, said Big Steel's attitude showed that what it wants is an automatic injunction.

"I think the position of Fairless (Benjamin F. Fairless, president, United States Steel) and his cohorts is a demonstration of how big industry seeks to use the Taft-Hartley Act to break strikes and unions," he said. "What his position amounts to is urging that industry should be allowed to create its own national emergency by refusing peaceful procedures for settling of disputes and thus

to use the Taft-Hartley Act to break strikes with an injunction.

"The American people are not going to be fooled by this repetition of Big Steel's anti-labor tactics."

The injunction procedure which Big Steel sought to invoke is reserved for national emergencies. The Senate already has approved a modification of this procedure, which so embittered labor, in the bill it passed recently and on the initiative of Senator TAFT, himself. By its modification the Senate clearly recognized the unfairness and injustice of this procedure. Proponents of complete elimination of such injunctive procedure lost by only two votes, a further indication of the need for a change.

TRUMAN USES DEFEATED BILL

President Truman, in his proposal for a 60-day continuance of work without a strike and for appointment of a board to make a finding of facts and to make recommendations for a settlement, follows very closely the provision which the Senate substituted in its recent bill. Under the Taft-Hartley Act such a board is not permitted to make recommendations for a settlement, only to find facts and review the strike issues. President Truman has explained that in the present case the parties would not be bound by the board's recommendations.

The injunctive power was left in the Senate bill recently passed, but an alternative of plant seizure also was included.

President Truman very properly pointed out to Big Steel that this is not yet a national emergency. It should not have been necessary for him to urge upon big business, which always has complained against interference by Government, that an attempt should be made for a settlement by voluntary arbitration before Government interference with labor by an antistrike injunction.

In saying to the Big Three, "Surely you are not afraid to have your side of the dispute examined in the public interest," the President emphasized the public interest with which the steel industry is naturally endowed. The wages and working conditions of its employees, its prices, and its profits are all a matter of public interest, and the facts as to their relationship are the public's business and are necessary for an equitable settlement in the public interest.

Take a Look at the Record

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. BRYSON. Mr. Speaker, representing, as I do, the greatest textile district in the world, naturally I am greatly concerned with everything pertaining to the textile industry.

At this time there is an increasing number of patriotic, hard-working, industrious textile employees who are unable to find the full employment they have enjoyed in the past. We are proud of the textile industry. It has been through the efforts of the textile employees, coupled with the labors of those who till the soil, that we have been able to astound the world by our production.

In this connection, I attach hereto a timely editorial from the Spartanburg Herald of July 19, 1949:

TAKE A LOOK AT THE RECORD

Any citizen of this country who lived through the days of the depression in the 1930's should be thoroughly impatient with those who are aiding and abetting the idea that the country must inevitably go into another such period, and there are the prophets of doom, who are operating—and operating deliberately and for selfish reasons—to spread fear and anxiety as to the economic security of this country.

The American people should recognize their duties and responsibilities in a world of conflicting conceptions of government, determine their course, and ride out the storm. The American people are all in the same boat. Mutiny is what the enemies of the country hope for—and the thing they are encouraging.

The country is still prosperous. There is not only a national demand for its goods and its products but a world need to be met, and it is our duty to do our part in supplying need. On farms of the country great abundance is promised by all reports. That means labor in the harvesting and labor in their storage and distribution.

Industrially the country is not stagnant. Demand continues at home and abroad for materials, supplies, and commodities. In bringing the industrial situation home to South Carolina, only yesterday the Federal Reserve Bank of Richmond issued a report in which it said industrial expansion in South Carolina "far exceeded any other State" in the Fifth Federal Reserve District. That was for the period 1939–47. And this industrial expansion in South Carolina continues. Manufacturing increased in this State during that period 369.3 percent, and the total value of manufactured products in 1947 amounted to $794,600,000.

According to an Associated Press dispatch: "The bank made this break-down of the value added by various manufactured products in South Carolina during 1947:

"Textile-mill products, $558,700,000; stone, clay, and glass, $11,600,000; furniture and fixtures, $6,500,000; chemicals and allied products, $16,600,000; lumber and allied products, $59,400,000; paper and allied products, $36,900,000.

"Also, food and kindred products, $34,900,000; printing and publishing, $9,000,000; fabricated metals, $1,500,000; all others, $59,600,000.

"South Carolina mills accounted for 10.47 percent of the Nation's textile products in 1947, the bank's report showed."

Spain's Military Capabilities

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. JAVITS. Mr. Speaker, there is appended an informative report on this subject:

ON-SPOT STRATEGISTS FIND SPAIN OFFERS PITFALLS FOR WESTERN DEFENSE—CAST-OFF ARMS FORTIFY NATION; RAILWAYS WOEFULLY RUN DOWN

(By Joseph G. Harrison)

MADRID.—Recent statements by United States Senators referring to Spain as a bulwark against a possible Russian advance in Europe do not correspond to the facts available here.

As the Spanish Army, Navy, and Air Force now stand, they would afford less opposition to a strong Russian push than did the Poles against the Germans in September 1938, when all of Poland fell in a matter of weeks.

This does not mean that Spain, by the use of truly vast sums of American money, could not be made a strong military base. But it does mean that Spain is not one at the moment. It shows little likelihood of becoming one in the foreseeable future.

In the opinion of non-Spanish military experts, whose task it is to assess Spain's value in the event of war, it is incorrect to speak of merely arming Spain's land, sea, and air forces.

Rather, it is necessary to create them. By any standard of judgment on modern warfare, Spain's armed forces would be virtually helpless in the face of a major foe.

While it is true there are some 400,000 men under arms in Spain today and that Spain could, in a severe crisis, probably mobilize up to 2,000,000, it is equally true that there is hardly a single up-to-date weapon of any sort in the length and breadth of this country. Except at sea, the tiny state of Israel probably has as large a stock of really modern weapons as does Spain.

EXPENSIVE TASK

To bring Spain to the point of being able to give sizable help in the event of an all-out Russian attack against western Europe—and it is only in this connection that Spain is discussed—would take not hundreds of millions but probably billions of dollars. Here is why:

The Spanish Army is completely without modern tanks, having only a handful of cast-off German and Italian models built 15 years ago.

It is equally lacking in all types of artillery, necessary to defend the Pyrenees passes and its long shore line.

It has enough rifles for perhaps half its troops but soon would run out of ammunition.

It has little or no signal equipment, field hospitals, trucks, and mortars.

Furthermore, because of this lack, it never has been able to train either officers or troops in their use.

AIR FORCE IMPOTENT

The air force is virtually nonexistent. In a world where only jet-propelled planes are coming to count and where the B–29 Superfortress already is outmoded, this country has only a few hundred fighters which were scrapped by all major powers, before World War II broke.

As for bombers, it has none which could not be swept out of the air in the first half hour of war.

Here again, Spain has been unable to train pilots, navigators, bombers, and technicians because it had no equipment.

In this country, even the very ground facilities for such training would have to be built.

The navy is a little better off, but only slightly, having 5 cruisers, 18 destroyers, 5 submarines, and half a hundred or so small auxiliary craft.

All of these are outdated and have no protection against aircraft worth speaking of.

Weak as Spain is in arms, it is equally weak behind the lines. The Spanish railroads, without whose efficient operation no modern war can be fought over large spaces and in such open country as Spain are so run down as to be comparable to those of the Balkans rather than of western Europe.

Vast sums and much equipment would be needed to give them a safe wartime operating efficiency.

Good indication of the state in which Spain's armed forces find themselves—despite the fact that they, along with the police, take more than 47 percent of Spain's 1949 budget—is the fact that Spanish officers are so lowly paid that large numbers of them, even up to the rank of full colonel, find it

necessary to take a second job, which they work at in the afternoon.

The younger officers are so ill-paid that they are considered to be an element of possible danger to the government, since there is always the possibility, although remote, that they may be driven to a "putsch" to better their position.

ARMY PAMPERED

Yet, despite this low pay, the Spanish Army, particularly the officer corps, gets the best of everything available—food, housing, social position, and even political appointments.

Indeed, there is a saying here: Spain is the only country in the world whose own army is an army of occupation.

These conditions notwithstanding, the United States undoubtedly could create a strong army and air force in Spain, strengthen its railroads and turn this country into the formidable anti-Soviet Army bastion which many persons now mistakenly believe it to be.

But to do so would take not only tremendous sums of money and equipment which might preferably be spent in arming the democratic armies of Great Britain and France, but it also would take time. Thus, from a practical viewpoint it might well be better to forget about Spain and concentrate upon strengthening democratic allies farther north, whose armed forces are already in a better state of preparation and whose rail system is already adequate.

As for the argument that while France is riddled with communism Spain is free from it, this is easy to say but hard to prove.

Long-time diplomatic residents here point out that millions of Spaniards supported the Republican side in the civil war, that they fought for three long years and that, although beaten, they remember that it was the Soviet Union which gave the republic its only effective military help.

CLASS ENMITY

Furthermore, even sincere supporters of Generalissimo Francisco Franco have told me that uncounted numbers of lower class Spaniards, who lost kith and kin during the war, nourish a bitter hatred against the upper classes now running the country.

While one can assume that many French Communists would help an invading Soviet Army, it is very far from being proved that the Russians would not find similar help in Spain.

It is true that General Franco has seized and executed large numbers of Communists and malcontents, but it is equally true that he has not taken the practical economic and social measures to correct the injustices which create such opponents.

Thus, whenever a prominent American arises with words of praises for General Franco and his regime, persons here are inclined to ask skeptically where he got his information.

Desert Gardens

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. TAURIELLO. Mr. Speaker, on Saturday last, it was my privilege to view one of the most spectacular garden displays I have ever seen.

Dr. Louis E. Blanchard, a physician from my home town of Buffalo, N. Y., has a hobby which should go far to dispel the notion that the cactus is essentially a desert plant. At Crystal Beach, Ontario, his collection of over 25,000 cacti plants is visited by thousands every year. It is valued at more than $125,000, and was accumulated during 20 years of travel throughout the world.

Dr. Blanchard has written an article entitled "Desert Gardens" which was the feature story of the October 1948 issue of Your Home and Garden. The magazine's cover displays color photos taken by Dr. Blanchard in his gardens of rare, exotic, and colorful cacti plants, located in southern Ontario, far from the usual haunts of most cacti. Under leave to extend my remarks, I insert Dr. Blanchard's article in the Appendix of this RECORD:

DESERT GARDENS

(By Dr. Louis E. Blanchard)

Desert plants represent highly specialized forms of plant life adapted to arid conditions and consist of cacti and other succulents, such as agaves, echeverias, stapelias, and sempervivums. Although widely scattered, most of the succulents are found in Africa, Mexico, and many parts of the United States. Cacti are native to the Western Hemisphere and are descendants of the leafy pereskia, the ancestor of all cacti. There are about 2,000 species of cacti and many more thousands of species of other succulents.

Groups of plants growing in widely separated places under similar climatic conditions develop a similarity known as parallelism. The euphorbias of Africa resemble the cacti of the Americas, but are definitely not related. The size of these plants ranges from a fraction of an inch to that of tall trees. The giant saguaro of Arizona grows 50 feet high and by the time it reaches its maturity in about 200 years weighs 10 to 15 tons.

Desert plants in the distant past flourished in tropical climates and had leaves and woody stems. As the geological changes produced deserts and mountains with dry air and limited rainfall, these plants had to adapt themselves to these changes of environment or perish. Undoubtedly, many species succumbed, but those that met the challenge were successful because they acquired the essential physical change known as succulence.

Thick, juicy stems or leaves, especially adapted for water storage in periods of prolonged drought, made life possible in such depressive periods. Thick leathery leaves of the opuntias, waxy coatings of the astrophytums and hairy coverings of the Old Man cactus (Cephalocereus senilis) are further examples of protection against loss of moisture. The plants also assumed many unique and bizarre forms, all of which were evolutionary changes in the development of a defense mechanism. Multiple ridges with accordionlike contours allowed for contraction and expansion in periods of drought and rain. Absence of leaves and branches allowed heavy plants to have a minimum of surface exposed to evaporation. Spines served as a protection against enemies and also gave partial shade.

The sugars in the plant juices were converted into pentosans which are thick and sirupy. In this form losses by evaporation or injuries are trivial. Brilliant pigmentation prevented chlorophyl destruction in prolonged brilliant sunshine, and in some species like the Sacred Mushroom (Lophophora Williamsii), large fleshy roots stored food and water. These and other similar defense mechanisms made it possible for succulent plants to withstand long periods of drought, even as long as several seasons. In times of depression these plants have the ability to become dormant and will patiently wait for months, if necessary, to burst forth in extreme activity with the appearance of favorable conditions. In a very short time the desert plants come into bloom, bear fruit, and store up water for future emergency. Time is of the essence. It is a question of life or death. These plants are with us because they are champions.

Although desert plants can endure hardships, they naturally, like all living things, prefer favorable conditions. In pot culture or in the garden the soil should be kept moist (not wet) during the growing period. Excess water causes rot and interferes with respiration. In the winter watering should be less frequent, possibly once every 3 weeks. Never allow the soil to become powdery dry as this will damage the roots.

These succulents, due to their ornamental shapes and varied colors, are the jewels of plant life and lend themselves admirably to realistic scenery in dish gardens. Most dish gardens have no drainage and it is essential that a measured amount of water be used. A small dish garden about 6 inches in diameter will require about one-half cup of water weekly in the summer. Larger dish gardens will need about one cupful of water. In the winter the same amounts will be ample for 3 weeks or more. In case of doubt, dig a hole into the soil for proper inspection. If moisture is present do not add water. Overwatering in dish gardens is the major cause of failure.

Desert plants make excellent garden displays. Use elevated beds, about 1 foot deep, to provide good drainage. Place several inches of coarse gravel on the bottom and fill with coarse sand, preferably sharp or builders' sand. Potted plants plunged into this sand with mound formations, make fascinating desert scenes. This method conceals the pot rims and makes the scenery more realistic. Take plants indoors before frost and keep them in a cool room or use them in a window garden. Water springly during this resting period and do not apply any fertilizers. In the spring when the plants show signs of activity, increase the amount of water.

If plants are pot-bound they should be shifted into larger pots. Increase the pot size by 1 inch. A good potting soil consists of one-third top soil, one-third leaf mold or rotted cow manure, and one-third sharp sand. To this add about 5 percent each of chick charcoal, lime, and bone meal. Mix thoroughly. The epiphyllums (such as the Christmas cactus) do best in an acid soil and lime must not be added. Good drainage and considerable shade are essential in this species. They also like a steady supply of moisture and will probably require watering twice a week. A layer of fine gravel on top of the pot will help discourage the growth of algae and keep the plants clean.

Such prepared soils will require no additional fertilizer for one season. After this period, complete liquid fertilizers, properly diluted, are beneficial. Several applications a season are ordinarily sufficient. Desert plants as a rule are slow growers and, therefore, do not require frequent feeding. Excessive applications of fertilizers will either cause root damage or build up such a high osmotic pressure in the soil from soluble salts that water absorption by the root hairs becomes difficult.

Many desert plants, particularly the epiphytic species of cacti, have gorgeous blooms in many colors. Cacti are either day or night bloomers and their exotic blossoms equal the beauty of the choicest orchids. Their fragrance is delicate and one flower will perfume an entire garden.

Although cacti and other succulents are comparatively free of pests and diseases, some varieties may get infested with mealy bugs, scale, thrips and red spiders. Contact sprays regularly applied will keep plants clean. An oil spray will be necessary for mealy bugs.

Root mealy bugs may cause considerable trouble. The pot may require dipping in a contact spray or the soil may be completely washed away until the roots are clean and then repotted.

Succulent plants can be propagated from seeds, offshoots and cuttings. It is advisable to sterilize the cactus soil and the container to prevent damping off. Sift enough sterile sand over the seeds to cover them. Do not allow the surface to become dry.

Offsets (called pups on cacti) may be removed from the parent plants with a sharp knife. Dip the cut ends in sulphur and plant in cactus soil. If cuttings are taken dust the open surfaces with sulphur and do not plant for about 1 week or until a callus is produced. The cuttings may then be rooted in clean sterilized sharp sand and as soon as there is root formation, they may be planted in soil. Many erroneously believe that desert plants grow in pure sand. This is not true. Succulents placed in sand will starve. The desert is rich in minerals and leaf mold and only requires water to convert it into a good growing soil.

American Business

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address of Irwin D. Wolf, vice president, Kaufmann Department Stores, Pittsburgh, and of the May Department Stores Co., and chairman of the NRDGA Vendor Relations Committee, at the merchandising convention of the National Retail Dry Goods Association, on Tuesday, June 21, 1949, New York City:

Probably every businessman in the United States has often thought what I now have the opportunity to say. I welcome the occasion and feel grateful for the privilege.

There will undoubtedly be those who honestly disagree with one of my words here, a sentence there * * * an entire thought perhaps, or a suggested procedure. I am not apprehensive about that, because the basic ideas are so much more important than their presentation. Nor do I anticipate that I shall be accused of offering criticism for its own sake, since what I have to say is followed by suggestion.

In that spirit I want to confer with you.

We are participants—you and I—in combat that is realistic and purposeful. Ours is more subtle battle than armed conflict. Economic power, political philosophies, and national resources are the weapons with which our war is being waged. The scope of our conflict is international; it extends to the far borders of those nations who have signed the North Atlantic Pact. American business, because of its part in this battle, stands at bay to the forces of regimentation, almost as did England not quite 10 years ago. If we fail in our battle, the last substantial bulwark of free enterprise will be swept away, and American business will be swept away with it.

Ever since the end of World War II, American business has been the big force used to influence, if not to shape, the political pattern of the world. To make the point clear, I need only cite the billions expended to date for European recovery. Our very way of life and the product of our sweat have been used, and are still being used, as potent instruments of persuasion on the international scene. Substantial alteration, if not destruction, of our standard of living has long been the target of our Nation's political antagonists.

As world events took form, American business became an instrumentality of state. As world affairs have now evolved, American business will be employed as a continuing instrumentality of state.

Business must accept that responsibility and must equip itself to meet the demands which that role entails. Government, on the other hand, must now make it possible for business to discharge the responsibilities which have been thrust upon us.

Gr ater responsibility has never rested upon any element of society than has devolved on business in consequence of its part in world politics. Upon our success in meeting these obligations depends not only the strength of our own Government, but also the welfare of untold millions who thus far have had the courage to decline the embrace of autocratic philosophies.

The very scope and importance of the role which our statesmen have assigned to business make it the prime duty of government to strengthen business and foster conditions under which it will thrive. Specifically, the structure of business endeavor must be reenforced and, at the same time, out-dated concepts and out-moded techniques must be discarded. Unnecessary and useless procedures, with which we have been burdened, must be eliminated. All of this is imperative if we are to succeed in the policies we have undertaken to support. For if we fail there will be no future. In war we were the arsenal of democracy * * * today we are the arsenal of peace.

But are we equal to the responsibility which has devolved upon us? Are we able to maintain the velocity of business necessary to support our own standard of living, provide for our own needs, meet our own fiscal problems * * * and at the same time contribute to the welfare and needs of others throughout the world? I am confident we can, provided we recapture for business the basic principles of democratic life which have made our Nation great. To a large degree they have slipped from our hands and we must set ourselves to the task of regaining them. While they are lost to us momentarily, those great principles are still within our reach.

Nothing that I have just said is even remotely in the nature of an attack on this administration or any single administrator. I am entirely aware, as are all of you, that many of those things which we businessmen seek to remedy are consequences of rapid growth and the increasing complexity of the world in which we live. But I do challenge government to eliminate an evil which, like any other parasitic growth, has attached itself to a strong body and is feeding upon it.

All right, then, what must we do? At the outset, we must examine the position in which we find ourselves. It is not a happy one. There is danger from within as well as danger from without. Business, instead of being the prime concern of Government, is once again the favorite whipping boy of Government administrators. Although the velocity of business is of vital importance to the Nation, hardly a day passes without presentation to Congress of additional and dubious proposals for further regulation or control of some phase of commerce.

We have developed a singular and highly unique tendency to label every disputed practice as a national menace. Our legislators are urged toward indignation at such practices and to legislate on ever-broadening fronts to suppress what is invariably a narrow and often isolated evil, fully capable of being suppressed through the enforcement of existing local law. The very number of such regulations often provides legal justification for "fringe" operations. And it frequently happens that Federal regulations create the very evils they are designed to eliminate: for example, some retailers have been forced into manufacturing—in order to avoid conflict with the Robinson-Patman Act. Many manufacturers are determined to sell only large users to avoid the awkward policies by which this act has been administered. The integrated operation has made its debut—why—because of such laws and the way they are administered. And to those who begot such laws are now sponsoring divorcement legislation to eliminate their self-created evils. That is our example of how ill conceived our business laws are.

Unfortunately the moving considerations which underlie most of our Federal laws governing business are those which were generated in a spirit of suppressing evil practices and abuses. Many other regulations were born in the clamor and outcry generated by those who desired to attract votes or to extend the boundaries of their own private kingdoms.

We have become so zealous in our endeavor to discourage what some are pleased to call sin, or at any rate what politicians conveniently call sin in order to denounce it, that we legislate and administrate against those who are innocent. Why? Because of fear and apprehension that, unless they are regulated, they may tend toward forbidden practices. And when we do legislate in these matters we invariably use such loose terms as to authorize political appointees not answerable to us and obviously unschooled, to do such things and promulgate such regulations as in the judgment of such administrator may be necessary.

However, we are a nation richly populated by farsighted administrators—some, in fact, are really seers—who unblushingly profess to be expert in all things. Hence, it is said, we are safe from error or abuse. But experience and fact deny such assertions, and the contrary is true. From those to whom we have entrusted the power and authority to encourage a high velocity of business, we have received nothing but a high velocity of regulations.

Our administrators have really labored. They have formed a gauntlet of penalties for business to run. They have constructed a Chinese Wall to circumscribe our activities. They have erected an enduring monument which arrogantly challenges what man has known for many long years, "Those are governed best who are governed least."

Laws enacted by Congress, having as their objective the protection of commerce, have been so administered and interpreted as to have a burdensome and deterring effect. Others have given rise to administrative techniques from which the specter of another NRA is already plainly discernible on the immediate horizon.

Our administrators are indeed prolific. All the laws enacted by Congress in the period from 1789 to date have been codified in four volumes known as the United States Code, whereas the rules and regulations of Federal agencies known as the code of Federal regulations comprise 47 volumes of substantial size. Do not think for a moment that their job is ended. Not at all; in fact theirs is an unending project. Not a single issue of the Federal Register fails to carry voluminous additions to the mass already in existence.

Rulings by administrators embodied in hundreds of volumes of agency reports bid fair to overshadow in immensity the reported opinions of our busiest judicial tribunals. The Harvard School of Business Administration has published three volumes on the Robinson-Patman Act alone.

Business, of course, and businessmen are supposed to keep abreast of all this prolific outpouring. Where, indeed, is the fortunate individual who can operate a legitimate enterprise for one day without innocently tangling in some thread of this incredible web? And once you have tangled, you have

"sinned." If this be "sin," are you free from it?

We have had some odd and startling results from our Federal business laws and their administrators; for example, the portal-to-portal controversy, the wage-and-hour rulings, overtime on overtime, the basing-point controversy, and the frantic appeals which they have caused to be presented to the legislative and executive branches of our Government. What man is bold enough to say that he can reconcile the administration and interpretation of the Robinson-Patman Act, the Miller-Tydings Act, the Sherman and Clayton Acts, the fair-trade laws of our various States, and other such regulations, with the needs and best interests of our Nation.

It is utterly wrong for the business of this Nation to be conducted in an atmosphere of doubt, uncertainty, and apprehension. It is utterly wrong for business today to be governed by the existing patch quilt of legislation which has been sewn without an over-all or cohesive pattern in mind. It is utterly wrong for business to be subject to the personalities and whims of transient administrators and the philosophies they harbor. It is utterly wrong for business to be subject to the rule of men and not the rule of law.

Why is there no tribunal, with judicial status, to function in the sphere of business law and the problems arising under it? Almost every other specialized disagreement may be resolved in an appropriate court. I submit that business is entitled to the advantages of orderly process and unbiased rulings, which such court would render. The determination of problems under business laws ought to be free of the considerations which motivate, impel, and influence our present administrators and administrative tribunals. Let our administrators concern themselves only with administration of the law. Let us take away their present license to be investigator, prosecutor, judge, and jury.

The boundaries of lawful and allowable conduct for business endeavor ought to be the subject of uniform and simple laws and no longer a hazardous field of conjecture and doubt in which even the justices of our highest Court can rarely agree.

There is ample hazard in business itself. The creation and perpetuation of additional hazards by the legislative or administrative route is totally unwarranted and a risk we cannot afford to take.

The task we have before us is plain. There are certain things we must do. And here they are:

1. We must no longer endure the merger, in the administration of Federal business law, of legislative and judicial and executive functions. In the structure and enactment of laws affecting business, and in their administration, we must insist upon adherence to the doctrine of the separation of powers which made this Nation strong and protected its people from star chamber rule.

2. We must no longer endure Federal business laws, which are so loosely phrased that they leave doubt as to the allowable limits of appropriate conduct for men of legitimate endeavor. We must strive for simplicity and uniformity in all laws governing business and commerce, and for simplification and uniformity in their administration.

3. We must resist further Federal centralization. We must encourage action by State and local government in local affairs, as a means of discouraging the expansion of Federal power and forestalling its further expansion into, and interference with, local business.

4. We must promote the elimination of State burdens upon, and barriers to, interstate trade. Such regulations tend to incite demands for Federal regulation.

5. We must insist upon recognition of the indisputable fact that the overwhelming percentage of businesses are honest * * * must be so or they would not prosper. It is a retail maxim that an unscrupulous competitor will eventually crowd your store; and what is true of a store is equally true of all business. We must seek greater freedom in business by promoting self-regulation as distinguished from Government regulation.

6. We must foster a study of business laws by all segments of business and we must propose the adequate revision of existing law with unselfish interest for the welfare of the Nation.

7. We must encourage the Government to reactivate the Department of Commerce so that it may function as a more effective voice in national decisions as have, for example, the Departments of Agriculture and Labor for so many years past.

These are not easy tasks. They constitute a challenge which every sound-thinking citizen of our Nation should accept. It is a goal to which we must dedicate our thoughts and our deeds.

We who cherish freedom, its institutions, and all the priceless liberties we hold indispensable to worthy survival, will be opposed by those who lust for greater and greater authority. Their power is entrenched and their resourcefulness is substantial. Courageous and wise statesmanship, coupled with forthright action, is needed now. Make no mistake about it: The rewards are high and very precious, the battle lines are drawn.

The part you play by actively espousing our cause will count on our side of the ledger. The part you play through inactivity, through mere passive interest or polite but meaningless applause, will militate against us and give aid and comfort to our antagonists.

If American business is to succeed in discharging the task to which it has been assigned by our statesmen, the dead hand of bureaucracy must be lifted from the shoulders of legitimate business enterprise. Just as the tenets of political freedom for man were wrested from despots by the Magna Carta, so now we must unshackle business from bureaucratic control by formulating and causing to be ordained a business bill of rights. It should be backed up, as I have already suggested by a business practice court in which the business bill of rights will be dispassionately enforced according to rules of law and not to fancies of administrators.

Men who are eager to support their Government rather than be supported by it will champion our cause. Distinguished statesmen in public and private life have long recognized our need and will rally to our support.

Let the retailers of America come to the forefront in launching this worthy, urgent, Nation-wide effort. Let us invite retailers, manufacturers, and all other business to join in a coordinate effort to assure study and revision of all business laws in order that they may be classified, codified, and simplified. Let us prove by our fight to regain democratic procedures, that we are worthy of the liberty to which we aspire.

Let all who feel as I do join with me in this enterprise.

Central Arizona Reclamation Project

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Mirror, the Los Angeles Daily News, and the San Diego Journal:

[From the Mirror of July 9, 1949]

ARIZONA TAX GRAB DEFIES CREDULITY

Arizona is cleverly engineering a colossal tax swindle through Congress.

The Senate Interior Committee put the Arizona flimflam one step closer to success last week by reporting favorably on Arizona's "compromise" bill in the California-Arizona controversy over Colorado River water.

The Arizona bill is a fraud full of jokers. The bill authorizes the preposterous central Arizona project, but purports to make appropriations for the scheme contingent on a United States Supreme Court finding that water is available for the irrigation plan.

However, the clause in the bill making the allotment of funds contingent on the Supreme Court ruling was amended out of the bill in committee.

In short, Arizona has arranged things so the case would go to the Supreme Court, all right, but they could still get the money for CAP, even if the Supreme Court decision was against Arizona.

The central Arizona project is itself a fraud on the United States taxpayer. Arizona wants us all to foot the bill for irrigating 260,000 acres at the incredible price of $1,750 an acre. (The average of all western irrigation project costs is $157 an acre.)

But that is not half of it. Some 55 percent of those 260,000 acres are owned by only 420 men. So what their scheme amounts to is simply subsidizing 420 wealthy landowners to the tune of more than $500,000 apiece.

Think of it, 140,000,000 American citizens paying income taxes for the benefit of 420 rich Arizonians, each one getting a $500,000 chunk of your money, for nothing.

[From the Los Angeles Daily News of July 12, 1949]

ARIZONA'S WATER TRICK

The proposed $738,000,000 central Arizona reclamation project is a dangerous threat to California's share of Colorado River water.

The Daily News has long advocated that this project be shelved until the central issue of the Arizona-California water fight can be resolved. This issue, which is concerned with riparian rights, has remained unsettled for 25 years, despite numerous compacts and conferences between representatives of all the Colorado Basin States.

Settlement of the controversy by United States Supreme Court adjudication is the logical, intelligent step to be taken.

But thanks to political maneuvering, the central Arizona project and the Supreme Court adjudication idea have been tied up in the same package. Recently, the Senate Interior and Insular Affairs Committee approved the $738,000,000 project bill with a rider attached calling for Supreme Court settlement of the inter-State water conflict.

The public's attention should be called to the dangers involved in this first legislative move toward sabotaging southern California's water supply—a supply vitally needed for 28 cities in this area with a present population of more than 3,500,000. Says the local Colorado River Association:

"The committee action cannot by any stretch of the imagination be construed as a partial victory for California in its fight with Arizona, even though it carries a Supreme Court proviso.

"Neither, as the sponsors of the Arizona bill assert, can the measure approved by the committee be classed as a compromise.

"The Supreme Court rider that has been tied to the costly and fantastic central Arizona project is a smoke-screen designed to confuse those who want a clean-cut Court ruling on the hotly debated question of water rights.

"The amendment approved by the Senate committee has been craftily worded in such a way that the project is authorized to be built even if the Supreme Court should rule against Arizona's water claims. The intent of this legalistic scheme is to give the Arizona project the green light, whatever the outcome of the high court ruling.

"Once built, the project would of course take Colorado River water because it is inconceivable that an irrigation system built with Federal funds, at a cost of $1,000,000,000 or more, would be permitted to stand idle.

"In other words, Arizona proposes to accomplish by political maneuvering and trick phrases what it is afraid it cannot accomplish through prescribed legal channels. Southern California homes, industries, and communities would pay the price of this squeeze play by being drastically cut down in their own use of Colorado River water.

"California public officials and the Colorado River Association, a citizen organization representing the men and women of California, will continue to press for a clean-cut Supreme Court settlement, with no '$738,000,000 strings' attached. This fair and proper way of ending the interstate controversy can be accomplished through prompt passage of Senate Joint Resolution 4 and House Joint Resolution 3.

"Meantime, the California official position on the dangerous Central Arizona project bill, as approved last week by the Senate committee, remains unchanged: S. 75 must be defeated as a matter of self-preservation for the people and the cities of southern California.

"We may well face the fact that we have lost the first round. The committee count was 9 to 3 against California. These odds must be changed before the issue comes to a vote on the floor of the Senate and the House. An informed and aroused citizenry is essential to a final victory that will protect California's indispensable Colorado River water supply."

[From the San Diego Journal of July 9, 1949]

ARIZONA PITCHES A CURVE

It looks to us as though Arizona has outsmarted, outmaneuvered, and outguessed California in the latest development affecting future use of Colorado River water.

For those who missed some of the early innings, it might be well to review the score.

Arizona is sponsoring a $738,000,000 Central Arizona project bill. Considering the benefits per inhabitant, this probably would be a record Government expenditure.

But California's opposition to the measure is not on the grounds of wastefulness and cost. California holds that its already signed contracts entitle the State to water rights which would be superseded if the water went to Arizona.

And, to settle the matter once and for all, California long has fought for an enabling bill to get the matter before the United States Supreme Court.

Arizona has opposed this, which may or may not connote that the State feels its legal ground is shaky.

It was at this point that Arizona came up with a tricky hipper-dipper pitch that, thus far, has California swinging wildly and futilely.

The tricky delivery was a rider attached to the bill which permits a high court ruling but which is so worded that Arizona would get its project regardless of the judicial outcome.

In all probability, the bill would come before the Supreme Court after the project was already a going concern.

And it's inconceivable that an irrigation system, built with close to three-quarters of a billion dollars of public money, would be permitted to stand idle.

At any rate, California struck out before the Senate Interior and Insular Committee, and the committee count was 9 to 3.

We hope this result can be upset on the floor of the Senate and in the House.

Despite all the legalistic flimflamming, the basic issue remains the same. Is California entitled to the water or isn't it? In a dispute between States, the obvious place to settle the question is in the Supreme Court.

We hope California's Senators and Representatives will spread that simple doctrine forcefully.

A Call for Public Opinion To Combat Extravagance in Government

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mr. LANE. Mr. Speaker, the following editorial appeared on the front page of the Lawrence Evening Tribune on Friday, July 15, 1949. It is a ringing summons to the people, asking them to make their wishes heard on a matter of vital interest to all Americans. The dominant issue of our times concerns the role of Government, local, State and National. What are their duties, where do they begin, and where should they end? How can we make Government efficient so that it will perform its rightful functions without breaking the back of the people who support it? Whatever our views may be on these questions, it is heartening to see the searchlight which the free press of the United States is directing to them. The merit of this editorial is that it does not assume a position of infallible wisdom, but asks the people to do some hard thinking on these problems and then express its will through effective democratic action.

GOVERNMENT ECONOMY—A MUST

Economy in the administration of Government looms today as America's number one must.

This is a different kind of an editorial because it is intended not only for the readers of this paper but for publishers and editors of other papers throughout the land.

It is really intended to be a challenge editorial, one that will rouse the ire of people everywhere who are critical of the extravagances of government but are doing nothing about it.

Extravagance, yes wild extravagance, in government is the tape worm that is sapping the strength of the greatest Nation on earth and public indifference and acceptance constitute the greatest contributing force.

This editorial is not offered as any great masterpiece, or the product of the mind of any genius of thought, or of any expert in government administration. At best it is offered as a humble and honest effort to bring a common-sense argument before the largest possible number of Americans in a common-sense way. It is hoped that individual leaders will respond by informing their representatives in government, local, State, and National, that they are forcefully for greater economy in government and that from now on they intend to vote only for those who favor economy and relief from the taxation load that is now severely testing to the very limit, the patience, tolerance, and endurance of American individuals, industry, and business.

It is suggested and hoped that other publishers and editors will accept this friendly and constructive challenge by reprinting in whole or in part or merely using the general idea of this editorial as a pattern or inspiration to impart to their readers the encouragement to do something about this wild orgy of spending of public funds.

There is no greater agency for the accomplishment of this necessary economy in government administration than the American free press. The people of America possess the power to bring about economy and the newspapers of America have the power to harness the force of public opinion so that it will be heeded by those officials of government administration who are responsible for the scandalous waste of public funds.

The reckless and extravagant spending of public funds that is so prevalent today is one of the greatest contributing forces to the development of unhappiness and discontent. These are vehicles upon which the enemies of the American democratic form of government thrive and make headway and progress. And let none of us fool ourself by making light of their progress.

A well-informed and soundly guided public is the greatest potential force for good that it is possible to muster.

This is the time to start the offensive that can result in a healthy revival of the great American spirit that has consistently overcome all destructive forces that have crossed the path of American progress.

Americans must become militant for a greater program of public economy. Stifling and smothering government pay rolls and expenditures must be constructively reduced if the greatness of the American Government is to remain great.

Government economy is a must.

Let us start militant action toward that goal now.

Economic Expansion Act of 1949

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. PATMAN. Mr. Speaker, I am inserting herewith an explanation of a bill introduced by me today which is the second part of the bill on the same subject I introduced Monday. It is as follows:

SECTIONAL EXPLANATION

TITLE I—ECONOMIC EXPANSION THROUGH TAX POLICIES

Amortization incentives for private enterprise

Section 101: This section provides a stimulus to private investment in the form of a shortened period of amortization similar to that used during the war. A taxpayer who so desires may deduct amortization of his investment in facilities which add to, or improve the efficiency of, productive capacity over any period that the taxpayer elects of not less than 5 years and not more than the normal depreciation period under the Internal Revenue Code. This privilege is extended to investments made prior to the enactment of this act to the extent that they have not been depreciated for tax purposes. A certificate of approval is required. The President is authorized to suspend this amortization incentive altogether or as to major industries, or thereafter to make it available again, as may be required to help achieve the objective of maximum employment, production, and purchasing power.

This section is intended to be of primary benefit to small and new businesses, both in

terms of helping them to repay short-term loans, which is frequently the only form of financing available to small business, and affording them operating capital when needed, including those small businesses with high-cost capital structures which would be among the first to be squeezed out if economic conditions were to continue to decline.

Special bipartisan Tax Commission

Section 102: This section creates a special bipartisan Commission of 18 members to examine the Federal, State, and local tax systems. The purpose of the examination is to determine whether existing tax structures and policies are a deterrent to sustained economic expansion and to make recommendations for such changes as may be desirable to provide incentives for private investment and consumer purchasing power and to provide for the financing of necessary public investment and social services on the part of Federal, State, and local governments.

TITLE II—ECONOMIC EXPANSION THROUGH PAYMENTS TO THE UNEMPLOYED

Payments to unemployed veterans

Section 201 (a): This subsection provides for an extension to July 25, 1950, of the unemployment benefit provisions of the GI bill of rights.

Section 201 (b): This subsection provides for increasing the weekly benefit from the flat $20 per week set in 1944 to $25.

Section 201 (c): This subsection provides that the Federal Government will pay only the extra cost above whatever rights an individual has under a State unemployment insurance law. For instance, if a single veteran is entitled to $15 a week for 10 weeks under a State law the Federal Government will pay the $10 extra for 10 weeks to bring his payments up to the $25. After the veteran has exhausted his State benefits the Federal Government will pay the entire cost up to the 52-week maximum in the GI bill of rights.

Section 201 (d): This subsection provides for increasing the $100-a-month maximum payment to self-employed veterans to the comparable monthly amounts of the increased weekly unemployment benefits.

Section 201 (e): This subsection provides that the increased amounts of weekly and monthly benefits will begin on August 1, 1949.

Payments to unemployed nonveterans

Section 202 (a): This subsection provides that State provisions requiring that the compensation applicant must "actively seek work" is not to be applied indiscriminately in all situations but only where it is necessary to insure an unemployed individual's exposure to suitable jobs and his availability for suitable work.

Section 202 (b): Under this subsection, a State cannot disqualify a person for benefits when the work available is less favorable in terms of wages, hours, or other conditions, than for similar work in the community, or before it is ascertained that the job offered utilizes the worker's skill as well as other available job opportunities in the community.

Section 202 (c): This subsection adds four new requirements to the six requirements which States must meet under the Federal law. These new requirements are as follows:

One new requirement specifies that the minimum percentage of wage loss which the weekly benefits based on the claimant's weekly earnings must provide shall be not less than 50 percent of wages up to a maximum not less than $30.

A second new requirement provides for payment of compensation for 26 weeks of total unemployment within a benefit year.

A third new requirement sets the maximum elegibility conditions in State laws. Since States provide eligibility conditions based on the weekly benefit amount, or high-quarter earnings, or weeks of employment, the new provision establishes three alternative bases as permissible maximum requirements in the year prior to unemployment—30 times the weekly benefit amount, 1½ times the high-quarter earnings, or 20 times the weeks of employment.

A fourth new requirement provides for maximum disqualification provisions, as follows—1 week as a waiting period in all cases; 4 weeks, where applicant left suitable work without good cause or was discharged for misconduct, or where applicant refused suitable work without good cause; and disqualification for period of work stoppage in a strike.

Section 202 (d): This subsection clarifies section 1607 of the Internal Revenue Code by adding definitions covering the base period, and weekly wages.

Sections 202 (e), (f), and (g): These subsections relate to converting the present Federal unemployment account from a loan fund into a reinsurance fund making outright grants under certain specified conditions to the States whose unemployment funds run low.

Section 202 (f): This subsection establishes on a permanent basis the Federal unemployment account which would otherwise expire on December 31, 1949.

Section 202 (g): This subsection provides that a State unemployment fund is deemed to be low if the fund has a balance of less than the benefits paid out during the two prior quarters. The State is then entitled to a reinsurance grant from the account if the benefits exceed 2.7 percent of payrolls. The amount paid to a State is three-fourths of the cost above 2.7 percent excluding any benefits paid in excess of 52 weeks. The division of benefit cost in a State where fund ran low would be as follows (measured as a percentage of pay rolls):

Cost of unemployment benefits in a quarter	Federal reinsurance grant	State share of cost
Percent	*Percent*	*Percent*
2.7	---------	2.7
3.0	0.225	2.775
3.5	.6	2.9
4.0	.975	3.025
4.5	1.35	3.15
5.0	1.725	3.275
6.0	2.475	3.525

Extended duration of payments to unemployed nonveterans

Section 203: This section provides for extending the duration of benefits beyond 26 weeks up to 52 weeks in any State which wishes to make an agreement with the Secretary of Labor. This section is optional with each State. The Federal Government will pay the cost of such extended benefits. This optional provision only comes into operation when unemployment in a State is in excess of 10 percent of the workers covered and more than 10 percent of such unemployed individuals have exhausted 26 weeks of benefits.

The purpose of sections 201, 202, and 203 is to equalize unemployment compensation for non-veterans and veterans with respect to the duration of payments when States with serious unemployment obtain the supplement to extend the period of payments from 26 to 52 weeks. These adjustments will help to assure the sustained purchasing power needed for economic expansion, and will also help to alleviate the suffering resulting from unemployment.

Maritime Training

EXTENSION OF REMARKS
OF
HON. VICTOR WICKERSHAM
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. WICKERSHAM. Mr. Speaker, a Senate Appropriations Subcommittee recently recommended a 50-percent cut in the Government funds for maritime training for the fiscal year ending June 30, 1950. This drastic cut, if it becomes law, will mean the eventual death of the youngest of the Federal academies, the United States Merchant Marine Academy at Kings Point, N. Y. As a member of the 1949 congressional Board of Visitors to this institution I was privileged to observe the efficient manner in which this Federal Academy is serving the future of this country. Through the building of well-educated, loyal citizens with a high degree of technical skill, it is combating through its graduates, the communistic trends in the merchant marine. Its graduates are among the best-trained merchant marine and naval officers in the world, who are educated to be self-sufficient in time of peace and immediately available to the armed forces in time of national emergency.

On Saturday, July 16, 1949, Lt. Gen. Walter Bedell Smith, United States Army, commanding general of the First Army, reviewed the regiment of cadet midshipmen at the United States Merchant Marine Academy. Following is his introduction by Rear Adm. Gordon McLintock, Superintendent of the Academy, and the subsequent remarks of General Smith:

Admiral McLINTOCK. General Smith, officers, and guests, gentlemen of the regiment, we are greatly honored to have as our reviewing officer this morning the commanding general of the First Army. Gen. Bedell Smith has sailed over from Governors Island to Kings Point at my invitation which was extended to him during the Army Day parade when he was reviewing officer of the great march-past on Fifth Avenue. He watched you then and his presence here today is a direct result of the good impression you made. I am sure you will not disappoint him or me today as he reviews you again on your own field.

General Smith is a native of Indianapolis, Ind. He is a veteran of both World Wars and between wars served with the Infantry in many parts of the United States and in the Philippine Islands. During the recent war he was Chief of Staff in the European theater of operations with headquarters in England and subsequently became Chief of Staff of the allied forces in North Africa and the Mediterranean area. He was General Eisenhower's chief of staff and helped to plan the invasion and carry it through successfully, and it was he who, on behalf of General Eisenhower, signed the surrender of Italy and the unconditional surrender of Germany. As the most able soldier and diplomat of his day he was then assigned to Moscow as our Ambassador, and filled that most difficult post with the highest distinction for 3 years. He is now Commanding General of the First Army with headquarters at Governors Island, N. Y. I will not recite his many decorations as that would

take all day. He has received the highest honors within the gift of his own country, and the highest decorations from 14 allied countries. Gentlemen of the regiment, you are in the presence of one of the really great men of our generation, who has made history, and been part of history's most breathtaking moments. On your behalf, as well as my own, I offer him our heartfelt thanks for the great honor he has paid us by coming here today. Here he is, Lt. Gen. Walter Bedell Smith.

General SMITH. Admiral McLintock, Your Excellency, Admiral Holden, and gentlemen of the regiment of cadet-midshipmen; as your superintendent says, I first saw you in formation on last Army Day. To you that might have been just the additional chore that always falls to a well-organized corps near a large city, but I want you to know that to me and to everybody else who saw you pass, you were an inspiration just as you are again to me today when I watch you in ranks. I want to thank you for that appearance and I want to take this opportunity to pay to your service a tribute from the United States Army which admires and respects what it is proud to think of as a sister service—the merchant marine. You young gentlemen are heirs of a great tradition.

We in the Army saw the miracles performed by the merchant marine during the war when you were our life line and I want you to know that if ever your pride of service needs further inspiration, read as I have recently done the heroic epic of the Murmansk run, and you will realize that the merchant marine has won victories in all our wars which are no less great and no less significant than the victories won by the other services, including the armed services; you will then understand why General Eisenhower said just before our invasion in Normandy: "When the final victory is won, no service will share the final credit more deservedly than will the merchant marine." It is a very significant thing, gentlemen, that the founders of this country in their first law enacted by their first Congress made provision as they thought for an adequate merchant marine and for a school for seamen. They looked into the future and realized then as we do now that this Nation will be as great as its merchant marine is strong.

I want to thank you and I want to thank your superintendent for giving me the opportunity to see you here in ranks. I compliment you on your appearance—I have never seen better—and I appreciate the privilege of being with you.

Bill To Plug Up Serious Loophole in Clayton Antitrust Act Approved by Judiciary Subcommittee—Now Before Full Committee—of Utmost Importance in Stopping Monopoly's Acquisition of Competitors' Physical Assets

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. PATMAN. Mr. Speaker, a bill (H. R. 2734) to plug up a serious loophole in the Clayton Antitrust Act has been favorably reported by a subcommittee and is now before the House Committee on the Judiciary. It is most urgent that prompt and favorable action be taken on this bill by the Committee on the Judiciary and by the Congress.

The effectiveness of section 7 of the Clayton Act in preventing mergers and acquisitions of competing corporations has been practically nullified and destroyed by the fact that the language of section 7 prohibits the acquisition of stock for the purpose of restraining trade or creating a monopoly, but does not prohibit the acquisition of physical assets of a competitor to accomplish the same monopolistic purposes.

Since the 1920's when the Supreme Court in three decisions affirmed the fact that the Clayton Act did not prevent acquisition of physical assets, groups intent upon destroying their competitors have acquired enough shares of stock in the competing corporation to enable them to have sufficient voting power to force the sale to themselves of the competitor's physical assets. In other cases the competitor's assets are acquired directly without using the rigged voting approach. This loophole in the Clayton Act is one of the factors which has contributed to the acceleration of the merger trend in our economy. As a result, competition is already a lost cause in many of our industries.

The question arises as to why action was not taken years ago to amend language which represents such an obvious weakness in our antitrust laws. The answer, which is apparent in this brief summary of the legislative history of bills designed to amend the section, is that many bills have been introduced, but they have not passed Congress.

From 1945 through 1948 companion bills designed to close the loophole in the law were regularly introduced in the Senate and the House by Senator O'MAHONEY and Senator (then Representative) KEFAUVER. In both the Seventy-ninth and the Eightieth Congresses, the House bill was approved by a subcommittee of the House Judiciary Committee, and twice was approved by the full Judiciary Committee, but twice failed to emerge from the House Rules Committee. On the Senate side, the bill was approved in the Eightieth Congress on May 17, 1948, by a subcommittee of the Senate Judiciary Committee, headed by Senator LANGER. But, like the House bill, the Senate bill never reached the floor for debate.

In this Congress, Senator O'MAHONEY has introduced S. 11, a similar bill, which was referred to the Senate Judiciary Committee, where no action has been taken. Representative HOBBS and Representative CELLER have introduced bills to accomplish the same purpose. Hearings have been held on H. R. 2734 (Mr. CELLER's bill) before Subcommittee No. 3 of the House Judiciary, and as I stated above, the bill is now before the full committee.

VOLUMINOUS EVIDENCE TO SUPPORT NEED FOR BILL INCLUDING PRINTED HEARINGS BEFORE FIVE CONGRESSIONAL COMMITTEES

The body of evidence which has been presented to Congress in support of this bill is voluminous. Principal items in this body of evidence which have been presented to Congress since the end of World War II may be listed as follows:

1. A general report by the Federal Trade Commission issued in 1948, entitled "The Merger Movement: A Summary Report."

2. A report by the Commission in 1947 entitled "The Present Trend of Corporate Mergers and Acquisition."

3. A printed volume of hearings before the subcommittee of the House Judiciary Committee of the Eightieth Congress. (Hearings on H. R. 515, to amend secs. 7 and 11 of the Clayton Act.)

4. A printed volume of hearings before the subcommittee of the House Judiciary Committee of the Seventy-ninth Congress. (Hearings on H. R. 2357, to amend secs. 7 and 11 of the Clayton Act.)

5. Approximately 700 typewritten pages of transcript of hearings before the subcommittee of the Senate Judiciary Committee of the Eightieth Congress.

6. A printed report of the House Judiciary Committee of the Eightieth Congress, approving the bill. (Rept. No. 596, to accompany H. R. 3736, June 17, 1949.)

7. A similar printed report of the House Judiciary Committee of the Seventy-ninth Congress. (Rept. No. 1820, to accompany H. R. 5535, March 26, 1946.)

8. Other information consisting of material presented before the Temporary National Economic Committee in the form of printed hearings and monographs as well as other printed reports of the Federal Trade Commission, going back nearly one quarter of a century.

The need for amendment to the Clayton Act is obvious, as shown in the reports and hearings listed above. Further study on this subject is unnecessary. What is required now is immediate action. I hope opponents of monopoly and monopoly power take concerted action to insure that H. R. 2734 does not meet the fate of similar bills in previous sessions.

Real Fight on Water Begins

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. POULSON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Times which gives the real picture of the Central Arizona project:

REAL FIGHT ON WATER BEGINS

New circumstances which have just developed in the long controversy with Arizona over water of the Colorado River make it imperative that all Californians clearly understand the issues. It is impossible intelligently to deal with a complex engineering and political question like this without appraising each new happening as it occurs. Lack of clear thinking or lack of interest at this point could result in deplorable results for all of southern California.

GOOD AND BAD NEWS

Both ominous and encouraging developments have taken place in this latest phase of the fight.

In Washington, the ominous matter was the approval by the Senate Insular and Interior Affairs Committee of a confusing bill which, in effect, gives approval to the $738,000,000 central Arizona project, subject to a determination of water rights by the Supreme Court. This bill is bad. There should be no connection whatever between the uneconomic and fantastically costly central Arizona project and the question of water rights in the Colorado.

Suppose, for instance, that Arizona should be awarded by the Supreme Court a certain amount of main stream water from the river; that has nothing to do with whether the central Arizona project is feasible or should be built. If the American taxpayer is to be saddled with the three-quarter of a billion dollar Arizona "rescue" plan to raise water 1,000 feet and take it 250 miles, why is it any more justifiable merely because Arizona owns some water?

THERE'S NO CONNECTION

It would be worse than foolish, therefore, for Californa to be lulled into any lessening of opposition to the central Arizona project merely because the misleading Supreme Court rider has been attached to the bill. This is a deliberate device to becloud the major question. The only test to be applied to the central Arizona project is whether it conforms to reclamation standards, according to all the business practice of the past. If it does not, it should be rejected, regardless of the availability of water.

Another matter with which Arizona has sought to muddy the logic of this whole issue concerns the fact that southern California is not yet using much of its share of Colorado River water. The inference, from the Arizona viewpoint, seems to be that because we are not yet using the water, this weakens our right to the water.

Nothing could be more ridiculous.

Los Angeles traditionally has planned for the future—and paid hard cash for its foresightedness—in regard to its water supply. In 1908, with a population of a mere 300,000 it began constructing the Owens River aqueduct to take care of the future. In 1949, with the city's population at 2,000,000, the Owens River aqueduct has just about reached its capacity. That was farsightedness. Should California in 1920, let us say, have been deprived of its Owens River water merely because it was not yet using it all? Again, in 1925 planning began for the Colorado River aqueduct. In 1931, the job began. Of course, we are not yet using the full supply. Nobody expected that we would be. This Colorado aqueduct was built for years to come, to take care of the future.

It is plain stupidity to try to base an argument on water rights on present water use. But Arizona, attempting desperately to cover up the pitiable weakness of her scheme, has tried to talk about everything but the facts involved, has sought to go off on pointless tangents.

TWO POINTS OF STRENGTH

California's strength lies in this: That her basic rights to Colorado River water are protected by solemn contracts with the Federal Government, and that California not only has offered but is actively campaigning to have all water matters in dispute decided by the only agency empowered to do so, the Supreme Court.

The one great point to be kept in mind is that we must not permit ourselves or Congress to be gulled by any such obvious trick as is embodied in the Senate "compromise" bill. Let's decide water rights in the Colorado; yes. But let's not pretend that settlement of the rights automatically authorizes Arizona to grab $738,000,000 of the taxpayers' money to "rescue" her central valley.

Requirements for the Labeling of Whisky

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. MORTON. Mr. Speaker, within the very near future the Treasury Department, through the Alcohol Tax Unit, will hand down a ruling in the matter of requirements for the labeling of whisky. This ruling will be of great importance to the distilling industry, not only in Kentucky but throughout the Nation. It also might have a great effect upon the white oak cooperage industry. It is important to all Members of Congress having in their districts distilleries, white oak timber stands or cooperage plants that the present ruling remain unchanged. Any change would, of necessity, be retroactive in nature and could result in serious inequities and substantial unemployment.

Under leave to include extraneous matter, I submit an article on this subject from the United States News and World Report:

MILLIONS IN A FEDERAL RULING—WHISKY DECISION SHOWS POWER OF OFFICIALS

Businessmen are finding they can't take their eye off Government. A ruling by Washington can make or break a company.

Whisky barrels help tell the story. Order allowing old kegs for new means big profit to some distilleries, big loss to others.

New rules keep turning up unexpectedly. Government, branching out, has more and more to say about how a business is run.

How Government, expanding its power and scope, influences the fate of business is coming to light in more and more ways.

A snap decision of a high official can influence the spending of hundreds of millions of dollars—and determine which company or which industry gets the money. What a board decides will determine whether a company is to stay in business with a Government loan or shut down, bankrupt. The finding of a minor official can determine who gets a valuable television license. It is the word of an employee of Government that often decides what rates a company can charge, how much profit it may keep.

Businessmen, day by day, are bumping against Government regulations that determine what they can do, or influence their chance to make a profit. The whim of an official well down the line may make the difference between success for one company and failure for another. Valuable rights and privileges are being passed out or denied every day by Government on a scale that steadily grows.

An example of how Government can tangle up business is being provided by the recent experience of the distilling industry. An apparently routine Government decision, not one made at the top level, suddenly changed the value of at least $34,000,000 worth of whisky inventory, greatly benefited some firms at the expense of others, and has caused an uproar within the industry.

What happened in the particular instance is this:

For years, United States whisky makers have aged their product in new charred-oak barrels. Cost of these barrels has been a substantial part of production costs. Idea is that the raw whisky extracts something from the charred oak of new barrels, and the reaction produces a superior product. This tradition of using only new barrels for aging has been guaranteed, since 1936, by a regulation of the Treasury Department's Alcohol Tax Unit, one which requires labels on whisky bottles to claim as the product's age only the number of years spent in such new barrels.

In wartime, however, priorities for making these oak barrels were low and the supply dropped out of sight. After war's end, production of whisky-aging barrels was limited because an OPA price ceiling made them unprofitable to build. Some liquor firms then bought out cooperage concerns in order to build their own barrels. But other distillers decided to reuse barrels, that is, to age their whisky in barrels that had been used for that purpose before. This saved those distillers up to 45 percent in the initial cost of producing whisky.

It was inevitable that holders of this inventory of whisky in used barrels should try to get full age credit on their labels for the time their product was aging in old barrels. An effort was made in 1947 to get the existing Government regulation changed so that whisky aged, say, 2 years in reused barrels and 1 year in new barrels could be labeled 3 years old. In that case, it would be labeled just the same as whisky that had spent 3 years in a new barrel.

That effort got nowhere. A deputy in the Bureau of Internal Revenue responded that such a change in Government regulations would be highly improper. It would, he said, deceive the public. Moreover, it would apply only to whisky produced in a short period when barrels were scarce—whereas, if the idea were sound, it should apply to all whisky. His final point was that such a change would have to be retroactive, applying to whisky produced in the past, and therefore capriciously altering the relative values of all whisky then in storage.

Now, 2 years later, this same official suddenly has issued the very order he turned down in 1947, changing the Government regulation to permit full-age credit for whisky stored in used barrels during the production period of 1944–46. This was done without preliminary hearings. No notice was given beforehand in the Federal Register, as normally required by the Administrative Procedure Act. The order was not approved by, or apparently even shown to, the Secretary of the Treasury.

Yet, by having the standard by which whisky is usually judged refer to two different types of processing, industry representatives claim, the ruling has changed the value of nearly all whisky stocks. Millions of dollars are involved. Result is said to be lowered values of inventories for some and increased values of inventories for others. Bankers who accept whisky warehouse receipts as collateral for working-capital loans also are affected.

In this case, reaction from the industry has been violent enough to cause a suspension of the recent Government order and scheduling of a series of hearings before a final decision.

But, whatever the final outcome, a single Government decision is to have a basic effect on the multi-billion-dollar distillery industry, just as hundreds of other Government decisions are having a bigger and bigger effect on the fortunes of other businesses all over the United States.

Hearings on Committee-Procedure Bill

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. HOLIFIELD. Mr. Speaker, I am pleased to note that the Senate Committee on Rules has opened hearings on Senator LUCAS' bill which seeks to prescribe a code of fair procedures for its investigating committees. This is a subject which should have been handled legislatively long ago by both the Senate and the House.

The importance of this matter was indicated by the introduction of bills on this subject by both majority leaders of the House and the Senate on January 3, 1949.

It is my considered opinion that certain procedural abuses of witnesses by the House Committee on Un-American Activities, during the Eightieth and preceding Congresses, had grown to the point where the confidence of the American people in the fairness of congressional committees, was in serious question.

Realizing the seriousness of this problem, I introduced four separate bills treating with this matter on January 3, 1949. The numbers of those bills are as follows: House Concurrent Resolution 4, House Resolution 16, H. R. 74, and H. R. 191. I regret that the House Committee on Rules has not seen fit to schedule hearings on this subject. I hope that the Senate hearings will impress the Congress with the importance and necessity of setting our own House in order.

Mr. Speaker, under unanimous consent, I insert with my remarks a pertinent editorial which appeared in the Washington Post on July 18, 1949:

CONGRESSIONAL CODE

Congress has at last begun to examine the necessity of prescribing a code of fair procedure for its investigating committees. The current hearings before the Senate Rules Committee come in response to a formidable public demand that congressional fact-finders respect the rights of citizens to remain free from irresponsible smearing. That demand was crystallized last January when Majority Leaders LUCAS and MCCORMACK of the Senate and House, respectively, introduced a resolution to guide the conduct of all committee hearings. The problem was effectively stated by Senator LUCAS when he declared at the opening session of the hearing on Thursday that "if Congress does not have the statesmanship to reform itself, I am afraid its investigations will fall into disrepute."

In the light of recent history, we think it is safe to start with the assumption that a code of fair investigating procedure should be adopted. The real question is what that code should contain. The Lucas-McCormack resolution is a good beginning, although its sponsors would doubtless be first to say that it needs to be critically scrutinized. For, while the chief objective of any such code must necessarily be the elimination of abuses from congressional hearings, an equally important aim must be improvement of the means by which Congress brings vital information to light. In other words, this investigative power is so essential to Government by the people that its effectiveness should be enhanced instead of being impaired. Any satisfactory code, in our opinion, must serve both to eliminate abuses and to make the legislative investigation a more useful tool in the hands of Congress.

This latter objective seems to be lost to sight in one provision of the Lucas-McCormack resolution. It would give a person defamed or adversely affected by testimony before a congressional committee the right not only to file a sworn statement for the record and to testify in his own behalf, but also to have the committee summon up to four witnesses to testify for him and to cross-examine witnesses appearing against him for a period up to 1 hour each. The result might be serious obstruction of important committee investigations. Communists summoned before any committee, for example, would be quick to claim damage to their reputation and thus win the right, under the proposed rule, to waste hours or days of time. While protecting citizens against loose slander, Congress ought to avoid fashioning unnecessary hobbles for itself.

In our series of editorials entitled "Turning on the Light," in which we pleaded for the right of defamed persons to defend themselves before investigating committees, we also pointed out that limitations upon this right are essential "to avoid disruption of inquiries or their diversion to irrelevant issues." Where that limit is to be drawn is probably the most difficult issue the Rules Committee will have to decide. We have no doubt, however, that it can be drawn so as to afford maligned citizens much greater protection than they now have without interfering with any legitimate investigation.

Overtime on Overtime

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. NIXON. Mr. Speaker, I have followed the progress of H. R. 858 with particular interest throughout because of its great importance to many people in California who are faced with overtime-on-overtime claims. In reading over the congressional debate and reports on H. R. 858, I believe some further statement as to its retroactive provisions is desirable.

Retroactive relief is an extraordinary remedy not to be granted lightly. It is a remedy that has been previously used, however, not only in the portal-to-portal situation but in many other situations during the last 50 years where such relief was necessary to achieve justice or promote the public interest. The purpose of such retroactive legislation is not to reverse the Supreme Court but to correct an inequity which has come to the attention of Congress either by reason of a decision of the Supreme Court or otherwise. Where legislation has been proven inequitable or harsh Congress must act promptly to correct it lest such legislation become an instrument of oppression and impede the progress of liberal legislation for the future.

These overtime-on-overtime claims arose because the Seventy-fifth Congress failed to define the term "regular rate" just as the portal-to-portal claims arose because the legislature failed to define the term "workweek." In both types of cases the claims were in violation of the intent and spirit of bona fide collective-bargaining agreements of long standing and the filing of these suits was deplored by responsible labor officials. In both situations employers who had attempted in good faith to comply with the law found themselves faced with enormous liabilities by reason of an interpretation of the Fair Labor Standards Act, 10 years after its enactment, which was never contemplated at the time of its passage. This result was harsh and inequitable in the extreme.

The only claims that will be affected by this legislation have been denounced by Judge Rifkind, an outstanding friend of labor, on the ground they would convert collective bargaining into a device for obtaining money under false pretenses and have been characterized by another liberal jurist, Judge Goodman, of the district court of San Francisco, as a species of synthetic afterthought. Even Judge Cooper, of the district court in Puerto Rico, who failed to sustain portal-to-portal defenses in these cases stated that the claims violate both the spirit and letter of a contract duly negotiated through collective bargaining. These overtime-on-overtime claims are mere windfalls never contemplated by the employees and would have benefited only a small portion of the workers in this industry, in contrast to the majority who followed the advice of their union leaders and did not join in the suits.

Under these circumstances it was manifestly just and proper that the Senate, without objection, and the House, by an overwhelming majority, voted for an amendment providing that the provisions of section 1 of H. R. 858 would be deemed to have been in effect since 1938 when the Fair Labor Standards Act was enacted. This amendment thus provides a consistent interpretation of the act from the beginning and, in my opinion, carries out the intent of the Seventy-fifth Congress. Obviously, if this clarification of the Fair Labor Standards Act is fair for the future, as was unanimously agreed by all segments of labor, industry, and the Government, it is equally fair to apply the same principles to the past.

Justice Frank Murphy

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1949

Mr. SADOWSKI. Mr. Speaker, it is with great sorrow that I learned of the death of the Honorable Frank Murphy, Associate Justice of the Supreme Court of the United States.

Justice Murphy was born at Harbor Beach, Mich.; he studied law at the University of Michigan and served in World War I overseas as a captain.

Justice Murphy was profoundly religious, a great humanitarian, and a man who constantly fought for the underprivileged. I first became acquainted with Justice Murphy when I was a law student at the University of Detroit; at that time Frank Murphy was one of our professors. The law students at the University of Detroit learned to admire and love this young professor. Many of these law students in later years became his staunch political supporters.

Frank Murphy's first political appointment was that of Assistant United States District Attorney at Detroit. Then he was elected judge of the Recorders' Court in the city of Detroit; after serving 7 years as judge he was elected mayor of Detroit. This was at the time the depression of the early thirties struck at the city with devastating fury. As mayor, Frank Murphy met the challenge—he fed and housed the city's jobless. It was a costly program, and he was subjected to much criticism, but he met the challenge boldly and bravely, and the city of Detroit was saved from rioting and looting.

While still mayor of Detroit, Frank Murphy became very friendly with Franklin D. Roosevelt, at that time Governor of the State of New York. This friendship between Roosevelt and Murphy grew and blossomed as they wrestled with plans to give food and employment to the poor victims of the depression. These two men had much in common. They were honest, fearless men, liberal, humanitarians, real students and followers of the great Jefferson and Jackson.

Shortly after Roosevelt was elected President he named Frank Murphy as Governor to the Philippines in which position he served with honor and distinction. The Filipinos still regard him, and always will think of Murphy, as the greatest friend they ever had. In 1936 he was recalled from the Philippines to run as Governor of Michigan.

The people of Michigan loved this honest and humane leader, and he was elected Governor of the State. Both as mayor and as Governor of the State of Michigan, Frank Murphy served during the most troublesome times and the toughest depression years in the history of our city and State. He would not turn machine guns upon the starving and struggling masses of people. He extended a friendly and helping hand to the poor and unemployed. He became a national figure. Everyone knew and heard all about the great Governor of the State of Michigan.

In 1939 President Roosevelt appointed Frank Murphy United States Attorney General. From that position he was elevated to the Supreme Court bench.

Justice Murphy possessed a deep sense of justice and righteousness, and great love for his fellow man. He was a courageous fighter who was unafraid of political criticism. His goal in life was to serve the common people, and not the special interests. The people of Detroit and the citizens of Michigan will mourn the loss of this great Democratic leader. Justice Murphy will always be remembered as the great fighter for human rights, and a vigorous opponent of bigotry and intolerance. He possessed an unbounding love for the poor, the oppressed, the meek, and the humble. He was truly a great servant.

Rehabilitation of the Navajos

EXTENSION OF REMARKS
OF

HON. HAROLD A. PATTEN

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. PATTEN. Mr. Speaker, I have just received a report from the Red Cross on its relief activities on the Navajo and Hopi Indian Reservations during this spring. I am including it as a part of my remarks. This report is additional proof of the necessity for the Navajo rehabilitation program which is incorporated in S. 1407. This bill is now in conference between the two Houses and I hope will be approved in a fully adequate amount.

REPORT OF RELIEF ACTIVITIES OF THE AMERICAN NATIONAL RED CROSS ON THE NAVAJO AND HOPI INDIAN RESERVATIONS IN ARIZONA DURING THE SPRING OF 1949

Relief operations in those sections of the Navajo and Hopi Reservations in Arizona seriously affected by the snowstorms last winter were completed during the month of June 1949. Among the significant facts brought out in the reports of our field staff were the following:

1. More than half the Navajo families in this area were in need of assistance.

2. Of the 2,002 families given food orders, approximately 75 percent had not previously been on the welfare rolls of the Navajo and Hopi Agencies.

3. Records of interviews with 1,610 families—very few of whom had previously been welfare cases—provided the statistical information given in the following paragraphs and indicated some of the problems confronting the Navajo people.

4. Forty-eight and six-tenths percent of these families had health problems, involving one or more members, that were obvious to the layman.

5. There were 4,244 children under 16 years of age in these families, and of this number only 481 were in school. If one-half the children were of school age, this means that only 22.6 percent were in school.

6. In 57.8 percent of the families there were employable males, but no opportunities for employment were available to them on the reservation and no employment outside the reservation would be available until the late spring and summer months.

7. Livestock losses were heavy. Mature sheep amounted to 15.6 percent of the herds of these families. Losses of lambs amounted to 42.2 percent, goats and kids, 10.3 percent, horses, 15.5 percent, and cattle, 24.5 percent. This information was obtained at the time of the first interview with the families. Both mature sheep and lambs continued to die beyond that point, and lambing was not completed.

The Navajo Reservation is located in eastern Arizona, western New Mexico, and southeastern Utah. It is a wild, rugged country of mountains, canyons, mesas, and deserts, situated at altitudes varying from 4,500 to 9,000 feet. It encompasses an area of 16 million acres, approximately 25,000 square miles, almost completely devoid of roads and other means of communication.

There are approximately 65,000 Navajos living on or adjacent to the reservation—the largest Indian tribe in the country. There are no towns or villages on the reservation as the Navajos live in isolated "hogans." These are octagon-shaped single-room, adobe-covered buildings varying from 12 to 20 feet in diameter, the only openings being a door, always facing the east because of religious beliefs, and a smoke hole in the roof. They are widely scattered all over the reservation. The economic status of the Navajo is extremely low, the average income per family ranging between $400 and $500 a year. Sustenance is provided mainly by sheep raising and rug weaving and, during certain seasons of the year, by employment off the reservation.

The Hopi Reservation, located in northern Arizona and completely surrounded by the Navajo Reservation, has a population of 6,300. Economic conditions among the Hopi Indians are much better than among the Navajos, and relief needs were minor in comparison with those of the Navajos.

The winter of 1948–49 was unusually rigorous. A series of very severe blizzards and unprecedented snowfalls accompanied by bitter cold created a condition of destitution and disaster among the already impoverished Navajos. The fury of the elements was unleashed with greatest intensity in the western section of the reservation. This section comprises an area of 4,500,000 acres in which live approximately 2,500 Navajo families. The loss of livestock was heavy, but fortunately only a few human lives were lost.

Red Cross relief activities were conducted in two phases. During the storms in January and February the Red Cross participated in a coordinated relief operation with the Army, Navy, Federal Works Agency, State of Arizona, Civil Air Patrol, and the Navajo Service Agency. Approximately 95,000 pounds of food and a small supply of drugs, blood plasma, cots, blankets, and fuel were provided by the Red Cross for delivery by airplane or truck into the affected area. Red Cross expenditures for these relief activities amounted to approximately $18,000.

The second phase of the Red Cross relief activities resulted from a request by the Honorable Julius A. Krug, Secretary of the Interior, when the funds of the Bureau of Indian Affairs available for welfare activities became exhausted. Early in March a survey of conditions among the people in the snow-affected area was made by the Acting Commissioner of the Bureau of Indian Affairs and the National Administrator of Disaster Services of the American Red Cross, as a result of which a Red Cross emergency relief headquarters was established at Window Rock, Ariz., and Red Cross disaster representatives assigned to the districts affected.

The duties and responsibilities of these Red Cross staff members included visiting and interviewing families, surveying and recording losses and needs, promptly providing the essentials of life as needed, and referring to the Navajo Service Agency (the field unit of the Bureau of Indian Affairs) welfare cases that involved long-time care brought to light by these surveys and that could properly be handled by the Agency when new appropriations of funds were made available by Congress. By reason of the fact that only about 20 percent of the Navajos speak English, an interpreter was employed by the Red Cross and assigned to each of its representatives.

Because of the exhaustion of Agency funds, 565 families that were on the regular rolls of the Navajo and Hopi Agencies were given assistance by the Red Cross. Many of these families had had small herds of sheep and lambs, which were lost as a result of the

storms, and their friends and neighbors who in normal times could be counted on to assist them if Government funds were not available were unable to do so this year because of their own heavy livestock losses.

The customary Red Cross disaster relief policies and procedures were applied insofar as it was possible to do so under the unusual physical, social, and economic conditions prevailing on the reservation.

The Red Cross representatives issued to families official Red Cross disaster relief disbursing orders drawn on the trading post of the family's choice, for specific amounts, usually 1 month's supply. This system consequently did not disturb the customary dietary or trading habits of the people. Each disbursing order carried a statement in the Navajo language indicating the purpose of the order. All traders were advised as to commodities that would be acceptable or unacceptable to the Red Cross.

A Red Cross accountant was assigned to the headquarters office at Window Rock, Ariz., to audit all disbursing orders and traders' bills, and payment of all bills was made from that office.

The relief given consisted almost wholly of food supplies, augmented in a few instances by medical supplies and feed for livestock. It was not necessary for the Red Cross to supply clothing at this time as sufficient stocks were available through other agencies to meet minimum needs.

It was found that the medical service of the Navajo Service Agency was suffering from an acute shortage of nurses, as a result of which medical and nursing service to the Navajos had been curtailed. In view of the dire health situation as revealed by the statistics quoted above, the Red Cross undertook to put on a nurse recruitment program and was successful in recruiting 20 nurses. These nurses were assigned on arrival to the Navajo Service Agency, and responsibility for their salaries was assumed by that agency.

The entire Red Cross emergency assistance program was carried forward in close collaboration with the Bureau of Indian Affairs, the Navajo Tribal Council, the Navajo Service Agency and its field staff of district supervisors and range riders, the missionaries, and the traders, all of whom were kept currently advised of developments and gave every possible assistance to the Red Cross.

In May and June employment opportunities, mainly off-reservation, in connection with railroad and agricultural work became available, and it was possible to discontinue the issuance of relief. Additional funds appropriated by Congress also made it possible for the Navajo Agency again to resume responsibility for families normally on its relief rolls and the additional welfare cases that the Red Cross survey had indicated would probably be long-time relief cases.

The expenditures of the Red Cross for this second phase of the relief program amount to approximately $187,000.

The Junior Red Cross supplemented the primary relief program by alloting $11,000 from its National Children's Fund for the purchase of recreational supplies and equipment and medical supplies to be used for the benefit of the Navajo school children.

American Red Cross relief expenditures in this operation totaled $216,000.

It was the unanimous opinion of the Red Cross representatives assigned to this relief operation that:

1. Temporary relief programs such as those engaged in by the Red Cross and other agencies from time to time were merely palliative and will never solve the problems of the Navajos.

2. The only hope of solving the Navajo probem is the economic rehabilitation of the reservation as a whole, probably along the lines of the 10-year rehabilitation program now under consideration by Congress.

3. Unless such a program is undertaken, there is every reason to expect that conditions on the reservation will become progressively worse and that eventually the cost to the Federal Government to maintain the reservation and its inhabitants will be much greater than if the long-range rehabilitation program were now undertaken.

Concluding Act in the Bentley Farce

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. HOLIFIELD. Mr. Speaker, the concluding act of the Bentley farce which was foisted on the public by the hysteria of certain members of the Un-American Activities Committee during the Eightieth Congress was reached recently in the payment by the taxpayers of Miss Bentley's Washington hotel bill.

As the wave of postwar spy-hunting hysteria subsides, we can reflect on the foolish and sometimes dangerous excesses which jittery superpatriots were wont to exercise.

We can also thank God that democracy has again proven its basic strength and stability, despite the frantic actions of those who doubted its ability to withstand its foes from within as it had vanquished its foes without.

Mr. Speaker, under unanimous consent to have my remarks printed in the Appendix, I include an editorial from the Washington Post of July 18, 1949, on this subject:

SMALL CHANGE

It would have been extremely niggardly, not to say ungallant, on the part of the House of Representatives to refuse to pick up the tab for Elizabeth T. Bentley's stay in Washington while she was the guest of the good-time Charlies of the Committee on Un-American Activities. Miss Bentley gave the boys quite a whirl while she was here. They painted the town red in her honor; it's a little late to start complaining about the size of the check the morning after. Besides, Miss Bentley's $526 hotel bill must be reckoned a very minor item in comparison with the value of other gifts conferred on her and with the cost of the spree to Congress in terms of its own prestige.

Miss Bentley seems to have pretty heartlessly jilted her beaux on the Hill. When the opportunity came to back up her charges about William Remington, she just couldn't be found; very properly he was completely exonerated by the Loyalty Review Board. It is rather significant, moreover, that not a single one of the numerous persons she named as members of the espionage rings she said she served has been indicted or charged in any way with violation of the law. We can conclude from this only that the Department of Justice, which has shown no reluctance to prosecute in espionage cases, prudently assumed that no jury could be persuaded to give credence to her testimony.

Why Miss Bentley herself has not been indicted for espionage is rather more difficult to explain. Her situation is substantially different from that of Whittaker Chambers, who confessed to having acted as a Communist courier only in the peaceful period of the 1930's. Although what Mr. Chambers says he did was clearly violative of the Espionage Act, the statute of limitations gives him immunity from punishment for that crime. But Miss Bentley says she did her espionage work while the United States was at war. The Espionage Act provides that whoever shall violate its provisions forbidding disclosure of information relating to the national defense in time of war "shall be punished by death or by imprisonment for not more than 30 years." And according to title 18, section 581a of the United States Code, "An indictment for any offense punishable by death may be found at any time without regard to any statute of limitations." It would appear that either the real price of Miss Bentley's wild party was a promise of immunity—or else there was no evidence to corroborate her story.

University of Louisville

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. MORTON. Mr. Speaker, under leave to extend my remarks, I include a letter from the president of the University of Louisville to my distinguished colleague, the Honorable NOAH M. MASON.

The University of Louisville is the oldest municipal university in this country and provides the only medical school for the State of Kentucky. It is clear from Dr. Taylor's letter that the university will not be engaged in operating Churchill Downs nor any other business enterprise.

JULY 14, 1949.

Hon. N. M. MASON,
New House Office Building,
Washington, D. C.

MY DEAR MR. MASON: I have before me a news release issued from your office under date of June 20, 1949, concerning your 30-minute address to the House in support of bill H. R. 5064. Among other things, the release states: "* * * Mr. MASON told the Members that the famous Churchill Downs race track has just been taken over by a tax-exempt organization and that nearly a half million dollars a year that it has heretofore paid as income taxes will now go to the University of Louisville and other tax-exempt institutions."

In relation to the foregoing, may I state: First, that the board of trustees of the University of Louisville, as well as the administration of the university, has had no contact with the American Turf Association (the present owners of the Churchill Downs race track). The board knows nothing of the proposed purchase of the Churchill Downs race track by the Churchill Downs Foundation other than what has been published in the local press. Secondly, the university, therefore, would stand in the same relation to the Churchill Downs Foundation as it would, and does, to any educational foundation, such as the Ford Foundation, the Rockefeller Foundation, the Kellogg Foundation, and the like. If the university should receive an offer of a gift from the Churchill

Downs Foundation, or from any other foundation, it would then act through its board of trustees in the matter of acceptance or rejection of the offered gift. Thirdly, according to press stories in the local newspapers, a meeting is to be held by the stockholders of the American Turf Association this month to consider the possible sale of the Churchill Downs race track to the Churchill Downs Foundation. It has also been stated in the press that the proposed foundation would devote half of its net annual earnings to the support of the University of Louisville School of Medicine. The source of this information is unknown to me, as well as to the official governing body of the university, its board of trustees. As far as we are concerned, the possibility of receiving a gift from this foundation, should it take over the Churchill Downs race track, is purely conjecture.

I would appreciate a correction of the facts as stated in the news release on the subject, dated June 20, 1949.

Very sincerely,

JOHN W. TAYLOR,
President, University of Louisville.

Sleeper in ECA Appropriation Bill

EXTENSION OF REMARKS
OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. HOLIFIELD. Mr. Speaker, on June 20 I called the attention of the Members to the shocking failure of our decartelization program in western Germany. I gave in detail specific cases and incidents which, in my opinion, proved that decartelization was being sabotaged by our military administrators in Germany, and also called attention to facts which indicated that personnel in favor of decartelization were being persecuted and purged by their superiors.

In the Washington Evening Star of July 18, 1949, the highly respected columnist Thomas L. Stokes wrote an article on this subject. He points out very clearly that the cartel protectors are busy in our legislative halls as well as in western Germany. Mr. Stokes charges that a "sleeper" has been added to the ECA appropriation bill which in effect will authorize further protective policies encouraging German cartels and their American financial collaborators. This "rider" opens a dangerous door, and it is my fervent hope that it will be eliminated in conference.

Mr. Speaker, under unanimous consent to extend my remarks, I include Mr. Stokes' article with my remarks in the Appendix of the RECORD:

"SLEEPER" IN ECA BILL—GERMAN CARTELISTS AND UNITED STATES ALLIES WORM THEIR WAY UNDER SENATE TENT

(By Thomas L. Stokes)

The German cartelists, now represented here personally, and their American big-business allies, finally have wormed their way under the tent in the United States Senate.

Through a "rider" attached to the pending ECA appropriation bill by the Senate Appropriations Committee, they hope to exploit the Economic Cooperation Administration that administers the Marshall plan to preserve and restore the great industrial and financial monopolies in Germany which were so useful to the Nazi war machine. Their specious grounds are European recovery, saving the American taxpayer, and protecting German workers.

This "sleeper" in the ECA bill provides that "the list of limited and prohibitive industries scheduled for destruction in, or removal from, Germany shall be reviewed and the Administrator of the Economic Cooperation Administration shall seek to obtain the retention in Germany of such plants on this list as would best serve European recovery if left in Germany."

ONE HUNDRED AND FIFTY-NINE PLANTS DUE TO BE RAZED

There are now 159 plants which under a downward revision of the original Potsdam reparations agreement list at the recent Paris Conference of Foreign Ministers, are on the list to be destroyed or dismantled and removed to nations participating in reparations. The object of the rider is to compel Paul Hoffman, ECA Administrator, to retain in Germany plants which this Government has pledged, along with its allies, to destroy because of their potential for war by a revived Germany, all in keeping with our war aim to break up the cartel system that fastened itself on Europe and helped to promote the Second World War.

Both Mr. Hoffman and Secretary of State Acheson are very much embarrassed by this little conspiracy. It would endanger the whole European recovery venture as it would antagonize our western European allies. Their struggle to revive and survive economically would be seriously impeded by a new German industrial giant that would flood Europe with goods in competition with them, not to mention their fear of a revived military Germany which again might pounce on them as in the First and Second World Wars.

The eventual aim of this conspiracy, which is really an old conspiracy that ramifies into much of the Eu opean economy, is to restore the old cartel system. Immediately the objective is to retain steel plants on the limited list that were to be removed and to save plants on the prohibitive list that were to be destroyed because of their direct war potential.

INTRIGUING STORY

How this rider got into the appropriation bill is an intriguing story.

It brings in V. L. S. Loesch, managing director of the Deutsche Edelstahl steel combine in Germany, who came to Washington on his mission for the steel interests. He interested Senator MALONE, Republican, of Nevada, who arranged conferences for the German visitor with Under Secretary of State James E. Webb, Mr. Hoffman, and William C. Foster, ECA Deputy Administrator. Senator MALONE enlisted Senator MCCARRAN, Democrat, of Nevada, who got the rider in the appropriation bill.

Mr. Hoffman and his aides now are working feverishly to have it defeated in the Senate, where the bill is expected to be taken up late this week.

Any further modification of the plant destruction and removal program would be resented particularly by the British, who agreed only very reluctantly at the recent Paris conference to the downward revision of plants to be included.

All of the plants involved in the current episode are in western Germany and none are assigned to Russia. Only three nations in the Russian orbit—Czechoslovakia, Yugoslavia, and Albania—would receive any plants in reparations, and their share is negligible.

Address by the President of the United States to the Imperial Council of the Shrine of North America

EXTENSION OF REMARKS
OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, July 21 (legislative day of Thursday, June 2), 1949

Mr. LUCAS. Mr. President, the two Senators from Illinois had the opportunity of accompanying President Truman to Chicago on July 19, where we heard his magnificent address before the Imperial Council of the Shrine of North America. I ask unanimous consent that the address be incorporated in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to be present at this Imperial Council of the Shrine of North America and to participate in your diamond jubilee celebration.

Among the many activities of the Shrine that have contributed to progress, I have always been especially interested in their program to aid crippled children. It seems to me that this program illustrates one of the best features of our way of life—concern for the unfortunate without discrimination as to race, color, or creed.

The people of the United States have never limited this attitude of concern for their fellow men to the boundaries of our own country. As the activities of the Shrine in Mexico and Canada demonstrate, we join with the people of other countries in the relief of human suffering. Especially since the end of the war, Americans, through their churches and other organizations and as individuals, have extended the hand of help and friendship to the unfortunate of many lands.

We do this because we think of the people of other countries as human beings, not as pawns in the game of power politics.

During the war, we established warm ties on comradeship and common purpose between ourselves and other peoples in the struggle against tyranny. We hoped that an enduring peace could be built on these ties of friendship. In part, these high hopes have not been realized. Leaders of some nations have cut off communications and built barriers of suspicion between their people and the outside world.

WILL SPREAD FACTS ABOUT UNITED STATES POLICIES

But, in spite of this, there persists in this country a sincere feeling of friendship and sympathy for those peoples who have been cut off from us by force or political intrigue. We are convinced that if they were permitted to know the facts they would return our friendship.

We shall therefore continue in our efforts to help them learn the facts. We believe that the people of the world should have the facts, not only about ourselves, but about all the things that concern them most deeply. Only if men know the truth are they in a position to work for a stable and peaceful world.

In this country, where the facts are readily available, we have a special obligation to inform ourselves concerning world affairs and important international issues.

This is vitally important if our country is to carry out the responsibilities of world leadership that it has today. For, in this Nation, foreign policy is not made by the decisions of a few. It is the result of the democratic process, and represents the collective judgment of the people. Our foreign policy is founded upon an enlightened public opinion.

The importance of public opinion in the United States is not always understood or properly evaluated. Public opinion in a country such as ours cannot be ignored or manipulated to suit the occasion. It cannot be stampeded. Its formation is necessarily a slow process, because the people must be given ample opportunity to discuss the issues and reach a reasoned conclusion. But once a democratic decision is made, it represents the collective will of the Nation and can be depended upon to endure.

PUBLIC OPINION BACKS FOREIGN COMMITMENTS

Those who rule by arbitrary power in other nations do not understand these things. For this reason, they do not realize the strength behind our foreign policy.

The major decisions in our foreign policy since the war have been made on the basis of an informed public opinion and overwhelming public support.

For example, in 1945 the people of our country were almost unanimously in favor of our participation in the United Nations. The Senate reflected that public sentiment when it approved the Charter by a vote of 87 to 2.

In 1948, after almost a year of discussion and debate, it was clear that a substantial majority of the people of this Nation approved our participation in the European recovery program. The Congress translated that approval into legislative action by a vote of approximately 4 to 1.

SAYS UNITED STATES SEEKS TO IMPROVE UN WORK

Our people continue to support the United Nations as fully as they did 4 years ago, in spite of the fact that some nations have obstructed its work through the misuse of the veto. We want to improve the United Nations. This desire was expressed in Senate Resolution 239, which called for the strengthening of the United Nations and the development of regional and other arrangements for the mutual defense of the free nations. This resolution was approved by the Senate last year by a vote of 64 to 4.

As a means of carrying out these desires of the people for stronger support of the principles of the United Nations, the North Atlantic Treaty has been negotiated and is before the Senate. The Senate is now engaged in discussing the treaty with the deliberation and close attention that is part of the democratic process. All points of view have been made known. Public opinion among our people is overwhelmingly in favor of ratification of the treaty, and I am sure that the Senate will give its approval.

These momentous decisions are the decisions not of the Government alone but of the people of the United States. For this reason it is clear that this country will steadfastly continue, together with other nations of like purpose, along the path we have chosen toward peace and freedom for the world.

The formation of foreign policy on the part of the democratic nations may be a slow and painful process, but the results endure.

It is only in the totalitarian states, where all decisions are made by a few men at the top, that foreign policies can be reversed or radically altered in secrecy, or changed abruptly without warning. Between totalitarian states, disagreements can suddenly become open conflicts, and allies can change into enemies overnight. The democratic nations, by contrast, because they rely on the collective judgment of their people, are dependable and stable in their foreign relations.

DECLARES MANKIND WANTS WORLD ORDER

Today, the great quest of mankind is for a world order capable of maintaining world peace.

Just as the democratic nations formulate their foreign policies after due consideration for the opinions of their citizens, so they formulate their plans for international order with due regard for the independence and the sovereignty of other nations.

The kind of world organization for which this Nation and the other democratic nations are striving is a world organization based on the voluntary agreement of independent states.

We are familiar, in our own history, with this kind of organization. Our country began as a federation—an association of local democratic sovereignties within a larger whole. The existing states, whether large or small, were brought together on the basis of voluntary agreement.

This principle of mutual respect and voluntary agreement is essential to the creation of a strong world organization for maintaining a just peace. In this respect, associations of nations are like associations of individuals—they will not survive and prosper unless the rights and the integrity of the members are respected.

This is the principle on which the United Nations is based. The United Nations is designed to give every nation a share in forming decisions on world issues. Such an organization will have its difficulties. We all know, from our experience in business, in unions, cooperatives, or fraternal groups, how much hard work and honest give and take is required to make this kind of organization successful. But we also know that in the long run an organization based on voluntary agreement among its members will command greater loyalty, speak with greater authority, and have a greater chance for success than any other kind. We must therefore continue to support and continue to improve, the United Nations, as the way to lasting peace.

CITES HISTORY TO SHOW RULE OF FORCE FAILS

In contrast to the United Nations is the concept of a world order based on the rule of force. In the past, attempts to organize the world by force have always failed. The most recent failure was the attempt of Nazi Germany to establish European unity through the rule of force. This attempt to create an empire by conquest lasted only a few years.

In spite of the record of history, the leaders of some nations today appear still to be relying on force as a method of world organization. Their doctrine calls for the destruction of free government through the use of force and the effort to create class warfare. To achieve their aims, they make a false appeal to men's sense of justice; they play upon the common desire of men to improve their condition of life.

But, in practice, this system of world organization is no better than the old tyrannies that have failed. It is incapable of satisfying the needs and desires of man for a better life. In its inner structure, it manifests the fatal weaknesses of all dictatorships. Within the circle of its control today, tensions and conflicts appear to be increasing. It may have temporary triumphs, but in the long run it must either destroy itself, or abandon its attempt to force nations into its pattern.

Some people would have us believe that war is inevitable between the nations which are devoted to our concept of international organization and the concept which now bears the name of communism. This is not the case. I am optimistic as I look toward the future, because I believe in the superior attraction for men's minds and hearts of the democratic principles which have been tried and tested in free nations, and which are now winning the allegiance of men throughout the world.

DEMOCRATIC FAITH SEEN AS MORE APPEALING

In the battle for men's minds our faith is more appealing, more dynamic, and stronger than any totalitarian force. The world longs for the kind of tolerance and mutual adjustment which is represented by democratic principles.

This country has had a revolutionary effect in the world since it was founded. Our democracy was born in a world of absolute monarchies. The idea which we made a living reality spread throughout the world and brought the day of the absolute monarchy to an end. We have always been a challenge to tyranny of any kind. We are such a challenge today.

Our idea prevailed against the absolute monarchies of the nineteenth century. It is prevailing against the new and more terrible dictatorships of the twentieth century.

The reason is clear. Our idea of democracy speaks in terms which men can understand. It speaks of opportunity and tolerance and self-government. It speaks of the dignity of the individual, his freedom of conscience, and the right to worship as he pleases. It does not exact blind loyalty to false ideas or improbable theories. It does not make a god out of the state, or out of man, or out of any human creation.

The world is tired of political fanaticism. It is weary of the lies, propaganda, and hysteria created by dictatorships. It is disgusted by the practice of torture and political assassination. It is sick of the kind of political allegiance which is inspired solely by fear.

RIGHT TO OWN THOUGHTS DECLARED FUNDAMENTAL

Men want to live together in peace. They want to have useful work. They want to feel themselves united in brotherly affection. They want to enjoy that great privilege—a privilege denied to millions throughout the world today—the right to think their own thoughts and to have their own convictions.

These desires of mankind are satisfied by the democratic principles which we have put into practice. These principles are at work today as they were in the past. In the conflict that exists throughout the world, these are our greatest advantages. They should give us confidence that we shall eventually succeed in establishing the kind of international organization to preserve the peace for which men yearn.

In working toward this goal, we must act wisely and steadfastly. We must realize that many dangers yet lie ahead, and that there are many tasks and problems which will be difficult to master. We must also preserve in this country full enjoyment of those basic democratic principles which are our greatest assets.

In this period of history when our country bears the major responsibility of world leadership, our domestic and foreign policies are inseparable. We must maintain a strong and stable economy as the basis of our own well-being and as the primary source of strength of the free world. We must also support economic health and democratic ideals in other countries, if we ourselves are to remain strong and prosperous.

Both these objectives require action now.

We must take proper steps to see that our economy moves safely through the present transition period, and that employment and production start expanding again. If we were to make our plans on the assumption that employment and production will get smaller, we would only make matters worse, and waste much of our potential economic

strength. What we must do, instead, is to make all our plans, private and public, in such a way as to give us more jobs and more output. This is the way toward a stronger economy.

Furthermore, we must take action to insure that the hard-won economic recovery of other free nations does not revert to stagnation and despair. One of the most foolish things we could do right now would be to slash our appropriations for European recovery. If we did that, we would be deliberately throwing away gain for peace and freedom that we have painfully made. Only the Communists would profit if we took such a short-sighted course.

We have been making progress in working toward peace and freedom because we have been willing to make the investment that was necessary. It would be disastrous now to change our policy and settle for halfway measures.

It would be disastrous to lose or impair the understanding and support we have gained among the other democratic peoples. These are priceless assets in the great task of constructing a peaceful and orderly world.

The kind of peace we seek cannot be won at a single stroke or by a single nation. Peace worthy of the name can be assured only by the combined effort of many peoples willing to make sacrifices in the cause of freedom.

The peoples of the world look to the United States for the leadership of this great crusade for peace. We have not taken up this task lightly, and we will not lay it down.

We must go resolutely forward, step by step, toward the creation of a world in which we, and all people, can live and prosper in peace.

Address by Vice President Alben W. Barkley to the Democratic Midwest Conference

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, July 21 (legislative day of Thursday, June 2), 1949

Mr. LUCAS. Mr. President, the Vice President of the United States, the distinguished Presiding Officer of the Senate, delivered a most unusual address on June 13 at the Midwest Conference of Democrats at Des Moines, Iowa. I ask unanimous consent, and I hope it will be granted, that the address be incorporated in the Appendix of the RECORD.

The VICE PRESIDENT. The Chair should probably object, but he will not. Is there objection?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished governors, distinguished guests, ladies and gentlemen, I wish in the first place to say for the radio audience that I have, I believe, only 15 minutes over the radio, but I shall probably talk longer than that. Therefore, if I am unavoidably cut off in the middle of a sentence at the end of the 15-minute period, you will understand that it was impossible for it to be otherwise.

I am very highly honored not only by the invitation which brings me here to participate in this Midwest Conference, but I have been unusually honored by being introduced to this great audience by two of my best friends, Mayor Kelly and Jake More.

I, of course, realize the importance of this great meeting. I appreciate the presence here of men and women from all over this section of the United States, whether they are farmers, laboring men, or industrialists because they recognize, as we all do, that the economic stability of the United States depends upon a coordinated prosperity of all classes of our people.

I am not here to speak to you this afternoon simply as Vice President of the United States, although I am that. I haven't quite gotten used to it yet. There are a good many others who haven't. There is some confusion about what people should call me. My answer is that I don't care what you call me so long as you call me.

The President is telling a very amusing story about me around Washington which I am in no position to deny. He says that on the day after election last November when he and I were elected—which was a surprise to four or five people—I returned to my home in Paducah, and being the only Vice President in captivity and the only one that we had had lately, and being the only one produced by my home town of Paducah, they made quite a to-do over it. They closed the stores 2 or 3 hours, built a platform in the middle of the street, and closed off about four blocks, and we had a big time there celebrating our victory.

It seems that according to the President's story, I started into the Irvin Cobb Hotel during the process of the celebration and started into some place where I wasn't supposed to go, and the guard or policeman grabbed me and said, "Hold on. You can't go in there," and I said, "I am the Vice President." He halted for a moment. I stepped forward about two paces, and then he grabbed me again and says, "What are you vice president of?" I said, "the United States." "Oh," he says, "I thought you meant the Cobb Hotel."

I am here not only in that capacity, but I am here as a farmer also because I am a farmer. My son and I together operate two or three farms in western Kentucky. I have always been interested in agriculture. I was reared on a farm, lived there until I was grown, and my ancestors for six generations have been farmers, and my father died as a farmer.

He was what was called a woodsman. He believed that any winter that didn't see his family clear up about 12 acres of new ground was a total failure. As soon as I was big enough to put an ax on my shoulder or pull one end of a cross-cut saw, I was taken to the woods and it usually fell to my lot to break it up in the spring, to prepare the new ground for the crops. Anybody who ever did that, any boy who ever did it, knows what it will do for his disposition, to say nothing of his religion.

During my 36 years in the House of Representatives and in the Senate, I participated in all the legislation that was enacted in behalf of the farmers of the United States. I even voted for the McNary-Haugen bill because it was the only thing offered at the time that held out any hope for a remedy of the agricultural situation in this country, and I voted for it hoping that it might do some good.

Twice it was passed and twice it was vetoed by the President of the United States who wasn't a Democrat.

Now, I do not wish to indulge in any partisan politics here in what I have to say today, but there is no way to escape a discussion of politics in its real sense as the science of government. We are told by the dictionary that politics is the science of government, and it is in that sense that I may advert to it, as the science of government, and in that sense there is an inseparable connection between politics and economics.

While politics is defined as the science of government, economics is defined as the science of production, distribution, and use of the things which man makes for his utility and for his advancement and his comfort.

There is an indispensable and inseparable partnership in that sense between politics and economics because the kind of politics we have, not only in this country, but in all countries, may determine the sort of economics we have, and by the same token, the sort of economics we have may determine, and frequently does determine, the kind of politics we have.

So whatever I may say that has any political intonation will be in connection with that partnership between politics and economics, and between government and economics.

I wish to reemphasize the relationship between agriculture and labor and industry. It may have been done earlier in the day before I arrived because, coming in late at a meeting of this sort is like going into a theater during the third or fourth act without knowing what has happened before.

Nevertheless, it is worth while to keep in mind the connection, the inseparable partnership, between agriculture, labor, and industry. There has been a rather strange and significant parallel between the income of the farmers of the United States and factory pay rolls in the United States.

As an example of that, we might take the year 1928, the year 1932, and the year 1948. In 1928, which was the year of a hectic prosperity, but a fairly good year for farmers, which did not last long, but in that year 1928 farm income in the United States amounted to $11,700,000,000. In that same year, factory pay rolls in the United States amounted to $11,300,000,000, so that there was a very significant parallel in 1928 between the income of the farmers of the country and the income of factory workers, as indicated by factory pay rolls.

Nineteen hundred and thirty-two was a very bad year not only for farmers but for everybody else. Farm income in 1932 amounted to $5,300,000,000 and in that same year factory pay rolls amounted to $5,400,000,000—practically the same figure for farm income and factory pay rolls in 1932.

Last year, 1948, farm income in the United States amounted to approximately $30,000,000,000, six times as much as in 1932, nearly three times as much as it was in 1928. While farm income in 1948 amounted to approximately $30,000,000,000, factory pay rolls also amounted to practically $30,000,000,000. So that these three citations, these 3 years somewhat separated from one another, indicate that there has been over a long period of time a parallel trend between farm income and factory pay rolls.

Now, it is true that the farm income, as a rule, over the last two generations, has amounted to about 15 percent of the national income. Last year the national income was a little more than $210,000,000,000. Farm income being about $30,000,000,000 means that one-seventh, or about 15 percent of the total income of the American people, was farm income.

But while farm income constituted only about 15 percent of the total income of the American people, farmers bought about 25 percent of all the products made by the men who labor in the factories, and that comes about because the farmers produce much of the things which they consume themselves and that gives them a wider margin of income with which to buy the things that are made in the cities and in the factories.

I mention these things in order that we may emphasize the fact there is an interdependence, an indispensable, essential relationship, between farm income in the United States and factory pay rolls, which means the income of laboring men, which, by the same token, means profits to industry; and any man no matter what his profession or politics who seeks to array

agriculture against labor or labor against agriculture is no friend of either agriculture or of labor.

Now, it might be interesting to note briefly something which has transpired in the United States with reference to agriculture in the last half century. At the turn of the century in this country, on the farms, the only power that was known to a farmer was manpower and horsepower. The automobile had but scarcely been thought of. It had not been developed. The tractor was unknown to the American farmer. The first rural electrical line ever laid in the United States was strung in 1913, only 36 years ago.

Today, among the 6,000,000 farms and farm families in the United States, nearly 5,000,000 of them now are within reach of electrical power and that electrical power was made available to them through the Democratic Party and its administrations. We shall not be contented until every farmer in America and every farm housewife is close enough to electrical power to enable them to cultivate the soil by electrical power and lift from the backs of housewives all over the Nation the drudgery of a part of the housework.

The total value of all farm property and the equipment in the United States is more than a hundred billion dollars today. That amount was insignificant 50 years ago, and it was less than half that 20 years ago. Not only is the value of farm and farm equipment more than a hundred billion dollars today, but in the last 15 years farmers have been able to save in savings accounts more than $20,000,000,000.

That has come about by cooperation between Government and farmers. Agriculture is no longer an individual enterprise. The ownership of a home or a farm is, of course, an individual matter; the ownership of the equipment necessary in the cultivation of that farm is an individual matter unless it comes under a cooperative arrangement among a number of farmers, but the enterprise of agriculture, the great business of agriculture, is no longer an individual matter. It is a matter of cooperation among farmers themselves, and it is a matter of cooperation between farmers as a group and the Government of the United States, because the Government of the United States is the only agency available to the people and the farmers, particularly, which can do the things which individual farmers cannot do.

You may talk all you want to about the Government of the United States trying to regiment the farmers, as we hear now and then—a speech was made over in Nebraska a day or two ago about the Government of the United States trying to regiment the farmers, trying to control them, tell them when they should plant, what to plant, when to eat, and what to eat, and when to sleep or drink.

I want to say this. I have been a part of every farm program that has been enacted by the Congress of the United States. Those programs were not enacted with the caprice or the whim of the Members of Congress. Those programs were enacted because the farmers of the United States, who in 1932 found themselves nearer to the brink of disaster and collapse than ever before in the history of America, demanded that Congress do something to lift them out of the ditch, place their feet on the solid foundation of prosperity so that they might look to the future with some degree of assurance, and it was in response to that demand by the farmers of the United States, which was reflected in the political platforms of both political parties back as far as 1920. Congress tried to enact legislation that would bring the power of the Government to the service and use of the farmers of the United States.

I might say by way of digression here for a moment that I am proud that the party of which I am a member has been the pioneer in all legislation for the benefit of the farmers of the United States. I am not talking politics now. I am talking the science of government.

It was in the administration of Grover Cleveland that the first rural free delivery mail route was established in the United States of America. Now, the whole Nation is covered by a system of rural mail routes that brings newspapers, magazines, the mail, and information to the farmer's door every day in the year save Sunday.

It was under Woodrow Wilson the first act of Congress was ever passed giving Federal aid to the States and counties in the construction of highways throughout the Nation in order that the farmers might have better roads over which to haul their produce and send their children to school. That was in 1916.

No Congress and no administration has ever yet dared to repeal the law granting Federal aid in the construction of highways throughout the United States. That was a democratic recognition of the needs of the farmers for better transportation facilities in order that he might carry what he produced to the markets of the world.

It was under this same administration—this same great President of the United States—that in the Clayton antitrust law was written for the first time in the history of the Nation a provision that farmers should not be prosecuted as violators of the antitrust law if they formed a farmers' cooperative organization in order that they might produce and market their products to greater advantage.

In that same statute it was provided that a laboring man should not be prosecuted as a violator of the antitrust law if he joined or formulated a labor union in the United States, thus linking labor and agriculture together again in the law of the land.

It was in the administration of Woodrow Wilson that the first farm-credit law was ever enacted, called rural credits at that time, now known as the Farm Credit Administration, the great proposal to give to the farmers of the Nation an institution under which they might have long-term credit and low rates of interest because commercial banks were not organized or designed to meet long-term credit demands of the farmers.

It was in the administration of Woodrow Wilson that the first farm-credit law was enacted which was a success. It met the needs of agriculture all over this Nation until the debacle of 1932 when for one whole year not a loan was made to a farmer in the United States because people had lost faith in farm-loan bonds, because they lost faith in the Government of the United States, they lost faith in their own economy.

They had lost faith in themselves, and they were waiting for a great Moses to come above the horizon to lead them out of the desert, out of the wilderness. That Moses came in 1932 and 1933 in the person of Franklin Delano Roosevelt.

It was under his great administration that the farm-credit system was revived, that new life was injected into its lungs and new blood into its veins. It was started on another highway of successful operation and is today one of the great going concerns of agricultural credit in the United States.

It was under that same administration that farmers' cooperatives were permitted to organize in order that they might market their produce, that they might buy their farm equipment, and a bank for cooperatives was set up by the administration to help in furnishing the funds for these cooperatives to carry on.

It was under this same administration that the Farm Security Administration was inaugurated, designed to aid tenants in the purchase and ownership of farms in the United States. There was some opposition to it on the theory that once a tenant always a tenant. The man who is a tenant ought never to have the ambition to own his own farm. I was never in sympathy with that theory, for I know, as you know, that every man who has his feet in the soil, every man who has a stake in an American home, is a patriotic American no matter what his politics may be.

It was under this same administration that all the agricultural legislation was enacted I need not category here, because you are familiar with them. It brought new hope to the farmers of the Nation. It reduced to a minimum the mortgage sales of farmers throughout the Nation. It gave the farmer a support price. It gave him the parity formula which he wrote himself through his organizations, designating that period in the past which seemed most favorable and most fair to agricultural prices.

I mention these things in order that we may not forget what this great political party which we represent and which honored us with public responsibility has done to bring economic stability and security to the one indispensable occupation of mankind, and that is the tillage of the soil, for out of the soil comes everything on which man lives. Everything that he eats and wears and uses in some form or fashion comes out of the soil of the United States.

I often quote that little couplet about unbelief, regardless of our religious denominations or our political complexions, regardless of the fact that sometimes the lips deny the sentiments that the heart feels when it says there is no unbelief: "Whoever plants a seed beneath the sod, and waits to see it push away the clod, he trusts in God."

I believe that as a farmer. I believe it as a Christian. I believe it as an American.

Now, the laws which we have enacted since 1932 I think no one can deny, on the whole have been beneficial to agriculture. They were not perfect laws. The parity formula itself was not a perfect formula. The triple A was not a perfect law any more than the Federal Reserve Act was a perfect law when it was passed in the Wilson administration—and it was opposed by many if not most bankers at the time of its enactment, but which has turned out to be the fortress of our financial defense, without which we could never have financed two great World Wars. But it wasn't a perfect law. It had to be amended. Experience showed where it might be deficient here and there, and Congress and the administrations which have followed have sought to correct whatever deficiencies or shortcomings were found by experience in the original act.

So the triple-A was not a perfect law. The formula for parity was not a perfect law. The farm security law was not perfect, and no man has ever claimed that it was because man himself is an imperfect fine art being and his works are not perfect. They are subject to trial and error. They have to be modified as experience determines their modifications to be necessary, but on the whole I believe I can say that no political party and no administration or any combination of political parties or administrations ever gave to the farmers as good a program as we gave him in 1933, 1934, and 1935, and from that day until this very hour.

It wasn't all politics. It wasn't all partisanship. We have tried to look at agriculture as a fundamental occupation of mankind, one indispensable occupation of man because without it all other occupations would fail.

Last summer some of our friends on the other side of the political and economic aisle decided that they wanted to try their hand at farm legislation. They not only tried their hand but they tried the patience of the American farmer.

I remember how that law was enacted. I was the minority leader of the Senate—the temporary minority—after I had functioned for a good many years as a majority leader and had had a part in the writing of all this farm program and knew a little something about it, I thought.

I recall one Sunday morning, at 4 o'clock in the morning on Sunday, they were getting ready to adjourn the special session of Congress. Their convention was in session at Philadelphia. The platform committee was engaged in writing a platform, and after 48 hours of unceasing day and night labor to bring forth something, the Committee on Agriculture, meeting off the Senate floor, word came out that they would not be able to write a farm bill. Congress would adjourn without writing a farm bill.

Then word came down from Philadelphia that there must be a farm bill, that they couldn't go before the country in the election without writing a farm bill, and so at 4 o'clock in the morning they got together a crazy quilt and wrote across it, farm bill, and brought it out and passed it.

It reduced the farm support prices from 90 percent of parity, as we had provided, to as low as 60 percent, and it did many other things that were unwise and impractical. They did another thing as bad if not worse. They took away from the Commodity Credit Corporation the power either to rent, lease, or build, or buy storage facilities for farm products in order that a farm-support price could be continued, because the Government cannot support prices unless there is adequate storage facilities, unless there is security in the product itself.

So they have a farm bill on the statute books which takes effect on the first of next January, and therefore it is essential that we do not allow that farm bill to take effect, it will nullify much of the good which has been done in the last 16 years by the farm program which we inaugurated under the Roosevelt administration.

If by any chance we should not be able to complete a farm program by that day, in my own judgment, it would be better for the farmers to go back to the program which we inaugurated instead of taking up the one which they put into effect on the first of next year.

I am glad that Mr. Brannan has come out here with his colaborers in this great farm section of the American Continent to talk about the new program which he has inaugurated. I am not going to undertake to discuss that program in detail. Mr. Brannan has done it and will do it. He is more qualified than I am. I don't even have a vote on it except in case of a tie. There hasn't been one since I became Vice President. I have been sort of dehorned.

They tell me it isn't even proper for a Vice President to go before a committee to advocate a bill in which he believes or he thinks should be enacted. Maybe not. But when Vice President Dawes was Vice President, he called me up to the desk one day. It seems he and Mr. Coolidge didn't get along very well, and it was mutual.

Dawes had more friends on the Democratic side than on the Republican side. I happened to be one of his good friends. One day, he called me up to the desk and he says, "BARKLEY, this is a hell of a job I have got." I said, "What is the matter with it? You still have it. I haven't seen where you resigned." He said, "I can't do but two things." I said, "What are they?" He said, "One of them is sit up here and listen to you fellows talk and I can't reply, and the other is to look at the papers every morning to see how the President's health is."

I often wondered if a Vice President didn't cast a furtive glance now and then at the sick list, but I have got an iron-clad agreement with Harry Truman I will never look at any sick list in any newspaper of the United States because he and I are a team and we are working together for the American people.

I am not out here with permission to speak for him, but I have no reason to suppose that what I say will be displeasing.

Now we are engaged in an effort to write a program, not a complete program for the farmer because the Brannan program does not deal with soil conservation, which is a separate subject. We have dealt with it—and by the way, ours is the only administration that ever inaugurated soil conservation in this country. We woke up not long ago to find a third of our soil had been wasted, one-third of all the soil in the United States.

We discovered that when the Mississippi River is at its height in flood time, gathering all the water and all the soil from all the hillsides and valleys in the Mississippi Basin, it deposits at the mouth of the Mississippi River in the Gulf of Mexico 40 acres or rich land every minute while it is in flood, and the same thing in variable proportion goes on all over the United States.

We discovered if we did not arrest this soil erosion, this waste of our land, as our population increases and each acre must support more people than it did the year before, the time would come when we would be like China or India, all our rich land, rich inheritance, gone and our children and children's children compelled to live an impoverished life upon a wasted land.

So we inaugurated soil conservation not only to preserve the fertility we now have but to reclaim that which has been lost, and as its handmaiden, we inaugurated flood control, which is a long way from completion, but which is an essential part of any full, comprehensive agricultural program.

We are not dealing with all that in this bill, this particular program. We are not dealing in it with the question of farm housing, which is a matter of such urgent need. For not only is there an inadequacy of homes in the cities, but we all know there is an inadequacy of homes in the country.

I believe every child born of American parents, whether in city or country, is entitled to a decent home in which to live and be reared, decent schoolhouses in which to acquire the knowledge, the vast knowledge, that is now available to our institutions of learning, the church house close by so that the principles of religion without regard to denominational differences may be imbedded in the very lives and characters of our people, because it is upon these foundations that our great American civilization and our great American way of life have been built. These things are not dealt with in the Brannan program for price supports and for agricultural income stabilization.

Now, there may be things in the Brannan program that we do not quite understand because any comprehensive farm program will be complex. There are complexities. There are technicalities involved that may not be easily understood at first glance, but it is an honest program. It is an honest proposal made by an honest man, working with honest colaborers, in order to bring American agriculture to a long-term, permanent economic stability to which they are entitled.

If there is anything about it that anyone does not understand, then let's try to make it plain by asking questions and having them answered candidly and frankly. If there is anything about it that is not workable, let's ascertain that fact by inquiry and by mutual conference, but it serves no purpose for politicians of one party or another to go over the country denouncing it as a scheme to bankrupt the American people and to put farmers under the control of the Government.

We have had controls in a measure ever since the first agricultural program was adopted, but these controls cannot be imposed unless the farmers themselves vote in favor of them by a two-thirds majority. Is that not a democratic way to ascertain whether farmers want to be a part of the program?

In my State, where we raise tobacco and corn and wheat and livestock, but tobacco is one of our great money crops, every time we have had an election among growers of tobacco as to whether they want acreage allotments or quotas or farm control, 90 percent of the farmers have voted in favor of it, whereas only two-thirds were required in order to put it into operation.

It is a democratic way, not partisan, but a democratic way in the sense everybody has a chance to express himself, to determine whether he wants it to be in operation.

Every farmer knows that without it, agriculture would drift back to the disastrous days of 1932, and if agriculture drifted back, every other industry and labor—our entire economy would drift back. We would not any longer be able to exercise the power of leadership in the world in order to try to fortify the economic and political stability of the liberty-loving free nations of the world in order to stem the tide of that alien and brutal ideology that seeks to destroy free men everywhere, freedom of worship, freedom of speech, freedom of thinking and of writing, freedom to assemble like we are assembled here today to discuss freely and frankly the great program for agricultural stability.

We realize, of course, that when the devastated regions of the world are restored and agriculture assumes its normal production there, there may be a reduction in the markets for agricultural products elsewhere. We have got to look forward to that. We have got to try to make provision for it, and that requires a searching out in the world of new markets and new uses of agricultural products, and that requires research, and that research cannot be made by individual farmers. It cannot be comprehensively made by educational institutions. It can only be made by the Government of the United States, though the Department of Agriculture and other departments of the Government, in order that we may find new uses for agricultural products in order to bring greater income to the farmers of the Nation.

I can give you one example. It has been discovered by research that four pairs of nylon hose can be made from a bushel basket of corn cobs. That is a new use. When I was a boy, we used to build fires with them.

I was telling my son the other day that they could make four pairs of nylon hose out of a bushel basket of corn cobs and he said, the next time his wife asked him for some nylon hose he was going to give her a basket of corn cobs.

That is a serious matter. It has been discovered that that can be done, and that is only one example of the many uses to which agricultural products now going to waste may be put to bring new income to those who till the soil, those who bend their backs under the blistering rays of the sun and who endure the vicissitudes of the weather and the seasons in order that mankind may be fed and clothed and housed.

So, my friends, it is a great adventure upon which we have entered. We have not entered upon it with any selfish motive except that selfishness which comes from a desire to live among happy people in a contented community in a prosperous and happy economy where all segments of our people feel that they are enjoying the equal rights about which Thomas Jefferson and Abraham Lincoln talked in the Declaration of Independence and in the immortal Gettysburg Address.

This is a challenge that ought to inspire the best that is in every American. It is a challenge to our leadership, to our wisdom and to our foresight. It is a challenge to our own unselfishness, the same kind of un-

selfishness that we are exhibiting in our effort to stabilize the economic and political life of the world. It is an expensive experiment, but the thing we are trying to preserve is priceless, my friends. It cannot be measured by any monetary standard.

I speak today out of the fullness of my heart and out of long experience and as a descendant of a long line of farmers going all the way back to North Carolina where my grandfather was born, reared, and lived on down to my own father who died at the age of 80 years, still on the farm, and of my mother who died at 89 years of age, still on the farm.

I do not want to get out of my system the atmosphere of agriculture, and whether I remain in public life long or short, I shall always thank Almighty God for the opportunity He has given me in a full and active life to render my service to this great body of Americans, men and women, without regard to political or religious or racial differences, who now and then go down into the very valley of the Gethsemane in their hardship and in their sacrifices in order to preserve the American way of life, the American traditions, which are planted deep in the soil of a glorious country.

I am proud of my country. You are proud of it. Proud of its leadership, proud of its opportunity, hopeful and prayerful to the God of Heaven that out of the turmoil of chaos and frustration that now faces mankind, somehow or other we may be able to lead them out of the wilderness into the promised land, out of the chaos and miasma of hatred, intolerance, and misunderstanding on to a firmer, more solid foundation of cooperation and understanding, among not only all the nations but all the peoples of the world and all occupations and there is no segment of our population that has a greater opportunity nor, in my judgment, a greater desire to contribute to that great desideratum than the farmers, their wives, and their children all over these United States.

I thank you.

Invitation to the Theater

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. JAVITS. Mr. Speaker, this is an invitation to Members from 26 of our most populous States to go to the theater. When I introduced the national-theater bill early in this session of the Congress few Members realized the widespread interest it would evoke. A visit to 1 of the 250 summer theaters in States from Maine to California will show the richness of America's cultural resources and the intense interest of millions of Americans in them.

The aridity of most of these areas in the theater—other than in the summer, when cheap costs make theater possible—shows the urgent need for a national theater establishment to bring theater to all our people. I have always emphasized that the national-theater bill primarily seeks to bring theater to the people—not to bring a great brick-and-mortar structure to New York or Washington.

The following is a list of 250 summer theaters compiled by the American National Theater and Academy, chartered by act of Congress in 1935. ANTA is the guiding spirit of country-wide theater activities in America.

AMERICAN NATIONAL THEATER AND ACADEMY
PUBLICATION OF 1949 SUMMER THEATERS

Listed below are the names and locations of over 250 summer theaters in 26 States.

The New York Times revealed that, in the aggregate, from the end of May through the end of September (1948), there had been close to 200 summer theaters of all types along the Atlantic seaboard covering 14 States. The States were New York, New Jersey, Connecticut, Delaware, Massachusetts, Maine, Pennsylvania, New Hampshire, Maryland, North Carolina, Rhode Island, Virginia, West Virginia, and Vermont. May 30, 1948, there were two summer theaters operating. The end of September saw all but two closed for the season.

Some of the summer theaters represented colleges and universities, others repertory groups. One or two theaters specialized in spectacles or pageantries while several continued their bills for 3 or 4 weeks at a stretch. Some theaters were part of schools of drama and in a number of cases were non-Equity. Equity itself had bonds posted for over 125 summer theater stock companies. Nevertheless, Equity or non-Equity, co-op or university, repertory or spectacle—they are represented summer theater.

During 1948 New York had no less than 54 barn theaters. The runner-up was Massachusetts with 30. Pennsylvania had 20, New Jersey 18, Connecticut 14, New Hampsire 11, Maine and Vermont 10 each, Rhode Island and Virginia 5 each. The 1949 returns indicate the same relative standing as before. In addition to the 14 States mentioned the authors have included 12 more with summer theaters. They are California, Colorado, Georgia, Illinois, Kentucky, Michigan, Minnesota, Missouri, Ohio, Tennessee, Texas, and Wisconsin. Canada has also been included.

It must be stated that in the past the barn circuit has been concentrated in the East but the trend points to a large number of summer theaters springing up in the Midwest and far West, particularly in California.

Summer theater, as an active force on the American scene and as a positive means of decentralizing theater, is here to stay—and grow.

CALIFORNIA

Beverly Hills: Theater.
La Jolla: Actors Co.
Newport: Repertory.
North Hollywood: Horseshoe Theater.
Pasadena: Playhouse.
San Mateo: Hillbarn Theater.
Santa Barbara: Lobero Theater.
Tustin: Holiday Stage.

COLORADO

Denver: Broadway Theater.
Denver: Elitch Gardens.

CONNECTICUT

Canton: Show Shop.
Clinton: Playhouse.
Guilford: Chapel Playhouse.
Ivoryton: Playhouse.
Litchfield: Summer Theater.
New Milford: Theater in the Dale.
Newton: Edmond Town Hall.
Norwich: Summer Theater.
Ridgefield: Summer Theater.
Rock Hill: Grange Hall.
Sharon: Pitchford Playhouse.
Southbury: Playhouse.
Stamford: Summer Theater.
Unionville: Group 20 Players, Town Hall.
Westport: County Playhouse.

DELAWARE

Arden: Acorn Theater.
Arden: Robin Hood Theater.
Rehoboth Beach: Henlopen Playhouse.

DISTRICT OF COLUMBIA

Washington: Washington Theater Festival.

GEORGIA

Atlanta: The Stage Inc.
Newman: The Three Theaters.
St. Simons Island: Georgia Players.

ILLINOIS

Highland Park: Tenthouse Theater.
Marengo: Shady Lane Playhouse.

KENTUCKY

Louisville: Musical Stock Co.

MAINE

Bar Harbor: Playhouse.
Belgrade Lakes: Playhouse.
Boothbay: Playhouse.
Bridgton: Riverside Theater.
Camden: Camden Hills Theater.
Harrison: Deertrees Theater.
Kennebunkport: Playhouse.
Ogunquit: Playhouse.
Peak's Island: Greenwood Garden Playhouse.
Portland: Summer Theater.
Skowhegan: Lakewood Theater.
Surry: Playhouse.

MARYLAND

Braddock Heights: Mountain Theater.
Lutherville: (Baltimore) Hilltop Theater.
Olney: Olney Theater.

MASSACHUSETTS

Bass Rocks: Theater.
Boston; New England Mutual Hall.
Beverly: Summer Theater.
Brewster-on-Cape Cod: Summer Theater.
Cambridge: Brattle Hall Theater.
Cape Cod: Provincetown Playhouse.
Chatham: Monomoy Theater.
Chestnut Hill: Campus Playhouse.
Cohasset: South Shore Players.
Coonamesset-on-Cape Cod: Falmouth Playhouse.
Dennis: Cape Playhouse.
Duxbury: Playhouse.
Duxbury: Summer Theater.
Fairhaven: Summer Theater.
Falmouth: Tanglewood Theater
Fitchburg: Lake Whalom Playhouse.
Gloucester: Bass Rocks Theater.
Holyoke: Valley Players.
Lennox: Lenox Theater.
Lowell: State Theater.
Manomet: Plymouth Drama Festival.
Marblehead: North Shore Players.
Marion: Harbor Playhouse.
Martha's Vineyard (East Chop): Rice Playhouse.
Martha's Vineyard (Oak Bluffs): Martha's Vineyard Playhouse.
Mashpee on Cape Cod: University Playhouse.
Medford: Tufts Arena Theater.
Nantasket: Actors' Theater.
Nantucket Island: Straight Wharf Theater.
Plymouth: Priscilla Beach Theater.
Stockbridge: Berkshire Playhouse.
Sturbridge: Town Hall Theater.
Ware: Shariwood Lodge.
Wareham: Summer Theater.
Wellesley: Summer Theater and school.
Westboro: Red Barn Theater.
West Newbury: Summer Theater.
Woods Hole: Theater by the Sea.
Worcester: Drama Festival.

MICHIGAN

Bloomfield Hills: Will-o-Wam Playhouse.
Detroit; Shubert-Lafayette Theater.
Detroit: Open Air Theater.
East Jordan: Center Stage '49.

MINNESOTA

Duluth: Comedy Theater.
Lake Minnetonka (Excelsior): Old Log Theater.

MISSOURI

St. Louis: St. Louis Municipal Opera (Forest Park).

NEW HAMPSHIRE

Castle Heights: Theater.
Charlestown: Old Fort Players.

Let's Keep the Record Straight on the B–36 Investigation and Related Matters

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. VAN ZANDT. Mr. Speaker, the front page of the July 19 issue of the Washington Evening Star displayed a startling and significant cartoon. It was the work of the nationally famous cartoonist, Clifford Berryman, who is noted for his kindliness and conservatism. Above the caption, "Clouds Over the Pentagon," the artist depicted the labyrinth of the building which houses a large and vital part of this Nation's Military Establishment. A low-hanging black cloud, labeled "5 percent" hangs awesomely over the Pentagon, the heart, the brain, the nerve center of America's security.

It is startling and significant to me, and it must be to every Member of this House, that the cartoonist, who usually selects the top news of the day as his subject, should have decided that the most important topic in the news was the dark and disturbing cloud hovering over the Pentagon. It would be disturbing enough if the only black cloud of suspicion lowering over the Pentagon were the scandal involving two major generals connected with the procurement offices of two branches of the Army. Maj. Gen. Hermar Feldman, the Quartermaster General of the Army, and Maj. Gen. Alden H. Waitt, Chief of the Chemical Corps of the Army, have been suspended pending the outcome of a Senate investigation of Army contract handling. In this connection I would like to quote from an editorial in Monday's Evening Star, which enjoys a reputation for accuracy, objectivity, and conservatism. The editorial runs under the caption, "Full inquiry essential." It reads:

Army Secretary Gordon Gray has acted promptly and properly to get to the bottom of a military procurement situation that, on the surface, has disturbing implications. The implications are yet to be reinforced by proof of illegality. But the integrity of the Army inevitably is clouded when the integrity of two of its department heads is ques-

tioned, and it is essential, therefore, that the most thoroughgoing sort of investigation should be made by the Inspector General, working in cooperation with the senatorial investigators who are delving into "5 percenters'" activities.

Pending completion of these simultaneous inquiries, it was wise to suspend the two high officers whose names have been brought into the investigation in a way that reflects, at least, on their good judgment. When officers of the military services become involved in any matter coming before a board or court of inquiry it is customary to relieve them of active-duty assignments until the inquiry is completed. The public should keep in mind the fact that no charges whatever have been placed against Generals Feldman and Waitt. The investigation may show that they are completely innocent of any wrongdoing. These veteran officers have yet to be given an opportunity to tell their sides of the story—a story first broken by the New York Herald Tribune as a result of some extraordinary journalistic enterprise by members of its Washington Bureau. Until the two generals have explained what their relations—if any—were with an alleged official influence racket in Washington, the story must remain unfairly one-sided.

The Herald Tribune has rendered a public service by bringing to light allegations and rumors that are serious enough to warrant senatorial investigation. The bandying about of such reports, without any effort to determine their reliability, would have been unfair to the Army and to the persons involved. Generals Feldman and Waitt should be glad of the chance for a public show-down with their accusers.

That is the end of this thoughtful and thought-provoking editorial.

As I was saying, it would be disturbing enough if the only black cloud hovering over the Pentagon were this scandal involving two major generals. It is far more disturbing when ugly rumors, which have been aired in the press for months, and which if verified, would amount to a major scandal, involve their superior, the Secretary of Defense, the Honorable Louis Johnson, as well as the Secretary for Air, the Honorable Stuart Symington. High-ranking officers though they be, Generals Feldman and Waitt are mere underlings by comparison with Johnson and Symington.

Just to keep the record straight, I wish to draw attention to the difference between the time and manner in which the two charges and ugly rumors were received and handled by the two Houses of Congress. First, let us take a look at the prompt and proper official notice taken by the Senate Committee on Executive Expenditures, headed by Senator CLYDE HOEY, of North Carolina, of the so-called 5-percenter scandal.

The first dispatch dealing with the 5 percenters was sent from the Washington bureau of the New York Herald Tribune on June 20, 1949, and published the following day. That same day, June 21, Senator HOEY issued a press release announcing that his committee would investigate the charges made in the New York Herald Tribune. That inquiry reached a point on Saturday, July 16, which caused the Secretary of the Army Gordon Gray to suspend Generals Feldman and Waitt. The Associated Press stated that Secretary Gray took this drastic action "because of evidence turned up by a subcommittee of the Senate Committee on Executive Expenditures." And that's that.

Now, let us look at the situation involving Secretary Johnson and Secretary Symington and others, including their good friend, Floyd Odlum, the head of the Atlas Corp., the holding company for the Consolidated Vultee Aircraft Corp., the makers of the B–36 bomber. The two cases are not entirely on all fours, but there is sufficient similarity between them to draw a parallel.

The story involving the B–36 goes back to 1947, but the first time I took notice of it was in January 1949, when Secretary Symington, appearing before the House Armed Services Committee, complained about somebody doing "a hatchet job" on the B–36. At that time, I asked Mr. Symington who was doing the "hatchet job" and why, but I got no satisfactory reply from him. Even before that time, I am informed that rumors, reports, and gossip concerning the B–36 were afloat in aircraft and Army circles. They were also published in the magazine Aviation Week and the American Aviation Daily.

The first story that I recall in the daily newspapers was published in the St. Louis Post-Dispatch on April 13, 1949. It was written by Marquis Childs, who has the reputation of being a fine reporter and not given to sensationalism. Childs wrote—and I quote:

> Johnson is reported to be privately pushing his friend, Floyd Odlum, the utilities operator and promoter, for Chairman of the National Security Resources Board.

It cited the fact that Odlum's Atlas Corp. owns 418,000 shares of Consolidated Vultee Aircraft Corp. Also that Johnson, prior to his appointment as Secretary of Defense, was a director of Consolidated Vultee. Then it added this, which I quote:

> Johnson recently approved a shift of approximately $157,000,000 in Air Force funds from other types of aircraft in experimental production to the B–36, which is made exclusively by Consolidated.

Senator WAYNE MORSE, of Oregon, thought the Childs' story was of sufficient importance to place in the CONGRESSIONAL RECORD on April 26, 1949.

Meanwhile, Washington was full of ugly, disturbing rumors and reports concerning the B–36 and the military aircraft procurement policies generally. In all of the rumors and reports the names of Johnson and Symington were linked with that of Odlum. Another story broke into print on May 15, 1949, in the Washington Times-Herald. It was written by Jerry Greene, of the Washington bureau of the New York Daily News, a reporter with a fine record. It was headed "New Scandal Looms on United States Plane Deals." It reads, in part—and I quote:

> A bipartisan, dynamite-packed probe of Government aircraft procurement policies which will rock the administration is set to break momentarily in both Houses of Congress. The investigation will run from the heyday of Maj. Gen. Benny Meyers, the kiss-and-tell plane-procurement expert now doing time for perjury, to the present.
>
> House Speaker RAYBURN, Senator TYDINGS (Democrat), of Maryland, chairman of the Senate Armed Services Committee, and both Republican and Democratic members of the House Armed Services Committee have assembled preliminary data on which the probe will be based.

A little further down in the story, it was stated—and I quote:

> Known to the Congressmen also is the name of one witness who has reported that an aircraft procurement officer, before the end of World War II, tried to put a $200,000 bite on a manufacturer. This company refused to go along and lost a lot of business in consequence.

There were more rumors, more newspaper stories, magazine articles, and radio broadcasts, but the foregoing is a fair sample of what was in the public prints. Every Member of Congress heard the rumors and read the reports. There also was the mysterious memorandum that was seen by many Members of the House, including the gentleman from Georgia [Mr. VINSON], the chairman of the House Armed Services Committee.

But, what happened, Mr. Speaker? Nothing happened. No action was taken by any committee of the House or by any individual Member. Speaker RAYBURN, the majority leader, Mr. MCCORMACK, the chairman of the House Armed Services Committee, Mr. VINSON, and Senator TYDINGS of Maryland, the chairman of the Senate Armed Services Committee, all are reported to have heard the rumors and reports affecting a vital arm of our national defense. President Truman and his White House staff must have heard the same things that I did, and perhaps much, much more. Any man in public life in Washington must have heard and read these reports unless he was deaf, dumb, and blind.

The national defense has been the subject of absorbing interest to me all of my life, and naturally I was disturbed by this rapidly spreading scandal in connection with our Air Force. However, I am a member of the minority party in the House. I had read on May 15 that Speaker RAYBURN, Senator TYDINGS, and the gentleman from Georgia [Mr. VINSON] planned an investigation. I defered to Chairman VINSON as the proper person to call for an investigation of these rumors and ugly reports.

When no move toward an investigation had been made and apparently none was to be made by the majority party in Congress, I determined to do something about it, and on May 25 I offered my resolution—House Resolution 227—providing for such an investigation. On the following day I told the House there was sufficient evidence at hand to demand an investigation, devoid of any whitewashing or soft-pedaling tactics. I said the American people are entitled to a fair and impartial investigation so that the truth may be known. I repeat that statement now with all the emphasis at my command.

I did not get action on my own resolution, but eventually action was taken, and that is what I wanted. On June 1 Chairman VINSON offered House Resolution 234, which was adopted by the House on June 8, ordering an investigation into all the facts relating to the procurement of the B–36 bomber and collateral matters, and providing that Chairman VINSON'S committee, the House Committee

on Armed Services, should conduct the investigation instead of an independent committee provided for in my resolution.

It is gratifying to me, and should be gratifying to all concerned, especially the American people, that the House has ordered this investigation to clear the air by determining the truth or falsity of the rumors and reports we heard so long without any action. It should be particularly gratifying to Secretary Johnson that he now has an opportunity to clear his name, which has been so deeply involved in the ugly reports. The same thing should be true of Secretary Symington, whose name also has been linked with these disturbing reports. It is likewise gratifying to have the assurance of Chairman VINSON that the investigation by the House Committee on Armed Services, as he put it, "Will go clear down to the bottom" and that "everybody will have an opportunity to lay their cards on the table."

The fact that the Armed Services Committee will be acting under Chairman VINSON's resolution instead of mine is a matter of indifference to me. I have no pride of authorship in this matter. When I first urged the House to authorize this investigation, I denied that politics was involved in my resolution. And the fact that Chairman VINSON offered a substitute resolution, which was unanimously adopted by the House, should absolve me of any political motives.

However, I cannot fail to note the difference in the attitude of some persons toward the investigation proposed by me and the investigation proposed by Chairman VINSON. For instance, in his letter to Chairman VINSON on June 2, 1949, Secretary Symington wrote:

> The Air Force heartily concurs in the resolution which you have offered calling for an investigation of the B-36 and collateral matters. You may be assured of our full cooperation in the conduct of the investigation.

Perhaps I should feel slighted. There was Secretary Symington smarting under the scandalous rumors and reports being peddled all over Capitol Hill and appearing in the press. Eight days before Chairman VINSON acted, I offered a resolution which would give Secretary Symington an opportunity to clear his name. But did I get a letter from him heartily concurring in my resolution? I did not.

And yet, Mr. Symington wrote to Chairman VINSON on the very day after he had offered his resolution—and again I quote—

> On May 26, Mr. VAN ZANDT made a speech in the House of Representatives repeating certain anonymous statements attacking the integrity of the Air Force action concerning the B-36. The rumors he publicized should be answered now.

So, Secretary Symington writes Chairman VINSON on June 2, that the rumors "should be answered now." Nine days earlier, I was trying to give Secretary Symington an opportunity to answer the rumors. Weeks before, the same rumors were flying around Washington. Did Secretary Symington or Secretary Johnson come up to Capitol Hill and ask someone to give them an opportunity to answer the rumors then. If they did, I have not heard of it. And the fact remains that I was the first to offer Secretary Symington an opportunity to answer the rumors. His own good name and the integrity of the Air Force were attacked, says Secretary Symington. Yet it was not until Chairman VINSON offered his resolution did Secretary Symington say anything about "heartily concurring" or offering "full cooperation" in the conduct of the investigation.

Secretary Symington's letter goes on—and once more I quote—

> Mr. VAN ZANDT's basic innuendo is that the B-36 picture is riddled with politics, influence, and disregard of the military security of the country. I deny this categorically.

I am more than glad to have Mr. Symington make his categorical denial. I only hope that he can make it stand up to the satisfaction of the House Armed Services Committee. I am not out to smear Mr. Symington or Mr. Johnson or anybody else. I offered my resolution calling for an investigation in good faith. I want to remove this dark cloud from the Pentagon. I want to hush this gossip if it is untrue and clear the names of the officials involved, if they are innocent. If they are guilty, I want to see them ousted from their posts of honor and responsibility for the security of this Nation. And then I would like to see them punished to the full extent of the law. For if any men deserve punishment, it would be the men who would jeopardize the security of our country for a few dirty dollars.

Secretary Symington does not protest against Chairman VINSON's resolution—the resolution under which this investigation will be conducted. No, sir; he heartily concurs. He offers full cooperation. Yet he complains about the rumors which he says I publicized, and what he calls my basic innuendo.

Just for the record, Mr. Speaker, I did not first publicize the rumors to which Secretary Symington refers. He is neither deaf nor blind and he certainly is not dumb. If he read the newspapers and magazines, and he has a public relations staff, to keep him informed, Secretary Symington must have seen and heard the same rumors and reports that I did. Yet, he complains that I publicized the rumors. Surely, Secretary Symington is not so dumb as to think the Members of this House will believe the first he knew of the rumors was when I called them to the official notice of the House.

And how does Mr. Symington make a distinction between the rumors, which he says I publicized, and the rumors upon which Chairman VINSON acted when he demanded an investigation of the B-36 and related matters? It is a distinction without a difference. The rumors are identical and the same. They do not differ one iota, except perhaps in Mr. Symington's mind.

In asking the House Rules Committee to approve his resolution Chairman VINSON said on June 7:

> Prior to the time Mr. VAN ZANDT made the speech there were rumors and memorandums and gossip about the B-36, and some memorandums were passed around among Members of Congress, and some of my colleagues have handed to me those memorandums. It was laid before the Armed Services Committee, and the Armed Services Committee feels this matter should be cleared up.

At the same meeting of the Rules Committee, Chairman VINSON said:

> We should go to the bottom of it and see where the source of these innuendos originates and see what is behind this thing.

Just to keep the record straight, I did not originate these rumors and innuendos, and neither did Mr. VINSON. We both acted in good faith on exactly the same set of reports. Yes, I was the first to call the attention of the House to the rumors and innuendos and thus saved Chairman VINSON the trouble of doing so. But Chairman VINSON based his resolution on the same rumors and the same innuendoes that I did. And the only difference is that Mr. Symington complains bitterly about what he calls my basic innuendo, but he heartily concurs in the basic innuendo which is embodied in Chairman VINSON's resolution.

Secretary Symington is understandably overwrought about this whole matter. Perhaps he should be forgiven if he does not see that the only difference between my action and that of Chairman VINSON's is that I was the first to offer him an opportunity to clear his name and the name of the Air Force. Simply because Chairman VINSON was a bit tardy with his resolution, he is now reaping the harvest which I had sown. But the fact remains that Chairman VINSON and I had the same objective in view—to investigate the truth or falsity of all the ugly rumors and reports. He gained the approval of the House for this imperative investigation, and I am satisfied with the result. If there is any glory in doing one's sworn duty, certainly there is glory enough for all.

Whether Mr. Symington ever changes his mind and decides that I was trying to give him an opportunity to clear himself, in which he now heartily concurs, is a matter of no consequence. But Chairman VINSON never had any illusions about the sincerity of my purpose. When Chairman VINSON appeared before the Rules Committee in behalf of his resolution, in which I supported him, the gentleman from Georgia [Mr. COX] apparently had a misconception of the whole matter, as well as my objective. Mr. COX suggested that I should withdraw the charges to which I had called the attention of the House and apologize for them. Chairman VINSON quickly set him straight. He clearly indicated that he was proceeding on the same set of rumors that I was and proposed the same sort of investigation that I had proposed. As a matter of fact, it is commonly known that for weeks previous Chairman VINSON toyed with the idea of introducing the resolution himself. Mr. COX appears to have been convinced of the purity of Chairman VINSON's motives, otherwise Mr. COX would never have agreed to the resolution of investigation.

My affable friend the gentleman from Alabama [Mr. BOYKIN] likewise appears to have labored under a misapprehension of my purpose. Last Thursday Mr. BOYKIN told the House that he did not "know anything whatever about the merits" of my resolution. "However," he said, "I do know about the rumors." My genial friend from Alabama did nothing about the rumors, but I did. And after I had acted, Chairman VINSON suddenly became convinced of the gravity of the rumors, and went into action.

My friend from Alabama usually bubbles with good humor, but he was scathing in his denunciation of the supercarrier, which was authorized by Congress and which Secretary Johnson sank without a trace. Mr. BOYKIN quoted his son Rob, who served in the Pacific with the United States Air Force, as saying that this "great, huge flattop would have been duck soup for any enemy bomb or even submarine."

I shall not argue with my friend from Alabama or his son Rob. For his information, my resolution did not mention the supercarrier or contemplate an investigation of that controversy. However, Mr. VINSON'S resolution would include an inquiry into the carrier controversy.

Now, Mr. Speaker, there are some differences between the "5 percenter" scandal and the charges involving Secretary Johnson and Secretary Symington. The chief difference lies in the fact that if the charges against Secretary Symington and Secretary Johnson are true, the "5 percenters" were playing a penny-ante game by comparison. The charges concerning the tops of the defense department not only involves contracts amounting to millions of dollars, but the military policy upon which the security of the Nation depends. And because the scandal involves the top men in our Military Establishment, it may be more difficult to dig out the truth. But that is the duty of the full Committee on Armed Services of the House since the Vinson resolution gives authority to that committee and not to an independent committee provided for in my resolution. The members of the House Committee on Armed Services know the American people will not be satisfied with a whitewash or a glossing over of the facts.

The scandal involving the Government aircraft procurement policies has been building up since 1947. It was mentioned with irritation by Secretary Symington in January 1949, before the House Armed Services Committee. It has been thoroughly aired in the press, aircraft trade publications, and on the radio for months. Yet the House is just getting around to investigating these rumors, which add up to grave charges. No one seemed willing to "bell the cat" until I offered my resolution on May 25.

As I have said all along, I do not vouch for the published reports or the whispered rumors about the B–36. I do not know any more than Chairman VINSON does about the truth or falsity of the reports upon which he based his resolution and upon which the House acted. All that I know and all that Chairman VINSON knows is that the reports were written by reputable newspapermen and printed in reputable newspapers and periodicals. Both the writers and their publications subscribe to the first tenet of American journalism, that accuracy is the prime requisite of good reporting. Yet these grave charges were written and printed with the full knowledge that the publications could be held accountable under the libel laws. Thus far, I have heard of no libel suits being filed against any publication which published these reports.

Just as the American people and the Congress are indebted to the New York Herald Tribune for publishing the stories about the "5-percent" scandals, so are they indebted to the alert reports and their publications for ferreting out the asserted facts concerning the B–36. Now the committee can sift the charges and establish their truth or falsity. That is all I ask.

I have heard that some members of this House have complained that I acted upon flimsy evidence, mere newspaper reports. It has been suggested that I should be the first witness before the committee and that I should be compelled then and there to prove the charges to which I was first to call to the official notice of the House. To anyone who makes any such suggestion, I say it would be far more logical to call Chairman VINSON as a witness before his own committee and compel him to prove the charges upon which he based his resolution, which was approved by the House. I stand on my responsibility as a Member of the House, just as Chairman VINSON does. I did not originate these charges nor did he. But we both felt that the nature of the charges were of such gravity that an investigation was imperative. I will furnish the committee and counsel with every shred of information in my possession to facilitate the investigation, and I know Chairman VINSON will do likewise. And I will take my place on the committee and exercise my right as a member to question witnesses to the end that we shall get to the bottom of this unpleasant business.

So far as the question of the investigation being based upon newspaper reports, let me recall to those who may have forgotten that one of the greatest scandals in Government in modern times—the Teapot Dome and Elk Hills naval reserve oil scandals—were unearthed as a result of newspaper reports. The same thing is true of the scandals involving the Department of Justice during the Harding administration. As a result of congressional investigations and legal action that followed, the then Secretary of the Interior, Albert B. Fall, went to jail. The Secretary of the Navy, Edwin Denby, and the Attorney General, Harry M. Daugherty, were both dismissed from office as unfaithful servants.

Mr. Speaker, I am not going to prejudge this case either way. I am not going to make the mistake of condemning Mr. Johnson, Mr. Symington, Mr. Odlum, or any others who may be involved in this investigation before the evidence is taken. Nor am I going to allow my feelings to lead me into such a statement as that made by the gentleman from Georgia [Mr. Cox] when the Vinson resolution was before the House Rules Committee. Mr. Cox said that no man in Congress or in Washington or anywhere else that knows Stuart Symington would give any credit whatever to this statement—meaning the reports, the sum total of charges involving Mr. Symington and the B–36. I recall that when Attorney General Harry Daugherty was first under attack, he was defended in the Senate by the late Senator Frank B. Willis, of Ohio. Senator Willis rose up in righteous wrath and declared that Harry Daugherty is as clean as a hound's tooth. But as it turned out, Mr. Daugherty had very dirty hands, and nobody knows just how dirty they were because the investigation of his official acts and possible prosecution sort of petered out after Daugherty was ousted from the Cabinet.

Under our laws, a man is presumed innocent until he is proven guilty. Mr. Johnson, Mr. Symington, Mr. Odlum, and any others who may be involved in this investigation are entitled to the traditional benefit of the doubt until and unless they are shown to be otherwise by the evidence. I shall reserve judgment and I commend a similar attitude to my colleagues.

Law-and-Order Enforcement in Navajo Reservation Critical

EXTENSION OF REMARKS

OF

HON. ANTONIO M. FERNANDEZ

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. FERNANDEZ. Mr. Speaker, under leave heretofore obtained, I include with these remarks an editorial appearing in the Gallup Independent, a daily published in Gallup, N. Mex., which emphasizes the need for the provision contained in section 9 of the rehabilitation bill passed by the House on last Friday. We from New Mexico sincerely hope that the Senate and House conferees on the rehabilitation bill will agree on the adoption of that amendment. As I have heretofore pointed out, the people of New Mexico are more acutely concerned and alarmed at the conditions described in this editorial because of the fact that although only 3,437,115 acres of the total area of 15,444,952 acres is in New Mexico, we have in that State 26,268 of the total 55,458 Navajos in the reservation. The Navajo Council is in favor of this amendment which will make possible assistance and cooperation on the part of the State in the enforcement of law and order in the reservation. The editorial from the

Gallup Independent of June 8, 1949, reads as follows:

NAVAJO RESERVATION BECOMING LAND OF LITTLE LAW AND NO ORDER

Last week the Navajo Law and Order Department was faced with four murders and suicides. The job kept the department busy night and day along with the time they spent in testifying in district court in cases involving Navajos living off the reservation. The law and order department now consists of one chief and eight Indian officers to preserve the peace over an area of 16,000,000 acres.

There is no law in the checkerboard country lying to the east of the Navajo Reservation. Until recently a law officer needed a surveyor and an agent from the land office to determine the status of the land on which the offense took place before he could take jurisdiction. Then the Indian police were pulled out. The Eightieth Congress passed an act before it adjourned which repealed parts of many acts. The United States attorney has ruled that under the blanket repealer an Indian Service officer is without official status outside reservation boundaries. It is questioned whether he even has a right to carry a gun. Off the reservation he has no more authority than any other citizen and can make arrests only after obtaining a warrant. Before he can make an arrest in the Indian checkerboard he must come to Gallup for a warrant while the offender against the law disappears into the hills.

Some whites have been boldly running liquor by the truckload into the reservation on pay days. Sam Akeah, chairman of the Navajo Tribal Council, tells of an Indian living near Farmington who has a regular delivery route for liquor and peddles the bottles from hogan to hogan to regular customers. A Navajo GI got a loan with which he purchased a pick-up. He used the truck to run liquor to the reservation, spreading the word by messenger where he will be and at what time.

A chief and eight men is an inadequate force to cope with the Navajo job. The fact they are also hampered by lack of communications when in the field also prevents what few officers there are from working efficiently.

This is not a criticism of the Navajo Service officers. A criticism would be out of order coming from Gallup because our own law enforcement problems are far from being solved. But the information is presented in hopes that some recognition will be given to the problem by those who fix the policies, and by those who furnish the money.

Proposed Amendments to the Federal Credit Union Act

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. PATMAN. Mr. Speaker, there is pending before the Banking and Currency Committee of the House a bill, H. R. 3201, which was introduced by me sometime ago, proposing certain amendments to the Federal Credit Union Act. Efforts are now being made to get early hearings and passage of this bill.

I have prepared and am inserting herewith in parallel columns the present law and the changes proposed in this bill. The statement is as follows:

PROPOSED AMENDMENTS TO THE FEDERAL CREDIT UNION ACT

PRESENT FORM	PROPOSED FORM BY H. R. 3201
1 Section 7:	1. Section 7:
"Powers: A Federal credit union shall have succession in its corporate name during its existence and shall have power—	"Powers: A Federal credit union shall have succession in its corporate name during its existence and shall have power—
* * * * * * *	* * * * * * *
"(5) To make loans with maturities not exceeding 2 years to its members for provident or productive purposes upon such terms and conditions as this chapter and the bylaws provide and as the credit committee may approve, at rates of interest not exceeding 1 percent per month on unpaid balances (inclusive of all charges incident to making the loan): *Provided*, That no loans to a director, officer, or member of a committee shall exceed the amount of his holdings in the Federal credit union as represented by shares thereof. * * *"	"(5) To make loans to its members for provident or productive purposes upon such terms and conditions as this chapter and the bylaws provide and as the credit committee may approve, at rates of interest not exceeding 1 percent per month on unpaid balances (inclusive of all charges incident to making the loan): *Provided*, That no loans to a director, officer, or member of a committee shall exceed the amount of his holdings in the Federal credit union as represented by shares thereof. * * *"
2. "(7) To invest its funds (a) in loans exclusively to members; (b) in obligations of the United States of America, or securities fully guaranteed as to principal and interest thereby; (c) in accordance with rules and regulations prescribed by the Governor, in loans to other credit unions in the total amount not exceeding 25 percent of its paid-in and unimpaired capital and surplus; (d) and in shares or accounts of Federal savings and loan associations."	2. "(7) To invest its funds (a) in loans exclusively to members; (b) in obligations of the United States of America, or securities fully guaranteed as to principal and interest thereby; (c) in accordance with rules and regulations prescribed by the Governor, in loans to other credit unions in the total amount not exceeding 25 percent of its paid-in and unimpaired capital and surplus; (d) in shares or accounts of Federal savings and loan associations; and (e) in shares of central credit unions."
3. Section 10:	3. Section 10:
"Members' meetings: The fiscal year of all Federal credit unions shall end December 31. The annual meeting of each Federal credit union shall be held at such time during the month of the following January and at such places as its bylaws shall prescribe. * * *"	"Members' meetings: The fiscal year of all Federal credit union shall end December 31. The annual meeting of each Federal credit union shall be held at such time during the following January, February, or March, and at such place, as its bylaws shall prescribe."
4. Section 11, subsection (d):	4. Section 11, subsection (d):
"No loan shall be made to any member which shall cause such member to become indebted to the Federal credit union in the aggregate, upon loans made to such member, in excess of $200 or 10 percent of the Federal credit union's paid-in and unimpaired capital and surplus, whichever is greater, or in excess of $300 unless such excess over $300 is adequately secured. * * *"	"No loan in excess of $500 shall be made without adequate security and no loan shall be made to any member which shall cause such member to become indebted to the Federal credit union in the aggregate, upon loans made to such member, in excess of $200 or 10 percent of the Federal credit union's paid-in and unimpaired capital and surplus, whichever is greater."
5. Section 12:	5. Section 12:
"Reserves. All entrance fees and fines provided by the bylaws and 20 percent of the net earnings of each year, before the declaration of any dividends, shall be set aside, subject to terms and conditions specified in the bylaws, as a reserve fund against possible bad loans."	"All entrance fees and fines provided by the bylaws and 20 percent of the net earnings of each year, before the declaration of any dividend, shall be set aside, subject to terms and conditions specified in the bylaws, as a reserve fund: *Provided, however*, That when the reserve fund thus established shall equal 10 percent of the total amount of members' shares on deposit, no further transfer to the reserve fund from net earnings shall be required except as needed to maintain this 10-percent ratio: *And provided further*, That no transfer to the reserve fund in excess of fees and fines and 20 percent of net earnings shall be required in any one year."

Communist Progress in China

EXTENSION OF REMARKS

OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. HÉBERT. Mr. Speaker, under leave to extend my own remarks, I herewith submit to the attention of the House a radio interview which I had last evening with Gen. Claire L. Chennault, the famous commander of the Flying Tigers.

Anything that General Chennault has to say about China is always of interest and importance, especially during these times.

The text of the radio interview follows:

Representative HÉBERT. It gives me the greatest pleasure to introduce my old friend of many years and one of Louisiana's most distinguished sons and one of America's greatest war leaders, Gen. Claire Chennault. We all know the heroic story of Chennault and the Flying Tigers—how in the black days of 1941 when it seemed that nothing could halt the sweep of Japanese arms throughout Asia, General Chennault and his handful of American volunteer pilots met and stopped the invincible Japanese Air Force. This ac-

tion kept China in the war fighting on our side and saved India from conquest. Later in the war as commanding general of the Fourteenth Air Force, General Chennault drove the Japanese Air Force out of China and contributed decisively to the final defeat of Japan. A few months ago he published his book of war memoirs, Way of a Fighter, in which the whole story of these fighting years is set down.

General Chennault has lived and fought in China for 12 years. He knows personally most of the leaders of modern China and is probably the best-informed man in this country on what is happening there today. He has recently come back from China on a brief visit and has agreed to answer at this time some questions on what may be the most critical problem facing Americans today—the problem presented by the sweeping Communist victories in China. General Chennault has retired from the Army. He has no connection with either the United States or Chinese Governments, and in giving us his views he is speaking solely as a private citizen.

General Chennault, will you tell us how far, in your opinion, the Communists can go in their present drive toward South China?

General CHENNAULT. Congressman, that will depend on us as well as on the non-Communist Chinese. I am certain that the Communists will meet fierce resistance before they can take all China. But whether that resistance will be enough to stop them depends upon what we do. If we do nothing but wait for the dust to settle, then I think in the end the Communists will take all China, and after that I don't believe they can be stopped until they have swept through all of south Asia, India, the islands of the East Indies, and finally the Philippines, Formosa, and Japan.

Mr. HÉBERT. Supposing that the Communists do take all China and even all Asia—how would that affect us?

General CHENNAULT. Winston Churchill said some months ago that the Communist advance in China at that time was the worst defeat which the democracies have suffered since the end of World War II. Although he has rarely been charged with such an offense, I am convinced that Mr. Churchill is guilty of an understatement in this connection. In my opinion, if the Communists go on to conquer all Asia, that would be the greatest disaster in our national history and the greatest threat to our security that we Americans, and our allies, have ever faced.

From the military point of view alone this would mean that the inexhaustible manpower and natural resources of Asia would become incorporated into the world-wide Communist war machine. The result of this would be to upset drastically, in favor of world communism, the present precarious balance of power between the eastern and the western worlds that I firmly believe that we would be put in a position where we would have to fight a bitter third world war of survival and would have to fight it with the odds heavily against us.

This is just the military effect of such an event. The economic consequences would be just as serious. If all China is communized, we will be cut off from the essential raw materials of Asia. We would be denied access to Asiatic markets. The Communists will permit a carefully controlled trade with us. But it would have but one object, that is, to get the products of our industries which they need to strengthen their war machine and then one day to turn that war machine against us. Trade with Communist China will be exactly like our trade with imperialist Japan from 1931 to 1941. It was during this 10-year period that Japan exchanged her silk for our cotton, gasoline, and scrap iron, which were all used against us later.

Finally, with a Communist Asia we would also be confronted with the necessity of supporting the people of Japan—and the peoples of many more islands of the Pacific—or else watch them go Communist. Japan has to trade with Asia if it is to be self-supporting. Without this trade the Japanese people will starve, unless we step in to feed them at enormous cost to the American taxpayer. I don't think we can stand this cost, and so I believe that if Asia goes Communist, Japan and the Philippines and the other Pacific islands will sooner or later go Communist too.

Mr. HÉBERT. General, isn't that assuming that the Chinese Communists are just like the Russian Communists? Many people including some American businessmen in China and some very influential people in our Government feel that the Chinese Communists are different, that they are more nationalistic than Communist, and that when they come to power in China they will resist and oppose the Russians the way Tito has in Yugoslavia. Consequently these people say that we have nothing to fear from the Chinese Communists, that they will not bring all Asia into the Soviet orbit, and that we can work and do business with them on a friendly basis. What would you say to this point of view?

General CHENNAULT. I am quite familiar with that sort of wishful thinking, Congressman, but I don't see how anyone who reads the newspapers can be deceived by such arguments any longer. The final word on that has been said by the man in the best position to know what he is talking about—Mao Tsu Tung—the boss of the Chinese Communists. A few days ago Mao made a speech which should settle the matter once and for all. He said:

First, that he is a real Communist, and not a harmless democratic agrarian. Mao said, quote, "We belong to the anti-imperialist front headed by the U. S. S. R."

Secondly, that of course the Russians have been helping him conquer China, quote, "The victory of the Red revolution in China would have been impossible without the aid of the U. S. S. R."

Thirdly, that of course the government of Red China is a dictatorship. This government, he said "Was and for the immediate future would continue to be a dictatorship."

Fourthly, that as for the wishful thinking businessmen who have visions of great profits through trade with Red China, Communist China does not want their business or their profits. "We can only look for genuine friendly aid from the nonimperialist front and not from the imperialist front."

And, fifthly, that "Not only in China, but also in the world, without exception, one either leans to the side of imperialism or on the side of socialism. Neutrality is a camouflage."

Finally, in this same speech, Mao summed up his uncompromising hostility to the western world in these words: "You have to choose between the alternative of killing the tiger or being eaten by it."

It seems to me that Mao Tsu Tung himself has ended the argument. The brutal beating which the Communists in Shanghai have just given our vice consul, William Olive, shows that they are not just talking, and the reports coming in from Shanghai and other Communist-held cities make it clear that the American businessmen who have stayed behind there have already lost any hopes they may have had about the good business to be done with the Communists.

Mr. HÉBERT. General, there is a great deal of talk over here about a complete breakdown of China's morale and its will and capacity to resist. People say that the government is corrupt and has lost so much popular support that soon there will be no organized resistance to the Communists. Would you like to comment on this? In other words, is there anything we can do to save the situation or is it already too late?

General CHENNAULT. I believe, Congressman, that there is a great deal that we can do. There are still millions of Chinese who will resist conquest by the Communists, and we can see to it that their resistance is effective. There is no denying that the Chinese Government is in a desperate situation at this moment but it is still an organized, constitutional government. There are many reasons why the government is in distress at this time and it would take a long time to go into them all. Right now it is enough to say that what has happened is due not only to the weaknesses and faults of the Chinese Government but also to our own mistakes of past policy.

However, the important thing now is not the past but the future, and I say again that there is a great deal we can do. Of course, we can't do now what we could have done a year ago. We can't hope to get back for a long time what the Communists have already seized in China and Manchuria—but we can at least see that they are stopped and held from taking the remainder of Asia. We can make sure that a sanitary area is set up to hold them back and to keep them spreading into south Asia.

Mr. HÉBERT. How do you think this can be done?

General CHENNAULT. By giving limited help to the Chinese Government, to the leaders, and the peoples of the provinces along the western and southern borders of China. If you look at the map you will see that this area is a broad belt of mountain country running down from the barren deserts of central Asia to the South China Sea. It cuts off the rest of China from Burma, Thailand, French Indochina, and the other rich lands of south Asia. The people in this area are hardy mountaineers with a tradition of local independence and freedom. I have visited most of their leaders within the last 2 months and I know that they are ready and determined to resist conquest by the Communists. They live in high, rugged country which is easy to defend and difficult to conquer. There is no question about their will to resist but whether that resistance will be effective will depend upon whether we give them a minimum of military and economic support, and the encouragement and hope that our support will bring. If we give them the help they need they will defend their native provinces against all comers. These are the mountains which the Japanese could never conquer and the Communists can be kept out of them, too.

Mr. HÉBERT. So you feel, General, that by giving some assistance to these border provinces communism can be stopped in China?

General CHENNAULT. I believe that such help given now will be enough to halt the advance of the Communists and to give us a breathing space. It will establish a free area between Communist China and the troubled and chaotic regions of southeast Asia. It will hold back the Red tide which is now at its flood and threatening to engulf the entire continent.

But of course this immediate military solution to our immediate military problem is not the final answer to communism in Asia. It is merely the first step which we need to take in order to win for ourselves the time in which to find a final answer. The Communists will not be stopped permanently until the peoples of Asia can be shown that the democratic way to security and the good life is a better way than communism offers. It will take time and patient effort and support from all the democratic world to build up the free areas of Asia to where they will have the internal strength to resist communism permanently and in the

long run to win away from communism, the people now under its sway.

In other words, it will take more than guns to stop communism permanently—it will take a long-range program of rehabilitation and development of the backward areas of free Asia—the sort of program President Truman spoke of under point 4 of his inaugural speech. The important thing is that these areas are under armed attack and their people need guns to defend their freedom and to win the time which they, and we, must have if we are to develop and put in operation any such long-range program.

Mr. HÉBERT. General, can you tell us how much the action you are recommending would cost? A lot of Americans are afraid to send aid to China because they feel we are already so heavily committed elsewhere in the world that we may be spreading ourselves too thin if we undertake further burdens in Asia.

General CHENNAULT. Within limits, Congressman, our assistance can cost about as much or as little as we want to spend. One thing to remember is that in the country I am talking about there are few roads or other means of transportation and communication. This puts a top limit on what you can spend. The only military assistance that these people can use, which will do them any good, are light arms that can be moved by hand or pack animal, rifles, machine guns, and ammunition. The economic aid they require now is also relatively small, consisting of such items as seeds, tools, fertilizer, and machinery.

Added to this must be the cost of transportation and American supervision. American supervision of any assistance we may give is absolutely essential. We owe it to ourselves and to the Chinese to make sure that every penny is spent wisely.

I think we can spend as much as half a billion dollars a year on this program and that it would be cheap at the price if we thereby stop communism in Asia. I also believe, however, that we can do the job on a bare, minimum basis for much less and that the entire cost of our assistance, both military and economic, could be kept as low as $200,000,000 a year, which is comparable to what it costs us to run the Berlin airlift just to keep part of a single city in Germany in our control. Considering all that we have at stake in Asia, $200,000,000 is a trifling investment in our national security.

In thinking about cost there is one other thing we must remember, and it is very important. If we can keep an area of free China, which includes Formosa, Hainan Island, and her western and southern provinces, we are keeping a supply ground for goods and raw materials with which the economy of Japan can be integrated and which will make her self-supporting. This will save the United States the choice either of supporting Japan indefinitely at terrible cost or of permitting it to go Communist.

The other day Congress was asked to appropriate $150,000,000 for Southern Korea—$150,000,000 for the southern tip of one peninsula in northern Asia. I have the deepest sympathy for the Koreans and I have no doubt that this expenditure is wise and necessary, but it will be obvious to anyone who looks at the map that spending this money in Korea will not help stop the Communists from overrunning Asia. And it will be equally obvious that unless the Communists can be stopped, this money and all that we have spent will be completely wasted and lost.

Before I finish I want to say just this: I am firmly convinced that by taking decisive action now we can, at relatively little cost, stop the Communists before they overwhelm all Asia. But the time left to us is very short. If we are to act, we must act now.

Mr. HÉBERT. Now, General, there is one question which I would like to ask you which would brighten the picture more clearly in the minds of the American people. It is the general conception that all China is becoming completely communistic controlled and it is just a question of days and hours when there will be no Nationalist Government in China. There is a prevalent opinion here that for all intent and purpose China is completely wiped out. Directly, give the picture for Americans to understand on the basis, by comparison, of an area in the United States as to that area which is still in the Nationalists hands? Will you draw the picture for Americans to understand as compared to the United States?

General CHENNAULT. There is a great deal more area in China and many more people outside of Communist control today than there was outside of Japanese control even during the year 1935, after 1 year of war with Japan. I estimate that an area considerably larger than one-half the size of the United States including more than 150,000,000 people who do not desire to be communized and will fight against communism in that area.

Mr. HÉBERT. There are more people under the Nationalist Government today than there are Americans in this country? I believe the American population figure goes around 140,000,000, and you say there are yet 150,000,000 Chinese under the Nationalist Government, which means more people than the population of the United States.

General CHENNAULT. That is right, Congressman; I have really underestimated the number of people outside of communistic control. There are more than 150,000,000 people outside of communistic control in China today and the land area is at least one-half the size of America today.

Mr. HÉBERT. Does that area now occupied and controlled by the Nationalist Government lend itself to adequate defense?

General CHENNAULT. It does. If you will look at the map you will find that there is a barrier, a northern barrier of desert and mountains; in fact, there are only two highways in this great zone. The Japanese Army which from 1938 to 1945 was considered to be one of the best in the world was unable to penetrate this great zone.

Mr. HÉBERT. What significance do you place on the meeting of Chiang Kai-shek with the President of the Philippines last week.

General CHENNAULT. I think their meeting had great significance. I think it was the first step in an effort to bind together the non-Communist area in China in resistance to the spread of communism in Asia.

Mr. HÉBERT. Then, specifically, do you believe in a Pacific pact similar to the Atlantic Pact as a weapon against communism. What kind of an alliance do you propose?

General CHENNAULT. I firmly believe that the pact should include both military and economic aid. As I have said before I don't believe military aid alone can stop the spread of communism. Resistance to communism should be built up from the grass-roots level and in order to do that we must build up the ways of living of the people themselves. Economic aid is most essential.

Mr. HÉBERT. Military and economic aid are very close to one another, they sort of work hand in glove.

General CHENNAULT. That is right, but they should be closely coordinated.

Mr. HÉBERT. How long, with the proper aid, do you think it would take the Nationalist Army to gain back that part of China they have lost.

General CHENNAULT. I do not recommend at this time that any effort be made to recapture those parts of China already lost to the Communists. In this zone that I have described can be set up as an area to prevent the further spread of communism. In this zone with economic aid we can raise the living standards of the people through their homes, so that there will be a greater contrast with the people themselves in the other areas that, within a short period of time, a period of 2 or 3 years, they will throw out the Communist leaders.

Mr. HÉBERT. That is a most important point and will clear up something in the minds of the American individuals which I don't think has been cleared up heretofore. I think the idea has been in the American mind that we mean to give the Nationalists armies and assist them to recapture the territories that have been lost. We would hold on to what we have and set up an example to those in the Communist part of China. You advocate no plan to recapture the great cities of Shanghai, Peiping, and Tsingtao from the Communists.

General CHENNAULT. That is exactly what I have in mind. I do not recommend that we try to gain back the enormous resources already lost. In order to maintain the great defense in China in the zone I have already described we should enable the Chinese themselves to defend their homes, to increase their way of living, to increase the production of their lands, to improve the breeding of their stock, and to encourage their communities and home industries so that their way of life will be so much better than that of the people under communistic control so that communism will fall because of the uprising of the people themselves and not by military means.

Mr. HÉBERT. Then any assistance from America would be for defensive and not offensive purposes.

General CHENNAULT. Yes, sir; it is to be considered offensive only that we would halt the further spread of communism by economic aid or military needs.

Mr. HÉBERT. Nobody knows more about China than you do, General, and let me thank you for coming here today to be with me. Before I close I have a personal message from Governor Jimmy Noe. I talked with Jimmy over the telephone this afternoon and told him you would be on with me today and he said to extend his very best wishes to you and Mrs. Chennault. You have been most kind and generous tonight, General Chennault, and I express to you my sincere thanks and gratitude.

Statement of Views of National Federation of Small Business

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of the National Federation of Independent Business, Inc., George J. Burger, vice president, Washington, D. C.:

In individual signed ballots sent to their Congressmen this month, thousands of independent business and professional members of the National Federation of Independent Business have expressed definite views on five current legislative issues ranging from reduction of excise taxes to barring of Communists from Government office. This is revealed today in the federation's report on the results of its latest sounding of Nationwide independent business and professional opinion. The ballots have been forwarded directly to Members of Congress by federation district chairmen representing business and professional men in almost every congressional district in the Nation.

Here is the summary of independent business and professional opinion on these matters:

	For	Against	No vote
	Percent	*Percent*	*Percent*
1. H. R. 2100. Eliminate wartime excise tax rates	86	12	2
2. S. 776. No interest penalties on taxpayers who make honest mistakes in preparation of tax returns	81	13	6
3. H. J. Res. 120. Stop Communists from running for office in Government	92	6	2
4. Present Army policy of awarding prime defense contracts	25	67	8
5. H. Con. Res. 20. Congress investigate insurance companies	71	22	7

Overwhelming support was given in these ballots to the move in Congress for reduction of present high wartime excise tax rates on business goods and services. Eighty-six percent of the thousands of signed ballots called for favorable legislative action on House Resolution 2100, a bill sponsored in the lower House by Representative JOSEPH MARTIN, Republican, Massachusetts. This bill would lower excises on a long list of items including luggage, purses, handbags, theater and sports events admissions, photographic supplies, cabarets and roof gardens, telephone, telegraph, radio and cable messages, bowling alleys, billiard and pool tables, jewelry, furs, toilet preparations, electric light bulbs and tubes, and railroad and bus fares. In comments on their ballots federation members have charged that wartime excises help keep retail prices high, that they have kept consumers out of the market. They contend that a reduction in these taxes, by permitting a corresponding reduction in retail prices, will bring many consumers back into the market for the goods and services they need and desire. This, they say, will help stabilize business at a time when conditions are not quite stable.

A large majority of federation independent business and professional members called on their Congressmen to pass a bill that would protect taxpayers from unfair punitive Treasury Department action. In their thousands of signed ballots they insisted on favorable congressional action on Senate bill 776, a measure introduced in the upper House by Senator RAYMOND BALDWIN, Republican, Connecticut. This bill provides that taxpayers who make honest mistakes in the preparation of their tax returns shall not have to pay interest penalties for these errors. Federation members assert that preparation of tax returns today is such a complicated procedure that it defies, sometimes, even the skilled efforts of experts. They say that present punitive provisions of tax law are an unfair hazard for smaller business and professional people who must prepare their own returns.

Subversive influences in Government were raked over thoroughly by federation members, with 92 percent of the signed ballots demanding that Congress refuse registered members of the Communist Party the privilege of running for office. This overwhelming majority of independent business and professional opinion demanded that Congressmen approve House Joint Resolution 120, a bill sponsored in the lower House by Representative ROBERT SECREST, Democrat, Ohio. House Joint Resolution 120 would make it unlawful for members of the Communist Party to be candidates for elective Federal office. The bill would also provide for immediate deportation of aliens found to be members of the Communist Party.

Sixty-seven percent of these independent business and professional people called on their Congressmen to force changes in certain Army procurement policies to give small business a fairer share of the multibillion national defense orders. The thousands of individual signed ballots sent to Congress in effect severely criticized the present reported Army practice of using statistical service financial reports as an important norm for determining defense contract placement. Federation member balloting on this issue is in line with the stand taken on the House floor by Representative FRED CRAWFORD, Republican, Michigan, when he declared that the Army policy, which consists of awarding no prime defense contracts to firms with under $1,500,000 in assets, represents poor utilization of our existing manufacturing potential. Mr. CRAWFORD sharply questioned the practice on grounds that it might add tremendously to our national defense budget by forcing additional Government subsidies to giant firms for expansion of their facilities at a time when so much smaller factory potential is not being used. The federation vote constitutes approval of the position taken on the House floor by Representative WRIGHT PATMAN, Democrat, Texas, who has indicated that the situation is so serious that it is one of the major subjects before his House Small Business Committee.

A majority of federation members called on Congress to determine the extent to which insurance companies are complying with Federal antitrust laws. This they did in their favorable vote on House Concurrent Resolution 20, a bill sponsored in the lower House by Representative EMANUEL CELLER, Democrat, New York. House Concurrent Resolution 20 provides for an investigation of the life-insurance industry with particular regard to the applicable antitrust laws and to the extent to which the operations of the industry comply with these laws. In repeated Nation-wide signed ballots, federation members have insisted that Federal antitrust laws be applied forcefully and impartially to all segments of our economy, including business and labor and consumer cooperative organizations. Federation members have indicated repeatedly their belief that the Federal antitrust laws are the most certain guardians of freedom of opportunity and continued democracy in our Nation. Seventy-one percent of the balloting federation members approved action on this bill; 22 percent voted against it; 7 percent voiced no opinion on the issue.

The National Federation of Independent Business, Inc., is a nonprofit organization of independent business and professional people Nation-wide. It has the largest membership of any organization covering all vocations of business and professional effort in the United States. It is the only such organization supported entirely by small business and professional people in the Nation. Ballots sent to Congress this month are from the latest of the federation's regular soundings of business and professional sentiment on national legislative issues of prominence and vital interest to the business and professional community.

Marshall Plan Fund

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following recent editorial from the Daily Evening Item, Lynn, Mass.:

WRECKING MARSHALL PLAN

The $3,778,000,000 Marshall-plan fund approved by the Senate Appropriations Committee should bear the title "United States farm-relief bill."

It deserves this label because of a secret proviso earmarking an estimated $1,500,000,000 exclusively for purchase of American surplus farm products to be dumped in European countries.

Reporters unearthed the clause after the committee avoided any mention of it in announcing its recommendations.

How did the earmarking feature get into the bill?

During the committee hearings on Economic Cooperation Administration funds, Senator WHERRY, of Nebraska, Republican floor leader, asked Paul Hoffman, head of ECA, to furnish estimates of the surplus farm commodities each ECA nation would need in the current year. It was a hostile challenge, for the Nebraskan didn't think it would be met.

Reporters said WHERRY appeared surprised when Hoffman produced the figures some time later. They gained the impression that many Senators promptly lost interest in cutting ECA funds sharply after they learned how much of their home-area farm production would likely go into the program.

But ECA never intended to stick rigidly to the estimates, either for particular commodities or particular countries. They were simply offered as a rough guide to committee action.

The effect of the secret clause is now to freeze these estimates into rigid legal requirements. It would mean ECA must buy surplus farm products in the estimated amounts or not use the money at all. In other words, it could not be transferred for other useful purchases.

Britain, for example, would get $200,000,000 worth of cotton under the estimates. Optimistic forecasts of textile exports lay behind the figures. If the export market should contract severely, Britain would have either to take cotton it doesn't need, take some other farm commodities it has no use for, or do entirely without part of the money allotted to it.

This provision is thus a cruel twist of the aims of the Marshall plan. That program is directed toward getting Europe back on its feet economically, not toward providing a handy dumping ground for products America can't sell at home.

The clause represents a disheartening display of national and regional selfishness by the committee at the very moment high-minded statesmanship is most urgently desired.

The current British dollar crisis symbolizes the deep-seated difficulties the Marshall plan seeks to solve. Sincere doubts have recently been raised as to the plan's effectiveness. All the wisdom we can muster is needed to attack the problem of western Europe's future economic course.

But this attempt to distort the plan into a farm relief program stems from no reasonable doubt. It reflects no regard at all for legitimate Marshall plan objectives.

Hoffman believes the secret clause would wreck ECA overnight. He says that sticking to rigid earmarking of funds might well waste hundreds of millions of dollars.

If this feature should become law, Hoffman and his whole ECA crew could be forgiven for resigning in a body. Certainly the Senate would merit a severe shock for bowing to narrow nationalism in the face of compelling international responsibilities.

Address of Hon. Jay LeFevre

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. COLE of New York. Mr. Speaker, for nearly a hundred years, the Republican Party has been a powerful factor in the development of this great country. During most of that period, our Government has been guided by the principles of that party administered by its members. The principles of the Republican Party have been fundamental and basic in the preservation of human liberty, the encouragement of individual opportunity and the development of a government financially sound and impartially administered to all classes of people.

Recently, the Republicans of Ulster County, N. Y., held their annual convention at Kingston, N. Y., and it is my pleasure to offer for your consideration the following excellent address delivered at that time by our colleague, the Honorable JAY LEFEVRE:

Mr. Chairman, honored guests, and fellow Republicans, as an underprivileged Member of the Eighty-first Congress, I am happy to be back home. It was very fine of Art Wicks to invite me to attend your meeting. County conventions are much more important than most people believe. It is here where rock-ribbed Americanism stays put. I make this statement not only from an appreciative but also from a selfish standpoint. At this convention our party candidates are selected. The voters have favored our selections of committee candidates as evidenced by the past elections. You show me a county with elected Republican county officials and I will show you a Republican district. Whenever we lose our county Republican officers, we are liable to lose our Republican district and Republican State officials. No house is any stronger than its foundation and in our area the foundation is our elected Republican home officials. These same officials are the ones who come in daily contact with our local citizens. They can make or break us. If we elect good Republican officials, I am not worried about electing Republican State officials and from a selfish standpoint, incidentally, a Republican Congressman.

Having just arrived from Washington, I am not too familiar with the program you have before you today. I know there are some important county candidates to nominate and from all accounts, I know the usual high calibered, responsible men will be selected.

I think it is most fortunate that this convention comes shortly after the President made his midyear economic report to Congress on Monday, July 11. Editorials following his message in Washington were headed something along these lines, "Harry sees the light—late," but let us not be ensnared or befuddled in believing that the President has given up his Fair Deal program. If I can read between the lines, there is still the threat of the Government going in business. They say this decision, on his part, is better late than never and, therefore, we were all happy when the President finally admitted that we are in a period of deflation. Up until last Monday morning, however, the theme song at the White House has been—that inflation was the real menace. The Republican position has been, what any schoolboy could see, a recession was in course. The Republicans have been urging the elimination of tax deterrents in order to stabilize business and insure jobs and pay rolls. Mr. Truman only acts after a fellow loses his job and pay rolls are down. Up to very recently, the President has insisted on higher taxes, plus stand-by powers to restore rationing and price controls, and other police-state nuisances that we had during the war. We all remember them and we don't want them back. Now the President tries to bow out gracefully and say goodby to all that.

Let's not be fooled. He has not changed fundamentally. In his message he failed to liberalize excise taxes. Oh, yes, he suggested taking off the 3-percent transportation tax on goods—but what about the 15-percent transportation tax on passenger tickets which is an added burden to the salesmen who should be scurrying abound the country to sell those goods. Not a word was said about JOE MARTIN'S bill which would help all of us—putting wartime excise taxes back to prewar 1941 rates. Such a tax cut would encourage business; such a tax cut would help the three-million-odd unemployed find jobs and, I believe, would help increase Federal revenues. Every man and woman here today would like to see the electric-light bulbs which we use in our homes have the present tax cut from 20 to 5 percent, luggage from 20 to 10 percent, general admissions to entertainment cut from 20 to 10 percent, toilet goods cut from 20 to 10 percent, telegraph messages from 25 to 10 percent, telephone calls, local, from 15 to 6 percent and long-distance calls from 25 to 15 percent. Many other items such as jewelry, cameras, films, and furs are included in this tax-cut bill. And don't let us New York citizens forget that every time $18 of your tax money goes to Washington, our State receives approximately $1 in return benefits. The first duty of Government today is to reverse the tide of business recession. These excise taxes are slowing down business and creating unemployment.

I am sure you will agree with me that his 6,000-word message was optimistic and for this we should be grateful. As a small-business man, however, I must say that it irks me when he piously states that businessmen must be courageous, lower prices and maintain wages on the theory that there will be an increased turn-over in the volume of business and in the same breath makes no reference in his message to reduce the high cost of Government. On the contrary, the President says that the Government must go on spending at the present rate. Remember we have a national debt of $252,000,000,000. On June 30 we had a deficit for fiscal year 1949 of $1,800,000,000, and it has been estimated for fiscal year 1950 we will be in the red anywhere from three and one-half to five billions due largely to commitments made.

The administration faces deficit spending without a qualm. When Mr. Truman estimated our deficit for this year being between $750,000,000 and $800,000,000, he surely was misinformed—he missed it by better than 50 percent. Selling bonds to take care of deficit spending isn't going to be too easy either, especially during peacetimes. The money will have to be raised on the faith of the people in their Government. When our Government elects the easy course and shuns the desirability of expenditure retrenchment on many items that could be lopped off—faith weakens. Businessmen and housewives would quickly curtail and not go on borrowing under similar conditions. Why does Government have to be so unrealistic? I would just like to make a little prediction right here and that is that next year this same administration will be for reducing the excise taxes and come forward with some other political bromides in order to line up a few more votes.

Speaking of votes, I feel forced to say a little about the National Labor Relations Act, improperly called Taft-Hartley. Regardless of the terrible Eightieth Congress the Eighty-first, having a Democratic majority, has failed to repeal the National Labor Relations Act. Republican Congressmen with some Democratic support made an outstanding effort to maintain the best features of the Taft-Hartley Act in order to produce a fair code, so management and labor would be afforded a basis of adjusting their differences. The Republicans tried to achieve a code that would bring enduring stability for both the worker and the employer. Instead of giving his cooperation to meet this end, Mr. Truman has been conniving with certain labor leaders who have promised him political support and has blocked in every way a revision of the labor law. He is unwilling to repel the union demands—the right of the Government, on behalf of the people, to apply an injunction against strikes which vitally affect the public interest. Mr. Truman seems to think that it is politically beneficial to him to have the Taft-Hartley law made an issue in the 1950 campaign. He thinks that by holding off any revision of the act until then he can keep the strength of the labor leaders and thus help swing the election. I think I know the attitude of the average workingman pretty well and the day when the labor leader can pull him around by the nose is past.

My friends, Mr. Truman has not given up his socialistic plans. He is merely soft-pedaling now to make some bids to business. He believes in giving selective aid to specific segments of our population and priming the pump where it will do the most good for him. This is one of my main reasons for opposing the Federal public housing bill. I have stood for progressive legislation where that legislation will benefit the greatest number. Legislation which might possibly benefit two people out of every 1,000 is far from equitable. About all we will get will be a splinter from the Federal housing bill.

Our people cannot afford the Truman spending spree. Today the average American family is paying more than $100 a month in Federal and local taxes—a burden which is depriving many homes of their basic necessities. To keep our leading place among nations we must keep America the financial citadel of the world, or all of our efforts abroad and here at home will be lost. Let's continue electing Republicans right here in this county and our day in restoring efficient management in government in Washington is bound to come.

The Late Van Bittner

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. KELLEY. Mr. Speaker, the Nation has suffered an appalling loss in the premature death of Van A. Bittner, vice president of the United Steelworkers of America. His entire life was devoted to the cause of labor, and in his going we have lost a man wise and experienced in that field, a person who was always a credit to the cause he served.

I knew Van Bittner well, and many members of his family live in my community. He should have had many productive years before him, but with the strains and stresses of his unrelenting

activity in organizing labor groups, it is not difficult for me to see that the physical toll of his work had shortened his life.

It is with real regret and a keen sense of loss that his many thousands of friends mourn the passing of Van Bittner. The sympathy of all of those friends goes out to Mrs. Bittner and his family at this time.

Kaufman Should Be Impeached

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Westbrook Pegler which appeared in the Washington Times-Herald on Saturday, July 16:

FAIR ENOUGH
(By Westbrook Pegler)

Many rulings by Judge Samuel H. Kaufman in the Alger Hiss trial were favorable to the defense and to the Roosevelt cabal and the Roosevelt myth.

Whatever his reason, I would say he saved Felix Frankfurter from demolition when he curtailed the cross-examination of Old Weenie by Thomas F. Murphy for the Government. Murphy thereby was forbidden to bring up the names of Communists and fellow travelers in the Government and put these people right in Weenie's lap.

For years Frankfurter had been getting away with a clever little scheme to pack the Government of the United States with people of a mind and politics agreeable to his own.

In fact, in this very court one of the few intelligible statements that could be dredged out of his evasive replies to Murphy was an unwise boast that he had been consulted by private and official employers far and wide on the selection of trustworthy help.

Alger Hiss had been one of those, but you would have to divine that because Felix did not say so flatly in his testimony. Although Frankfurter brashly rushed in, showing off as always, to give Hiss a good character, he stalled and filled in and, in total effect, was not clever but clumsy.

There is no use of his pretending that his evasiveness was not intentional because he would readily admit that he is a man of superior intelligence and skillful in the use of language. When a man of such gifts resorts to double talk and chews up masses of words he is hiding out.

An elderly magnate of our economy told me years ago that when he and Felix were serving in the peace conference in Paris at the close of the First War, Frankfurter remarked that a smart fellow with determination and energy could control the Government of the United States by causing the appointment of individuals to key positions.

I doubt that he would permit me to name him because his company already has been put through one exhaustive and expensive investigation and an antitrust prosecution because of some resistance to the grafting rapacity of a member of the royal set early in the New Deal.

But I call your attention again to the spotting of Frankfurter men in the Government—Nathan Witt as secretary of the Labor Relations Board during the riots and the raids of the CIO's dragoons on whole communities of men; Henry L. Stimson in the War Department; and now, Frankfurter's intimate friend and his mouthpiece of record, Dean Acheson, in the Office of Secretary of State, the Department in which Hiss formerly served and where he is alleged to have filched secret papers for transmission to Russia through an apparatus of traitor and other spies. And all the while David K. Niles in the White House.

The deflation of this gas bag has been one profitable result of this trial, and Thomas F. Murphy deserves honor for that eminent public service, the more so in view of the fact that he did it with two strikes on him and was not permitted to take Felix down the list of his appointees and protégés.

Incidentally, Mr. Murphy's attack on Alger Hiss in his summation must have given him a personal satisfaction above and beyond his professional pride of artistry because Hiss had digged him dirty by faulting his grammar during the cross-examination, and Murphy's neck had lit up like a neon sign on a gay saloon.

Murphy had said "had ran" or something like that and Hiss, icily, had replied, "had run."

"Are you correcting me?" Murphy inquired. "No," Hiss said, "I am testifying."

To be sure, to be sure, Frankfurter was not the defendant, was not on trial in this case. But are we so sure, after all?

He certainly did put his own character up for inspection when he presumed to stake the power of his name and the prestige of the Supreme Court, such as it may be after the vicissitudes and degradations of the Roosevelt years, on Hiss' case. And the curtailment of the examination lest Felix be forced to admit relationships with Communists and persons merely questionable left the details still behind a rather transparent but substantial curtain.

Many of us know what is behind the veil, but revelation of this stuff bit by bit is less convincing to the public than a dramatic exposé of all of it at once in court would have been.

So, although Murphy did take him down appreciably and send him away wilted, Frankfurter survives.

A layman would resist the temptation to believe that Judge Kaufman was biased, whether consciously or no, but for the fact that so very many lawyers have given us ignoramuses aid and comfort in our opinions.

I do not recall any case in the past in which the lawyers did not put themselves on the side of the judge and the court and deplore the instinctive but erroneous judgments of the people.

But in this case, many lawyers have spoken out in criticism of Judge Kaufman's rulings and one publication, the Lackawanna Jurist, of Scranton, Pa., carries an editorial condemning Frankfurter's conduct as "inexcusably thoughtless or wanton disregard" of his exalted office.

It gives Frankfurter and Justice Stanley Reed, who also left the bench and took the stand for Hiss, a terrible going over and concludes with the observation that "this is clearly a case of condemnation and reprimand."

The Cold War

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein the following thought-provoking article written by a constituent, Mr. Archie Carter, and appearing in the Tacoma Times:

READER OUTLINES COMMIE COLD WAR PROGRESS; SAYS DEPRESSION NEXT ON AGENDA

EDITOR, THE TIMES:

The last week of February marked the third anniversary of the declaration of war on the United States inside its borders. Yes, I said war, not just cold war. For while it is Russia's intention to avoid a shooting war with this country until the United States is sufficiently weakened, it is war—just like the phony war Hitler carried on until he was ready to move in for the kill.

And the phrase was used, "inside the United States," since it was the last week of February and the first week of March 1946, that the United States Communist Party officially adopted its program, and had everything in readiness to announce it to all the Communist locals in the United States. However, this program had been in the process of planning for some time, as are all wars, and one cannot determine as to just when the Kremlin set its world campaign in motion.

Events indicate that some 3 or 4 months prior, the European Communists had been given their orders. But war was officially adopted as party policy just 3 years ago this week. Unfortunately, too many people are not yet ready to acknowledge that fact.

It almost seems as though no one wanted to learn that there is a plan to this war. It didn't, like Topsy, just grow. It is planned just as ruthlessly and heartlessly, and as thoroughly as any of Hitler's seeming mad escapades. A detailed report of the plans was made to every Communist local in the United States the early part of March 1946. And so the cold, hard words of an actual war to the death between the United States and Russia was outlined in detail.

That for the first 5 to 7 years this war was to be economic—a process of economic strangulation—makes it all the more necessary that we understand the plan and the timetable of aggression. While Russia wishes to avoid a shooting war on a major scale, it was only during this period while she was getting her stock pile of atom bombs ready. When she felt she was strong enough to make the move, the first surprise attack with her atom bomb, then an actual war would come.

We cannot consider ourselves at peace. And, least of all can we consider our present national budget as a peacetime budget. It is a war budget, even though it is at present an economic war budget. We need to review the Russian plans for war, and assess the extent of her success, so that we can take an intelligent view of our budgetary needs, and understand how close we stand to having already lost this war.

The plenium, as the Communists call their party councils, apart from their conventions, was attended by representatives of all the Communist parties of South and Central America, Mexico, Cuba, and various European nations.

Foreign representatives ridiculed the Communist Party in the United States as being the weakest and most ineffective politically of all, save those in Canada and Great Britain. In all European countries where they were not strong enough to win actual power, the Communists were strong enough to break any government by strikes or otherwise, in case any of them attempted to join a war against the Russians.

Communist deputies held seats in Cuba, and in several Central and South American countries even though under other names. In the United States there has been a Senator elected who has been a party member for some 15 or more years. But perhaps, the organizer reported, there may be those who

might be surprised that American Communists had more power than credited, and could demonstrate that they could turn a few tricks.

By common agreement, Communist parties were placed under strict orders not to initiate or engage in any independent moves which would interfere with the Kremlin timetable. Not even to launch political campaigns until such time as it was decided by those who must necessarily guide such a program to completion.

They must remain inactive, specifically in certain South American countries, even though it led to their disintegration, so as not to arouse United States opposition. In many cases it would be necessary for party members to go underground. When the time was ripe for their part, they would be given ample reinforcements.

The United States was to be brought under Communist domination or reduced to the status of a third-rate world power, while Russia became the world's dominant power.

The time schedule might be accomplished in 5 years.

Or if there were minor setbacks, it might take seven.

Chief ally was to be a depression in the United States, which always came after every war. But the efforts of the American Communists were to be concentrated in efforts to quicken its coming by aiding inflationary moves, and repeated well-timed strikes which would aid the depression.

A depression in the United States would automatically lead to a depression in all Latin American countries, and our potential allies in Europe. The United States would be so isolated that her people would have neither the will, the ability, nor the allies to inaugurate or carry on even a defensive war.

The order forbidding any independent action was necessary since the time table was divided into three parts. First called for gaining and consolidating power in Europe. Second phase was the gaining of power in the Orient. Third and final phase would be renewed activity in Mexico and Central and South America so as to shut us off from our final sources of raw material, and make certain we could not effectively wage either offensive or defensive war.

It is a coolly calculated job of economic strangulation. However, no party member was to be afraid of coming afoul of the United States law charging conspiracy to overthrow the Government by force. In no modern state, where there are modern police facilities, could revolutions be planned or carried out. But members must be prepared to take part in economic movements, designed to cripple the anti-Russian campaign.

So, statements made by Communist Party members that they are not members of a revolutionary party (in the United States) are half true. Revolutions are reserved to weak countries. But the party is in no sense independent. There is no will to be independent.

Now the Kremlin time table is about half over. How far have they accomplished their plan? Can they complete their economic encirclement? Can we defeat their plan?

The Russians will probably have the atom bomb by 1952, and possibly in quantity sufficient to make an adequate surprise attack. Professor Urie and Dr. Bradley made this adequately clear on Town Meeting of the Air recently. Further, the new underwater bombs are found to be far more destructive, and could be planted in major ports by submarine, in the development of which the Russians have been in the forefront. There can be no doubt that Russia will have the atom bomb on schedule, and could plant it where it might do the most damage.

That job would be more effective if we were cut off from allies, and raw materials. So what about this economic strangulation business?

Our State and military departments seem to have forgotten there is such a thing as geopolitics. So let us recall a little history.

On September 1, 1939, Hitler marched into Poland. I can remember some discussion which took place that day. Almost all concerned were sure that America could avoid war.

This writer disagreed, pointing out that the war would not come from Europe, but from the Pacific.

It would come because my observation of the moves of the Rome-Berlin-Tokyo powers indicated they followed certain theories marked out by geopolitics. Japan would strike when she was ready to take the Philippines away from us. And when she did, Japan would be able to shut off our basic raw materials of rubber, tin, and kindred items from the Orient, so that our entire industrial machine might be crippled, and we would face defeat as a result.

Perphaps if the Japanese strategists had proceeded to take over Malaya, Borneo, Java, Indochina and the remainder of China without attacking Pearl Harbor, our isolationist element would have kept us out of war. We might have suffered tire rationing and not made any effort to aid in the defeat of Hitler in Europe. But we would have been reduced to a third rate economic power, ready for a final Hitler-Japanese attack.

Russian cold war strategy has produced almost the desired situation in the Pacific today. There are strong Communist-sponsored revolutions in all oriental countries with the exception of the Philippines and India. It is not necessary that Communist governments be successful in the next few years. It is only necessary that these governments be able to keep the United States from securing raw materials, or bases, or allies when she decides to attack.

The failure of the State Department and our military department to permit adequate support for some nationalist government has been the equivalent of accepting the Pearl Harbor of the world war III with no countermove. In the Orient the timetable is surely on schedule. We have no allies there. Officers in Japan and Korea evidently believe we intend to withdraw from there shortly, or would make no attempt to defend them.

The European stalemate is not serious for the Communists. Their internal strength in any country has not been broken. They could paralyze all Europe except Britain in any crisis. We have few friends left, after the purges, in eastern Europe.

There are indications that Mexican Communists are to begin active anti-United States operations within the next year. The only item not on schedule is the next depression in the United States.

Keeping that depression from turning the corner becomes the most important thing to require the attention of every American citizen.

ARCHIE CARTER.

TACOMA.

Arms and Pump Priming

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bristol (Pa.) Courier of July 19, 1949:

ARMS AND PUMP PRIMING

Is the arms end of the Atlantic Pact, in which we are to be called upon to furnish weapons to our partners in this treaty for the next 20 years, simply another of the ingenious pump-priming boondoggles which the New Dealers have been so prolific in inventing?

It's a little too early to say whether this is the main reason for the almost hysterical support for the arms program displayed by Washington's "brain trusters."

But it certainly isn't too early to look into the way the plan adapts itself to freewheeling spending programs by the Federal Government.

And the planners at Washington badly need some new excuse for supercolossal spending programs. They've used up their old ones.

Think it over. The feed-Europe business is about done for. Europe is tired of being the dumping ground for our surplus crops—and fretful over being asked to look pleased at getting foodstuffs she doesn't want and doesn't know what to do with. Moreover, that's the spending scheme which backfired so badly in 1946. It sent prices skyrocketing, and created artificial scarcities in the midst of bumper crops—and the housewives got mad and voted Republican majorities into control of both Houses of Congress.

The get-tough policy with Russia created an excuse for fifteen to twenty billion dollars extra spending by Uncle Sam, some of it for rebuilding our own military resources (thrown away at the end of the war) and some of it for pumping vast sums into such obscure corners as Greece and Korea.

That immense spending created the strictly artificial prosperity which lived barely through the Presidential elections last year. It ran its course about last Christmas.

Yet from the point of view of the New Deal brain trusters in Washington, it's all a case of "spend or perish." They are converts to an economic philosophy which is somewhat like the conditions in that mysterious land described in Alice Through the Looking Glass—the one where you must run fast as you can just to stand still.

We have been plunged into a rat-race economy, where the only way the experts have figured how to avoid the impact of our national debt, the biggest in all history, is to pump new Government money into circulation faster than the old supply dries up.

Read President Truman's recent address again, and note his constant emphasis on "expansion." That alone is almost enough to be a tip off on how completely he is sold on the Keynesian ever-expanding theories.

But where to spend?

There was a day, some 15 years ago, when Federal spending of a couple of billions extra represented a lot. At that time it primed the pump for about a year and a half. Today it would be only a drop in the bucket. This ever-expanding business means that some 10 to 20 times that much must be spent, according to the Washington calculations, during the coming year—and still more each year thereafter. This is over and above the regular national budget, which itself is four times bigger than it ever was in the spendingest prewar year of the New Deal.

The New Dealers have poured out extra billions in many fields since the war. They have poured out in veterans' benefits, in housing schemes, and in a host of other ways. But this has been, in the Biblical phrase, like water spilled on sand—it has disappeared, with no visible effect on the national economy.

Something infinitely bigger is in order. Something comparable, let us say, with the public-medicine and cradle-to-grave boondoggles in England, where the Socialists are trying to cure bankruptcy by bigger and better spending programs.

The Marshall plan has been a disappointment to the spending boys. Its food-dumping provisions are in hot water in Europe, and in the United States as well. It has financed a good deal of heavy machinery and production-line equipment, most of it to set up direct competition abroad with America's own workers—and this is backfiring.

It has given away a good deal of material without making anyone happy. The Americans who made these articles for sale are faced with the need for paying the purchase price out of high taxes. The foreign recipients are disturbed because they are beginning to see they will never get rich sitting around letting us give them the things they could be manufacturing for themselves.

The world is getting hungry for peace. The war-scare is a dog that may not be going to hunt much longer. Also, the present trend of the Marshall plan is to plunge the world into a gigantic and vicious trade war.

Is the arms-give-away program just the answer to the prayers of the many schemers who can visualize nothing but more spending as cure for the ills which too much past spending has brought upon us?

Consider how this plan is to work.

Congress will authorize the President and the brass hats to give away, to our cosigners in the Atlantic Pact, "surplus" war equipment up to a certain valuation. The ceiling now being discussed, for the first year, is a little over a billion dollars.

But neither the ceiling, nor the requirement that the weapons be "surplus," really means a thing. Anything in the military line which the brain trusters want to give away can always be described as either "surplus" or "obsolete"—certainly during times of peace. And as to value, who can question the figure set upon it by the "experts"? A bomber that cost $100,000, and would cost $150,000 to replace can be called obsolete and valued at 30 cents—and who can raise objection?

There has been a move to compromise the fight in Congress over the arms program by whittling down the "ceiling"—cutting it from its present level of $1,100,000,000 to a much smaller figure; possibly the $200,000,000 suggested by Senator DULLES.

This is purely shadow-boxing. It means nothing. The War Department could give away precisely the same list of weapons under both ceilings—merely devaluing them more for the smaller sum.

War equipment is the neatest give-away prize found yet. There is no limit to the amount which our foreign "friends" will accept—especially those who have private war schemes of their own up their sleeves.

But for that matter, these Socialist governments, which we have been financing with our taxes since the war, are many of them only one jump ahead of revolutions at the hands of their citizens.

That's one of the interesting phases of the arms program.

Freedom-loving Americans, having financed these Socialistic potential dictatorships, now are being asked to arm them. And in several cases, the main reason the governments want the arms is to be protected from their own semienslaved citizens.

The arms gifts compete with no local industries in the recipient countries. These domestic industries are trying frantically to get themselves into position to export regular civilian products—largely in direct competition with our own mills and factories.

Consider the possibilities. Once we sign up—and when we do we can't back out for 20 years—and once the arms program is authorized, no limit to the extent to which our Government might go in arming these foreign countries. Weapons which we declare to be obsolete, and send to them, might in a year or so be determined to be obsolete in the hands of their new owners, and, therefore, subject to replacement.

Now, here is the joker:

Regardless of whether the weapons and military equipment we give away are called surplus or obsolete, once it is gone there will be an immediate drive to replace it.

That's where the spending comes in. Competent observers in Washington say that the first year's give-away program, regardless of whether the congressional ceiling on it is a billion and a third, or less than a quarter of a billion—that the 1-year's give-away of arms as apparently already blueprinted will call for replacements in the sum of about $10,000,000,000.

Do you see how it can work? The more that we give away, on the theory that we don't need it ourselves, the more we will have to spend replacing it, on the theory that we can't afford to do without it.

Here is the making of a boondoggle of bigger proportions than anything else ever conceived by the master minds at Washington.

And it is fantastic to hope that such vast quantities of war-making devices should be poured out in such a fashion, without some reckless nation somewhere starting a war to use it.

Almost inevitably, sooner or later, we will be dragged in, and presently find our own sons and brothers, fathers and husbands, being shot down with these given-away American weapons.

Veterans' Housing

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. TOLLEFSON. Mr. Speaker, Collier's magazine for July 23, 1949, carried an article by Frank D. Morris entitled "Our Shameful Record in Veterans' Housing," which I recommend for reading to those persons opposed to the recent public-housing legislation. This article follows another one written 2 weeks earlier by Senator PAUL DOUGLAS entitled "Democracy Can't Live in These Houses."

Collier's editorially commented on both articles, and I include herewith an excerpt from that editorial which should help to allay some of the fears expressed concerning public housing:

Senator PAUL H. DOUGLAS told Collier's readers about Congress' start on nonveteran slum clearance in Democracy Can't Live in These Houses, which appeared 2 weeks ago. He pointed out that if private business could put up decent low-cost houses profitably it almost certainly would have done so. But that isn't possible. The only complete solution is to do the job with public funds—most of them from the Federal Treasury.

One reason why the job has been put off for so long is that a lot of Congressmen have shied away from the very mention of public housing as if the subject were mined and booby-trapped. It's the beginning of the end of the free-enterprise system, they moan.

How come? Government isn't competing with private business when it takes on a job that business can't touch without losing money. And far from hurting private business, a big public-housing program should give it a tremendous boost.

You don't buy a vacuum sweeper when you live in a Quonset hut that can be swept with a broom. You don't buy a refrigerator or a stove when you're doubled up with your in-laws, because the in-laws already have them. But think of the new, country-wide market for all sorts of appliances and furnishings if thousands are moved out of barracks, spare bedrooms, and cold-water flats into places of their own.

This, with the work that a housing program would give the building and building-supply industries, can be a healthy stimulant to the whole American business community. In spite of congressional fears, the housing program is not a plot to kill the goose. It is a plan that promises to step up the production of golden eggs.

The Supreme Court Outsmarts Itself

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. MASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily Tribune of July 18, 1949:

THE SUPREME COURT OUTSMARTS ITSELF

Maj. Gen. Benny Meyers, the Air Force's percentage boy, thinks he sees a way to get out of prison. He is doing 20 months for inducing a witness to commit perjury before a senatorial committee that was investigating Meyers' private profits at public expense when he was chief buyer for the Air Force.

His attorneys have filed habeas corpus proceedings contending that the committee before which the perjury was committed did not have a quorum present at the time. They cite the recent opinion of the Supreme Court in the case of Harold Christoffel, the Milwaukee Communist. Christoffel was convicted of perjury before a congressional committee but the Court freed him on the ground that there was no proof that a quorum of the committee was present to hear his lies. There was no proof, either, that a quorum was not present.

It was pretty evident in the Christoffel case that a left wing majority of the Supreme Court decided that it wanted to let Christoffel off, and having reached that decision, looked around for some law to make the decision look right. As numerous lawyers have pointed out since, the supposedly learned justices made an extremely unfortunate choice. If it works for a lying Communist, why not for a crooked major general? And if for a crooked major general, why not for thousands of other convicts sentenced under laws passed without positive showing that a quorum was present when Congress enacted them? Justice Jackson stressed this danger in his dissent in the Christoffel case.

Ever since Congress first convened in 1789, its two Houses and their committees have transacted business on the assumption that enough Members are always present to do business legally unless some Member calls attention to a deficiency of attendance. Then it is proved by a roll call and the sergeant at arms rounds up enough statesmen to make the session legal.

One consequence of this practice has been that thousands of pages of the CONGRESSIONAL RECORD have been filled by

oratory delivered to a half dozen Members of the House or Senate who didn't have anywhere to go at the moment. No one ever mentions the lack of a quorum in such instances, because if he did, his fellow Members would have to come back and listen to the orators. Similarly, many bills have been passed without proof that the constitutional quorum of a majority of the membership of each House was present to vote on them.

It will be interesting to watch Justices Murphy, Frankfurter, Black, Douglas, and Rutledge wriggle out of the situation in which their casuistry has placed them, when the appeals start rolling in.

Paralyzed Vet's House Warming

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John Wessells, from the Richmond Times-Dispatch of July 17, 1949:

PARALYZED VET'S HOUSE WARMING IS STAGED IN HOMELIKE ATMOSPHERE

(By John Wessells)

The Congressmen had to look twice last night to make sure that Bernard E. Shufelt's house was one of those designed for a wheelchair.

Shufelt, who is persident of the Paralyzed Veterans of America, threw a house-warming for some of his Washington "friends" in the home he built with the help of their legislation. Senators and Representatives, Republicans and Democrats came down.

Four of them are Members of the House Veterans' Affairs Committee, including Representative EDITH NOURSE ROGERS, Republican, of Massachusetts, chairman of the committee in the Eightieth Congress, who authored the paraplegic veterans' housing bill.

Representative OLIN E. TEAGUE, Democrat, of Texas, who lost an ankle and 3 inches of one leg in World War II, but led the fight against the Rankin veterans' pension bill, was on hand, as were Representative WALTER B. HUBER, Republican, Ohio and Virginia's Representative J. VAUGHAN GARY.

The Senate delegation was led by HARRY P. CAIN, Republican, Washington, and included Senators JOSEPH R. MCCARTHY, Republican, Wisconsin, and WARREN G. MAGNUSON, Democrat, Washington. They all vowed with Senator CAIN that they had come to shake the hand of this man Shufelt.

But they saw no ramps and no elevators, and they had to mount a very purposeful step to get in the front door. The reason was simple. Shufelt and his wife, Winifred, had spent weeks designing it that way.

"We didn't want a lot of people stopping to point their fingers at us," the paralyzed veteran explained.

The special features were there—doors 3 feet wide, a concrete floor with no interior sills, special bathroom fixtures—but they are far from obvious.

Some are artfully concealed. One of the two concrete strips which form a driveway is wider than the other—just wide enough to let a wheelchair roll up. It is inconspicuously flush with the concrete side porch at the top, to let a wheelchair roll on into the house.

Inside, there are no rugs, and each room is big enough to turn a wheelchair on the asphalt-tile floor covering. A few conveniences are necessary to Shufelt, because the wheelchair has become part of him. He even takes a shower in it, by means of a specially designed stall.

Otherwise, the house at 1108 is indistinguishable from others on East Forty-eighth Street. Modified colonial Cape Cod, it has two guest bedrooms up a conventional flight of stairs, which the owner has never seen. In a conventional, though carefully planned kitchen, Shufelt yesterday prepared a Virginia ham for his housewarming. There, like many another husband, he has to wash dishes.

He prefers it that way. A veteran paralyzed from the waist down needs some help from his Government to get financially and socially "on his feet." Beyond that, according to Shufelt, he wants only to be as normal as possible. The least acceptable gift to him is sympathy.

CHUCK VA PLANS

In planning their home, the Shufelts, like many others in their circumstances, chucked the fancy plans prepared for them by the Veterans' Administration, and sketched their own.

"We didn't want a house with ramps sticking out all over," he said.

And they want you to know they have $12,000 of their own savings in that house. Congressional legislation has given the paraplegic one-half the cost of his home up to a maximum allowance of $10,000. The Shufelt's house, when all the decorating was completed last week came to $22,000.

Last night, the paraplegic himself changed the subject when it veered to house-building. As full-time representative of some 2,400 paraplegics, he is more interested in a Nation-wide program to help them.

"Our goal," he said, "is to get every possible paraplegic out of the hospital and into a normal environment. We feel that a home of his own will help."

A veteran also of many a congressional committee hearing, Shufelt was a force behind the housing provisions for his organization, and has closeted himself with committee members on points of hospital administration, treatment and other special problems.

His long-range dream is the embryo Paraplegic Research Foundation, by means of which two fellowships to medical graduate students already have been awarded. The foundation, he hopes, will some day endow beds for paraplegics, veteran and nonveteran, over the Nation.

The trend is toward including some of the 85,000 civilian paraplegics in the foundation's activities. An immediate goal is an easing of VA restrictions to make rehabilitation facilities available to civilians.

IMMEDIATE PROBLEM

The immediate problem, strangely enough, is in the realm of sports. Up until recently, paraplegic basketball games, besides being excellent rehabilitation, were a major source of PVA chapter funds. Two chapter teams, playing in New York, cleared $20,000, all of which went to help other paraplegics.

"We have our own league," Shufelt said, "and we have pretty strict rules to keep it on an amateur basis."

The stumbling block is a recent VA ruling forbidding paraplegics who are patients in VA hospitals to play in a game where admission is charged, even though PVA regulations stipulate that all profits shall go to finance chapters of the foundation.

Shufelt is far from discouraged. He is out to get the ruling changed, but meanwhile, he is making plans for a funds drive on behalf of his beloved foundation.

Ironically enough Shufelt went through 4 years overseas without a scratch, only to suffer a spinal injury in a motor-vehicle accident on an airfield at Asheville, N. C.

"I was born in New York, raised in North Carolina, and hospitalized in Virginia," is the way he puts it.

Mrs. Shufelt, whom he met before the war, was a classmate at High Point College, High Point, N. C., and yesterday was jittery at the prospect of entertaining half a dozen Congressmen.

Mint juleps were the feature of the evening, the recipe coming from a local hotel.

"Tell you the truth," said Shufelt, "neither of us ever mixed a mint julep before."

White Paper—Will It Be an Apology for Foreign Policy in China?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an article by George Sokolsky which appeared in the Washington Times-Herald this morning which deals with the question of our foreign policy in China:

THESE DAYS

(By George Sokolsky)

Usually when a government issues what is often called a white paper, its object is to take an immovable stand, to lay a foundation for the justification of that stand.

Often such documents are issued on the verge of a declaration of war or immediately thereafter. Once a white paper has been issued, it is assumed that the government's policy has been established, come what may.

The American policy toward China was generally fixed from 1843 to 1943. At the Tehran Conference, Mr. Roosevelt abandoned the traditional American policy of maintaining the territorial and administrative integrity of China and of resisting recognition of territorial changes accomplished by force.

Instead, he accepted Soviet Russia as the successor to Japan's rights, claims, and assumptions in Manchuria. This was done a few days after he had reached a contrary agreement with Chiang Kai-shek at Cairo.

Since then, it has been one of the fixed functions of the State Department and of the New Deal to defend what Roosevelt did, while not admitting that he did it.

Since 1945, particularly since VJ-day, the Government of the United States has taken step after step leading to a Communist victory in China and the hegemony of Soviet Russia over that country.

As a result of a series of obvious blunders it is not beyond historic possibility to assume that soon eastern Asia will fall to Soviet Russia.

The State Department caused the American people to accept the following as truths, although they are demonstrably false:

1. That Chiang Kai-shek is incompetent, inefficient, and does not understand China. This is the Stilwell thesis.

2. That the Kungs-Soongs-Chens and their associates are crooks, thieves, grafters.

3. That Gen. George Marshall, when he spent more than a year in China, pursuing instructions prepared for him by John Carter Vincent of the State Department, was sabotaged by Chiang Kai-shek and his generals and, therefore, his sojourn in China was a miserable flop.

4. That aid to China is wasted because it is always stolen.

All this the white paper will tell if it is ever published. Dean Acheson's document is full of facts and figures it will be important; if it is a mere recapitulation of hearsay it will make the United States ridiculous.

For instance, Chiang Kai-shek, in power since 1925, conquered all of China against military resistance, set up a national government in Nanking, prevented Soviet Russia from establishing a Communist state there in 1927, and fought Japan from 1931 to 1945.

It is difficult, in view of such a career, to say that he is incompetent and inefficient and that he did not understand China and the Chinese people as well as "Vinegar Joe Stilwell" did. Chiang was born in Fenghua, near Ningpo; Stilwell in Florida.

I happen to know a good deal about the Kungs and Soongs, having enjoyed a friendship with all the members of that family—three generations of them—since 1919. Of course, I never counted their money; perhaps Dean Acheson or someone in the State Department has. This I do know: Most of their possessions, including Dr. Kung's ancestral home in Shansi, which has been in his family for many hundreds of years, have been confiscated by the Communists.

Now, the State Department is in a position to obtain and publish every dollar of possessions of every member of this family in American funds.

Such information is in the possession of our Government. Further, it ought to be possible for our State Department to publish evidence of possessions in other countries. If Dean Acheson's "white paper" fails to state specific amounts in specific places, it will fail to be convincing.

There is no room in this limited space to discuss Gen. George Marshall's activities in China. Suffice it to say that he failed to grasp that a union between the Nationalists and the Communists was as impossible in that country as it has been anywhere else.

He also failed to grasp that the Chinese Army was based on personal loyalty and not upon a national command.

These two errors of knowledge and judgment may be forgivable in a man of General Marshall's training, but it cannot be defended from the standpoint of history.

Navy Calls Events in Asia Disaster for United States

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. JUDD. Mr. Speaker, when the able and responsible men who head the United States Navy publish an article entitled "United States Disaster in China" as the leading article in the July 1949 issue of the Proceedings of the United States Naval Institute, it is high time every Member of Congress and, even more, every official of this Government dealing with foreign policy give it sober attention. Must we always ignore warnings until too late before we wake up? Under leave to extend my remarks, I include the article:

UNITED STATES DISASTER IN CHINA

(By Capt. E. M. Eller, U. S. Navy)

(A graduate of the Naval Academy in 1925, Captain Eller served in the Pacific during most of World War II, and subsequently was Director of Public Information, Navy Department, Washington, D. C. At present he is attending the National War College, Washington, D. C.)

Motto: Let no man despise the snake which has no horns, for who can say it will not become a dragon.—Chinese proverb.

Historians of the future, writing of these fateful years in which we live, may well record that 1948 and 1949 disasters in China set the stage for disaster in the United States. We, in the Navy, who must think not only of the United States and its coast line, but of the world seaways and air-seaways converging on our shores, have a particular interest in Asia. We have just completed the greatest naval war of history to destroy hostile dominion over China and southeast Asia. Are we losing today what only yesterday we expended billions of dollars, hosts of ships and airplanes, and thousands of live to preserve?

Both Russia and the United States have long looked on China and the fabulous Indies to the south with the deepest interest. Before the present Communist regime, the czars of Russia saw in the northern provinces of China opportunity for growth to the great seas denied them in Europe. The Communists see not only this opportunity but the greater opportunity of world communism. Each Communist expansion provides but a base for starting the next. "We are living not merely in a state," says Stalin, quoting Lenin to reinforce his views, "but in a system of states, and it is inconceivable that the Soviet Republic should continue for a long period side by side with imperialistic states. Ultimately one or the other must conquer. Until that end, a series of terrible conflicts between the Soviet Republic and the bourgeois states is inevitable." [1]

According to the Committee on Foreign Affairs, Eightieth Congress, in the powerful document, Strategy and Tactics of World Communism, compounded from the Communists' own declarations, examination of these statements leads to some deeply disturbing conclusions:

1. The Communists have one goal—world revolution.

2. They assume that the revolution will be violent.

3. They are incapable of accepting the idea that peace can endure from now on, and they expect one more catastrophic war.

4. The Soviet Union is regarded as the main force of the revolution.[2]

China is important to the achievement of world communism, according to Lenin, for the "Far East is the back door of the capitalistic and imperialist powers."

While we strive to lock the front door in Europe, the house is being entered from the rear in Asia. As was written in the Confucian Analects two millenniums ago, "The days and months are passing away; the years do not wait for us."

Columbus, in search of the wealth of the Indies, voyaged westward with no livelier hopes than have stirred the minds of Americans in every generation looking to Asia. Scarcely had our War of Independence ended when the 55-ton sloop *Harriet*, out of Boston, and the larger *Empress of China*, out of New York, sailed on trading ventures to China. There lay riches. There dwelt an ancient, cultured, and talented people who produced silks, "Nankins," teas, lacquer, porcelain, carvings—all hungrily sought by Americans and gladly brought to them by American ships which, if fortune served them, might receive a quarter of a million dollars in a single voyage, from an investment in ship, outfit, and initial cargo of one-sixth that.

Changing times and the rapid industrial growth of western nations, including the United States, brought a decline in the relative importance of the China trade. Fabulous fortunes came to mariner merchantmen as late as the clipper-ship era when on the wings of the sky such jewels as *Flying Cloud*, *Romance of the Seas*, and *Great Republic* raced around the Horn freighted with cargo for the gold fields of California and thence sped homeward by way of China. Fortunes continue to be made today, though on a lesser scale and with lesser romance than in the days of our stirring maritime youth. China, in 1948, is of less importance to us commercially than she was a century ago. Tomorrow, with her vast population and boundless need for capital equipment, she could become in trade one of the most important areas to us on earth.

At times consciously, always unconsciously, America has realized what China means to her destiny. The golden land of Han was the dominant power in Asia when savage tribes still roamed most of Europe. She has given the west many inventions, including probably the mariner's compass. She has demonstrated the possession of a mysterious formula that has bestowed upon her the power to live through a recurring cycle of greatness and decline. Other nations, like all living things, grow to maturity of greatness, then fade into death or permanent impotence. She alone holds the secret of finding in decay the spark that drives her upward again—youthful, vigorous, great.

Looked at in the dangerous short view, China is an industrially backward, disorganized, overpopulated, impoverished land, suffering many revolutions simultaneously, incapable of aiding us or harming us in this immediate time of peril. Looked at in the long view (and it may be much shorter than some think) after her necessary time of travail, accompanied by chaos and destruction, China will experience renascence once more, becoming, as for most of her long history, a decisive force in Asia.

There are few reasons why this rebirth should not come to China, many why it should. She holds in rich measure those elements which, woven together and fused by the flame of national purpose, shape national greatness. She is situated in the North Temperate Zone, in the climatic belt whence sprang our own European civilization and most of the other civilizations that man has shaped. She has an extensive coastline with some of the world's first harbors on the world's greatest ocean. Within her boundaries are such vast and fertile lands that some 20 percent of the earth's population somehow find food, even though the farming is primitive and less productive than it might be made to become under a settled government with modern methods, machinery, and scientifically selected seed.

These 450,000,000 to 500,000,000 people—three times the population of the United States and more than twice that of Russia—have demonstrated a tenacity for living, a tireless energy in labor, a limitless skill in handicraft, and a social culture designed for everyday happiness in human contacts which have few if any peers in the records of other nations.

Anyone going to China and looking at superficials compares her very unfavorably with the United States. He sees incompetence in her dirt, her lack of hygiene, her scarcity of bathtubs, radios, television sets, telephones, and automobiles (which for some people are the measure of progress). He sees weakness in the illiteracy and poverty of much of her population, matched only in our own slums and tenant farms. He sees impotence in her deficiency in modern industry and her widespread canker of cumshaw and graft. He may come to a different conclusion, however, if he looks more closely at China of both today and yesterday, with her possibilities for tomorrow, and compares her with European nations of, say, a century

[1] Letter to Comrade Ivanov, February 12, 1938.

[2] H. Doc. 619, p. 4.

or half century ago, in scientific and industrial development. Looking thus closely he may decide that the transformation that Japan accomplished in a generation and a half, and Russia in less than one, may well be accomplished even more speedily in China.

In their long history the Chinese have demonstrated remarkable skill in every field of human endeavor. Still today there is no nation that can match them in multiplicity of lovely handiwork: silks, embroideries, porcelain wares, jewelries, brasswork, artificial flowers, carved jade and ivory, wood and silver, lacquer, inlays, cloissoné, furniture. To name Chinese handicrafts is to name beauty. A thousand generations of skill and culture animate their patient, tireless hands. They are creative masters.

Although they lack our scientific agricultural methods of this generation, the Chinese are masters, too, in farming, whether the measure be in quantity, variety of product, or the esthetic loveliness of a Chinese miniature garden with its dwarf trees and specially bred flowers. As merchants they combine skill in getting along with people and skill in merchandising to such a degree that they are the tradesmen of the Western Pacific from Singapore to Manila.

As voyagers they have conquered deserts, mountains, and sea. They are particularly able fishermen and seamen, as many in our Navy can testify after witnessing their junks ride out typhoons. Long before the Vikings dared their heroic voyages, the Chinese ventured on longer ones in equally tempestuous seas to southeast Asia and India. To make their wanderings safer, they early invented the double bottom for their junks, one of their several contributions to the ancient art of the sea.

In social ethics and the relationship of man to man they are still today, despite all the unrest and chaos and misery in the land of Han, probably ahead of any other great people. Buddha, the Teacher of Contemplation, Mohammed, the Prophet of Paradise, Christ, the Prince of Peace (though Christians have attained little enough of it), all promise the blessed hereafter to the pilgrim who has trod well the stony and troubled way of earth. Confucius taught a way of life for life itself that man may make pleasant, peaceful, and happy daily contacts with other men. Once in answer to a question on the hereafter, Confucius replied, "Until you are able to serve man, how can you serve gods?"

The Golden Rule is a foundation stone of Christianity, but only one of many such, all directed to well-deserved rewards in the land of golden streets. The Chinese on the other hand are educated in a semireligious code of ethics which in some measure enters into every human relationship—imperfectly, of course, since the Chinese, too, are human. It enters strongly enough, however, so that though they may be callous to suffering and death of those in their immediate family (a characteristic in varying degree of most human beings), they attain a higher degree of happiness in their daily face-to-face contacts than most peoples. The ready smile, the childlike curiosity, the lightness of heart, the philosophic poise of the average Chinese, however miserable his worldly lot, are real, not artificial. They come to him from an ancient philosophy woven into the fibers of his being.

"The superior man," says Confucius, "holds righteousness to be of the highest importance. * * * He hates those who proclaim the evil of others. He hates the slanderer. The goal he sets for himself is perfect virtue, which is composed of gravity, generosity of soul, sincerity, earnestness, and kindness. He begins to learn in his earliest days that youth when at home should be filial, and abroad, respectful to his elders. He should be earnest and truthful. He should overflow in love to all, and cultivate the friendship of the good."

Whatever their backwardness in scientific and engineering invention today, the Chinese have a proud record in the past that may be repeated in the future. Among their many gifts to the Western World appear certain ones that have revolutionized our lives: Movable type, paper currency, gunpowder, probably the compass that made possible the age of great discoveries starting with de Gama and Columbus. They have contributed greatly in textiles, in handicrafts, in fruits of the soil.

Although far behind occidental nations of this century in engineering works, China once led all nations. Her great canal network (some 40,000 miles of these waterways are still in use), her system of paved roads and couriers that equaled those of Rome in efficiency while surpassing them in mileage, her mammoth earthen dikes harnessing her rivers of sorrow, her Great Wall winding wide and sturdy over mountain, valley, and desert a distance equal to that from New York to Francisco—these are not works of an ineffectual race. As someone has said, "The soul of China is a titan. Dwarf trees grow in China, but not dwarf souls." If anyone questions whether this tenacious skillful people can repeat such achievements, he has only to observe what they accomplished in the industrialization of Manchuria within a decade under a settled government and Japanese direction:

This statement leads us to some of the weaknesses of China. These exist partly in her graft-ridden government, partly in the anarchic self-seeking of the privileged classes, partly in the impact of many revolutions striking her in the down curve of one of her ever-repeating cycles of decay and growth, partly in a strange somnolence resulting in a measure from these observable forces, in other measure from unconscious realization that all this has been before and will be again, that human beings live and labor and die, that cycles rise and fall, that change comes inevitably, and that all flow on into eternity which ever appears different, ever remains the same.

"If the fleeting world is but a long dream,
It does not matter whether one is young or old."

sighed Po Chu-I more than a thousand years ago. And a thousand years before him sang another poet in this ancient land of sun and sorrows:

"In infinite succession light and darkness shift
And years vanish like the morning dew—
Man's days are but a brief sojourn."

Men say the Chinese are not patriots. This cannot be true. One has only to talk with them to understand their deep love for China, their faith and culture rooted in centuries of greatness, their belief that the civilization of Cathay is the best that man has evolved, with more to give than to receive from the West. They serve their people ill politically, or not at all, in some degree because of an old custom. It is the custom to oppress financially, to graft and bribe. These faults, that exist in every country are kept under control in our own, run wild in China today. The traditional habits of cumshaw or commission and devouring taxation have degenerated into a vicious drain on China's strength, just as similar evils have degraded some of our own municipalities. They destroy like a malignant disease.

China's citizens are not different today than in the past. Greed is an evil as old as Eden. Probably before the dawn of writing the Chinese had set down the duality of man in a proverb, the conflict of good and evil: "Prisons are shut day and night, yet they are always full. Temples are open day and night, yet they are always empty." When controls are strong, evil is repressed; when weak, it gains ascendancy. Prominent in the controls is government, and, as Confucius noted, "Bad government is more destructive than tigers."

Corruption in office, like many other state ills, spreads riotously under a weak national government. Without checks to keep the disease in bounds, it becomes an epidemic. The social creature, man, goes with the crowd. A wave of corruption is one expression of mob psychology. A human reaction is, "This corruption is wrong, but everybody is getting his, why shouldn't I get mine?" Strong souls resist the tide. Weaker ones go along with it. They can be redeemed only by an equal wave of revulsion which may come from several causes, the most common and effective being the establishment of a strong central government which stamps out corruption by example and punishment. "It is the duty of the government," said Gladstone, "to make it difficult for people to do wrong, easy to do right." "Advance the crooked and set aside the upright, then the people will not submit. Advance the good and teach the incompetent, then they will eagerly seek to be virtuous," observed Confucious; and at another time. "Let your evinced desires be for what is good and the people will be good."

China has been sick throughout this century, and before. Two great men, Dr. Sun and Chiang Kai-shek, almost succeeded in lifting her the first step out of the quagmire. They would have succeeded had it not been for outside interference that has continued to this day. Just when Chiang had unified China and she showed promise of reviving strength, Japan struck, first in Manchuria, next in China proper. As for the Communists, like time they have worked ceaselessly to destroy through internal gnawing and external assault.

World War II, coming in part because of our failure to check Japan in Asia, in shaking the foundations of the world likewise aggravated China's ills. Her problems became more acute. It is possible that Chiang Kai-shek could not have solved them in any event. It is certain that the solution became almost impossible when the Communists, with vast stores of Japanese arms, intensified their pressure and with the aid of their comrades across the border got control of the industrial empire of Manchuria which has no counterpart elsewhere in China. (Manchuria provided the Communists more manufacturing facilities, and denied them to the Nationalists, than Chiang had in the rest of China or was able to get from other countries.)

Chiang, tough, sincere patriot, and resolute in his mistrust of the Communists, may by some miracle and sufficient aid come back to provide the strong government which China needs, which she must have to start solving her problems and to become again a first power in the world.

Whatever Chiang Kai-shek may or may not accomplish, the Communists will provide the dictatorial government, direct and ruthless, that will solve the problems in the part of China they dominate. They know what to do, are doing it, and will continue to do it. Will they, in solving the problems and in bringing strength, bring blessings or otherwise to China and the world?

Some observers say that the Communists, like all past conquerors of China, will sink in the morass and be absorbed by the Chinese. In weighing this prophecy we must consider several differences between this conquest, if it may be called such, and those of the past. In the first place, this is not a subjugation by external armed forces, whatever the aid may be from outside, but a conquest from within, the conquest of an idea. This is true even though Moscow-trained Communists lead and direct the fighting and subsequently the communization of the areas they take over.

Fragmentary evidence indicates that communization is proceeding at high speed following the fashion laboriously learned in Russia and recently perfected in central European countries. To begin with, workers and farmers are promised and given relief from taxes, and gain ownership of industry and land. Their most pressing problems are solved; they are given their heart's material desires. Why not? All can be taken away later. Give anything. Temporize as necessary for the moment. When the hour is ripe, all can be undone. Meanwhile, to insure that the backing is there to undo it, training schools are established so that promising youths may immerse themselves in the doctrine.

Regardless of the efficient direction from outside, the communization of China rolls on essentially as an internal change. Organized and controlled by a few, with the great mass (as in Russia 30 years ago) passively accepting because of promised and some immediate temporary benefits, this is conquest of China by her own people. A new dragon has risen from the fields and villages, hurling his coils around China. New masters take over from the old. Will they be less successful than native Communist dictators elsewhere, less cruel and ruthless and competent in bringing the masses into line? Will these few who merely displace another few be less successful in enslaving the many?

A second difference over past conquests exists in the industrial potential of the two halves of China. Wars today depend predominantly upon coal, steel, other minerals, and large industrial plants. Whatever her latent resources, Nationalist China south of the Yangtze is a weakling today compared with north China and Manchuria, the Ruhr of Asia, which, with outside aid, early fell to the Communists and was only in small part and temporarily retrieved at high water of Nationalist operations.

A third difference is that the Mongols and Manchus were a handful of rude nomads who rode in to establish themselves as rulers of a people not only far advanced over them in civilization but outnumbering them as the waves of the seashore outnumber footsteps on the sand and eventually obliterate all trace of them. The pressure of Soviet communism, a powerful force in Chinese Communist victory over and above any direct aid being rendered, does not derive from scattered nomads. It bears down vast and overpowering with the weight of one of the world's first nations back of it. Soviet Russia provides a base for communism too extensive and powerful ever to be absorbed by even the tenacious culture of China. The python swallows the pig, and not the reverse.

Another group of prophets say the native Communists will not accomplish much because the Chinese lack organizing and administrative ability. All their past record negates this false concept. Their brilliant achievements, not in one period but in repeated golden ages of power, give promise of what they will do again. But more of this hereafter.

Still others say that China's problems will weigh down the Communists as they have the Nationalists, or at any rate that their gravity and complexity will delay solution for a generation or longer. As they put it, "Let the Communists have the mess. It is good riddance from our shoulders. May it break their backs, and welcome to it." They also add that the character of the Chinese and the nature of their civilization both oppose communism. No, communism cannot get control of China. This rationalization, too, must bear closer scrutiny, for if the proponents are wrong, the disaster of tomorrow will be no less terrible because of our deliberate self-delusion. Indeed, in face of the great danger ahead of us we might do well to heed the Chinese proverb, "Let no man despise the snake which has no horns, for who can say it will not become a dragon."

China's problems press upon her with the weight of centuries. So did those of Japan in the 1880's. So did Russia's in 1917. The solution for the Chinese rests in a powerful central government that will harness and give direction to the immeasureably powerful forces that lie latent in them. The Communists will cut the Gordian knot as they did in Russia. They know and ruthlessly follow Napoleon's dictum that "Exclusiveness of purpose is the secret of great success and great operations."

It is profitable at this point to compare conditions in North China-Manchuria today after World War II with those in Russia in and after World War I. In 1917 there existed a number of Russian Communist leaders, toughly trained by years of revolutionary activity in prison and out. When the corrupt Czarist Government collapsed, some of these leaders were underground in Russia, some like Stalin were in Siberian imprisonment, others like Lenin were in Switzerland whence they were transported by the Germans to Russia to accelerate the breakdown of Russian power. These leaders had some backing in the Russian universities and among the liberal elite. They had followers on a small scale in the four industrialized areas around Moscow and St. Petersburg and in the Donetz and Dnieper Basins. The total number of Communists added up to only a few tens of thousands, was for many years under a million, and to this day amounts in party members to not over 6,000,000, only 3 percent of the whole Russian population.

Russia was a great amorphous mass of many peoples speaking many languages. Sprawling across two continents, she had built some important railway lines, chief among them being the Trans-Siberian, but here railroads were then and are to this day but a beginning of what she needs. She had and still has few hard surfaced roads. As a consequence, internal transportation and communication are so difficult that they have been major handicaps in her development.

The picture so far sounds almost like China today. But we have more to add. Some 80 percent of Russia's population scratched a living out of the soil, as in China of 1948, though with less efficiency than the Chinese but with larger reserves of arable land and therefore with better chance of expanding output, though collectivization might produce some expansion in China. Russia's basic industries were in their infancy, textiles alone having experienced considerable growth (as in China, and as in most countries in the early stages of the industrial revolution).

Records of 1917 list considerable mineral resources for Russia and some beginning at exploiting them in industry. Yet compared to what lay hidden, what was to be discovered and developed within 20 years, the known resources of 1917 were but the first buckets from a deep well.

Russia's coal resources in 1917 appear as 130,000,000,000 tons, of which she mined about 29,000,000 tons annually. In 1937 the resources had grown more than 10 times to 1,654,000,000,000 tons, mostly in Asiatic Russia, with about 130,000,000 tons mined that year. Iron ore reserves went up 5 times, copper more than 10 times, other minerals similarly.

At the start of World War I Russia mined 9,200,000 tons of iron ore, producing from it some 4,200,000 tons of pig iron and an equivalent amount of steel from the pig. By 1937 these figures had tripled and were on the way to quadrupling. In 1917 uranium (which my 1941 reference book prosaically lists as "a rare white metallic element") was not dreamed of as a metal of world interest. Between then and 1937 Russia took sovereignty, previously loosely claimed by China, over the mountain girded land of Tannu Tuva, abutting the northwest tip of Mongolia. This land, little known to the outside world, is said to contain many mineral deposits, including possibly rich ones of that "rare white metallic element," uranium.

"Disease," say the Chinese, "can be cured, but not destiny." Under a strong government vigorously pushing development, miraculous transformations of national power today can occur within a few swift years.

The picture of Russia in 1917–21 compares in many repects strikingly with that of China in 1945–49. There are the same groups of revolutionary leaders, long trained in sabotage, resistance, and revolt, but with the added strength of having been carefully schooled in tactics by successful masters of the art. There are the same small numbers of followers (small compared with the teeming millions of China) yet more dangerous and effective because they are relatively more numerous than they were in Russia and are tempered through decades of warfare. There are the same fears of communism in outside nations which led the Allies of 30 years ago to aid the White Russians with supplies and funds (on an ineffectual scale) and with military forces as well. The assistance this time to the anti-Communists has been likewise inadequate. As for assistance to the Communists, there is a striking difference. They possess not only relatively greater numbers, but this time the whole outside world is not hostile. Backing them up to the north, aiding them along the thousands of miles of Russian-Chinese border, and pushing them on is one of the world's great powers, mother of their ideology, openly professed base for world communism.

There exists the same nucleus of industrial proletariat, somewhat but not measurably smaller in north China-Manchuria than in Russia 30 years ago. There exists the same predominantly agricultural society, with the mass of the population peasant farmers filled with a mass land hunger, eager to swallow the bait of land riches for their initial support of Communism—and we have no reason to believe that millions will not die as they did in Russia nor that they will be more effective in resistance when the land is taken from them again.

In China we have likewise the same awakening of peoples in the early stages of the industrial-scientific revolution, an awakening accompanied by the pull of powerful forces, of ideologies, of crumbling structures, of instability and fears and dark emotions which prepare a perfect setting for demagogs who would free a people from old slavery by crushing them under another more brutal and cruel.

Those who seek to persuade themselves that the disaster in China is not a disaster to us declare that there is one crucial difference (among others) between Russia of a generation ago and China of today. Russia has impressive mineral resources and an important start in the industrial revolution. China, they say, has neither. (It would be interesting to determine if the same people made the same remarks about Russia not being a danger just a generation ago.)

Earlier in these pages we have noted how in 20 years the known mineral resources and the heavy industrial production of Russia multiplied manyfold. Strong evidence may be found that the same development can occur in north China-Manchuria. Indeed, we already have record of startling development in Manchuria alone under the Japanese within the amazingly brief span of 8 years.

Same 1,500 years before coal was discovered in the United States, natives of Manchuria mined it for the manufacture of

pottery. When Czarist Russia moved in during the last years of the nineteenth century building a railroad to Port Arthur, coal mining increased measurably. Other minerals attracted some interest. Practically all of the mining took place within a few miles of the railroad and its spurs.

The Chinese-Japanese war of 1894–95 and the Russian-Japanese war a decade later introduced the power politics struggles of this century for the material resources of Manchuria. Following the Treaty of Portsmouth in 1905, and particularly in World War I, Japan made progress in developing this rich region, including discovery of many promising new mines. Subsequently, however, as Chiang Kai-shek gained strength and progressively extended his authority northward, Japan realized the approaching danger of losing her sphere of influence in Manchuria. At the time she was steadily expanding industrially and understood more than ever before what the wealth of Manchuria meant to her destiny. Thus there occurred the Mukden incident and in 1932 the establishment of the puppet state of Manchukuo.

In the quarter of a century of Japanese paramount interest in Manchuria (but not the full control which began in 1932), she had extensively built up Darien with its surrounding leased area of some 1,200 square miles in Kwantung peninsula. To a lesser degree she had also developed the territory adjacent to the South Manchurian Railroad, expanding the production of the great Fushan open-cut coal mine, for example, from about 200,000 tons annual output in the early 1900's to over 3,000,000 tons 20 years later.

Yet the resources of this "kuhr of Asia" and her industrial potentiality had scarcely been touched when the Japanese took over completely in 1932 ready for large-scale development. Although varying figures exist, the most common estimate of Manchurian coal resources in the summer of 1932 is 4,800,000,000 metric tons. Seven portentous years later, after swift general surveys, with new discoveries still coming in, the estimated reserves had multiplied four times to 20,000,000,000 tons and were still rising. Coal mined likewise shot up, approaching 20,000,000 tons in 1939 and over 30,000,000 tons in the year of Pearl Harbor. Fushan alone, the world's largest mine of its type, poured out a black torrent of over 9,000,000 tons annually, approximately one-third of Manchuria's total output (and incidentally one-third of the total coal output all Russia had achieved in the last years under the Czars).

Anyone reading about China or her Province of Manchuria in a book printed before the great world depression of the 1930's will learn that Manchuria, in addition to coal, had considerable iron deposits. Unfortunately, however, these were of low grade and therefore not competitive on an equal cost basis. Undeterred, the industrious Japanese early built a large iron foundry on the South Manchurian Railroad at Anshan and developed a process for handling the ore. By 1932, the year they formed the puppet state, they were almost ready to commence making steel here, and subsequently did so on an increasing scale.

It is said in China that "The tiger cares nothing that the cow is lean." The Japanese would have gone into Manchuria for what resources it was known to have. That these proved many times larger only shows the possibilities in other parts of China once a stable, vigorous government begins to push development.

In the 1920's the total iron ore deposits of Manchuria, all of low grade, appeared to be something under 400,000,000 tons. In 1939 these reserves (with surveys still under way) had jumped eight times to over 3,000,000,000 tons. This total is a billion tons greater than the total reserves known to exist in all of Russia in 1917. An even more pleasing feature of the new discoveries were deposits amounting to 130,000,000 tons of rich ore containing 60 to 85 percent iron. Much of this had been discovered in a single region along the Korean border, in the provinces of Eastern Peace and Eastern Flower, previously not considered of importance in mineral deposits.

In our great United States we accept as commonplace the need to ship ore long distances to smelting and refining plants. Iron, for example, travels from the Mesabi Range (whose rich ores today are approaching exhaustion) hundreds of miles to the lake ports and inland steel manufacturing areas. Or it may travel much greater distances over the high seas, from far away Brazil and other lands to Bethlehem's plant in Baltimore. Copper ores may come to us from distant Chile. Some of our richer aluminum ores make the long sea journey from South America. It is sobering, therefore, to look on a mineral resource map of Manchuria of 1940 and to notice the mass of mineral symbols concentrated in the southeastern sector. There lie iron and coal side by side, and next to them limestone, magnesite, copper, aluminum. Zinc, lead, and oil shale also abound.

The Japanese were so excited over their rich finds of huge underground deposits that in 1937 they formed the Manchuria Development Corp. to push the expansion of heavy industry. By 1939 it had unified the important industrial companies operating in Manchuria, had organized many new ones, and had greatly expanded production. Establishing her 5-year plans, in the latter part of 1938 she reached the rate of installing a new pig-iron furnace at the Showa works every 2 months. In the early years of the war she had built up pig-iron production in South Manchuria to almost 2,000,000 tons, in addition to a million tons of steel—all this from a standing start 10 years earlier.

In China's province of Manchuria alone, then, we have one of the earth's great industrial empires of the future; in fact, one that already has a long start. Taking our belt of great mining-industrial-agricultural States from Minnesota east to Pennsylvania and New York (which besides these three States includes Wisconsin, Illinois, Indiana, Ohio, Michigan, New Jersey) and throwing in all of the New England States to boot, we obtain an area roughly the size of Manchuria. The natural wealth of this rich and populous section of the United States (something less than one-half our population resides in this belt) may also be compared with the potential wealth of Manchuria which currently has a population of some 45,000,000. Under a powerful government, which the Communists should provide, there is every indication that the proved resources, the industrial capacity, and the population will all steadily increase.

This being the one area of China with a large agricultural surplus for export, and with lands still untilled, its population can increase to 70,000,000 or more. One can easily understand why the Japanese so coveted Manchuria. It was rich, far richer than Japan, richer than their dreams or hopes. It provided not only the raw materials for the industrial empire on the home islands, but the possibility of a far more powerful empire on the great continent, leading Japan on to all Asia. Who now sees this dream of empire?

Such was Manchuria at the outbreak of World War II—a new center of world power, revealed in a few years under Japanese rule. What will happen under Communist direction not only in Manchuria but in the larger and more populous domain of North China, no one can prophesy. However, as the Chinese might say, "Long robes can hide heavy feet."

The added possibility of industrial greatness resulting when we include north China with Manchuria is only a guess, but we can make at least a reasoned guess. No similar concentrated effort having been made to uncover hidden mineral wealth or to industrialize north China, it is impossible to say whether it will reveal similar resources to those of Manchuria (vast deposits of coal amounting to over 200,000,000,000 tons and some important deposits of iron ore are known to exist). Surveys and statistics indicate that a large expansion of known reserves will not occur. But for that matter they indicated the same results for Manchuria before the Japanese opened the secrets of the earth—secrets apparently not known to some of our current writers and speakers who still obtain their data from books that the passage of a few years has outmoded.

It would be folly to shut our eyes to the possibility of marked expansion of resources. To believe a business impossible is to make it so for oneself, but not for the other fellow who does not so believe. Without attempting to investigate the possibilities in all minerals, we can take time to look at two in which impressive changes of estimated reserves have taken place quite recently.

Widespread surveys of China by Americans before World War I led to the conclusion that she had negligible oil resources. By 1937, however, estimates placed her oil reserves at 1,375,000,000 barrels. Explorations during the war uncovered other reserves including a claimed 400,000,000 barrels in Szechwan and lesser quantities in Sinkiang and Kansu, northern provinces that are inherently part of the Communist sphere. Oil shale has been known in Manchuria many years, but no evidence of petroleum in commercial quantities. Consequently the Japanese went ahead with construction of plants for extraction of oil from the rich deposits of over 7,000,000,000 tons of shale. By 1936 they were producing 50,000 barrels of oil per month; by 1940, 250,000 barrels per month with a schedule doubling that rate to some 6,000,000 barrels for the next year. That same year of 1940 they brought in an oil well in Jehol, southwestern province of Manchuria, portent perhaps of discoveries yet to come.

As late as 1934 able geographers and general authorities on China set forth her reserves of aluminum as small or "modest." Within a year new discoveries and clearer knowledge of existing fields resulted in estimates of 188,000,000 tons of aluminum ore in what are now Communist-controlled Shantung and Manchuria, enough to supply the world for a hundred years at the then rate of consumption. Within 10 years these estimates had shot up again several times, the holy province of Shantung along being credited with 271,000,000 tons.

The possibilities of industrial development, then, in North China and Manchuria combined are far greater than in Manchuria alone. Perhaps all of China will come under Communist domination, perhaps only the northern half we have considered in this discussion. If only the latter, the Communists will control a quarter of a billion Chinese with their many skills and ready adaptability to mass industrialization, as already demonstrated in Manchuria, whose population consists essentially of Chinese immigrants and their descendants from Hopeh and Shantung. Considering what the Communists accomplished in a brief span in Russia, and the Japanese in a briefer one in Manchuria, we may with reason conclude that the Communists can develop this north half of China into an industrial nation for peace or war comparable to Russia of today, by the mid-1960's.

They will do it by the very means Stalin employed in Russia, as he himself related in a speech on February 9, 1946. After giving essentially the same industrial figures (brought up to 1940) as presented in the foregoing paragraphs on Russia, to demonstrate the major achievement of the Communists in preparing for World War II, he goes on to say that such an unprecedented leap from an agrarian to an industrial economy was achieved by forced industrialization and collectivization. In his words, "The Soviet method of industrializing the country differs radically from the capitalist method * * * (which) begins with light industry. Since in light industry smaller investments are required and there is more rapid turnover of capital, and since, furthermore, it is easier to make a profit there than in heavy industry, light industry serves as the first object of industrialization in these countries."

After decades in which light industry accumulates capital, heavy industry gets its turn. Understanding this delay and understanding "that a war was coming, that the country could not be defended without heavy industry," the Communists, to save the Soviet order from perishing, "began the work of industrializing the country by developing heavy industry. It was very difficult, but not impossible. A valuable aid in this work was the nationalization of industry and of banking, which made possible the rapid accumulation and transfer of funds to heavy industry.

"There can be no doubt that without this it would have been impossible to secure our country's transformation into an industrial country in such a short time."

As for collectivization, "In order to do away with our backwardness in agriculture and to provide the country with greater quantities of marketable grain, cotton, and so forth, it was essential to pass from small-scale peasant farming to large-scale farming for only large-scale farming can make use of new machinery, apply all the achievements of agronomical science, and yield greater quantities of marketable produce."

Despite extensive resistance from "not only backward people," but "Trotskyites and Rightists" of the party, the true believers carried on unswervingly to victory.

By the same methods can China be transformed within the next decade and a half.

This does not purport to be a prophecy. It is merely an effort to discover what might be accomplished in the great empire of China and what we might have to contend with. It is part of the estimate of the situation that any wise leader digests in his mind to determine what his various courses of action may be and which will most likely bring him to his objective. Those who have written off China's problems as insoluble, who say that even the ruthless Communists will bog down in them, may be right. It may be that this disaster in China is not a disaster to our policy of containing world communism with its oft announced purpose of destroying the United States and all our cherished democratic institutions.

It may not be. On the other hand, it may be a disaster of the first magnitude. Unless we are sure it is not, and pending the remorseless unrolling of the future to show us what it is in fact, we would be advised to consider the possibility of the worst.

"The dark of night is profound and in its midst each man is alone in perplexity," says Lao Tze. The future in which we move is indeed dark and perplexing. However dark, our only salvation is in facing it with open eyes and without delusions. If there is a way through the darkness, only by looking carefully and preparing wisely shall we find it.

The Mission of the Jew

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. MULTER. Mr. Speaker, I am sure that the following article which appeared in the current issue of Liberal Judaism will prove most interesting. I set it forth in full together with the editor's illuminating comment about it:

THE MISSION OF THE JEW

(By David E. Lilienthal)

(With the new-born state of Israel's application for membership favorably voted by the United Nations, the following thoughts assume a singular, almost prophetic significance. Delivered in a six-State-wide collegiate contest, 31 years ago, its author has since risen to unique eminence. David E. Lilienthal, then a senior at De Pauw University, to whom Rabbi Morris Feuerlicht of the Indianapolis Hebrew Congregation refers as "one of my boys," is now chairman of the all-powerful Atomic Energy Commission. In granting us permission, at the behest of Rabbi Feuerlicht, to reproduce "that kid oration" three decades later, Mr. Lilienthal writes: "While that oration, as I recall, was rather ornate in style and certainly more elaborate than my present speaking style, I shall be glad to see it republished in Liberal Judaism, for its central theme is one in which I verily believe." Rabbi Feuerlicht, who found a copy of the address while "rummaging through local history notes," regards young Lilienthal's winning oration as "a very beautiful and dramatically timely presentation of the Jew's historic relationship to world affairs."—Editor.)

The most baffling force in history is the Jew. His very origin wrapped in the purple of obscurity; his strange mission down through the years never yet spelled out; his destiny still unknown—he stands as the great enigma of the world. He remains the unsolved riddle of antiquity; and amid today's world convulsions, the torch bearer of a faith, mysterious, inextinguishable.

The meaning of this tragic nationality is beyond human ken. For the story is not a blending of defeat and victory, but rather one of cumulative vanquishment. Beholding his country swarming with pagan foes; passing beneath the yoke of kinglier clans; treading the slave path to the land of the conqueror; falling prey to insidious luxury; prostituting his high powers to servile fawning in heathen courts; suffering exile ages old, he became at last a nationality without a country, doomed through centuries to play the rôle of despised wanderer—a mockery of his pristine glory.

PARADOX OF THE WORLD

The telling of this tragedy is bitterness unspeakable, for I am a Jew. The anguish of my people is my anguish; the immortal yearning of my people, thank God, is mine too.

And yet, however fatal may have been the tale, the Jew endures. His very persistence is the sublimest racial paradox. History, we say, pictures the rise and fall of nations; yet the Jew, though flung afar, remains essentially the same. Singing in the midnight watches of Egyptian bondage; building cities to the pride of hated kings; standing amid the ruins of the last dark hour of national life; enduring the horrors of the Spanish Inquisition; lifting his low moaning amid the bloody scourgings of Germany; cringing through the centuries before the anathemas of Italy, France, and England; patiently accumulating wealth for the plunder of the Russian; through all the burnings at the stake, the crucifixions, the tortures inflicted even in the name of Jesus—through the bleak tragedy making bloody all the years, the Jew has remained the paradox of the world.

No less amazing than his tragedy and his persistence is the unconquerable faith of the Jew. Every national catastrophe, every racial calamity, every period of enslavement, every bloody butchery, has but fed the torch he lifts against the sky. Nations have died; philosophies given place to larger conceptions of truth; religions grown effete; yet through all the years of change the Jew has continued bowing his head in the solemn celebration of the Passover, and breathing out across the world his prayer of faith, "Next year in Jerusalem."

Custom persists after belief is dead. Yet while the religious life of other men is replete with change, the Jew, through all the evolutions in ceremony and belief, has reverently read the changeless Torah of his fathers. And while other sacred scripts have withered before progressive revelation and scientific investigation, the Bible of the Jew stands out, the book of books, the indestructible, immutable message from his God.

Prophets too of other peoples have arisen, proclaiming redemption from evils through self-abasement; or through decoration of the paternal sepulchers; or through the subjugation of the world to Allah and his prophet. And yet, as darkness fades before the dawn, all these once mighty prophets are passing into oblivion. But still today clearly and distinctly shine the Ten Commandments of the Jew Moses; a million tongues daily extol the Almighty through the songs of Israel's psalmist David; and a fifth of the people of the world prayerfully beseech the blessing of God in the name of a Galilean prophet, Jesus the Jew.

Thus runs the tragic, persistent story of the Jew. But what of him today, when the drunken earth lifts to heaven the scream of charging soldiery, mingling with the wail of starving women and children? Through all time the paragon of sufferers, he is today one of the most pitiful victims of all this orgy of blood. A citizen of every belligerent nation, he is in the army of every country now at war.

The Jew presents the anomaly of a nationality arrayed against itself—of blood fighting blood. The Austrian Jew fires across "no-man's land" into the heart of a brother Italian Jew; the German Jew must starve the wife and children of a Belgian Jew. Every gory charge is against his own. Every day runs livid with accounts of the massacre of Russian Jews in counter-revolutions; of their starvation in pillaged Poland; their shameless slaughter in the streets of Jerusalem by the besieged Turk.

IDEAL OF PEACE EVERLASTING

No wonder that an age-old shroud of mystery gathers about the thoughtful Israelite; no wonder he lifts the cry Jews in every age have lifted: "Why has my nationality been delivered from the greedy maw of time?" No wonder he asks: "Is my mystic people but a freak of fate?" No wonder he cries: "O God, will the morning never come?" No wonder that as the Hebrew child at the Passover asks the meaning of the ceremony, the Jew today asks the meaning of his strange, persistent tale.

And from the depths of his being comes a sure reply: "This gruesome night shall have an end. The day toward which my fathers yearned draws nigh. The ideals of

my scattered people shall prove the saving spirit of the world, and lead to universal brotherhood and peace everlasting." But this intuition, welling up from within, must find a rational statement as to the ultimate mission of the Jew.

It is the mission of the Jew to help establish among men, as the inexorable principle of all life, the law of unity. The mission of the Jew is to teach the reunion, the refraternization and internationalization of mankind; to make all men feel that they are one, that they have one loving Father— this is the mission of the Jew. It is toward this worthy goal that for a score of centuries his bloody feet have trod a path of thorns— it is for the accomplishment of this end that Israel has persisted through these terrifying ages of hatred and persecution.

"But," it may be asked, "what can the Jew accomplish—negligibly scattered, a subject people, without a country—how can they help the world to realize the dream of prophets and seers?" This despised people can hasten world harmony because of their unified dispersion. His physical and spiritual home destroyed, the Jew, embodying the message of unity, went forth the messiah of nations. And where do we not find him today? In the Wall Streets and ghettos of the world is this mysterious Jew. In the marts of Italy, in the crowded Judengassen of Germany, in the seats of power in France, is the persistent child of Abraham. In the blood-stained pale of Russia, in "darkest Africa," and in the arid steppes of Siberia, is this "man of the wandering feet and weary breast."

The eternal man of tears is everywhere, among rich and poor, high and low, free and oppressed, of every clime. He is a universal citizen, a potential world patriot.

DIVINE UNITY IS ISRAEL'S HERITAGE

In the second place, the Jew will help establish enduring harmony because unity is the major tenet of his religion, therefore of his life. The creed of divine unity, "Hear, O Israel, the Lord Thy God is one," is the eternal foundation of his spiritual temple. This mighty confession of divine unity he chanted from the golden sanctuary of Solomon; this glorious anthem he lifted, too, from the anguish of his captivity. Clear as a silver lute above his shrieks of agony at the stake; whispered with the last tortured breath on the fiendish inquisition rack; gasped in terror beneath the cruel hoof of Cossack cavalry—his persistent cry, proclaiming the unity of God, has never been silenced.

Neither gag, nor executioner's ax, nor hangman's rope could stifle the cry of his faith. In the prattle of little children, in the slow, measured accents of patriarchs, in the early morning and in the twilight, in meditation and in action, in the shriek and clang of battle, in the calm and peace of the fields, through every moment of Israel's day has risen the prayer, "The Lord is one."

In the unity of God, the basic principle of his religion, we find also the dominating idea of the unity of man, of his common brotherhood and common fatherhood, the true basis of democracy. "All men are brothers," says the Jew, "for they are all descended from the same mortal parents. All men are sons of God," says the Jew, "for all are created after the fashion of one Jehovah."

But how can this people, so few, so scattered, so weak, aid in the unification of the world? We are prone to think in material terms. But this unification of the world is not to be temporal but spiritual. Not with the thunder of cannon nor the ingenuity of diplomacy can the world be brought into a great brotherhood; "not by the sword but by My spirit, saith the Lord"; not by the blare of trumpets nor the crash of cymbals shall redemption of the world come, but quietly, through the spirit incarnated in this people of sorrows.

Nineteen centuries ago, on the shores of Galilee, a humble tradesman, a Jew, spoke to a handful of ignorant, untutored fellow Hebrews; yet thus were the foundations laid for a spiritual empire today embracing 500,000,000 souls.

And so shall come the accomplishment of the eternal task of my people; not by force but by the spirit of the Lord—the same spirit that keeps aflame in the breast of this Messiah Nation, their mission, the unity of mankind.

And so, with eyes filled with the light of that eternal "hope which is of God," the Jew cries—

"We have traveled the highways of the world,
Staff and sandal and pack;
And the way we came is strange and far,
But the night is bright with an ancient star,
And we follow its golden track."

Enlightened Leadership at Marquette University

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 18, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, during the war years my alma mater, Marquette University, prepared thousands of young Americans for hazardous duty all over the world in the service of their country. Some of them never returned, they fell on D-day night at Iwo Jima or on the battlefields of Europe; they were lost at sea or flamed high in the clouds. Today, Marquette University is still sending young men and women into the world of peace to work and, if need be, fight for God and country.

Because of my rightful pride in this great Jesuit institution which bears the name of one of our country's most distinguished missionary explorers and which today is one of the largest Catholic institutions of higher learning in America, I wish to insert in the RECORD the commencement address of the Very Reverend Edward J. O'Donnell, of the Society of Jesus, Marquette's distinguished young president, himself an alumnus of the university and a recent missionary.

Father O'Donnell's remarks, although addressed to the graduates, are eminently worthy of repeating, especially his call for leadership in the political, intellectual and spiritual fields:

There are moments in the lives of all of us, brief moments it may be, that sum up a whole period of effort; vivid moments that light up the long night of waiting; thrilling moments that climax the steady march toward achievement. Graduation is such a moment. It is a time of varied emotions. We look before and after, back over the years of striving for this goal, and forward, wondering what lies beyond. Looking back you see a long succession of daily efforts culminating in the triumph of today. Looking forward, you see a world-wide battlefield, calling you to enter the combat and justify the long years of training.

You are leaving your university to join an ever-increasing company of alumni. From today until the end of your lives, your honor, your success and your achievements are intertwined inseparably with the honor, the success, the achievement of your alma mater. Graduation, therefore, is not a day of parting; rather, it is a day of new consecration. Your college bestows upon you the accolade of a diploma, and you cease to be students. But you assume a new responsibility. You become ambassadors of your college to places far and near, symbolizing her ideals, her beliefs, her loyalties.

Your alma mater congratulates you sincerely upon the achievement of graduation. She reacts with you in the healthy pride you feel over a work well done. She is as genuinely interested in your future career as she has been in preparing you for it. Ever since the day she took you by the hand as a freshman, she has led you with wise devotion, friendly counsel, and personal attention through four happy years. She has treated you as though you alone sat in the classroom. She has rejoiced with you in your success, helped you in your difficulties, and today does you honor as though you alone were her only graduate. In a word, she has looked upon you as an individual given to her by God to love and cherish and form into that beautiful thing we call a Christian gentleman.

The solemn occasion of graduation warrants, I think, my recalling to you once more before you leave how fortunate—indeed, how blessed—you are to have received a religious education. You are far better equipped because you have received here a religious education. You must know that education in America has been following what is popularly called the secularist trend. I mean there are strong forces at work in this country to eliminate God from the classrooms and lecture halls of our schools. Paradoxical as it may seem, education for democracy has come to mean in our day education without religion, without God. To Washington, as to the Congress of the Confederation and founding fathers of our Republic, the school was the normal means of teaching religion and morality. Theirs was the American spirit in education. The spirit that has replaced theirs of the completely secularized school is an atheistic importation. If the founders of our Republic had anticipated the terrific storm of propaganda for nonsectarian education that beats upon the citizen today, they would have left more prayerful admonitions to their countrymen to beware the satanic delusion that a country can grow apart from God, that a spiritual culture can be achieved in our land if for the 12 most acquisitive years of a child's mental development we immerse him in an entirely Godless environment.

I think you will agree with me that it is preferable to live in an age when the fight is in the day, not in the twilight. For some time now the battle for religious education and for religion itself has been fought largely in the dark. I do not mean we have become a prey of centrifugal forces driving us apart, or that we have lost our purpose, or yielded up our God-given right as Catholic educators. I mean the atmosphere in which we live is so charged with materialism that we fail to see as clearly as we should our present danger. In the old days of the Roman Empire, Christians saw with logical clearness that it was imperative for them to cut themselves adrift from the social life in which they lived—from its tastes, practices and amusements. The line of demarcation between pagan and Christian life was sharp, clearly defined and obvious. Modern Christians have not been so favorably situated. We are the inheritors of a movement that has been eating away slowly at the foundations of Christian culture and Christian reli-

gion for over three centuries. The loss of the principles of a Christian civilization is now almost complete. Rejecting God, denying all religious, spiritual, moral and even intellectual standards, the philosophy of naturalism has inevitably issued in the complete and reasoned abandonment of all hitherto accepted human values.

Two frightful wars have hastened the process of dissolution, so that today we stand at the watershed of our history. Whether man in this atomic age will go down in the struggle for survival, is a question I would hesitate to answer. Even the scientists whose creative activity has brought atomic energy into being assure us that the most important consequences of atomic power are in directions as yet unpredictable. But of this we can all be sure: It will not be in the resources of the world that men shall find refreshment, light and peace, for those resources have uttered their last word of power. The earth has given up its possessions for the satisfaction of man's material needs; and yet man, narrowing down his ambitions to those that circumscribe the animal world, still cries out for a solution of the problems that beset him—the general incomprehension, the social instability, the psychological crises, the political chaos of our time.

I do not think that I am painting the picture too black. We know the world may at any time burst into flames, or be blown to bits without notice. We know that we are soon to become active members of a country and a civilization which—to speak frankly—are in the greatest peril of their history.

No wonder fear grips the hearts of men. No wonder men are uneasy about the future. No wonder men are groping for a way out of their misery. There is only one way out. That is the way indicated to men by Jesus Christ. It is the way you have learned at Marquette University. It lies in going deep down into, in exploring the riches and utilizing the resources given to us by God Himself through His Son. The religion of Christ our Lord is literally our only hope. We shall save ourselves only by the most tremendous efforts to carry out the obligations of our faith. If we are serious about the matter, if we wish to assist bewildered and tortured humanity in the present crisis, we should devote ourselves wholeheartedly to the task at hand. This university has tried to give you convictions about your religion. It has tried to make you faithful to the practice of your religion. Either you have these convictions deeply rooted in your souls, or your education has been irrelevant. You have learned here to live your life in conformity with the law of God and the dictates of your conscience, or you have learned practically nothing. The transformation of the minds and hearts of its students, under the Divine influence, has been your university's chief task.

You may say that there is a disproportion between the end which your university pursues and the practical concerns of life. You may say that there is no going against instinct. A man must get on in life. He must earn a living. He must provide for the future. The university realizes this fact. That the student should seek to embrace all those branches of learning that will help him in his chosen profession is not only natural but necessary if a realistic purpose is to be given to his studies. The doctor, lawyer, artist, writer, historian, sociologist, engineer are thus brought into being.

But apart from the greater professional opportunities offered by the university, there is a moral purpose which education must always fulfill, namely, the formation of God-fearing men and women. If ever there was a time for men to take up the challenge for the things of the spirit—for truth and justice, for reason and godliness—that time is now. Our university graduates have a greater task today to perform than ever before. Evil influences, the infiltration of unbelief, materialism, and mediocre conventionalism were never so widespread as they are today. You, as graduates of this institution, will soon learn, if you have not learned already, that the present world is not Christian. Your amusements, your pleasures, your pursuits, your books, your papers, your associations will offer serious temptations to mediocrity and conformity and abandonment of one's principles. These objects of gratification will be of much the same kind as are those of the people with whom you mingle, and who may not have a vestige of a Christian principle left in their minds. Too many with an education equal to yours have allowed themselves to become absorbed exclusively in secular interests soon after leaving school. Too often the result has been a growing divorce between religion and life in the soul of the individual graduate. Little by little his faith ceases to exercise a determining effect on the bulk of his ideas, judgments, and decisions. His character as a social being no longer bears trace of the formative effect of the beliefs he professes. And his faith rapidly becomes a thing of tradition and routine and not something which is looked to as a source of life that is real.

It is one great advantage of an age in which the forces of evil speak out that the forces of good can speak out too; that if falsehood assails truth, truth can assail falsehood. You are closer to the truth than you will ever be again. You have read and studied and come in contact with the accumulated knowledge of mankind. You can use your culture to influence others. You can enter into life and take part in it. You can contribute to the rebirth of goodness in the souls of men. You can make those interested for the better things of life who are now detached. Of the ignorant and the unheeding you can make men of knowledge and action in the interest of the world which you as a graduate should help to rebuild.

You have the power to give and the power to make an effort. You have the enthusiasm of youth. Here, in whatever else it must yield, youth has the advantage over age. Youth can make itself be and can make itself do what more mature years cannot. Youth has optimism. Youth possesses enormous possibilities for good. Youth has high ideals, and its idealism can lead it to heroism. God calls the youth of America in this decisive hour for a dynamic, heroic Christian life. Take your stand, then, before time saps your enthusiasm, before the practical concerns of life engulf you and the world invites you to surrender your ideals. The appeals ring out over the world; but especially here and now, it is echoing throughout America. It is a call for leadership, not only political but intellectual and spiritual as well. Go forward, then, in the strength of your faith, in the name of Marquette, to answer the call.

The Evidence of the President's Military Aide

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. KEATING. Mr. Speaker, it was disappointing to observe from press reports that it is not the intention of the committee established by the other body to call before it the President's military aide, General Vaughan, in connection with its investigation of those involved in Washington in selling their influence. He is reported to have volunteered the information that he knows 300 people here engaged in this questionable practice. It is difficult to imagine any evidence which could possibly bear more directly on this inquiry.

If the man who is the daily boon companion of the President has such crucial facts and is prepared to disclose them, certainly he should be given the opportunity. By the same token, if he was talking through his hat, it is equally important to lift the cloud he has cast over the White House and every procurement agency in the Nation's Capital.

The President himself is said to have given a complete green light to the Senate investigators. That is, of course, commendable. Yet this injunction against covering up anyone loses much of its force unless he directs his aide to tell all he knows, if given the chance. General Vaughan should be pounding at the door demanding to be heard.

A Great Exemplar of Peace Diplomacy

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. HAVENNER. Mr. Speaker, California is proud to claim Dr. Ralph J. Bunche as one of her most distinguished sons.

A fitting tribute to the magnificent work which has been done in the cause of peace by this great American is contained in the following editorial from the San Francisco Chronicle:

Dr. Ralph J. Bunche's question—"Where would the world be today without the UN?"—is a reminder we need. In the sweep of events since the war, with their record of failure to achieve the spirit of total peace, the constructive things UN has done tend to be forgotten. Dr. Bunche ticked them off:

Kashmir, Berlin, Indonesia, Palestine—each had the elements necessary to start a war. And each, as he says, has been reduced in tension from the potentiality of explosion to a relaxed state in which no dangerous imminent threat to peace is presented.

"Now, we can work at the problem; we couldn't before."

This is a heartening expression of faith from a man who must many times have felt the strain of his own faith being tested as he labored to mediate the struggle in Palestine.

The United Nations has been given a job to do that is as complex as any in the world. It was supposed to be given an implement of enforcement, a peace force, but that was withheld. Yet, despite all the despair of the pessimists and the I-told-you-so's of the cynics, its staff men—men like Dr. Bunche and his predecessor, the late Count Bernadotte—have hammered away with infinite patience and devotion to create a pattern for the settlement of tensions. The formula is truce, armistice, treaty. It is an old formula of diplomacy, and the historical record is full of glaring examples wherein it

hasn't worked. But there is this fact, too often lost sight of, that the diplomacy of the United Nations is not power diplomacy, but single-minded peace diplomacy. It is, moreover, backed up by the most formidable moral force in the world.

The men who carry this moral force with them into the arena of disputes have an intangible implement at their hands which, as we see, works. The very existence of it makes them dedicated men, of which fact Dr. Bunche is a present and visible demonstration.

Frankfurter a Voluntary Witness in the Hiss Trial

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, for 3 days I tried to find out if Justice Frankfurter appeared as a voluntary witness in the Hiss trial or upon subpena, but without success. He apparently was absent from Washington on vacation and there was no response at his office. Justice Reed, I was informed, appeared at the trial in response to a subpena.

This morning, Mr. Speaker, the Associated Press reports, from Heath, Mass., that the judge "deemed it an unnecessary formality to be formally served with a subpena." The quotes, Mr. Speaker, are from the judge's own statement, according to the news account. Obviously he was so interested in the welfare of Alger Hiss, one of his boys, that regardless of the propriety of his appearance as a member of the United States Supreme Court, he jumped into the case with both feet, to the utter disgust of an overwhelming majority of the American bar.

Mr. Speaker, I am including the news item referred to above which appeared in the Washington Post today:

HISS SUBPENA NEEDLESS, SAYS FRANKFURTER

Justice Frankfurter said yesterday he "deemed it an unnecessary formality to be formally served with a subpena" to testify as character witness at the Alger Hiss perjury trial in New York.

Frankfurter and Justice Reed testified as character witnesses for Hiss. Mrs. Reed said Tuesday that her husband was subpenaed by defense lawyers.

The question whether the Justices appeared voluntarily was raised as the result of a move in Congress to exempt Supreme Court members from any compulsion to testify in such circumstances. Reached at Heath, Mass., where he is vacationing, Frankfurter told the Associated Press by telephone:

"I appeared as a witness in the trial of Alger Hiss because his counsel deemed it their duty to put my testimony before the jury. They had a right to my testimony because, under the Constitution, every accused has the right to produce evidence relevant to determining his guilt or innocence. The reputation of an accused is such a relevant matter, especially under a charge of perjury. Since counsel felt they must draw on the testimony I was under duty to give, I deemed it an unnecessary formality to be formally served with a subpena.

"Of course, no member of the Supreme Court should needlessly disqualify himself from participation in a case that may come before the Court. But the circumstances that qualified me as a character witness at the trial would necessarily disqualify me from sitting in any case involving Alger Hiss, even if I had not been a witness in his case. As is patent from the public records, every year members of the Court abstain from participation in cases because of some past relation to a party litigant or any other interested party in a litigation."

Hiss, a former State Department official, was charged with perjury in connection with charges that Whittaker Chambers, one-time Communist courier, obtained secret Government documents from him. The jury failed to reach a verdict. The Government has said it will try Hiss again in the fall.

Senator O'CONOR, Democrat, Maryland, yesterday described as ill-advised and illtimed legislation to bar Supreme Court Justices from testifying as character witnesses in a criminal trial.

"Such a law, if enacted, would be improper interference with the judiciary and it is extremely doubtful if it would stand the test of constitutionality," he said in a statement.

A bill to bar Supreme Court Justices as character witnesses has been introduced by Representative KEATING, Republican, New York.

O'CONOR said the three branches of Government are "separate and distinct and must be kept so."

It's Nice Work, If You Can Get It

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include the following three editorials from the Rochester Times-Union, pricking the bubble known as the Brannan farm program, debated and, fortunately, defeated today.

LOWER FOOD PRICES, HIGHER FARM INCOME, IS NEAT TRICK

The corn States Thursday got their gold star for good conduct in November. The Secretary of Agriculture unwrapped a new farm program, and politically it's a daisy. It will raise farm income but lower food prices, it says here, which is the neatest trick of the Washington week.

How can either a dirt-farm Congressman or a sidewalk Congressman oppose a deal like that?

The only way we can imagine is by seeing the catch in it. This shouldn't be hard to do.

The bill would let the free market set prices on meat, milk, butterfat, eggs, poultry, fruits, and vegetables. These are the foods people prefer and should eat more of.

But if the unsupported market lets people buy them too cheaply, Uncle Sam would sit down and write a check for the farmer who produced them, covering the difference between what the Government thinks the farmer should have received and what the people were willing to pay.

There is no better recipe than a fat check to turn people into satisfied voters.

But don't go away, there's more to it than this. Where do meat, milk, butterfat, eggs, and poultry come from? They come from feeding animals and fowls corn, wheat, and other grains.

And this same bill jacks up support prices on these, along with cotton, tobacco, peanuts, soybeans, flaxseed, dry beans, peas, and wool. All the apparatus of loans, "surplus" purchases and Government-built storage space would be continued and strengthened to raise prices on these.

Then how is the price of meat, milk, butterfat, eggs, and poultry to come down, if the price of grains that produce them is propped higher?

There is more than a little flim-flammery here.

Besides this bill's hokum, it contains some ideas that surely need far more exploration than they have had.

There is the question of the Government's guaranteeing the income of one portion of our people regardless of other portions' price judgment on the value of their output.

And if that is desirable, is it good policy to attempt to freeze one portion's income at distorted wartime high levels—which is the effect of the new base period for computing parity, a price index of what farmers buy?

But the most reprehensible thing about the plan is that Secretary Brannan presented it to Congress without a single estimate on what the program would cost.

Without solid cost estimates, adequately documented, Congress really has nothing to work on. We have surely not come to the point that we buy every bauble that looks pretty politically without asking the price. Or have we?

SEEKS TO SUBSIDIZE AND CONTROL FARMERS

The more one looks at the administration's new farm program the more extraordinary it appears. As noted in these columns on April 8, the plan is tricky. It proposes to let the free market set the price of preferred foods—meat, milk, butterfat, eggs, poultry—but at the same time actually raises support prices on grains which feed farm animals that produce these foods. Also, it involves subsidies to keep farm income at or close to recent levels.

Long-range results of such a program would be even more startling than its immediate effect. All farmers, except the big commercial growers who are 2 percent of their number but produce 25 percent of the Nation's crops, would receive these high support prices on their storable crops and cash subsidies on meats and other perishables.

Thus a two-way system is introduced to favor the smaller farmers—who represent the most votes.

Even so, indications are that with lower foreign demand, continued high support prices for grains, cotton, tobacco, peanuts and other storable products would tend to increase production above what the market would absorb at such prices.

Here comes in the allotment system for farmers who get the benefits of the plan. This will become more and more rigid as surpluses pile up. Thus Government controls will work, as usual, to promote scarcity.

Under the law passed by the Eightieth Congress price supports were to be reduced in 1950 to a basis which, while protecting the farmer against a disastrous price break, did not guarantee his income level.

The administraiton's program would by price supports and by direct subsidies undertake to maintain farm income. The general body of taxpayers, whose incomes are not guaranteed, would pay the subsidies and the support price costs.

SELF-DEFEATING FARM PLAN

As we understand Secretary of Agriculture Brannan, the Nation has been guilty of great

follies in its price-support policies and it must therefore embark on still greater follies to cure them.

He says we are spending a million dollars a day to keep potatoes scarce and the price high.

We have spent $37,000,000 thus far this year to keep the price of eggs beyond the reach of many breakfast tables.

We have bought butter to keep its price up while compelling most housewives to color their own margarine if they can't pay the butter price.

We are about to do the same thing with pork products, making sure that the benefit of last year's bountiful corn crop will not be passed on.

But this, says Secretary Brannan, doesn't do the consumer any good. It surely doesn't.

So he has a plan. You let the market set supply-and-demand food prices. Then you pay a consumer's subsidy. You don't pay it to the consumer. You pay it to the farmer. It is the difference between what the farmer would have received at wartime price levels and what consumers are now willing to pay.

And then to limit taxpayers' costs—Mr. Brannan steadfastly refuses to estimate whether they will be five or ten billion or what—the Department tells the farmer how much he can raise.

This production check not only destroys the farmer's control of his own farm but counterchecks declines in food costs to consumers by limiting supply.

Working both ends against the middle is not unique. It is the almost uniform pattern of Government planning. It would be too simple to give consumers reasonable potato prices by refraining from doing the things that make potato prices unreasonable.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. GAVIN. Mr. Speaker, in view of the great interest in my district in the proposed legislation for Federal aid to education, I would like to make my position clear.

I am vigorously opposed to and will vote against the bills for Federal aid to education now before Congress.

Now, Mr. Speaker, this country of ours was set up as one in which the people would be masters of Government, not the Government masters of the people. And I hope it will continue to be a Government that believes that the right to assume self-responsibility will always be more precious than life itself.

It was founded and developed by people who sacrificed comfort and security in order to secure and ever preserve liberty and freedom of operation in this Nation.

The growing menace of bureaucracy and governmental control over the fundamental rights of the citizens in recent years is not only alarming, but if it continues, can lead only to some form of regimented bureaucracy or statism. In fact, bureaucracy has grown so in the past several years that it really constitutes a fourth branch of our Government. Bureaucracy has grown to the point where it has become master of the citizen and the citizen has become the servant rather than the master of Government.

The degree to which people of all classes have been brought into dependency upon the whim or bounty of bureaucracy is not only alarming but it is dangerous to the very concept of the sovereignty of the individual and self-government of the people.

So today the question before us is whether or not we are going to maintain our American way of doing things; whether we are to continue good, sound governmental policies to maintain the solvency of this Nation and the preservation of our American way; or, degenerate into some over-all economic plan with a regimented, regulated people being told what to do, when to do it, and how to do it by the Government.

The challenge before us is whether we are to surrender to these new philosophies of government or restore sound governmental policies and thinking; whether we will let freedom of opportunities we enjoy pass on, or whether we have the determination to change the trend of thinking and preserve in America those rights, ideals, and principles which have been handed on to us.

In my opinion this Federal aid to education is just another one of the programs that they are seeking to establish that would inject the Government into our educational system. They are requesting $300,000,000 to initiate this program, but once they get their foot in the door this program will be expanded and expanded with more taxes and more taxes which have now become a burden on the backs of every American taxpayer. High taxes are a millstone around the necks of all our citizens. They stifle initiative. They are a drag upon production and are a major factor in the cost of living because they enter into the cost of everything.

Instead of reducing taxes, we are concocting more ideas to increase taxes. Under the circumstances, if taxes were reduced the Federal Government would function more efficiently by eliminating waste and extravagance. Rather than create new formulas for spending, let us return these responsibilities to the States where they rightfully belong.

In the Senate S. 246 has been passed, and in the House H. R. 4643 is still before the Committee on Education and Labor. Both are for Federal aid to education. It is my intention to vote against any bill for Federal aid to education in event one is presented to the House for consideration.

It is my opinion that the proposed program for Federal aid to education will not do what it purports to do—reduce the inequalities of educational opportunities. Much of the $300,000,000 it would appropriate for such purposes would be distributed to States which already are doing a more than adequate job of financing education as evidenced by their high per-pupil current expenditures for schools.

Between 1936, when the first real drive began for $300,000,000 of Federal aid and 1947, the most recent year for which the United States Office of Education figures are available, State-local support for schools rose from $1,656,800,000 to $3,124,550,000, an increase of $1,467,750,000, or 5 times the 300 million offered as a door-opener to more Federal money and controls.

In the 2 years since 1947 the States and their local subdivisions have increased their school-purpose taxes by another $900,000,000-plus—or three times $300,000,000.

The $300,000,000 aid to education is not needed. Increasingly, the States are raising more and more money for the support of their schools. In Pennsylvania, I have been advised, our recently adjourned general assembly appropriated approximately three hundred million to education for the coming biennium, which represents an increase of over 200 percent since a decade ago. Our State, like others, has been aware of education's problems and has taken concrete action to effectuate solutions. For example, Act 481 of the 1947 session was an answer to the need for more adequate revenue sources of school districts in the Commonwealth. Throughout the country, State legislatures have appropriated almost $2,500,000,000 in the last 12 years as increased school support.

From a financial viewpoint alone, the Federal Government, with its debt now amounting to $252,000,000,000 and with a deficit in the offing of an estimated four or five billions for this fiscal year, and a budget of almost $42,000,000,000 should not undertake this educational project which starts at $300,000,000 but which will ultimately cost many times that every year. This is a responsibility that belongs to the States.

The total school expenditures for the year 1948 were estimated at more than $3,500,000,000, an increase of 60 percent over the 1939–40 total. In Pennsylvania funds allotted for public instruction in the biennium 1947–49 total $239,124,000 or 40.2 percent of all general fund appropriations as compared with $97,896,000 for the biennium 1939–41, which represented 23.3 percent of general funds for that period. These figures show clearly the ability of Pennsylvania and the States generallly to take care of their own educational problems. Under this new bill the States would receive financial benefits but they would also pay into the program. Pennsylvania's share of the receipts would be $10,410,000 but her part of the expense would be $22,020,000—a net loss of $11,610,000 to the Commonwealth.

Now important as financial considerations are, the most compelling reason in my opinion that this legislation should be defeated is the danger inherent in Federal control of education. Permit me to say that "he who pays the piper, calls the tune." And if this legislation is enacted Federal bureaucracy will eventually find the ways and means to exercise direct or indirect control over the schools. Therefore, I intend to vote against this legislation.

Certainly these programs are a snare and a delusion. There is no such thing

as free money. Eventually all the people through taxes will pay the cost of these plans.

Recently Harold W. Arlin, member of the Education Committee of the Ohio Chamber of Commerce, made a statement in opposition to S. 246 before the Subcommittee on Education of the House Education and Labor Committee, in which he said, and I quote:

Although the proponents of this Federal legislation declare that it provides for no Federal controls, the fact remains that the Federal Government must establish certain supervision over the expenditure of this money. Definite controls will be established. It cannot be otherwise. Certainly, it would be unwise and poor public policy for the Federal Government to distribute public funds without exercising control over the expenditure of such funds and without demanding an accounting by those who do the spending. The Supreme Court is correct, we believe, in its finding that "It is hardly lack of due process for the Government to regulate that which it subsidizes." As a matter of fact, section 7 of the Senate bill 246 establishes at least seven definite controls, some of which delegate wide discretionary authority to those who exercise such controls. For example: Item E, of section 7, provides "that the State educational authority shall make such reports, in such form and containing such information concerning the administration of this act as the Commissioner may reasonably require, and give him upon request access to the records on which such reports are based, which reports the Commissioner shall transmit to the Congress with recommendations for such revisions of this act, as, in his judgment, the Congress should consider, with particular reference to recommendations arising from changing conditions in our national economy." Such language and such delegation of discretionary authority is broad enough to include most anything.

Section 2 of Senate bill 246 declares, "Nothing contained in this act shall be construed to authorize any department, agency, officer, or employee of the United States to exercise any direction, supervision, or control over, or to prescribe any requirements with respect to any school, or any State educational institution or agency, with respect to which any funds have been or may be made available or expended pursuant to this act," etc.

Despite this laudable effort to prohibit Federal intervention in "the administration, the personnel, the curriculum, the instruction, the methods of instruction, or the materials of instruction," the danger of Federal controls being applied to the Federal subsidy is recognized by the proponents.

When this proposal, then designated as Senate bill 742, was before the Senate last year, Senator SCOTT LUCAS said, quite frankly, "I cannot go so far as to tell the States we are going to grant this money to you * * * and after we grant the money we will have nothing to do with it except audit the funds."

Senator TAFT, one of its sponsors, when asked what assurance he could give that "some subsequent Congress will not change materially the chief sections of the bill," replied forthrightly, "We have no assurance. That is one of the dangers of any Federal-aid program, I quite agree."

The framers of the Federal Constitution were under no illusion as to the real nature of Government. They took every precaution to assure that the Federal Government would be a government of balanced authority and of written law rather than a government by men. George Washington warned that "government is not reason, it is not eloquence—it is force. Like fire, it is a dangerous servant and a fearful master." Not satisfied that the specific rights of individuals had been sufficiently protected by the framers of the Constitution, the Congress, with consent of the States, quickly added the bill-of-rights amendments, the tenth of which says specifically: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

Public education in the United States has, from the beginning, been recognized as a local responsibility. The founders of our country had fought for their freedom and they proposed to keep it. To this end, they determined that education was a matter to be left entirely to the States, and to local communities in particular. Their purpose was to develop a society based on the assumption that freedom is the primary condition of worth-while existence, and that the development of the individual and of his community life can never be realized under the coercions of government. It is upon this basis that parents, educators, and public officials developed, in this country, the first truly democratic system of education in the world—a system free from government domination. When the first universities were chartered, and when public schools were being established, the Federal Government gave them grants of land as an endowment, so that they might remain as free as possible from the political pressures of even their own State governments. This localization of public education has been a great safeguard of our freedom and should be maintained as the surest guarantee of that freedom.

This fine, clear, forthright statement is one in which I heartily concur.

So I want to state that it is time for a reawakening on the part of the American people to what is happening in Washington because in spite of the excellent philosophies underlying the American way, attempts are being made to ease onto the American people various programs with the technique of controlled and regimented government. A type of government that will eventually nullify our American system.

Therefore, we must be realists and proceed with caution on all these programs or it is a question of whether we can maintain our American way and the solvency of this Nation. Let us not delude ourselves into thinking that any planners will produce a utopia, without somebody paying the bills.

So I want to be recorded as being opposed to this program of Federal aid to education and will vote against any legislation that may be presented.

Understanding the Delinquent Boy

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. MULTER. Mr. Speaker, I direct the attention of my colleagues to an article by Russell J. Fornwalt, which appeared in the June 1949 issue of the Big Brother Bulletin:

UNDERSTANDING THE DELINQUENT BOY

(By Russell J. Fornwalt, vocational counselor, Big Brother movement, Greater New York)

The delinquent boy gives every one of us a great deal of concern. But sometimes we allow ourselves to get so excited about the delinquent that we forget about the boy. Often we fail to realize that the so-called problem boy is just as healthy and normal as the lad who never gets into any juvenile devilishness or mischief. We forget, too, that the traits which now get a boy into trouble may later help to make him successful in some business or profession. * * *

So often we label a boy delinquent merely because he gives the normal response to an abnormal situation. Then we throw the lad into a reformatory, which is probably the most abnormal of all abnormal situations in the world. While in the reformatory, the boy learns to perfect his technique of giving natural responses to abnormal conditions. And then we wonder why it is so difficult for him to adjust to a new and different society after his release.

ENVIRONMENT, NOT BOY, NEEDS REFORMING

What needs to undergo reforming is not the boy, but the social, spiritual, and physical environment in which he finds himself. If a boy did not respond in an antisocial or nonsocial way to such conditions as a broken home, lack of parental guidance and affection, emotional insecurity, and overcrowded neighborhood and overstimulating movies and magazines, he would not be normal.

On the other hand, if two boys become delinquent as a result of seeing a gangster movie, why not the other 998 who live in the same neighborhood and see the same picture? The answer is simply that delinquency does not depend solely on what happens in the movies. It depends largely on what takes place in the home and what has taken place there since the child was born.

Now while the antisocial or nonsocial response is the normal reaction for the boy to make in a given situation, I am not implying that it is the most desirable response. On the contrary, it is often the least desirable and the most costly for the boy and society.

Running away from home, breaking into grocery stores, vandalism, and excessive profanity are unwholesome yet quite normal forms of behavior for the boy whose training and environment are not what they should be.

How can all this be changed? If we do not want truancy and other juvenile offenses, we must change the conditions (including our own attitudes) that bring them about. Fundamental changes must be made in the social, spiritual, and physical surroundings in which our children live. Unless properly handled, a boy's natural reactions may be the forerunner of a serious behavior pattern.

DELINQUENT MUST BE TREATED INDIVIDUALLY

The abnormal conditions that prevail in the school, home, and neighborhood must be studied in relationship to the individual boy. No two cases are alike.

You cannot prescribe a cure for any delinquent boy unless you know what is ailing him personally. Unless we tackle every case of delinquency individually, we are apt to spend a lot of time, money, and effort in a hopeless cause.

The cure lies in individual diagnosis and treatment. In the Big Brother movement we have found the individual approach to be highly successful. Delinquency cases referred to us are subjected to a thoroughgoing analysis. Programs to meet individual needs and objectives are carefully planned and followed through. We have

found that 9 out of 10 boys are never rearraigned in court after having been under the personal guidance and influence of the right type of Big Brother who is assisted by a staff of professionally trained counselors.

Most delinquents are exhibitionists. Most of us are exhibitionists in some very harmless way or another. Boys are the same way. They'll cut up in classes, or commit some offense as an outlet. It is normal, and its development should be encouraged along more constructive and wholesome lines.

UNDERSTANDING CAN REDIRECT DELINQUENT'S TRAITS

Aggressiveness is another common trait of the delinquent boy. Yet it is an asset in hundreds of occupations. Delinquent boys are usually highly imaginative, capable of concocting all sorts of schemes. It is nevertheless a quality which they might capitalize on later in life.

It would be difficult, indeed, to name one evil influence in a boy that cannot be directed toward some useful purpose. But whether his will be a career of distinction or one of crime will depend upon the understanding and guidance provided. Every normal boy has enormous possibilities for social, civic, and vocational success. Often he is lost in the shuffle because of our failure to treat and respect him as a human being or because of our failure to provide constructive outlets for his interests, drives, intelligence, aptitudes, and personality. He compensates by becoming delinquent. It is only normal to do so.

Supreme Court Justices as Character Witnesses

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. KEATING. Mr. Speaker, whether or not Justices Frankfurter and Reed were subpenaed as witnesses in the Hiss case is utterly immaterial. The propriety of their appearance does not hinge on any narrow technicality. It is now stated by Justice Frankfurter that he appeared voluntarily since service of the subpena would have been "an unnecessary formality." On the other hand Justice Reed, speaking through Mrs. Reed, defends his appearance on the ground that he was forced by subpena. Of the two, Justice Frankfurter's position is the more defensible. Every lawyer knows that a witness to give character or opinion evidence, as distinguished from testimony as to the facts, is never served with a subpena unless all preliminary arrangements have been made in advance and the witness has requested that he be subpenaed.

It is obvious that one who is to testify as to the character or reputation of an accused would never be called against his will or unless the accused knew in advance that his testimony would be favorable.

Clearly the course which the Justices should have pursued, when approached by Mr. Hiss or his counsel, should have been to point out the impropriety, embarrassment to their associates, and unfortunate precedent resulting from the appearance, thus breaking a tradition as old as the Supreme Court itself. Such a simple statement would have ended the matter and preserved the lofty dignity of our highest tribunal.

Again I repeat my respect for the two Justices and the high position they occupy. There is nothing whatever personal in my remarks or in the introduction of legislation to prevent a recurrence of an incident which has shocked the Nation. The deluge of approving communications, however, which I have received from the bar, the bench, and the public since my bill was offered on Monday has convinced me that the country is back of legislative action in this matter.

Another contention is reported to have been advanced by Justice Frankfurter and a member of the other body to the effect that barring Supreme Court Justices as witnesses might be an infringement of a defendant's constitutional right to produce evidence relevant to determining his guilt or innocence. It may be highly relevant and material for a priest to disclose facts given to him in the confessional, or a lawyer, or a physician, facts elicited from a client or patient. Yet to seal their lips does not violate the constitutional protection. No more certainly does it infringe on constitutional guaranties to provide that nine men, while sitting as Justices on the highest Court in the land, shall not serve as character or reputation witnesses for a criminal defendant in a subordinate Federal tribunal from which an appeal may be taken to the very bench they occupy.

Ireland and Israel

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. KLEIN. Mr. Speaker, it is not new or startling for me to restate the often-noted parallel between the history of the Jewish Nation and that of Ireland.

Nevertheless, the parallel is so striking that it can bear repeating.

Both nations have suffered under the heavy hand of the British Empire. Both nations, under the extremes of adversity, have kept alive the eternal flame of independence and liberty. Both nations, in spite of the broken promises of England and with the sympathy of world opinion, have achieved their dream of freedom. Yet both nations still find the road to full fruition of their national dreams made rough by the arrogant antagonism of Great Britain, even though England has lost the imperial effort to block national aspirations completely.

ZIONISTS AND IRISHMEN HAVE COMMON AIMS

It is not alone because of this strong and striking parallel in the national histories of Eire and Israel that, in common with most of my coreligionists, I have an interest so deep and so sympathetic with Irishmen and with the magnificent descendants of the Irish who now owe fealty to our own land or others.

There are other qualities which bind the two peoples with bonds of idealism—the idealism of freedom, of human dignity, of refusing to acknowledge defeat.

It is true that the Jews were driven from their homeland two milleniums ago—driven from the homeland to which they have been able to return as an organized government only in the last year; and it is true that the Jews had a high state of culture and civilization when all Europe was still in the stone age. It is true that the Irish, with magnificent tenacity, were able to maintain in their own country a sturdy and rebellious population able ultimately to wrest control of their own homeland from the oppressors against incredible odds.

PARTITION THREATENS BOTH

Those are minor differences which but accentuate the basic bonds; and meanwhile both nations march onward, against British resistance, toward ultimate realization.

I was struck by an even closer parallel in a statement I received from the Irish Legation on partition.

The British have used partition in Israel to weaken the new nation there; and they have used partition in Eire to weaken the new nation there.

Under consent, I am inserting in the RECORD the full text of the Irish statement on partition, with the hope that Members will take time to read it and see what kind of a bully England is in close relationships, regardless of the splendor of the British Commonwealth as a wartime ally:

"It is hereby declared that Northern Ireland remains part of His Majesty's dominions and of the United Kingdom and it is hereby affirmed that in no event will Northern Ireland or any part thereof cease to be part of His Majesty's dominions and of the United Kingdom without the consent of the Parliament of Northern Ireland." (Clause 1 (2) of Ireland Act of British Government, June 1949.)

"That area was created by an act of the British Parliament. * * * For British purposes and was created with the express design and object that in that area there should always be a Tory majority." (Mr. John A. Costello, Prime Minister of Ireland, speaking in Dail Eireann, May 1949.)

THE PARTITION OF IRELAND

WHAT BRITAIN HAS TAKEN FROM THE IRISH NATION BY PARTITION

By partitioning six of the counties of Ulster, Britain has taken the great shipbuilding and linen industries; the magnificent harbors of Lough Foyle and Belfast, and Leough Neagh, Ireland's largest lake.

Partition has also taken from the Irish Nation many of the most hallowed and cherished places in the age-long history of the country.

Armagh: The see of St. Patrick.

Down Patrick: Where the great saint is buried and where also rests Brian, who drove the Danish invader from Ireland at Clontarf.

Bangor: The site of one of Ireland's most ancient and greatest schools.

Derry of St. Columkille.

Tyrone of the O'Neills.

Belfast: The birthplace of the United Irishmen, organization founded by Presbyterians for the attainment of an Irish Republic.

Mac Art's Fort (Belfast) where Wolfe Tone, the great Protestant patriot, with others of

his coreligionists undertook a solemn obligation not to cease their efforts until Irish independence was secured.

These are but some of the national historic shrines which have been cut out of the very heart of the Irish Nation.

Never will Ireland abandon her fight to regain this territory rich not alone in material wealth but hallowed by the most sacred memories and the scene of many of the most heroic incidents of Ireland's history.

Yet, seemingly, Ireland is expected quietly to acquiesce in the mutilation of her territory.

Would Americans acquiesce if a foreign power exercised sovereignty over a number of American States, peopled by Americans with a passionate desire for unity with their fellow countrymen, and having within their borders such national shrines as Mount Vernon, Monticello, Gettysburg, and the Alamo?

Partition, by its very fruits, stands wholly condemned, but the problem remains and must be solved.

It is a problem not unknown in other nations, indeed the problem of a dissenting minority is an ordinary problem of national governments. But, if every such problem were to be settled by detaching part of the nation and attaching it to another country, there would not be a bodily whole nation in Europe or America.

In addition to the wrong inflicted on Ireland by partition, its attempted perpetuation by the Ireland Act recently passed by the British Parliament has caused a swift ebbing of the wave of good will toward Britain which had been built up over the last few years, and has replaced this good will by a deep bitterness in the hearts of the Irish people, both at home and abroad.

And this, when today more than ever before, it is imperative for the preservation of the democratic way of life that all nations should seek to strengthen the links that bind free peoples together.

How can the Irish people be expected to believe in the sincerity of the utterances being made regarding the principles of democracy and self-determination for all countries behind the iron curtain, when those principles are denied in their own country—and denied by a country which proclaims its adherence to those principles?

The Partition of Ireland and the Atlantic Pact

(Extracts from speech made in Dail Eireann on July 13, 1949, by Mr. Sean MacBride, Minister for External Affairs)

I need hardly refer in any detail to the events leading up to the passing of the Republic of Ireland Act. The house is already fully informed on all these matters. This period was a crucial one from the point of view of the department, as many steps had to be taken, very often in a nonspectacular way, in order to insure that on and from the 18th of April last the Republic of Ireland would be internationally recognized. As the house learned, official recognition was accorded, and in every case messages of recognition and welcome to the Republic of Ireland were received.

Since the passage of the Republic of Ireland Act, a number of countries have expressed their desire to extend diplomatic representation to Ireland. In particular, the Government of India propose to open an embassy in Dublin. Discussions are also proceeding concerning the opening of diplomatic or consular missions here by Norway and Egypt.

ATLANTIC PACT

I do not think that it is necessary on this estimate to deal with our attitude to the Atlantic Pact and to the Ireland Act which was passed by the British Parliament. The Government's attitude on these matters has already been made clear to the house on other occasions. To a certain extent, the introduction of the Ireland bill in the British House of Commons exactly 1 month after the signature of the Atlantic Pact emphasized the wisdom of the Government's decision in declining to adhere to the Atlantic Pact without a clarification of the attitude of the other nations concerned regarding the territorial integrity of Ireland. As the house knows, the Atlantic Pact was intended to guarantee the territorial integrity and political independence of the participating nations. It is, I think, of some significance that within 1 month of the signature of the Atlantic Pact, Britain should have, unnecessarily and without justification, introduced a statute in her Parliament reasserting her claim to a portion of our territory.

PARTITION

In our view, and I think I can say that I am speaking for every member of this house, the essence of democratic rule lies in the right of the people of a nation to determine democratically by their free votes, their form of government and their internal affairs, without outside interference. It was the infringement of this rule which was largely responsible for the last war and which is now responsible for much of the tension existing in Europe today. Interference in the affairs of another nation, whether it be by Germany, Russia, or by Britain, is destructive of the basis upon which democratic government rests and must lead to friction.

Our sole claim is that the Irish people should be allowed to determine their own affairs democratically and of their own free will, without interference by Britain. The fact that Britain succeeded, over 25 years ago, in retaining a corner of our island and that she has since occupied it, in no way entitled her to divide the historic Irish Nation and to pretend that our island now consists of two separate nations.

British propaganda often seeks to justify Britain's attitude on the ground that Britain is merely protecting a minority. This, of course, does not bear examination. In the first place, in an area approximating four of the six counties which have been cut away from us, there is a majority in favor of unity with the rest of Ireland; the Nationalists population in these areas is coerced undemocratically and against its will, to remain separated from the rest of Ireland.

We have no wish or desire to in any way penalize or interfere with the civil or religious liberties of those who in the northeast choose to describe themselves as the British king's men. On the contrary, as has been repeatedly stated, we are quite prepared to afford them any constitutional guaranties that may be reasonably required to allay any fears, real or imaginary, that they may have. We cannot, however, accept the claim of a small minority supported by Britain, to divide our nation in defiance of the express will of the Irish people.

The continuance of partition and of Britain's support of it, is a constant indictment of democratic rule in this part of the world. We urged that this was a matter which should be discussed between Ireland and the nations participating in the Atlantic Pact. We felt that, if the concept of cooperation and democracy was to be given reality, one of the first essentials was to remove from the midst of western Europe this dangerous undemocratic anomaly. The first essential of cooperation is the removal of causes of dissension. We regret that, no doubt through Britain's influence, even our suggestion to discuss these matters was not accepted.

ATTITUDE OF STATE DEPARTMENT

I have noticed in the papers recently, reports to the effect that the State Department in Washington had stated that American policy would not allow President Truman to intervene between Ireland and Britain in order to secure the ending of partition. I am fully aware that that has always been the attitude of the State Department; indeed it is a matter about which I cannot complain, as the question of American policy is essentially one to be decided by the American people. I cannot help, however, regretting that the leading democratic Republic in the world should not at least take an interest in and assist in ending a situation which, in addition to being undemocratic, is dangerous and damaging to the unity which should exist in the democratic world.

While I know that the United States administration did not intentionally desire to do so, its attitude of indifference in the matter has been and is being construed by the British Government as a definite encouragement for Britain's interference in our affairs and the continued denial of the right to self-determination by the Irish people. That is evidenced by the fact that before the ink on the Atlantic Pact was dry, the British Government felt at complete liberty to reassert by statute, its claim to interfere with the territorial integrity of Ireland. It is even being suggested now that the United States have, under the provisions of the Atlantic Pact, undertaken to defend Britain's invasion of our territorial integrity. In these circumstances it would not seem unreasonable that the United States should at least offer its services for the purpose of bringing about a discussion and an ultimate solution of this question.

Partition is the sole remaining issue between Ireland and our neighboring isle. Its solution would end the century-old struggle that the Irish people have waged for liberty and self-determination. It is obvious that, by bringing about a solution of this question, the United States would render a service, not merely to Ireland and Britain, but to the democratic world.

It does seem extraordinary that in this era there should be a reluctance even to discuss grave problems that mar the enthusiasm and unity of the democratic peoples. I know that we are but a small nation and that Britain is a powerful one, but I cannot believe that that consideration alone should stand in the way of a democratic solution.

One of our most important tasks in relation to partition and to Britain's interference in our affairs is to make our point of view known in America, in Australia, in New Zealand, in Europe, and in Britain itself. I have no doubt that if the issues involved were clearly explained to world opinion and particularly to those who help to form world opinion, this denial of democratic rule could not survive.

Let's Not Make a Habit of Asking Federal Aid

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. SADLAK. Mr. Speaker, under leave to extend my own remarks, it is my desire to incorporate into the RECORD an editorial from the Hartford (Conn.) Courant for Wednesday, July 20, 1949, which is a very timely comment as well as a warning to proceed slowly and with great caution in asking for Federal aid and assistance. To the justification for the request for help at this time por-

tion of this editorial may I also add the notice that Connecticut was last night visited with a very severe electrical storm breaking the extended drought but causing the loss of lives and millions of dollars of damage to crops that may have possibly survived complete ruin and loss if the long-awaited downpour of rain had not been accompanied by lightning, hail, and wind.

The editorial is as follows:

LET'S NOT MAKE A HABIT OF ASKING FEDERAL AID

Governor Bowles has had two busy days of conferences, speeches, and press interviews in Washington. We are told he found prospects encouraging for Federal aid to Connecticut in housing, in channeling contracts and public works into this area, and in agriculture. Most residents of this State, probably, will be glad to know this aid is on the way.

Our growing dependence on the favors and benefactions of officials in Washington does, however, provoke a few reflections. We in Connecticut yield to no one in our dislike of excessive centralization in Government. Since the days of the Hartford Convention 135 years ago most of our people have felt that way. We have a strong distaste for undue dependence on the Federal Government. The eagerness with which some of us turn to Washington for economic help thus is a bit incongruous.

There is, of course, some justification for seeking outside aid at this time. As the Governor told President Truman on Monday, Connecticut, like most of New England, has been particularly hard hit by the recession in business. Our high degree of industrialization makes us especially vulnerable. There is no harm in asking that the Federal Government, in letting contracts that will go to some State anyway, bear that in mind. There is no harm in coordinating the efforts of State and Nation to cope with a distressing situation.

Then, too, the drought we are sweltering through this year is something special. Seldom has it been so dry so long at this particularly critical part of the growing year. Connecticut, and the immediately adjacent areas, again, are singled out as victims of a punishing drought that has already ended nearly everywhere else. While the skies continue to smile ironically upon us, it is prudent to take steps acknowledging our unusual plight.

It is heartening to see, though, that Connecticut's farmers, for all their troubles, are not ready to give up completely. They have asked that the State be declared a drought emergency area, but they say the dry spell still does not rank as a disaster. They are not eager to seek disaster loans from the Farm Home Administration. They are backing the request that this be declared an emergency area only after taking every step they can themselves to maintain production. Some are still not convinced even this request is necessary.

There are times when hard-hit cities and States are justified in looking to the Federal Government for aid. The present may well be one. But let us not get into the habit, as too many other groups and interests have done, of turning to Washington as a matter of course. Statistics have made clear that Connecticut contributes more in taxes to the Federal Government than it gets from it in grants and aids. It is up to us, always, to do whatever we can for ourselves before succumbing to the delusion that in Washington there is an answer to all our problems. Cooperation between State and Nation is healthy and constructive; dependence on the Federal Government is not.

The People Fear Depression

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. BLATNIK. Mr. Speaker, the fear of another 1929 economic crash is today uppermost in the minds of the people, and they are watching the Congress with the hope that action will be taken to check the present recession. Under leave to extend my remarks in the Appendix of the RECORD, I include the July 14 editorial from one of the most outstanding weekly newspapers in Minnesota, the Chisholm Free Press, which reflects the growing public concern regarding the economic state of the Union:

CAN WE DIVERT A DEPRESSION?

There's a growing anxiety about our country's economic condition. This fear and indecision is doing none of us any good. Like a parasite it is feeding on all of us and infesting a creeping paralysis.

Most fearsome right now is the drift policy. This is disturbing because the economic conditions and trends may well lead us into wholesale depression. Inaction now is just increasing the problems which we eventually have to face. Ours is still a healthy and vigorous economy. But it is not an economy that runs itself on some pattern or formula of automatic or mechanical self-stabilization, or just private capital and business enterprise. Our economy responds to human decisions, human will, human effort.

In 1946, the American people, through their Congress, made an important, far-reaching decision when they passed the Full Employment Act. This was a measure enacted to attack the problems of mass unemployment and ruinous depressions. It was a commitment by the Government to the people—a commitment to take any and all measures necessary for a healthy economy, one that provides opportunities for those able, willing, and seeking work.

Industry itself is unable to put and keep more than 60,000,000 people on the job. In the laws of supply and demand, there is also the profit motive and the personal desire for wealth and power. Unless there is a complete reorganization, industry never has been and never will be able to absorb the millions in manpower who want to work. For almost 2 years, the majority of our Congressmen and industry have supported increased armaments and foreign aid, thinking this will divert a slump and depression. Both groups have refused to face the fact that internal development is the only answer. They have not reached the obvious conclusion yet that the economic crisis developing in the United States is also taking place in western Europe. Unemployment is growing in western Europe, Britain's gold reserves are melting away fast, dollar shortages in South America are cutting United States exports. And in spite of the Marshall plan, a recent United Nations report showed that eastern Europe has recovered faster than western Europe.

Let's get our facts straight—as straight as we can. And then let's act as intelligently as we can, as boldly as we must, and in time to get going along the road to continued high levels of employment and full use of our resources. The main point is that the present situation is too serious to ignore. It requires the careful and immediate consideration of the President, the Congress, organized labor, organized business and organized agriculture. It deserves the attention of all thoughtful citizens.

In the past, the Government played a decisive role in achieving full wartime employment; we climbed out of a depression through Government action and we sustained a postwar economy through Government assistance. Only the Government has the statutory obligation and power to help in this economic crisis.

The Government should consider immediately the reduction of taxes and raising of exemptions in the lower income bracket. The veterans' readjustment benefit program which expires this month must be extended for at least another year and the payment of the national life insurance premium should be made in the latter half of 1949 instead of 1950. Old-age retirements should be increased, restrictions on public assistance removed and have the Federal share of public assistance be matched by the States to at least $2,000,000,000 for 1950. Education is a vast program in itself and students with incomplete training cannot be thrown into an already scarce labor market.

Employment can be directly provided if a sound program of reconstruction is begun. We need to build homes, highways, bridges, irrigate desert areas, construct power dams; bring electricity into the rural areas and reforest the cut-over lands.

We need new tax, wage, and price policies. We need liberal credit policies and a fair amount of profit. Those who can't live on $25,000 clear profit a year had better revise their mode and attitude of living. There is many a laboring man who brings up his family and educates his children on less than $2,000 a year. We need a national labor and wage policy designed to stimulate free collective bargaining, rather than restricting it, and a minimum wage standard that will be a credit to our country.

Yes, we need all of these revisions. We also must work, and work hard, if we are to accomplish these goals.

The World Situation

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Keene Evening Sentinel, published in Keene, N. H., of July 19, 1949, entitled "The World Situation":

THE WORLD SITUATION

In Europe and Asia, the military forces of the Soviet Union constitute a dominant power, at present unbalanced by any group of nations.

In the world at large, the strength of the United States is dominant, outside of the land areas of Europe and Asia, and the possession of the atomic bomb makes this country almost irresistible in warfare for a limited period of years.

The impasse in Europe constitutes something of a deadlock between eastern and western Europe, which could be broken, no doubt, by the use of Soviet force. That Russia does not attempt to solve these problems by force, as she did in eastern Europe, is due entirely to our possession of the atomic bomb, in the opinion of Mr. Winston Churchill, who is a man with great knowledge of world affairs.

The burden of the United States in international affairs will be greatly lightened, when the nations of Europe, outside the Communist orbit, become strong enough to balance the preponderance of might that now belongs to Russia. When this happens, the United States, separated by the Atlantic and Pacific oceans, will be the decisive factor in world affairs. We will occupy the position that Great Britain held for many centuries in Europe and if we use the position intelligently, we can largely determine the course of world affairs.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. TAURIELLO. Mr. Speaker, much has been said on both sides of the question of Federal aid to education which has been under discussion recently.

I have received the following letter from the Council of Churches of Buffalo and Erie County, N. Y., on this important subject. This council occupies a respected and unique place in my hometown of Buffalo and has achieved an enviable record in religious, educational, and community matters and in bringing about cooperation and mutual understanding among the churches of various denominations in western New York.

While my views with regard to Federal aid to education do not coincide with theirs—since I have repeatedly stated my position in favor of a Federal educational aid bill which would aid all schools—I think this letter is important enough to bring to the attention of the United States Congress so that the Representatives may be given the benefit of the council's thoughts on this question. Accordingly, under leave to extend my remarks, I insert this letter in the Appendix of this RECORD:

COUNCIL OF CHURCHES OF
BUFFALO AND ERIE COUNTY,
Buffalo, N. Y., July 11, 1949.

The Honorable ANTHONY F. TAURIELLO,
House of Representatives,
Washington, D. C.

DEAR SIR: This letter is concerned with one phase of the subject of Federal aid to education. It is written pursuant to direction of the officers of the Council of Churches of Buffalo and Erie County, on recommendation of the civic committee of the council.

This council wishes to record itself as strongly in favor of the principle that any legislation extending Federal aid to elementary or secondary schools, if enacted, should confine such aid to public tax-supported schools.

The council is aware that the principle which it is here supporting is the subject of some controversy. Vigorous and even intemperate arguments have been made both for and against the principle. Out of the welter of argument, however, there emerge two considerations which in the council's view are of special significance.

First: Simply as a matter of historical fact, public education in this country has been built on a few well-known principles:

That free public elementary and secondary education should be open to all;

That such education should be guaranteed to its citizens at public expense;

That parents preferring to send their children to private schools, religious or secular, have the right to do so (a right which was legally vindicated in *Pierce* v. *Society of Sisters* (268 U. S. 510 (1925));

That parents exercising this preference may not look to the taxpayers for financial support.

These principles may fairly be said to represent American tradition today. They owe their persistence, it is believed, to the fact that they have well served both education and the public interest and have made the public schools one of the chief unifying forces of our Nation. Traditions can, and on occasion should be changed, but anyone who, in the face of our favorable national experience, wishes to alter this particular tradition bears a heavy burden of proof.

Second: Public aid for private schools inevitably raises the question of aid for schools conducted under church auspices. Any grant of public funds to support such schools is, under recent decisions of the Supreme Court, a violation of the fourteenth amendment of the United States Constitution, if the grant is made by a State, and of the first amendment, if made by the Congress. The views of the Court on this point are too clear to admit of doubt; consider, for example, the following sentence from opinion in *Everson* v. *Board of Education* (330 U. S. 1, 15 (1947)), reiterated in its opinion in *Illinois* v. *Board of Education* (333 U. S. 203, 210 (1948)):

"No tax in any amount, large or small, can be levied to support any religious activities or institutions, whatever form they may adopt to teach or practice religion."

Unless and until the Supreme Court modifies its views in the orderly course of constitutional adjudication, its interpretation of the first and fourteenth amendments remains the supreme law of the land, binding upon all of us.

This letter is being mailed today to those Members of the House of Representatives whose districts include parts of Erie County and to the Senators from New York State. Copies will be released to the press tomorrow.

Respectfully yours,

HARLAN M. FROST,
Executive Secretary.

Society Indicted by New York Court

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. KLEIN. Mr. Speaker, under consent, I am inserting in the CONGRESSIONAL RECORD a news story from the New York Times of July 16 which tells the pathetic story of a Brooklyn family trying to obtain urgently needed medical attention for their child.

The story speaks for itself and, in its indictment of a society as rich as ours in which such an incident can occur, it speaks for all forgotten people:

COUPLE WIN MERCY IN FOUNDLING CASE—COURT DROPS CHARGE AGAINST PARENTS WHO LEFT THEIR SICK BABY AT HOSPITAL

A charge of child abandonment against Michael Zaccaro, 21 years old, a $41-a-week stock clerk, and his wife of 974 East Ninety-sixth Street, Brooklyn, was dismissed in Felony Court yesterday afternoon.

The two admitted leaving their partly paralyzed 6-week-old son, Michael, Jr., in a hallway of Bellevue Hospital with a note asking that authorities give it badly needed medical care.

In granting the dismissal motion by Oscar Robinson of the Legal Aid Society, Magistrate Philip B. Thurston said:

"These two are the unfortunate victims of nature's inexplicable developments. I'm inclined to credit their lack of judgment to the unusual combination of circumstances. There apparently is a serious gap in our services, but this case cannot be considered a precedent for these two or for anyone else in the future to try to gain admittance to a hospital this way."

The child, born May 28 in Beth-El Hospital, Brooklyn, remained there until June 30. It was then suggested that it be transferred to Kings County Hospital.

TREATMENT NOT AVAILABLE

Admittance was refused there with the explanation that the hospital was not equipped to give the child the treatment it needed. The parents said that after the child had spent a sleepless night in their apartment they decided to force its entrance into Bellevue.

In his plea for dismissal Mr. Robinson said:

"It is only fair to state, to underscore, that no one is to blame for the lack of facilities for this infant. The responsibility for it rests solely with society, a society of which we are all a part. Perhaps the desperate act of these parents, lacking facilities for their infant and finding none available, will result in some positive good.

"It is hoped that provisions will be made so that hereafter no decent parents will ever again under similar circumstances be compelled to such extreme measures in order to secure care for their infants."

The child, suffering from a meningitis type of disease, will remain in Bellevue for the present. Its condition was reported as critical.

Housing Shortage at Greenwich, Conn.

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting an article written by Bernie Yudain which appeared in the Greenwich Time on Monday, July 18.

This is a notable and heartwarming example of the responsible functioning of the private-property free-enterprise system. These people of Greenwich, Conn., are giving an inspiring example of a generous community spirit. They are demonstrating in concrete and irrefutable terms that they appreciate that freedoms and responsibilities are inseparable.

The article follows:

THE RAMBLER
(By Bernie Yudain)

THE HOME PROVIDERS

In their own quiet way, a number of men and women in Greenwich are doing their bit to help lick the housing shortage. The Greenwich Home Providers, Inc., sparked by an indominable housewife, are in the process of getting another multiple dwelling into shape which will rent to modest or low-income families who are now residing in substandard dwellings.

Mrs. Kenneth Van Riper, the spark plug of the unique Home Providers movement, points out that a number of business houses, artisans, and volunteers are, with no fanfare or thought of recompense, contributing to the establishment of these homes.

For instance, Maher Bros. donated all the building materials needed for remodeling of the latest house acquired by the nonprofit Home Providers on Delevan Avenue. The firm delivered the gratis goods to the site, too.

Bill Hennessey, the gregarious plumbing contractor, donated materials, and his own time, for installing a new bathroom and renovating an old one.

Bob Craig at Craig Electric has given materials, and supplied labor, for wiring and lighting.

Some of the others who have pitched in with materials, labor or assistance include: Peel's Hardware Store, Belmont Fuel, Greenwich Hardware, Colman's Paint Store, D. K. Allen, Post Road Iron Works, George L. O'Brien, William Carlson, Ernest Drenckhahn, Greenwich Gas Co., New England Chimney Co., Garrish Roofing Co., Chimblo Bros., Connecticut Light & Power Co., and Joseph Tiriolo, refuse collector. In whatever way they were able, they helped put these old houses into order so that Home Providers could move in the families considered in most urgent need.

On the honor roll of workmen who have given their off-duty time to the project are: Harry O'Connor, William Lawlor, Wilfred Cameron, Peter Driscoll, Sr., Jerry Burke, Peter Driscoll, Jr., Andrew DeRosa, John Atherlay, Andrew Bridge, Andrew Scales, George Scales, Edward Wilson, Ernest Mannetti and Frank Leach.

Then of course, there's the invaluable contribution of the corporation's officers, especially Mrs. Van Riper. And the anonymous residents who have contributed money for the down payment on the houses. And others, too.

All in all, it's pretty swell. And only the beginning.

Veterans' Problems

EXTENSION OF REMARKS
OF
HON. JOHN McSWEENEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. McSWEENEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including excerpts from two letters that I have received from my friend and comrade, Gen. William L. Marlin, manager of the Veterans' Administration, Cuyahoga Building, Cleveland, Ohio. General Marlin's letters are self-explanatory and will bring to my interested colleagues and comrades very vital and worth-while suggestions.

I have had a personal pride in the fine service of General Marlin in the Veterans' Administration since World War I. He served with distinction as an officer in the Thirty-seventh Ohio Division; this division made an enviable record in the first world conflict. I was aide-de-camp to Major General Farnsworth, the commanding officer of this division, and had the pleasure of standing on the main street of Brussels in Belgium, after the Armistice in 1918, and watching the King and Queen of the Belgians head the triumphal procession which entered their capital city. At the head of a select body of troops from the Thirty-seventh Ohio Division rode, with pride and dignity, our own, then colonel, William L. Marlin. So you can see that the suggestions that he makes in his letters come from a true soldier who not only serves in time of war but carries that interest for his comrades and his country into his peacetime activities. I should like to call special attention to this phrase from the closing paragraph of his letter of July 18, 1949, which should become a slogan, "Transfer the unemployed from the pool room to the school room." Quoting from General Marlin's letter of June 29, 1949:

Many veterans returned from military service and immediately entered industry at very good pay. They have acquired seniority and would, no doubt, be recalled whenever the company increased production. If these veterans take advantage of some type of improvement training the cost would not be much greater to the Federal Government than to apply for and accept unemployment compensation. Returns, however, to the veteran, industry, and the general good of the country would be much greater.

Under the provisions of Public Law 346 the Veterans' Administration is not in a position to counsel and supervise large numbers but through the cooperation of industry and the employment service it is believed that many veterans can be directed into types of training which will be of material benefit to them upon a return to original employment. This has been brought to the attention of the educational director of the Cleveland Chamber of Commerce and, through him, to the presidents of personnel associations and training directors' associations, who appear to believe that the plan is good and well worth a trial.

I bring this to your attention as I know you are vitally interested in veterans' affairs. There seems to be a difference of opinion as to whether unemployment benefits will be continued and just what form any veterans' legislation may take in the future. Mr. Huber has introduced a bill for unemployment compensation and there are several bills pending or being considered with reference to pension and bonus. It appears to me that if Public Law 346 is properly used great benefit will result to all concerned. Here, the use of the public and private nonprofit schools are being stressed rather than the high pressuring of veterans into vocational schools where they may take a course for the purpose of securing subsistence only but not with any intent to use the course as a means of livelihood. That situation is already overdeveloped and many of the trade objectives of the profit schools have reached a saturation point. Personally, I think that in some instances if the unemployed veteran goes to school and learns to read and write it would be of great benefit to him and the country.

P. S.—I have always been interested in the men at the crossroads and intend to bring this matter to the attention of the smaller cities as well as larger ones. In Cleveland we have full facilities for services of this type but we will also endeavor to build up the service in less populated areas.

CLEVELAND, *July 18, 1949.*

Hon. JOHN McSWEENEY,
House of Representatives,
Washington, D. C.

DEAR JOHN: I have your letter of the 15th and note your request for permission to print my letter of June 29 in the CONGRESSIONAL RECORD. I did not write the letter on that basis and after reading over a copy I am not sure you would want to print all of it, but you have my permission to use it in any way you desire. Thanks very much for your interest in the matter and your very kind suggestion.

Incidentally, the committee had a meeting today at which time it approved the copy for a small pamphlet which is to be distributed through various sources to unemployed veterans. Funds have been donated to provide for 50,000 copies which should pretty well blanket Cuyahoga County. The pamphlet will be available in about 2 weeks and it is expected that the movement will be under way about August 1, 1949. The committee includes members from the schools, industry, labor, employment service, ex-service organizations and the Urban League.

I have suggested to the committee that the welfare of the community can be advanced by transferring unemployed veterans "from the pool room to the school room."

Kindest regards and good wishes.

Sincerely,

WM. L. MARLIN.

Out at Second

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. LANE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor of July 20, 1949:

OUT AT SECOND

We don't know whether the national pastime or a college education taught Jackie Robinson how to do it. But nothing could be better calculated to deflate Paul Robeson's Red-tinged fearsomeness into proper perspective than his fellow Negro's comment on it. Of the famous singer's assertion that the Negro American wouldn't fight in a war against Russia, Brooklyn's famous second baseman observes:

"The statement, if Mr. Robeson actually made it, sounds very silly to me. But he has a right to his personal views, and if he wants to sound silly when he expresses them in public, that is his business."

There is essential power and sanity in the whole of Jackie Robinson's statement—made despite his reluctance to risk being muddied by the political waters which swirl around the House Committee on Un-American Activities, and because of what he guesses boils down to a sense of responsibility.

It carries power because it puts in forthright language what every sane American, of whatever color, must know:

That in the event of such a war the Negro Communist would act just like any other native Communist; that the Negro pacifist would act just like any other pacifist; and that the average Negro would behave just like any other average American—try to keep his country out of war, then help his country win the war.

It carries power because Jackie Robinson says out loud what any other self-respecting American expects any self-respecting Negro American to feel: That because he is willing to fight communism on the battlefield doesn't mean that he won't keep on fighting racial discrimination at home.

"The more a Negro hates communism because it opposes democracy, the more he is going to hate any other influence that kills off democracy in this country."

Straight-talking, clear-eyed eloquence which, coming from an expert on being a colored American, should make about as admirable a contribution to better race relations as anything that has happened in a long time.

Federal Excise Taxes Are Rough Locks on American Prosperity

EXTENSION OF REMARKS
OF

HON. ARTHUR G. KLEIN
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. KLEIN. Mr. Speaker, it is my settled opinion that Federal excise taxes are rough locks on American prosperity and, of all business hazards, at this time, constitute the gravest threat to the industries affected by them.

Excise taxes, sales taxes, consumer taxes of all kinds, by whatever names they are known, are unfair and discriminatory taxes which have no place in the American fiscal structure in peacetime, and in wartime only have a claim to serious consideration as brakes on inflation and diversion of manpower and materials.

When we are caught in an inflationary spiral, excise (or other sales taxes) taxes accelerate the speed of the inflation; and when the crest is reached they operate in the opposite direction to hasten the downward cycle.

EXCISE TAXES FOR REVENUE ABANDONED

With the adoption of the Sixteenth amendment to the Constitution we abandoned the principle of Federal excise taxes for revenue except for needed social and governmental controls over narcotics and intoxicants.

By adoption of that amendment the people of the United States dedicated themselves to the principle of the graduated personal and corporate income tax—and again, in my view, this is the fairest and most equitable tax yet devised for the support of the vast governmental activities demanded by the people.

The income tax falls with greatest burden on those best able to pay.

The excise tax, by whatever euphemism it is called, falls with greatest weight on those least able to bear it.

The income tax is proportioned to the individual according to his ability to help support the Government which insures him maximum standards of living; the excise tax—a tax on consumption—is the very opposite in its principle.

EXCISES HURT BUSINESS

Ever since adoption of the sixteenth amendment there has been a constant effort by the wealthy, unwilling to bear their just share of the public expense, to return the burden of taxation to the bowed shoulders of those of small and uncertain income.

In the strain of the Hoover depression this Congress took a backward step, even in the midst of progressive reforms, by resorting to Federal excise taxes as emergency measures. Numerous States took the same backward step by adopting sales taxes, and history shows that, once adopted, the sales tax is difficult to get rid of, for it is supported by vested interests with concentrated power, and opposed only by the unorganized consumers and retailers. In New York the sales tax was adopted as an emergency source of relief revenue, and remains as a shackle on local business.

Inescapably, Federal excise taxes hurt business.

Since our present wide system of Federal excise taxes were justified, after the passing of the national emergency of depression into the national emergency of near war and war, by the argument that the taxes would discourage inflationary pressure and would help conserve manpower and materials, it fell on many industries which had a luxury tinge in total war.

WARTIME EMERGENCY PASSED

The wartime emergency is passed but the excise taxes linger on.

The list of articles subject to tax is long and varied.

Americans pay taxes to travel, they pay taxes to use the telephone or telegraph. They pay taxes on their luggage. There are Federal taxes on jewelry, women's handbags, cosmetics, fur coats, and amusements.

Obviously, every industry picked out as a target for this kind of tax is placed at a competitive disadvantage with untaxed industries.

Where something approaching a monopoly exists in a given field, the discrimination is lessened; but in such industries as furs, jewelry, cosmetics, and luggage, where the firms are small and varied and highly competitive, thousands of small businesses are fighting for their very lives.

PARTY PLATFORM PLEDGED AGAINST SALES TAX

The 1948 platform of the National Democratic platform has an unequivocal pledge against the Republican scheme for a national sales tax.

The Democratic platform adopted at Philadelphia says:

"We shall endeavor to remove tax inequities and to continue to reduce the public debt.

"We are opposed to the imposition of a general Federal sales tax."

This Democratic Congress owes it to the people to start carying out the mandate of that platform by repealing the Federal excise taxes that rough lock small business.

FUR INDUSTRY SUFFERS MOST

Mr. Speaker, the fur industry is being prostrated by the Federal excise tax on furs and fur coats.

The processing and sale of furs is centered in New York City; but the blight spreads to the swamps and bayous of the Southland, to the mountains of the West, and to the Arctic regions. It brings hunger to little people in the wilds of central Asia and depresses business in South America.

The processing of furs alone absorbs the labor of 100,000 Americans, most of whom live in New York City and its vicinity; and probably a majority of these workers live in my own congressional district on the lower east side of Manhattan.

They pray for relief.

But they are not alone.

This is a problem in which labor and management, producers and retailers, clerks, salesmen, and bookkeepers, join with unanimity—and, of course, this unanimity exists equally in the jewelry trade, the cosmetic and pharmaceutical businesses, the luggage and handbag industry, in the telegraph and telephone companies, the theatrical world, and wherever this heavy-handed discriminatory tax threatens depression and bankruptcy.

CRISIS EXISTS NOW

The summer is normally the peak season in the fur industry and full employment might be expected at the present time. In actuality, however, in this summer of 1949, one-third of the fur workers ordinarily employed in fur processing and manufacture have no work at all; one-third are working part time; and only one-third are working full time.

The businessmen face bankruptcy at worst and heavy loss at best.

The continued imposition of the 20-percent excise tax, and the adverse effect of the peculiar loopholes found in this part of the law, are undoubtedly the most substantial factors in this unprecedentedly severe unemployment crisis.

But the impact is more far reaching.

The excise tax is uneconomic. It destroys other sources of revenue, and, in addition, imposes burdens on the Government which may well be greater in cost than the revenue derived from the excises.

The difficulty of administering the tax—which is particularly flagrant in the fur industry—makes it administratively inexpedient.

AN INDUSTRY OF SMALL ENTERPRISES

From the raw fur to the retailer, the fur industry is one of small enterprises.

The capture of the raising in captivity of fur animals is an important source of income to hundreds of thousands of farmers and ranchers, or to professional trappers and fur raisers, all of whom have income and resources well below the national average.

More than 5,000 firms are engaged in dressing, dyeing, fabricating, and selling fur garments. A typical fur manufacturing plant employs only 10 persons; and the average employment in other branches of the industry will not vary greatly from that figure.

The effect of the excise tax on furs is to stifle a large number of highly competitive small businesses least able to withstand the current stagnation in sales—estimated to be a reduction of 30 percent below the peak.

TAX SELF-DESTRUCTIVE

The self-destructive nature of the tax and its harmful effect are demonstrated by the revenue figures themselves. They show a drop in fur excise tax receipts from $97,000,000 for the 1947 fiscal year to $79,000,000 for the 1948 fiscal year. Receipts for the fiscal year 1949 are even more drastically cut, being $53,000,000 for the first 9 months (complete figures are unavailable). Since the three unreported months are the spring months when virtually no business is done, the $53,000,000 figure probably closely approxmates the total. These figures in turn reflect a loss of $90,000,000 in business for the 1948 fiscal year and $120,000,000 for the 1949 fiscal year.

The effects of this drop are particularly tragic insofar as the labor force of

the industry is concerned. Workers in the fur industry require a high degree of specialized skill developed over many years of training and experience. Most of the workers in the industry are of middle age or over. The great skills acquired in this trade are not transferrable to other work. Consequently, lack of work in the industry for these workers means unemployment for them in this or any other industry.

The burden of maintaining these workers on unemployment insurance and, increasingly, on relief and dole allowances, will shortly, if not already, consume a substantial part of the revenue from this tax and, if the present decline in sales continues, soon exceed it.

INTOLERABLE BURDEN ON CONSUMERS

I have said, Mr. Speaker, that in my view any sales tax, by any name, bears most heavily on those least able to carry the burden.

This is borne out strikingly by the discriminatory and pernicious effect of the excise tax on furs, which has created its greatest havoc in the low-priced and medium-priced garments.

These are the garments which are purchased by working women and the wives of working men, whose incomes are small and who must be efficient and economical in their purchases.

In the northern part of the United States fur coats and accessories are not luxuries but are the most economical outer garments.

They give protection against cold which cannot be provided by any other material of common use, and they last for many seasons.

FURS ARE ONLY GARMENTS TAXED

The tax on furs is the only tax on articles of clothing. This discrimination has lent itself to allowing manufacturers of cloth coats, and particularly fur-trimmed cloth coats, no longer to fear the competition of the fur coat. They are thus able to take advantage of consumer resistance to a 20-percent tax by overpricing their products to take advantage of the 20-percent differential which the tax imposes. Unquestionably, if fur coats could meet free competition in the garment market, the effect would be to lower for the consumer the price on cloth coats and fur-trimmed coats.

This competition is especially unfair in the light of the figures which establish that the vast bulk of the fur garments produced are made of rabbit fur, mouton, and other inexpensive materials to retail at prices which compete with the cost of cloth coats. Such garments are usually purchased by working people. It is precisely this section of the fur industry which has suffered an almost complete collapse due largely to the 20-percent tax. The customer who is able to purchase a fur coat for several thousand dollars does not offer as much resistance to the excise tax as the consumer who can spend only a modest sum. Yet, the best present estimate of sales in the industry discloses that in excess of 60 percent of the units made and sold are sold at $300 or less.

Considering the long life of a fur garment, which averages between 6 and 10 years, such garments are by no means luxuries, but necessities, in the long run more economic than the shorter-lived wool garment. Yet, under the present tax law, a $200 cloth coat with fur trimming is tax free, while a fur coat at a cost of $100 is subject to the 20-percent-tax burden.

REPEAL OF EXCISES URGENT

Mr. Speaker, I want to repeat and underscore that I am opposed to excise taxes in principle and favor repeal of all Federal excise taxes, with complete reliance on income taxes for the great bulk of Federal revenues.

But I wish to urge upon you the dire consequences of the excise taxes in basic industries catering to consumer necessities.

In accord with the principles I advocate, it is just as important to repeal the excise tax on theater admissions as it is to take the tax off fur coats; it is just as important to free railroad transportation from Federal excise as to deliver the luggage and leather-goods industries from its burdens.

As a matter of practical politics and national interest, however, it is, quite obviously, more difficult to plead the same urgency about the taxes on articles of general consumption which fall into the categories of luxuries.

There can be no question of the basic necessity of furs, luggage, and pocketbooks in our contemporary stage of culture.

My secretary regards her lipstick, her compact, and her cologne as necessities, and she resents paying a Federal tax on them; but I can recognize that to many of my colleagues this argument seems frivolous, even though I agree with my secretary.

There is no frivolity about furs and leather goods.

These are necessities which come only after shelter and food in the budget of every American family; indeed, in a broader sense they are a part of the shelter item of the household budget, and on an equal footing with shoes, dresses, suits.

Yet this Congress is literally destroying these industries by its procrastination in carrying out the pledges of the party platform.

The annual season of summer sales is only a matter of days away.

The small business units in these industries have little or no resources to withstand the disastrous results of small sales in this season. Their resources already are strained; last January we saw the unheard-of spectacle of full page retail advertising of fur sales at the peak of the season.

Two basic industries are being jeopardized.

Mr. Speaker, I urge you and the leaders of the Congress, and our national leadership, to take a decisive stand, to help bring to the floor swiftly, a repealer of the burdensome taxes on fur and leather goods, at once.

RIDERS NOT GOOD LEGISLATIVE PRACTICE

It is my view that the attaching of irrelevant riders to substantive legislation is a device of doubtful legislative sagacity; and I hope that I shall not be forced to decide if I must vote to adopt H. R. 2905 as it stands now before another House.

But, Mr. Speaker, my people are so desperate, the fur and leather industries are so desperate, that I greatly fear that I shall have no choice when and if the time comes. I shall be constrained to vote for that bill, no matter how much I disapprove of the device used; and I think that other members are going to feel the same way.

This is not an orderly method of legislation, and it is my sincere hope that the legislative committee having jurisdiction will agree to report an emergency repealer on these two excise taxes at once, and will then move rapidly toward the elimination of the remaining excises early in the next session.

Federal Housing Law

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Buffalo Evening News of July 18, 1949:

INVITATION TO HOUSING—R. S. V. P.

Now that the Federal housing bill has been signed into law and there is no longer any point in calamity howling against it, this would be a fine time for real-estate men, builders, bankers, and others who have fought the bill from the beginning to settle down and calmly reread it.

Viewed rationally and not emotionally, the law has a lot of interesting possibilities for the very people who have opposed it most steadfastly. This is so because the fundamental aim is to encourage private enterprise and local communities to take on the lion's share of the slum-clearance task. Though the fight waxed hottest on the issue of public housing, this long-term national-housing policy makes public housing strictly secondary. It is there only for that part of the market on which private industry defaults or which, for elementary economic reasons, it cannot serve unaided.

The real worth of this new Federal program lies in its slum-clearance and urban-redevelopment sections. Public housing was included as a necessary part of the whole. The reason the public heard of little else during the long campaign for this legislation is that extremists on both sides made this their principal battleground. The militant public housers were continually reaching out for more, while the much-maligned real-estate lobby fought the whole idea with tooth and claw. As a result, the casual spectator might have gathered that there was nothing in this bill other than a program for providing federally built houses for the masses.

Actually, the emphasis in this law is the reverse—and public housing will now be maximized or minimized depending on what private industry and local communities are able to do to abate the need for it. The policy of the law is clearly stated in the preamble: "(1) private enterprise shall be encouraged to serve as large a part of the total

need as it can; (2) governmental assistance shall be utilized where feasible to enable private enterprise to serve more of the total need; (3) appropriate local public bodies shall be encouraged * * * to undertake positive programs of encouraging and assisting the development of well-planned, integrated residential neighborhoods, etc. * * *; and (4) governmental assistance to clear slums, to facilitate community development and redevelopment, and to provide adequate housing for * * * families with incomes so low that they are not being decently housed * * * shall be extended to those localities which estimate their own needs and demonstrate that these needs are not being met through reliance solely upon private enterprise."

It is to that slum clearance section particularly that Buffalo civic, industrial, and financial leaders should look for ways to combine individual effort, community action and Federal assistance in a broad, imaginative program for the redevelopment of our worst-blighted residential districts. This is a job it behooves the city administration to tackle with zest. But even more it is a challenge to those very private interests that have been the most implacable foes of public housing. With Uncle Sam definitely committed to this program, the surest way for the building industry's fears of socialization to come true would be for it to default on redevelopment, thereby leaving it to the eager public housers. Right now, the field is vast and beckoning. But the invitation contains an urgent R. S. V. P.

Letter of Commendation

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONKLIN, N. Y., *July 6, 1949.*

Hon. EDWIN A. HALL,
House of Representatives,
Washington, D. C.

SIR: This is a letter of thanks, appreciation, and commendation.

I thank you for the sincere and heartening letter you wrote me when my husband was in the OSS in 1945.

I appreciate the books on child care you sent me when my children were born.

I commend you for your promptness, thoroughness, and above all, your kindness.

There must be thousands of people in this community who have been viewing with increasing distaste the smear publicity which has been accorded you lately by the Gannett papers. It is only serving to make you new friends and is strengthening the regard of those who have been your friends from the start.

From Ye Olde Binghamton Press, I see that you are considering running for mayor. Well, if you do, I am sure you will win that easily. That job has needed a good expediter for a long time.

Because I feel that your earnest efforts in behalf of people like myself cannot be measured, the most I can say is, you may count on me. If you ever need help on this end, call me and I shall be glad to serve you promptly, thoroughly, and gratis.

Respectfully submitted.

Mrs. A. L.

Further Probe Needed of Commodity Credit Corporation's Multi-Million-Dollar Accounts Discrepancies

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. BOGGS of Delaware. Mr. Speaker, more than 3 months ago, I directed the attention of the Members of this House to the multi-million-dollar discrepancies in the accounts of the Commodity Credit Corporation, disclosed by the distinguished senior Senator from Delaware [Mr. WILLIAMS].

As a part of my present remarks, I include an article by the able columnist, Herman A. Lowe, which appeared in the Philadelphia Inquirer on June 1, 1949.

This fine article presents some startling information. It also shows what a splendid service has been rendered to the people of this Nation by Senator WILLIAMS in bringing to the public's attention some of the facts concerning the Commodity Credit Corporation's missing $366,643,129. Furthermore, it serves to emphasize the fact that extreme care should be exercised in delegating any additional authority to the Secretary of Agriculture.

Mr. Lowe's splendid article discussing this serious matter follows:

MISSING MILLIONS—NEW INVESTIGATIONS HINTED IN UNITED STATES AGENCY SHORTAGES

(By Herman A. Lowe)

WASHINGTON, May 31.—With a Senate committee finally preparing to probe the Commodity Credit Corporation's missing $366,643,129, there are rumblings here that the books of still other corporations are far out of "kilter."

It is quietly claimed, for example, that an amount far greater than the CCC's $366,000,000 cannot be accounted for in the records of the Reconstruction Finance Corporation. The General Accounting Office, the Government's own official accountant, which has been unable to balance and bring up to date the snarled books of CCC, is understood to be finding equal difficulty in trying to unravel the records of other agencies.

Not much is being said of the other corporations at this time. However, if and when the CCC mess from July 1, 1942, to June 30, 1945, is ever clarified, several Members of Congress are waiting to take the lid off the story of unaccounted-for millions in other Government corporations.

Meanwhile, Senator JOHN J. WILLIAMS, of Delaware, who forced the inquiry into the Commodity Credit records, has come forward with more specific charges than he made originally. He now declares flatly that some of the missing $366,000,000 is attributable to either dishonest or careless dealings with private traders and operators. He denies that the missing $366,000,000 is merely the result of lost or destroyed records of transfers of commodities from one Government agency to another during the war, as alleged by Secretary of Agriculture Charles F. Brannan.

How much of the $366,000,000 of taxpayer's money was lost as a result of these private deals will probably never be known. The missing records conceal that.

And whether two former convicted embezzlers, later hired by CCC to serve in responsible positions during part of the period, had anything to do with the losses, is likewise not known thus far to Congress.

When Senator WILLIAMS recently uncovered the scandal of the unaccounted-for $366,000,000 Secretary Brannan promptly came back with a statement that: "These wartime operations were the subject of an extensive investigation by a House committee (in 1945) under the leadership of Judge Tarver (Representative Malcolm C. Tarver, of Georgia). * * * All questions of fraud or loss to the Government were fully explored and the committee fully satisfied that there was no evidence of either."

Senator WILLIAMS broke the back of that whitewash last week by laying before the Senate the report of the Tarver committee, which expressed anything but approval of the wartime operations of CCC—called the War Food Administration from 1943 through 1945.

The Tarver committee found:

1. CCC (or War Food Administration) sold as surplus to private dealers commodities it did not have and that it then had to go out into the open market and purchase these commodities at more than it was selling them for.

2. "Dereliction of duty" on the part of some officials and employees.

3. The agency's own records were in such poor condition (whether deliberately or carelessly) that it accepted the word of private merchants on transactions, even where such records as were in its files showed entirely different information.

4. CCC (War Food Administration) gave deliberately false information to Congress to cover up its own blunders.

Here are some direct quotes from the report which Secretary Brannan sought to use as proof that the missing $366,00,000 is only the result of bookkeeping transactions and that no money was lost for the taxpayers:

"We are of the opinion that inefficiency and dereliction of duty have occurred on the part of some of the officials and employees of the War Food Administration (now CCC) and that such derelictions are clearly indicated by the record of the hearings."

"There has been no reconciliation of the inventories submitted monthly by the various warehouses with the records of the WFA and that storage and service charges are being paid solely upon the word of the warehousemen that such storage and service charges are due and accurate, without checking against any storage records of the WFA.

"With respect to the sale of commodities to individuals and corporations, in some instances final settlement for the transaction is based upon the quantities which the purchaser states that he has received. Instances have been brought to the attention of the committee where the amount stated by the purchaser disagrees with the amount reflected by the inventory records of the WFA, and the final settlement has been made based upon the quantities reported by the purchaser."

H. R. 5602, Authorizing the Secretary of State To Provide for the Relief of Chinese Students in the United States

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 20, 1949

Mr. JAVITS. Mr. Speaker, ever since the United States authorized the moneys promised by China as a result of the Boxer Rebellion in the last century to be

used for educational purposes, there has been a steady stream of students from China coming to this country to study and bringing back to China with them the American concepts of democracy. The Committee on Foreign Affairs of the House, in order to preserve this cultural link of long standing under present exigencies which prevent many students from getting support from home, has approved bills making available $4,000,000 of ECA funds to selected Chinese students. Appended hereto is a letter from Dr. Clarence Linton, president of the National Association of Foreign Student Advisers and adviser to students from other lands at Teachers College, Columbia University, on this subject:

THE NATIONAL ASSOCIATION OF FOREIGN STUDENT ADVISERS,
New York, N. Y., July 19, 1949.

Hon. J. K. JAVITS,
Member of Congress,
House of Representatives Office Building, Washington, D. C.

DEAR CONGRESSMAN JAVITS: Thank you very much for your recent letter reporting the favorable action of the Committee on Foreign Affairs on the bills to make $4,000,000 available to selected Chinese students.

I am very hopeful that favorable action by both houses of Congress will be possible this session. Many worthy students are completely without funds either to continue their studies or to return to China.

Sincerely yours,

CLARENCE LINTON,
President, National Association of Foreign Student Advisers.

The Brannan Plan

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the resolution passed by the Eastern Federation of Feed Merchants at their annual convention held at the Hotel Commodore in New York City on June 21 this year.

Manufacturers and retailers of livestock feeds, with business operations scattered over 11 Northeastern States, who constitute the membership of the organization, are naturally interested in the welfare and prosperity of the farmers. When farmers are prosperous, the feed merchants are prosperous. The Brannan plan unquestionably will lower farm-production efficiency. Balancing of supply and demand by competition free from Government subsidies is the only practical stabilizing process.

The resolution follows:

Whereas the Eighty-first Congress of the United States is now considering legislation embodying the so-called Brannan Farm plan which proposes a Government-guaranteed income for agriculture; and

Whereas in the opinion of the members of the Eastern Federation of Feed Merchants, Inc., said Brannan farm plan is not in the best interests of either farmers or consumers because it is unsound economically; and

Whereas to implement said Brannan farm plan, agriculture would be regimented and controlled by government bureaucracy to its detriment and its loss of freedom of management and operation; and

Whereas the cost of implementing said Brannan farm plan threatens the solvency of our Government because of its costly implications; and

Whereas Congress is at this time being particularly urged to try the operation of said Brannan farm plan on a few specific agricultural commodities, particularly on hogs; and

Whereas the said Brannan farm plan in general and particularly its proposed trial run on hogs is outstandingly dangerous for the welfare of northeastern agriculture: Now, therefore, be it

Resolved, That the federation, now in annual convention, go on record in vigorous opposition to the adoption of said Brannan farm plan by Congress in any form whatsoever; and be it further

Resolved, That the said federation go on record in accord and support of the position recently taken by the New York State Conference Board of Farm Organizations in reference to said Brannan farm plan, to wit:

"1. The Brannan plan proposes to center complete control of production, marketing, and prices in the hands of a Government agency.

"2. It is developing with frankly political implications which will leave the welfare of farm peope subject to the whims of a bureaucracy and dependent upon congressional appropriations.

"3. It will stop the long-time trend toward greater efficiency in farm production, a trend which is in the interest of consumers as well as producers.

"4. It would be, under most conditions, a consumer subsidy paid by taxpayers in the name of farm relief"; and be it further

Resolved, That a copy of this resolution with an accompanying letter outlining the background reasons upon which it is adopted, be dispatched to each of the Congressmen representing districts in the 11 Northeastern States in which the federation has its membership and urging each of said Congressmen to support the position of said federation as outlined in said resolution.

Wisconsin Has 2,250 Dairy Plants

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks, I submit the following article appearing on July 14, 1949, in the Colby Phonograph, of Colby, Wis., a fine newspaper in my congressional district:

WISCONSIN HAS 2,250 DAIRY PLANTS

There are now 2,250 dairy plants operating in the State of Wisconsin, according to a report compiled July 1, by the dairy division of the State Department of Agriculture.

The plants produce about a dozen different types of manufactured dairy products.

Cheese factories are more numerous than any other type of dairy plant, with a total of 1,313, the report reveals. Ice-cream plants and milk distributors rank second and third in number.

Following is a tabulated report of the number of plants now operating in the State:

Butter factories	316
Cheese factories	1,313
Receiving stations	353
Condenseries	101
Powdering plants	127
Ice-cream plants and counter freezers	620
Milk distributors	15
Process plants	15
Cheese food compounds	5
Cottage cheese manufacturers	175
Cooked cheese manufacturers	1
Concentrated whey manufacturers	11
Canned cream	1
Total	2,250

Wisconsin's agricultural economy, as this article indicates, is very much of a livestock economy—85 to 90 percent of the farm income is derived from livestock and livestock products, and about 50 percent of this farm income is derived from milk. When one realizes that Wisconsin milk prices in 1948 were more than 50 percent higher than the present prices, it is quite evident that the economy of the State is seriously affected. The present cheese price of 27 cents per pound is a rather sudden drop from the 45 cents per pound price enjoyed in 1948.

Certain forces, like the CIO, for instance, who were trying to pass the oleo bill, were evidently willing to make thousands of dairy employees lose their jobs. Wisconsin alone produces one-eighth of the milk produced in the United States, and combined with Iowa and Minnesota the production is one-fourth of the total in the United States.

We now witness cheese selling for 5 cents per pound below the legal lawful support price, and milk being sold to the evaporating plants for 50 cents per hundredweight below the support price set up by law. The welfare of 2,250 dairy plants and thousands of employees in the dairy industry stands in jeopardy because the provisions of the support law are not being carried out at this time. We are entitled to more performance of the support law and less deceiving promises.

An Answer, Including a Lesson in Law

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. MULTER. Mr. Speaker, on July 18, 1949, I was granted a special order for July 19, 1949, which I intended to use for the purpose of answering the unfair and unwarranted attack made by the gentleman from Wisconsin [Mr. KEEFE] upon United States District Court Judge Samuel H. Kaufman. Unfortunately, the death of Supreme Court Justice Frank Murphy intervened, necessitating the postponement thereof.

The gentleman from Wisconsin laboriously demonstrated that no Member of this House, on or off the floor, should attempt to review the rulings of a trial court, and that it was in exceedingly

bad taste for any Member to review the evidence while the defendant Hiss is still subject to being retried.

Intent upon proving the judge's unfitness, he set himself up as a grand jury and indicted Judge Kaufman. Then, under the role of judge and petty jury he presented his proof, most of it hearsay, little of it of probative value, and immediately proceeded without further deliberation to find the defendant Hiss and Judge Kaufman both guilty as charged.

The distinguished gentleman from Wisconsin prides himself on being a trial lawyer of vast experience. I daresay that if a lawyer came into a court of law and made the charges he made and failed so miserably to sustain them with legally admissible evidence of probative value he would be severely censured if not held in contempt.

It is unfortunate that so many Members of this House take the privilege to address it on matters not before it, as a license to take unto themselves immunity from criminal libel prosecution and from liability for damages.

The gentleman in question correctly stated the rule that Congress has no right to review a judge's rulings and then he proceeded to attack each of the rulings he did not like. I mean just that. By his own statement, he is too good a lawyer not to know that Judge Kaufman's rulings were legally correct except in one instance where he ruled against the defense and in favor of the prosecution.

I will discuss each of those rulings seriatim, in a moment.

The gentleman very carefully pointed out the correct ruling of law that a congressional inquiry must be limited and I quote him, "solely to any allegations of misconduct on the part of the trial judge." To keep within that salutary rule, the gentleman then launched into a tirade about the judge's background and antecedents, all of which had been considered by the Senate before it confirmed Judge Kaufman's nomination long before this trial.

Few laymen know and many less understand the principle of law oft referred to as res judicata. It means the matter has been adjudicated. No doubt some lawyers, even experienced ones, have never learned it or its application, despite the fact that it is found in every system of law, including both the Roman and the Anglican. It applies even in impeachment trials. Matters once finally adjudicated are not subject to further review or to new trial.

The reference to the trial judge's activities as a lawyer before he became a judge, like the inadvertent reference to the firm made up of his former law partners as "his law firm" were unworthy of any advocate and even more to be condemned when, uttered at a time and a place which permitted no answer by the accused.

Those are the tactics which caused the activities of a committee of the Eightieth Congress to be labeled "un-American."

The reference to political contributions by persons other than the judge after his appointment were just as invidious. The gentleman's statement about there being no record in New York of political contributions is just as incorrect as most of what he said. I suggest he spend some time reading the New York State election and penal laws. Possibly before he reads that he should study the law of evidence and learn that in American courts we do not prove a man guilty of a crime by showing his past conduct.

The worst offense a prosecutor can commit in New York State is to attempt during the presentation of his direct case to show that the defendant had been charged with or even convicted of other crimes.

Now I do not pretend to know the law of every State in the Union, nor the procedure of every Federal jurisdiction. I do know it differs very radically in many respects in many States. That is the principal reason for the rule that a lawyer must be separately admitted to practice in each Federal and circuit court. I do claim to know the law and the rules of evidence as applied in New York State and in the Federal courts there. Not by way of boasting but merely to demonstrate the accuracy of my statement, let me say that I devoted 25 years to specializing in trial and appellate court work, a very substantial part of it being referred to me by other lawyers.

With that background, I now intend to take apart, in a lawyerlike way, each of the appellate rulings made by the distinguished lawyer from Wisconsin as he reviewed the New York Federal Court's decisions and rulings.

ASSIGNMENT OF THE CASE FOR TRIAL

The assignment of the case for trial to Judge Kaufman was neither unusual nor irregular. I do not know and care less about how many adjournments of the trial were had before it reached Judge Kaufman. Certainly no one can charge that he had anything to do with any of that. Our Wisconsin friend approvingly says that attorneys seek to have their cases heard by a favorable judge. That goes for the prosecuting attorneys as well as the defense attorneys with one very important limitation. In New York the defense attorney never has an opportunity to pick a judge to his own liking. The prosecuting attorney always has. Anytime the prosecutor does not like the judge he asks and gets an adjournment for any one of a number of reasons. If he does not like a particular judge or group of judges he can usually get another judge assigned.

With the summer vacations long since assigned and fast approaching, I am certain that very few of the New York judges would have undertaken the assignment to the trial of this case, which everyone knew would be protracted and trying.

PICKING THE JURY

The Federal court rule was changed some time ago so as to eliminate the criticism leveled at the manner in which lawyers conducted the impaneling of juries. It is now the exceptional case in which lawyers query prospective jurors in the Federal courts in New York.

What Judge Kaufman did in impaneling this jury is accepted and proper procedure known to every lawyer practicing there.

To say that the presiding judge limited counsel to the exercise of peremptory challenges is to fly in the face of the record. Both sides were given every opportunity to submit to the court proposed questions to be asked of the prospective jurors and counsel had every opportunity to make a record on which to base challenges for cause and to make such challenges.

I have no doubt that our friends now throwing the brickbats would be just as vehement if the trial judge had allowed any longer time to be consumed in picking the jury. No matter what this judge would have done would be subject to their condemnation.

THE OPENING STATEMENTS

Because a Wisconsin lawyer does not like a New York lawyer's opening statement is no ground for criticizing the court. I am sure our friend would be just as fascinated as most people are listening to Mr. Stryker. The Wisconsin gentleman's statement that he was never permitted to sum up in an opening to a jury indicates he has tried to. A perusal of the defense opening shows that no matter how dramatic, it was an outline of what the defense intended to prove. At least four jurors believed the defense proved that Chambers was "the thief, liar, blasphemer and moral leper" as painted in the opening statement.

THE ADMISSION AND EXCLUSION OF EVIDENCE

It is impossible to give here a complete lecture on the law of evidence and keep within any reasonable limits. I must, however, point out some very important though much misunderstood principles.

Neither side may impeach or attempt to destroy the credibility of its own witnesses. A lawyer may do nothing to impugn the credibility of his own witness by showing he is unworthy of belief or that he is hostile, biased or prejudiced. As a part of the prosecution, the prosecutor may not offer such proof about the defendant or the witnesses he may call. A defendant's credibility is never an issue in a criminal case unless and until he offers himself as a witness. Guilt must be proved in American courts beyond a reasonable doubt. It cannot be pinned on a defendant by proof of association with criminals or persons of ill repute. Although proof may be circumstantial it must relate to the crime and not merely create an inference from which one might draw another inference.

Collateral matter adduced from a witness may not be contradicted. Even a defendant called as a witness in his own defense on cross-examination may be made a prosecution witness as to such collateral matters thus binding the prosecution by the answer and precluding the right of the prosecutor to offer proof to the contrary.

Confusing as all of this is to most people it should be obvious that, if in a case charging the simple crime of perjury about the alleged delivery of documents, unless this rule was adhered to the court and jury would soon be trying a dozen different people for as many different crimes.

It must also be borne in mind, that in every criminal case greater latitude must be given the defense in the presentation of its case. The reason for that is also little known by laymen.

In the event of a conviction, the defendant has an absolute right of appeal.

In the event of an acquittal, the Government has absolutely no right of appeal. It is therefore of the utmost importance that defense counsel have a record which will present his points that he may seek to review.

Government counsel have no such problem. If an offer of proof is made and rejected it cannot be reviewed, so that it matters not if the record is incomplete on that score.

The defense must not only make the offer of proof but it must be technically correct in form and in substance or the appellate court may refuse to review it.

THE PSYCHIATRIST

The foregoing makes clear the necessity for the course followed by the judge in allowing a question to be addressed to the defense witness, Dr. Binger, knowing in advance that the witness would not be permitted to answer.

The only proper way for the defendant to "make his record" was to call the witness. First, defendant had to prove the witness, Dr. Binger, was qualified to testify. Secondly, defense counsel was required to include in his question every material fact adduced at the trial. No matter how qualified the doctor was proven to be, no matter how much he knew about the defendant, unless every material fact was made a part of the question, the court would have refused to permit him to testify.

In reviewing that point an appellate court would have to resolve both those questions in favor of the defendant before coming to the vital question of whether the physician should be permitted to testify about Chambers' sanity. As to that question I believe the court erred in favor of the prosecution and against the defense.

One of the leading treatises on the subject is Richardson on Evidence. The rule is there laid down as follows:

After a witness has been sworn, evidence as to his mental condition may be received for the purpose of affecting his credibility. The extent to which such an inquiry may go is largely in the discretion of the trial court, but in cases where it appears that, in the interests of truth and justice, such inquiry is necessary, it is error to exclude all evidence which is offered for the purpose of attacking the sanity of the witness.

THE JUDGE'S DEMEANOR

In the Federal courts a trial judge—even in a criminal case—has the right—and many times the duty—to give his opinion of the evidence. The only restriction on that is that the jurors must be advised that they are the ones who must determine the facts—and that the judge's opinion is only for their guidance. If Judge Kaufman had been biased in favor of either the prosecution or defense, he could have, with propriety and without being subject to censure, indicated his feelings in his charge to the jury. I believe that he carefully indicated to the jury what the law was in the case, and I do not believe he undertook to influence the jury either way.

THE SUPREME COURT JUSTICES

I cannot recall a single instance where a judge did not act exactly as Judge Kaufman did when his court was graced with distinguished public figures. There was absolutely no impropriety in his action in greeting them, and I do not believe it had the slightest effect on the jury. Knowing the defendant as well as they did, it is obvious that Justices Frankfurter and Reed would feel called upon to disqualify themselves in the event the case ever reaches the Supreme Court. They had the same right to testify that any American has. I believe it was their duty to testify.

There is some talk about changing the law to prohibit such testimony in the future.

I have no doubt that any such law is unconstitutional. No legislature has the right to deprive any defendant of a full and fair trial at which he may submit every last bit of evidence available to him.

TECHNICAL RULINGS

The exclusion of the Government's testimony sought to be offered through Mrs. Massing was in every respect proper. It was purely collateral and had no bearing upon the crime charged. Even a police court judge knows that it is his duty to exclude evidence upon collateral issues that do not relate to the specific charge. Alger Hiss was being tried on perjury charges—and on perjury charges alone. Even if he was guilty of treason—and I do not in any way intimate that he was—he was not on trial on that charge. Therefore, any evidence that did not relate specifically to the charges in the indictment should not have been admitted.

As Prosecutor Murphy himself pointed out in his opening, the issue was: Did Chambers tell the truth—or did Hiss tell the truth? Rulings on evidence are highly technical. But they have become part of our trial law as a result of hundreds of years of experience, and no one—least of all a member of a legislative body—has the right to ask that technicalities be waived unless and until that procedure is changed by law.

THE GRAND JURY MINUTES

Grand jury records are usually secret. But there are exceptions even to that rule. The law requires that the grand jury minutes be made available to the defendant when it can be demonstrated that a witness made one statement before the grand jury and conflicting statements elsewhere. In this case, Judge Kaufman was entirely within his rights in ruling that the defense could look at some of the minutes. In fact, if he had not permitted the defense to have access to them, he would have committed reversable error—requiring a new trial—in the event there had been a conviction.

SHOULD THE FOREMAN HAVE BEEN DISQUALIFIED?

Probably most unfair of all the charges is the one that the court should have disqualified the foreman of the jury in view of rumors that the foreman had made up his mind about the case.

Do not take anyone's opinion on that score. The record is crystal clear on that. Here is the verbatim quote from the record:

Judge Kaufman, speaking to Prosecutor Murphy:

Well, if the defendant's counsel are willing, and if I should follow your suggestion and dismiss this juror, you may have a mistrial.

Prosecutor MURPHY. Well, so we can understand each other right now, the Government is not moving for a mistrial in words, substance, effect, or inference.

Judge KAUFMAN. Are you moving that this juror be disqualified?

Prosecutor MURPHY. No, sir, I am not.

CONCLUSION

There is no need for me to point out in greater detail the many other errors of fact and of law that are found in our colleague's statement of his case against Judge Kaufman.

It does not withstand analysis. His charges fall of their own weight, when measured by the rules of law he himself lays down for his own case.

I repeat what I said before on the floor of this House. Judge Kaufman is a good lawyer and an excellent judge. His honesty and uprightness are unassailable. He is every bit as loyal and patriotic as his attackers. I referred to his loyalty and patriotism because a charge of connivance with an alleged traitor necessarily impugns one's loyalty. The charges made against Judge Kaufman are the more unfair because he cannot fight back. Since Alger Hiss must be retried, it would be unethical and improper for Judge Kaufman to make any comment upon the first trial, lest it affect the conduct of the new one. And I think that if some of my colleagues in Congress had any regard for the rights of the defendant to a fair trial, they would not have unfairly prejudiced him by their comments.

President Truman says Samuel H. Kaufman is a good judge.

Robert Patterson, president of the Association of the Bar of the City of New York agrees and says that his conduct of the Hiss trial is not subject to censure.

Case closed.

Spending

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of my statement in reply to a letter from Mr. George E. Lane of the Weymouth Gazette Transcript, Weymouth, Mass.:

If the Eighty-first Congress does nothing else, it has established a new all-time record for peacetime expenditure in the United States. As we move into the new fiscal year beginning July 1, 1949, there is mounting concern throughout the Nation over the enormous Federal spending program by which we are confronted.

Unwarranted Federal expenditure means inevitably high prices with the danger of widespread suffering for all through inflation; it means high taxes with the danger of increased unemployment; it means expanding Government competition with private enterprise; it means increasing Government control and regimentation in the lives of all.

From 1933 to 1946, under Congresses controlled by the New Deal, due to depression, World War II and gross waste and extravagance on the part of the National Administration, we pursued year after year the policy of spending more than we could collect in taxes, of taxing more than the national economy could stand in the long run and of piling up a national debt without parallel in our history for our children and our children's children.

During the years of 1947 and 1948, the Eightieth Congress, controlled by Republicans, made a determined effort to reverse these policies and to put our financial house in order. Initial responsibility fell upon the Appropriations Committee of the House, of which I have been a member for many years, and of which I was in effect vice chairman.

Under the so-called Reorganization Act which had been recently passed, the committee for the first time in its history established a nonpartisan, expert investigating staff. Some 8 or 10 permanent employees were appointed, with contemplated expansion. The regular staff was augmented by a group of consultants from private enterprise, who gave generously of their time in the interest of economy. In this manner skills far beyond the ability of the Government to provide were made available to the committee. Numbered among these men were 10 of the country's outstanding accountants. All of these men were, of course, certified public accountants of national standing and one is currently president of the New York State Certified Public Accountants Society. The remaining men were business executives and research assistants of considerable standing. There was no partisanship in the activity, as the group was very representative of both political parties, although all were united in behalf of Government economy. In addition to the day-to-day work of the staff, major studies of many departments and agencies were completed which were invaluable to the committee and to Congress.

The over-all result was that it was possible to effect savings or recissions of some $9,800,000,000 in the 2 years in question, making possible a balanced budget for the first time in 16 years, making possible a reduction in our national debt by some $7,000,000,000, making possible a reduction in our tax burden of some $4,800,000,000, 71 percent of which went to those with incomes of less than $5,000, some 7,000,000 persons being removed from the tax rolls entirely. The staff made a splendid contribution to the Nation in terms of lower prices, in terms of lower taxes, in terms of a stable economy.

With the convening of the Eighty-first Congress, controlled by the Truman administration, in January of 1949, we returned to the philosophy of spending more than our income and of increasing the national debt with all the dangers inherent in this course of action. The expert staff to which I have referred was abolished. I predicted at the time that this would cost the people of this Nation literally billions of dollars. I have not changed my mind.

The House has completed initial action on all appropriations for the fiscal year ending June 30, 1950. It has made available for that year, funds in excess of those made available for the fiscal year just ended to the extent of over $4,439,000,000, an increase of more than 12 percent, a figure which will almost certainly be increased as a result of action in the Senate and as a result of further funds which may be required for implementing the Atlantic Pact or as a result of the enactment of additional legislation recommended by the President.

The expenditure in the fiscal year just ended, amounting to some $40,000,000,000, is the largest expenditure in peacetime in our history. Expenditure in the current fiscal year is likely to reach $45,000,000,000, or about $1,500 for every family of five in the United States.

Instead of the surplus of some $8,000,000,000 as in the case of the fiscal year ending a year ago, we have for the fiscal year just ended a deficit of $2,000,000,000 with a further deficit in view for the fiscal year ending June 30, 1950, estimated at from $3,000,000,000 to $5,000,000,000. A 10-percent recession in the aggregate personal income, we are advised, would result in the loss of $5,000,000,000 of taxes in revenue.

We have a staggering national debt of over $250,000,000,000, increased to the extent of about $500,000,000 by expenditures in the fiscal year just ended, representing something like $8,300 for every family of five in the country. The total assessed valuation of all taxable property in the United States in 1940 was $142,000,000,000.

Our present Federal tax burden "paid in the sweat of every man that labors" is more than six times our pre-Pearl Harbor tax burden. When State and local taxation is added the total burden is well over 30 percent of our total national income.

The financial integrity of our Federal Government and the financial stability of our free-enterprise system are of paramount importance. To impair our national solvency would be a tragedy not only for America but for the entire world. It could destroy freedom at home and remove all barriers to the spread of communism abroad.

Speaking at the two hundredth anniversary of Washington and Lee University, my friend for many years, former Secretary of State James Byrnes, said among other things, and I quote:

"We are going down the road to statism. Where we will wind up no one can tell, but if some of the new programs seriously proposed should be adopted, there is danger that the individual, whether farmer, worker, manufacturer, lawyer, or doctor—will soon be an economic slave pulling an oar in the galley of the state.

"We are not only transferring too much power from the individual to government, but we are transferring too many powers of State governments to the Federal Government.

"Some of the proposals now suggested, which would curtail the liberties of the people are offered in the name of public welfare and are to be made possible by Federal aid. That phrase is an opiate. It is deceptive. It leads people to believe that Federal-aid funds come from a Christmas tree. The truth is there are no Federal-aid funds except those taken from your pockets. If the people generally will ever come to understand this, there will be less demand for Federal aid.

"Our first line of defense is a solvent American economy.

"Every segment of society is demanding special privileges.

"The only wise course is to reduce expenditures and live within our income. In the light of changed conditions we should estimate our revenue and then determine how the revenue should be allotted."

These are not the words of any Republican. They are the words of a lifelong Democrat giving distinguished service over the years under the New Deal as a Representative, as a Senator, as a member of the Supreme Court, as wartime Director of Economic Stabilization, and as Secretary of State.

There are two proposals pending before the Congress at this time. One consists of the recommendations of the Commission on Reorganization headed by former President Hoover, estimated to save annually from three to four billions of dollars. The other is a proposal for what is in effect a single appropriation bill in each session of Congress so that the American people can compare the total expenditure recommended, against the total revenue available.

I believe that the proposals of the Hoover Commission, insofar as practicable, should be put into effect at the earliest possible moment. I am inclined to believe that the other proposal, originally suggested by Senator BYRD, should also be put into effect and given a trial.

Let us not forget, in the face of the tremendous demands by which we are confronted both at home and abroad, the words of the great Communist leader, Lenin.

"Some day," he said, "we will force the United States to spend itself into destruction."

Address by Hon. J. Howard McGrath, of Rhode Island, at Jefferson-Jackson Day Dinner, Pensacola, Fla.

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Friday, July 22 (legislative day of Thursday, June 2), 1949

Mr. PEPPER. Mr. President, on last Saturday evening the senior Senator from Rhode Island [Mr. MCGRATH] made a very able and eloquent address at a Jefferson-Jackson Day dinner held at Pensacola, Fla. I ask unanimous consent that this outstanding address by one of our colleagues be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is good to be in this great Democratic stronghold of Florida. I want to pay a special compliment to all of you Florida Democrats for the high caliber of your lawmakers in the Senate and the House, for the fine quality of your State officials, and for the fine leadership that has been shown by those you have chosen as officials of the Democratic Party in your State. At national headquarters, we are proud of all of them.

I wish we could export the enthusiasm of Florida Democrats to the rest of the country as widely as you ship your Florida oranges. Maybe next winter you can let some of your 14-carat Florida democracy rub off on some of the misguided persons from States like Vermont and Kansas who come here to escape the chill Republican winds which blow in their own homes. If that won't work you might try injecting some Democratic vitamins in the oranges which you ship into States which voted Republican last year.

I want to congratulate all of you for the fine job you did last November in contributing to a victory that was not only a victory for the Democratic Party but a victory for every American who believes in the American people, who believes in a fair deal for everyone, and who believes that America can and must keep on growing bigger and better.

We are celebrating that victory here tonight and such celebration is fitting and proper. But I believe we should also make this an occasion for girding ourselves for the fight that will take place in 1950 when the same forces we fought in 1948 will return

to the battle with fresh money and the same old ideas they had 2 years ago and 20 years before that.

The first skirmishes in the battle of 1950 are already under way. Republican snipers and sharpshooters have already started a sporadic fire. I want to give you some ammunition for our side, to tell you what your Democratic Party is doing.

I want to give you a brief report on the stewardship of your national administration—where we stand today and what we propose for the future.

First let's talk about the international situation. Call it what you will—cold war, armed truce, uneasy peace—none of us are happy about the state of the world at this moment.

We are in a struggle, not of our own choosing, between two basic political and normal beliefs—a struggle between those who believe in Christianity and democracy and those who believe in Godlessness and dictatorship.

We know that godlessness and dictatorship lead to hatred and war, to bloodshed and suffering amongst the innocent and guilty alike.

We knew that Christianity and democracy lead to peace and to a respect for the rights of others.

After the shooting war ended, the forces of dictatorship took the initiative against those who believe in freedom—freedom of the spirit, freedom of political choice, freedom of economic opportunity.

But these forces of evil did not long hold the initiative unchallenged.

President Truman's leadership brought quick action on a positive program to stop the spread of communism toward the west and to give economic aid to the nations which share our belief in democracy and human rights.

We gave military assistance to Greece and Turkey. Without that assistance, there is no reason to doubt but that these nations would be Communist satellites today.

We devised and put into effect the European recovery program—the Marshall plan. This plan is helping western European nations get back on their feet through their own hard work. It is giving them the tools with which to lick the want and idleness upon which communism thrives.

Even now the Senate is moving toward ratification of the important Atlantic Pact.

All of these actions, over and above our participation in the United Nations, are concrete evidence of our desire for a just peace and of our constant opposition to communism and its totalitarian repression of human and economic rights. And we are making slow, sure progress on the road to an enduring peace for which we have all prayed and yearned. The world situation today is far better than a year ago and this improvement is based clearly on our own course of action.

We have assumed the mantle of world leadership among nations which believe in freedom and which honestly desire peace. It was a mantle of leadership which was not sought but which for the benefit of all of the world we were forced to assume.

This has cost money. This year the cost will be about seven billion. But what would be the cost of the alternative? It would either be the cost of another war, a more horrible war than the last one, with the bill to be paid in blood and treasure to an amount undreamed in the past, or the equally terrible cost of becoming a slowly strangling democracy squeezed into economic and moral chaos by an active, spreading communism surrounding us on all sides.

Our international program is a bargain insofar as its monetary cost and the fact that we have no dreadful drain on the lifeblood of our young men. But more important, could we Americans look one another in the eye with self respect if we were not taking positive, constructive action to build a peace and help other nations which share our belief in democracy? I don't think we could.

The bold course of action has always been the American way. Our foreign policy carries on that fine tradition.

But while we have no aggressive designs and have made no aggressive moves, we cannot afford to let ourselves become helpless against possible attack by those who prefer force to reason.

That is why our national defense has been so important during the troubled postwar era.

Politically it would have been easy to sit back and say that we have the atom bomb and that there is no need to spend money on keeping up our armed services. But that would have been the worst possible thing we could have done. Fortunately our President and those he has appointed to head our national defense have not chosen the easy way. We have kept our defenses strong and we are keeping them strong.

It is costing money. This year the cost will be about $14,000,000,000. But I say that we are making a good investment in spending that money. There are powerful forces in this world who respect nothing but force. That is why we need a strong and efficient military defense establishment.

Let me add that your administration is working hard to cut the cost of national defenses without weakening our strength. Stronger unification, greater efficiency in the Military Establishment are the goals of our President, our Congress, and our Secretary of Defense. We are moving steadily toward those goals.

Don't be misled by screaming headlines and wild charges of a few who think politics is more important than national security. Your national defense is in good hands, competent hands, honest hands.

But a sound foreign policy and a strong national defense establishment are not enough to give us complete security.

Our foreign policy and our national defense depend in the final analysis upon the general good health of our domestic economy.

Last week our President laid the economic cards out on the table—all of the cards, the deuces and treys along with the aces and kings.

He gave to the Congress and to the people a frank, clear, understandable statement on the economic picture.

He showed that our economy is in good shape and he gave us a sound, middle-of-the-road program to keep it in good shape.

Now, I realize that there has been a lot of talk lately, and a lot of words written and printed about a serious recession or a depression.

Who wants a depression?

Well, overseas, the Communists want an American depression. The Kremlin wants an American depression. Stalin wants an American depression. That is understandable. There were more Communists in America during the last Republican depression than ever before or since. The Communists want—if they prayed, they would pray for—a serious depression in America. They want our free-enterprise economy to collapse. They want our system of good wages and good profits to collapse. They think their way of low wages and no profits is better. So the Soviet wants a depression here in America.

In fact the Moscow newspapers run articles frequently which say that America is in a serious depression.

Who else wants a depression?

Well, those peculiar people who live in the United States but think that Russia does things better, they also want a depression. They would like to talk us into one. The Communist paper, the Daily Worker, is very depression-minded these days.

But lately something new has been added to the pro-depression group. Who else wants a depression? Why, some Republicans are whooping it up for a depression. They think it would make a nice political issue in 1950. Well, maybe a depression issue would be a good issue for the Republican Party. It governed the country longer during the Nation's worst depression than any other party. It has the experience. Of course, one Republican weakness is that the GOP seems to know more about the care and preservation of depressions than it does about how to get rid of them.

It took the Democratic Party to get rid of the last depression after a Republican administration got us into the worst economic mess in our history.

Recently the distinguished Senator who is the head of the Republican senatorial campaign committee said categorically that "we are now in a state of depression."

Other Republicans agreed with him and some of them offered their plan for a remedy. They suggested we go back to the things that we were doing in 1931 and 1932.

Let me quote to you from an official news release of the Republican National Committee:

"The pitiful thing is that the needy cannot expect as much relief as was available in the last depression, notwithstanding the present high cost of living. Sufficient relief would be possible if the administration were willing to end its wild spending. During the last depression we were not trying to feed the world, did not have all the expensive Government bureaus we have today, were not carrying on a multi-billion dollar cold war with half the world, and did not have all of the other countless, unnecessary, frill expenditures in Government which we have today."

Remember this is an official statement by the Republican National Committee. It says in effect that we should abandon the Marshall plan, abandon our national defense expenditures as "frill expenditures" which should be junked in order to provide money for a relief dole.

Presumably the statement means that the Republicans would also do away with unemployment insurance, old age pensions, end the FDIC and the SEC and divert the funds they spend to a relief dole.

In any event, the Republican National Committee and the Communists in Moscow find themselves in agreement on three major points: that we should abandon the Marshall plan, abandon our national defense, and frighten ourselves into a depression.

In moving in with its Moscow bedfellow, the Republican Party has had to turn its back for the moment on some of its big business friends. For the day after the Republican National Committee tried to scare the wits out of the public with its gloomy release on unemployment, Alfred P. Sloan, Jr., chairman of the board of General Motors warned that "we can frighten ourselves into a real recession."

And the day after that a magazine that is not noted for espousal of Democratic Party programs (U. S. News and World Report) listed in detail the reasons why 1949 cannot be another 1929.

Here are some of the major reasons:

1929

Wild stock-market speculation.

Backlog of needs filled.

Building boom over. Small public construction.

Bank failures widespread.

Mortgage loans unprotected, foreclosures on large scale.

Cash and bank deposits only $55,000,000,000. No savings bonds.

Personal incomes and purchasing power helped by only $1,000,000,000 in Government benefits.

Farm prices skidded down.

Unions weak, wages spiraled down.

Exports slumped.

Gold hoarding added to money squeeze.

Private debt was larger than public debt.

1949

SEC blocks dangerous market gambling.

Big backlog of needs still exists.

Building cycle in early stage. Five-billion-dollar rate public building.

FDIC insures deposits, keeps banks sound.

Mortgage loans insured.

Cash and bank deposits $165,000,000,000; $48,000,000,000 in bonds.

Personal incomes supported by $12,000,000,000 in Government benefits such as social security, unemployment insurance, etc.

Farm prices supported by Government.

Strong unions and minimum-wage law protect wage income.

Marshall plan supports export market.

Gold no longer automatic regulator of money supply.

Public debt, not subject to forced liquidation, now larger.

That is what an independent probusiness magazine thinks about the wise safeguards which the Democratic Party has erected to prevent another Republican crash in our economy.

But let's look now at our current economic position. Business and employment have declined as we reap the harvest of our failure to adopt a stronger anti-inflation program. But how seriously are they off?

Here are the high lights of our present situation taken from the President's message to the Congress. They are honest figures, giving the bad along with the good.

Let's look at employment. It averaged 58,000,000 during the first half of this year, a little lower than a year before. The number of unemployed is about a million more than a year ago, but we have added another million to our job force.

How about production, the real key? Production of all goods and services is only off 1½ percent over the last half of 1948. But industrial production has dropped 13 percent. Farm production is remaining high.

Personally, I think the news about prices is good. They are lower. We have shifted from a sellers' market to a buyers' market. We have more good, old-fashioned American merchandising competition. But I don't think it's quite cause for a panic when you can walk into a store and buy a white shirt for less than a suit of clothes used to cost before the war. I don't think we have reached economic collapse because clerks in stores have started to speak to shoppers as though the customers were human beings. We certainly have not had any disastrous slide in prices. Wholesale prices have gone down 9 percent, while consumers prices have only gone down 3 percent from highs of last August.

If we cannot take changes like that without getting the jitters, we have a nation of economic hypochondriacs.

Now let's look at wages. They have increased in some industries. But less work and less overtime have reduced take-home pay in manufacturing. The cost-of-living drop has helped to alleviate this.

Finally, how about profits? We're for them. Profits are the key to our free-enterprise economy. Well, during the peak of inflation profits set all-time records. I think some profits got too high for the good of the country. Profits have gone down, but not seriously. Corporate profits are down about 13 percent, other profits have fallen only 7 percent. Profits are still good.

What about the farm picture? Farm income has gone down about 8 percent with some danger signs ahead for the farm economy. We propose to do something about that.

And how about purchasing power? It's still in good shape. Personal income has gone down only 1 percent and prices have fallen more than that on consumer items.

Those are the facts. They show a mild decline in our economy. They also point to danger signals ahead. Now the question becomes, What should we do about it?

The President and the Democratic Party say that everybody concerned, agriculture, labor, business, government, should roll up his sleeves and pitch in to get more production and to keep on expanding our economy.

On the other hand, many Republicans say that the thing to do is to institute the sort of blind, damaging government economy that would bring on the very things we want to avoid.

I'll talk a little more about both ideas, but first let me tell you briefly what the President's program is. Here are the things he wants the Congress to do at this session:

1. Repeal the tax on the transportation of goods, liberalize the provisions for carry-over of losses by corporations, and raise estate and gift taxes. No major increase in taxes should be undertaken at this time.

2. Extend the maximum time limit now fixed by law on the maturity of loans to business made by the Reconstruction Finance Corporation.

3. Provide for a broad study of investment and development needs and market opportunities in an expanding economy.

4. Adopt an improved program of farm income supports.

5. Increase the minimum wage to at least 75 cents an hour and broaden its coverage.

6. Strengthen the unemployment compensation system by increasing the amount and duration of benefits and extending coverage.

7. Extend to July 25, 1950, the availability of readjustment allowances for veterans not protected by State unemployment compensation laws.

8. Raise benefits and extend coverage under the old-age and survivors insurance system and improve the public assistance program.

9. Enact legislation to permit Federal agencies, and assist States and localities, to intensify their advance planning and to acqure sites for useful projects.

10. Enact legislation to provide technical assistance to underdeveloped areas abroad and to encourage investment in such areas.

11. Restore the Reciprocal Trade Agreements Act.

This is not an extreme program, because we have no extreme problem which calls for extreme action. It is a preventive program and it is a confident program because it reflects the faith that the future is going to be better, not worse.

It reflects confidence that we can increase our national production to $300,000,000,000 a year, the goal set by our President.

On the other side is the pessimistic program. The pessimists say we should cut down on everything, that we should retreat instead of pressing forward.

They want economy in government, but they want the wrong kind of economy, cuts that would hurt us instead of helping us.

Everybody wants the right kind of economy based on more efficiency and the paring of expenditures that can be made without depriving the people of essential Government expenditures.

That is the kind of economy your administration is bringing about by Federal reorganization, prudent administration, and careful pruning of Federal funds.

Let's see where the money is going in our present $42,000,000,000 budget.

Fourteen billions for national defense. Arbitrary cuts there would endanger our national security.

Seven billions for foreign aid and occupation expense. Heavy arbitrary cuts there would jeopardize chances for a lasting peace, would aid Communist expansion in Europe.

Elevelen billions for aid to veterans and interest on Government war bonds. We don't want to default on our bonds or on our debt to our veterans.

Thus we have thirty-two billions in the budget which we can charge up to the cost of war or to the cost of preventing war. That leaves ten billions for all the rest of the Government, public works, farm price supports, education and housing programs, payments for health and social security.

To chop these expenditures drastically would be a severe blow at the stability of our economy and would encourage a depression. In a nation with a $200,000,000,000 economy, ten billions is not a large sum to be spent on such sound investments as a good farm economy, social security, better health, and better education.

The President's budget is a sound budget, composed of programs that are necessary. As the President said the other day, "the very heart of sound government finance is to make the expenditures that are necessary to help achieve prosperity and peace."

The President outlined the choice we face between those who want to work harder and produce more and those who want us to pull ourselves down into a depression by our own bootstraps.

Here is what he said:

"To restrict business investment, curtail production, reduce employment, or slash wages, because our economy has declined somewhat, would only serve to drag us further downward. But if in every field of action we do the things that are consistent with a strong and growing economy, we will have a strong and growing economy.

"Yet there are those who assert that the decline in national income requires that we cut essential national programs. Nothing could represent greater economic folly than to follow this course of action.

"It would contribute to the very recessionary forces that we should be counteracting. It would be a defeatist admission that we cannot prevent our economy from running downhill and that those programs which are vital to the international security and domestic welfare of our people, as well as to the strength of our economy, must be steered in the same downward direction.

"This issue is fundamental. Are we going to admit that the forces of progress in our economy have become so feeble that we must content ourselves with lower levels of education, health and housing, international and domestic security, and national development?

"Or are we going to move forward toward making our economy as strong and productive as our resources and skills permit, and adopt the programs which are consistent with that kind of economy and necessary for its attainment?

"I propose that we follow the latter course."

Those words echo the fighting words made by another great Democratic President who aroused the Nation from despair to fighting action with the rallying cry, "We have nothing to fear but fear itself."

President Truman has the same faith in America that Franklin D. Roosevelt had. Both have the same vision of a better tomorrow built by the partners of our free-enterprise economy.

Most Americans share that vision. While the Communists and the petty politicians of the minority try to talk us into worrying ourselves into a depression the majority of us will be on the President's team, too busy to worry as we work for prosperity. Let's roll up our sleeves and get to work.

Is There a Limit to Our Folly?

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 19, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, consider the following: Experience teaches us that the friend of today may be the enemy of tomorrow.

Witness Hitler's invasion of Russia, notwithstanding a treaty of mutual aid. Russia's present attitude toward us, though we aided in saving her in World War II.

Britain's policy of advantageously dealing economically with our potential enemies, while we are extending aid to her.

Britain's treaty with Russia, though the grass is barely green on the graves of hundreds of thousands of Americans who gave their lives to save her from destruction—England from invasion.

Our Government and our people have accepted the thought that Communists, back of whom stands Russia, are driving to overthrow our Government by force. To meet this threat of the Communists, of a potential enemy—Russia—we spent billions of dollars to develop the atomic bomb and superbombers to carry that destructive weapon to wherever an enemy may threaten.

We alone possess the know-how, the material, and the ability to make the atomic bomb. It is our greatest safeguard, the most powerful weapon on earth. The Congress is attempting to safeguard the secrets which made its creation possible.

Judy Coplon was convicted because she attempted to disclose some of those secrets to the agent of a foreign country. Hiss will shortly go on trial. It has been said that he disclosed vital, secret information to Communists. The technical charge against him is perjury.

Our military strength has been a deciding factor in two world wars. Our experts now claim that, because of the atomic bomb and of long-range bombers, we can force peace upon the world, need fear no foreign foe.

Our desire is for world peace. Our possession of the atomic bomb, a destructive force which tends to prevent any other nation becoming an aggressor, puts us in a position to prevent war. Why, then, should we be so foolish, knowing their warlike dispositions, as to pass on to other nations secret information which will enable them to create for themselves and use the most destructive implement of war the world has known—the atomic bomb?

If communism or Russia threatens our national security; if we prosecute a Coplon and a Hiss because they attempted to give vital, secret information to agents of potential enemies, are we not extremely foolish if we permit President Truman, as he now proposes, to pass on to the British the secrets which make possible the atomic bomb, when we know, as we do, that they have always—not sometimes—but always—made treaties and followed policies in their dealings with other nations which they conceived to be beneficial to their own economy and political interest, even though those dealings were detrimental to us, strengthened our potential enemies?

If I possessed and passed on to the agent of a foreign government, even to the British, the secret of the atomic bomb, I would, and rightly, be subject to prosecution for treason.

The administration during the past week has evidently considered favorably the giving of such information to Britain. Apparently Britain is pressing for that secret information and is using her demand for that information to force us to give her dollars to meet the present economic situation which threatens her with disaster—a situation for which she, herself, is responsible, because of the adoption of socialistic practices.

We have been more than generous to her. We do not need to entrust to her a weapon which, in the hands of Russia, might destroy us.

Why play Samson to her Delilah?

Is there not a limit to our folly?

Hitler's Heirs

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES

Friday, July 22 (legislative day of Thursday, June 2), 1949

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Hitler's Heirs," published in yesterday's Wall Street Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HITLER'S HEIRS

Great Britain has induced her dominions to join with her in cutting purchases from America by 25 percent.

The reason advanced is that Britain and her economic satellites cannot find the dollars to pay for their purchases.

The reason is phony; just as phony as the statement of the Russians that they blockaded Berlin because of some "technical difficulties" in transportation.

In the first place the number of dollars which might be conserved by the cut in purchases is only a small part of what the British call the "dollar deficit." If the cut in purchases should work out as the British claim it will, the difference between what the British sell to the United States and Canada and what they would like to buy from those countries will still remain very large; the problem will not be broken; in fact, scarcely dented.

In the second place the British will have to seek substitute sources of supply for the goods that they do not take from the American Continent. These substitute purchases will be at higher prices and generally speaking of lower quality than would come from the normal sources of supply. They will increase British production costs and make her even less able to compete in world trade than now.

In the third place Britain will pay pounds sterling for the purchases substitutes for American purchases and the recipient of these pounds will find ways to convert these pounds into dollars.

The real purpose of Britain is something far more cunning; in light of her promises, the correct word is "sinister."

Britain sees the end of the sellers' market in the United States. By withholding purchases of American goods at this time, she hopes to accelerate a downward movement. When American sellers have felt the effect of this, they will then—so the British reason—be ready to enter into a bargain with the British so that they can again move their products into British hands.

The price which the British will demand for taking American products once more is a bilateral-trade agreement, such as her Socialist government is attempting with other countries. Along with this will go a world stabilization agreement on certain raw materials of which Britain is the main producer.

Thus the United States will agree to take British cocoa, rubber, and tin at stabilized prices—which means more than they are worth. There may be additional considerations. Then the British will resume their purchases, or more correctly they will consent to take American products as gifts.

The Daily Telegraph of London has this to say in a news story:

"Proposals for what would be in effect a bilateral-trade agreement with the United States are believed by many observers to be the implication behind Sir Stafford Cripps' speech. * * *

"It was clear that the import reductions he announced are in the nature of marking time until the Washington talks in September. They are also a pointer to the course which British policy must take if nothing arises from those talks to alter it.

"The effect on American exports * * * was not difficult to deduce. There is little doubt that the Chancelor intended to present that aspect of the situation as plainly as possible to American opinion."

The story goes on to explain that there is expected to be a sharp reaction from American tobacco and cotton producers and these are then expected to demand that Washington knuckle under.

So there you are. Britain has made repeated commitments to work for a less restricted world trade. She now rejects those commitments. The next step is to try to use America's desire to help Britain to bring America into the network of restricted bilateralism.

It has been said that Hitler won the war in the person of Stalin.

We would amend it to say "in the persons of Stalin and Sir Stafford Cripps."

For just as Stalin has adopted the cultural and political methods of Hitler, Sir Stafford Cripps has adopted the economic method of Hitler.

Message by Hon. Irving M. Ives, of New York, to First Annual Conference on American Foreign Policy

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, July 22 (legislative day of Thursday, June 2), 1949

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a message which I am sending to the First

Annual Conference on American Foreign Policy, which convenes today at Colgate University, at Hamilton, N. Y.

There being no objection, the message was ordered to be printed in the RECORD, as follows:

On the occasion of the first annual conference on American foreign policy at Colgate University, I send warm greetings and felicitations to all participants. I congratulate Colgate University upon its leadership in a concerted effort thus to contribute to the development of an informed public opinion with regard to matters of foreign policy at the grass-roots level.

At the same time, it seems to me that, through the medium of your conference, substantial progress can be made in clarifying and reconciling conflicting views and ideas concerning American foreign policy. The distinguished group of national and international authorities on our foreign policy, who are to participate in the panels, symposia, and round-table discussions, can perform a most valuable function in helping to remove the confusion and misunderstanding which all too frequently nowadays are bedeviling the consideration of serious questions pertaining to America's present-day role in world affairs.

Your conference assembles at a most significant time in the development of our foreign policy. We have just ratified the North Atlantic Treaty. We are about to consider the implementation of that treaty with an armament program.

The long debate on the treaty itself, which preceded its ratification, provided unhappy evidence of the differences which still exist in the thinking of the American people with regard to our responsibilities in international affairs and our relationship toward the rest of the world. A core of isolationism still exists in our country. Offsetting this isolationism are a conflicting body of ideas and theories which make concerted, united effort in our approach to the solution of international problems, in which we are involved, extremely difficult of attainment.

A divided, uninformed or misinformed America cannot provide the type of leadership which today is so essential in world affairs. A united, informed, and determined America can lead the way out of present international difficulties an toward the goal of lasting peace. For, after all, regrdless of differing ideas as to method which may exist among us, the principal goal all of us are seeking is peace.

As I have stated, conferences such as yours can contribute much, not only to clarification of thought and understanding, but to the realization of concerted and united action. May wisdom and truth attend your deliberations. May all possible success crown your efforts.

Our Distinguished Allies

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting an editorial which appeared in the Washington Times-Herald on July 22, 1949:

OUR DISTINGUISHED ALLIES

The Senate yesterday voted 82 to 13 for the North Atlantic Treaty. The scrap of paper is thus ratified by considerably more than the required two-thirds majority of Members present when the vote was taken.

TREATY SEEMS A PUSH-OVER

This, despite the gallant efforts of Senators ROBERT A. TAFT, Republican, Ohio; RALPH E. FLANDERS, Republican, Vermont; FORREST DONNELL, Republican, Missouri; ARTHUR V. WATKINS, Republican, Utah, and a few others to block this remarriage of the United States to 10 of western Europe's most cantankerous and quarrelsome nations.

Let's stow the baloney and the double-talk and admit that here is a treaty creating a military alliance which contemplates war on Soviet Russia.

So, having gotten ourselves some allies, let's look them over, one by one, and in alphabetical order.

Belgium: A nice little country. But in World War II, Belgium lasted only 19 days after Hitler started his real attack on the West May 10, 1940.

Canada: Not a European nation. A big, powerful, friendly North American nation which, like the United States, suffered no bombing during World War II. An ally well worth having. For our money, the only such ally on this entire list. But for all practical purposes we are allied with Canada anyway, and long have been.

Denmark: Another nice little country, which produces a lot of bacon and eggs. But in World War II, Hitler took Denmark virtually by telephone, in 1 day.

France: An ancient nation with a relatively glorious history—up to, say, 1936. In that year, France failed to slap Hitler down when he remilitarized the Rhineland. When Hitler struck in 1940, France lasted just 44 days. Its vaunted army crumpled, its air force was a pathetic joke, its civilian population was honeycombed with Communist traitors.

Great Britain: Rolled up an honorable but singularly slewfooted record in World War II. Routed by the Germans in Europe in 1940. Proved unable to hold its Far East empire, or to help us importantly in the war on Japan. Now run by a bevy of Socialists, who hate most Americans' guts but keep panhandling us—and with notable success to date—to finance their government in large part. Weak as to land, sea, and air fighting forces.

Holland: Same comment as on Belgium, above—except that Holland knuckled under to Hitler in 5 days.

Iceland: Neutral during World War II. Quite possibly a good way-station for our bombers in case of a war with Russia. Ability to fight—practically nil. Has a considerable Communist element.

Italy: Was on both sides in World War II, first on Hitler's and then on ours. A military liability, not an asset, to both Hitler and ourselves. A nation of generally charming and witty people; but they don't like foreign wars, and in modern times, when it came to fighting, they have put their backs only into squabbles among themselves.

Luxemburg: Practically the same comment as for Denmark, above.

Norway: Has a short common frontier with Russia. Attacked by Hitler April 9, 1940, Norway put up the best fight it could but did little better than Poland. It was largely gutted of its wealth by the Germans, has staged only a slow comeback, and lives in fear of the Kremlin.

Portugal: Neutral in World War II. Strategically valuable in a possible war with Russia—if Spain were also included in the North Atlantic Treaty. But Spain isn't, because Secretary of State Acheson doesn't like Dictator Franco's politics and various Americans don't like his Roman Catholicism. The fact that he has been and is western Europe's most successful foe of communism cuts no ice with these ladies and gents.

And there is the roll call of our allies-to-be.

PLENTY OF NOTHING

In ratifying the North Atlantic Treaty, the Senate sewed us up for 20 years to a bunch of foreign dead-beat and stumble-bum nations whose World War II record was generally pitiable and which would be slaving for Hitler today if we hadn't come to their rescue. (Canada, to repeat, is excepted from these remarks.)

Worse, we are put in the position of a grown man who promises to help a gang of small, mischievous, combative kids in their battles with the gang on the next block. That is one of the surest ways known to man of guaranteeing yourself frequent and bloody fights.

It was one for the book when, at the signing of the North Atlantic Treaty in Washington last April 4, a Marine band played It Ain't Necessarily So, and I Got Plenty of Nothin'.

Happenings in Washington

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, July 22 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the texts of three broadcasts entitled "Happenings in Washington," which I have made.

There being no objection, the texts were ordered to be printed in the RECORD, as follows:

HAPPENINGS IN WASHINGTON

(Program No. 1)

My fellow Pennsylvanians, this is ED MARTIN speaking to you from the Nation's Capital.

In these discussions of happenings in Washington, I hope to bring you a better understanding of developments in your Government.

I shall endeavor to keep you advised about legislation that is being considered in Congress and how it would affect Pennsylvania.

In preparing for this first broadcast I turned to the mail from my constituents—the folks I work for.

I wanted to find out what Pennsylvanians were thinking about and what was giving them concern.

I was surprised at the increasing number of letters dealing with taxes—urging tax reduction—and asking me to support the economy recommendations of the Hoover Commission.

So today I want to talk to you about taxes—Federal taxes.

Our Government has grown very big, very complicated, and very expensive. Its functions have developed over long years.

It is not surprising therefore, that so much overlapping, duplication, and nonessentials have added to the cost.

The average man pays for all this but it is almost impossible for him to get a clear idea of what is taking place.

Every man, woman, and child in Pennsylvania pay Federal taxes. It doesn't matter whether you are a Republican, a Democrat, or a member of no party at all.

From the time you get up in the morning until you retire at night, you pay many Federal taxes without being aware of it.

Let me give you a few examples.

When you go to the movies, you pay a Federal tax.

When you buy a package of cigarettes, or a pound of oleo, or gasoline for your car, you pay Federal taxes.

If you ride on a railroad train, or an intercity bus, or an airplane, there is a tax on those things.

Your telephone is taxed by Uncle Sam and so is any telegram you may send.

If you drink beer, or buy wines or distilled spirits, Uncle Sam gets his tax.

If you buy an automobile, an electric-light bulb, a handbag, cosmetics, or baby oil, you pay Uncle Sam his tax on all these things.

If you buy a wedding ring you pay a 20-percent Federal luxury tax on that, too.

In fact, if you consider all the hidden taxes, you can't make a single purchase without the Government reaching out for its tax money.

Then, of course, there is the Federal income tax which is being paid today by more than 2,500,000 Pennsylvanians, and the corporate taxes paid by the incorporated businesses in the State.

I bring these matters up because it is so important for people to become more tax conscious.

One major reason we pay such high taxes today is that our people have not kept their eyes on the cost of their Government. The people have become careless and indifferent.

It is easy to tax those who don't seem to care. That is why tax rates have increased. That is why so many new taxes have been levied in the past decade or so.

I would like to see an America in which the people are very much alive to the taxes being taken from their earnings.

I would like to see an America whose people demand that their elected representatives in Congress keep taxes to a minimum and insist that Government stop unnecessary spending.

I would like to see an America whose people insist that they receive a full dollar's worth of services for every tax dollar spent.

I would like to see our people back up their State delegation in Congress in demanding economy in Government.

If you will do this, and if the people of other States will do it also, we will get better, more thrifty Government than we have known in years. You will have more money to spend for the things you need.

Do you know that Pennsylvania pays about one-twelfth of all the Federal taxes? We Pennsylvanians now pay into the Federal Treasury each year about three and a quarter billion dollars.

Think of it.

Pennsylvania today is being taxed more money by the Federal Government than the entire 48 States produced in taxes in 1934, only 15 years ago.

You know, a few States like ours—the wealthier States—carry the great bulk of the burden. Some States get back from the Federal Government far more dollars in benefits and services than they pay in taxes. Others, like Pennsylvania, contribute so much and get back so little.

Of course, in a government like ours, richer States must help the less-favored ones. The point we Pennsylvanians should make is that Congress and the Federal Government must cut down on waste and extravagance. We are willing to contribute our share, but we don't want our taxes spent wastefully.

You all know that the last Congress—the Eightieth Congress—authorized a commission to study all the departments and agencies of our Government to see where we could cut down and merge and save money for the people.

President Truman gave the project his blessing and appointed some of the members. Others were named by the House and Senate.

The Commission, with former President Herbert Hoover as Chairman, was made up of both Democrats and Republicans. A few weeks ago this Commission completed its work.

It made many specific recommendations for increasing efficiency and saving money. The Commission found that if the water were squeezed out of our Federal bureaucracy the taxpayers would save from four to five billion dollars a year.

A Nation-wide committee of leading citizens—patriotic Americans—has been organized to push for adoption of the Hoover Commission plans. Its chairman is Dr. Johnson, president of Temple University in Philadelphia.

That committee, I regret to say, will have hard sledding.

Already many departments and bureaus are agitating against the proposed changes. These agencies would be made smaller. Some of their functions and pay rollers would be cut away. A lot of their duplication and waste would be eliminated.

And they don't like it at all.

So, directly and indirectly, they have been lobbying at Government expense against the parts of the Commission recommendations which would cut them down.

Their efforts are making headway. Many phases of the proposed reorganization have been quietly shelved.

There is only one way that economies can be achieved to save the taxpayers from four billion to five billion dollars a year.

That is for you to make Congress hear you and heed you.

Another thing: Bills were introduced early this year authorizing the President to reorganize the executive departments. The House passed one version of the bill. The Senate passed another.

When that happens in Congress, the House and Senate each appoint a conference committee. These committees sit down together and try to compromise the differences.

I am sure you and most Americans would appreciate a little economy for a change. Only a few want to continue the present sprawling, wasteful inefficiency.

But the few are organized—they are exerting pressure to block economies.

The majority are mostly unorganized and doing nothing about it.

I said earlier in this talk that our people have become indifferent to taxes. I said they should arouse themselves and demand an end to unnecessary spending.

These Hoover Commission recommendations provide something specific. All good citizens can rally behind them.

We people in Pennsylvania should become aggressive in our demands for the end of waste. The people of all the other States should join us.

If this is done, believe me, we will get better government and government at lower cost.

On June 30 we shall end a Federal fiscal year. During this year, despite a record national income and heavy taxes, our Government has been operated at a deficit—in the red.

The financial experts agree that next year—the period starting July 1—the deficit will be much, much higher.

There are many Members of Congress—Republicans and Democrats alike—who are opposed to increasing taxes. They believe that the way to meet the situation is to cut down the high cost of government.

But others argue there is only one thing to do—increase taxes next year by four or five billion dollars.

That means 2,500,000 Pennsylvanians will be called upon to pay higher income taxes. The tax reduction given you last year will be taken away.

Many of our people in the lower-wage brackets have been taken off the income-tax rolls completely since the end of the war. Last year, under the tax-reduction law, about 700,000 Pennsylvanians stopped paying income taxes. But if these taxes go up, many—if not all—of these people must start paying again.

Do you want that?

I predict there will be no tax increase this year but unless we get economy in Government, unless we follow the advice of the Hoover Commission and stop the waste of our money, there will be no alternative for Congress next year except to raise your taxes.

This is not a party issue. Many prominent Democrats, as well as Republicans, have been urging economy rather than higher taxes.

Now is the time to make your voices heard in Washington. If you wait it may be too late.

I am grateful to this station for its public-spirited cooperation in making its facilities available for this message on the happenings in Washington.

It is my plan to invite your attention at frequent intervals and to bring you further reports on the activities of Congress.

This is ED MARTIN—speaking from the Nation's Capital—and assuring you of my sincere appreciation of your attention.

HAPPENINGS IN WASHINGTON

(Program No. 2)

This is ED MARTIN, speaking to you from the Nation's Capital and bringing you another discussion of happenings in Washington.

First I want to tell you how much I appreciate the many fine letters I have received since I spoke to you 2 weeks ago on the dangers of the high cost of Government. They have been most encouraging.

Since then, I am happy to report, some progress has been made for efficiency and economy at Washington.

In line with the recommendations of the Hoover Commission, Congress has authorized the President to submit reorganization plans. Mr. Truman has offered seven reorganization proposals. They will become effective unless voted down by Congress within 60 days.

That is a good beginning—but of course it is only a beginning.

We cannot stop there. Much more must be done if we are to achieve the $5,000,000,000 saving outlined by Mr. Hoover and his bipartisan Commission.

I assure you the fight to reduce the cost of Government will continue with increasing vigor. You must continue your efforts to make Congress and the President hear you and heed you.

Let me turn now to a subject that has been causing more and more worry. That is the problem of increasing unemployment.

Do you know that 3,300,000 workers are unemployed in the United States today, and that 344,000 are without jobs in Pennsylvania? Thousands of others are working part time.

Those are official figures and a break-down shows that the biggest increase in unemployment has been in manufacturing.

For seven successive months the number of unemployed workers in Pennsylvania has gone down steadily.

Tomorrow your job may be at stake, or your husband's job, or your father's or your son's.

I have had hundreds of letters and telegrams from individual working men and from local unions of the A. F. of L. and the CIO, asking me to do something to protect their jobs.

They came from Philadelphia, Pittsburgh, Erie, my own home town of Washington, Pa.; Greensburg, Jeannette, Glassport, Clarion, New Kensington, and many other places.

I also have had letters from businessmen and owners of small factories asking for help to keep their plants going.

Now the question is—what has caused this sharp increase in unemployment? What can the administration do to correct it? What can Congress do? Surely every one of us is interested in saving the jobs of the American worker at high wages. Everyone wants to maintain the American standard of living at its present high level.

Let me tell you about a meeting I attended here in Washington a week ago last Tuesday. I think it will throw some light on the subject. It was a meeting arranged jointly by officials of organized labor and representatives of manufacturers in the glass, china, and pottery industries.

They invited Members of Congress to meet with them to discuss the situation.

My fellow Pennsylvanians, that meeting was a splendid example of American cooperation—labor, management, and Government sitting down together to find the solution to an American problem.

Now, what was their complaint? They pointed out that the importation of glass, china, and pottery from foreign countries, produced with cheap labor, was stealing the American markets. As a result they were losing their jobs and their plants were closing.

Furthermore, they complained that they were being taxed to provide the dollars to send to Europe to build the most modern industrial plants to compete against them in their own markets. They also pointed out that we are furnishing the best technical skill in America to teach foreign producers the American know-how.

In Pennsylvania, particular western Pennsylvania, we have a considerable glass, china, and pottery industry. It is an old-established industry. Recently it has been hard hit by a flood of low-price imports.

In a single year Pensylvania's hand-blown glass industry has been cut down 50 percent. That means part-time employment or complete unemployment for many of our people.

Let me tell you what was brought out at the meeting. In Pennsylvania our glass workers earn an average of $1.42 an hour.

Glass made in Belgium is taking some of our market. The workers there are paid 31 cents an hour.

Another part of our market is being taken away by French glass. Those workers are paid 33 cents an hour.

Plenty of Czechoslovakian glass is coming in. Its workers are paid 20 cents an hour.

Pottery and dishes are being imported from occupied Japan to compete with our Pennsylvania products. There the workers are paid 7 to 10 cents an hour. They are also being brought into this country from occupied Germany where the worker receives 30 cents an hour.

Well, what are we Pennsylvanians supposed to do? Certainly we do not want to cut wages to meet this competition. Certainly we do not want these old American industries to die and go out of existence. That is exactly what will happen unless something is done about it.

It is not surprising, therefore, that the principal things talked about at that meeting were the tariff on foreign-made goods and the reciprocal trade agreements.

Labor is getting wide awake to the tariff situation now. Pennsylvania labor is worried over the loss of industry in our State because it means fewer jobs, lower wages, and a reduced standard of living.

Now, these men that I met with were greatly concerned because awaiting Senate action is a bill which has already passed the House. This bill continues for two more years the power of the President to make reciprocal trade agreements with other countries.

It would permit the President to cut our tariff rates even lower than they are now—and they are now the lowest in our history.

These men were urging me and other Members of the Senate to support an amendment which Senator MILLIKIN, of Colorado, has offered known as the peril-point amendment.

Now, what is this peril-point amendment? It is something that protects the jobs and wages of thousands of Pennsylvania's workers. This amendment provides that before the President enters into any reciprocal trade agreement the Tariff Commission shall make a study of the particular products covered.

It shall then indicate tariff rates below which there would be danger to American industry, business or agriculture.

These peril-point rates would be certified to the President. If he determines on rates below the peril point fixed by the Tariff Commission, he may do so. But, first, he must publicly tell the Congress and the American people his reasons.

That is all the peril-point amendment does. But there is much opposition to this simple amendment offered to protect the American worker. Those opposed to it say it places a hampering restriction upon the President.

My fellow Pennsylvanians, there are more than 17,500 factories and mills in our Commonwealth. We have approximately 1,600 mines and quarries, and about 170,000 farms. In Pennsylvania we employ 4,500,000 people. I am deeply interested in the welfare and prosperity of our workers and their dependents. That is why am I supporting the peril-point amendment.

Now I'm not against reciprocal trade agreements so long as they are truly reciprocal. But in recent years they have stopped being reciprocal. Our tariff rates have been cut to the lowest level in our history. Other countries which have signed these agreements with us have raised their tariff barriers to the highest levels.

Reciprocal trade agreements should be two-way streets—not one-way. They should be beneficial to both countries concerned; not favoring one while harming the other.

What is happening in the glass, china, and pottery industries of Pennsylvania is also happening in other industries of our State.

The rayon industry in Marcus Hook, Lewistown, and Meadville has already felt the blow.

Production of shoes and other leather goods in eastern and central Pennsylvania has been hard hit.

Textile workers in Philadelphia and other parts of the State know the story from bitter experience.

The watch industry of Lancaster is battling against foreign competition. More than 85 percent of the watches sold in America today have movements made abroad.

I know of one rug factory in Pennsylvania that was forced to close. Japanese imports put it out of business.

Pennsylvania is not alone in this difficulty. Recently, as a member of the Finance Committee of the United States Senate, I have heard the same complaints from many other parts of our country. They came from the clothespin manufacturers of Maine and Vermont, the textile industries of Massachusetts, and the oil fields of 27 States. Even the cherry orchards of Oregon are threatened by a flood of low-priced imported cherries.

And so it goes—clear across the Nation.

This is the issue that the Senate must soon consider when the extension of reciprocal trade agreements comes before us.

You can readily see what an important bearing this legislation has, not only upon the well-being of our workers and their families, but also upon all the people of Pennsylvania.

If this situation today has no other beneficial value, it is teaching labor and management a lesson so many factory owners and so many workers seem to have forgotten—that one cannot get along without the other.

When industry is threatened by ruinous tariff rates and ill-considered trade agreements, then the jobs of the workers are also threatened. One cannot thrive unless the other thrives. Without the pay roll of the factory worker, what becomes of the small retail merchant, the butcher, the baker, the grocer, and all the others?

Obviously, they will be in trouble, too.

And the farmer will be in trouble. The workers are his market.

The legs of the tripod upholding American prosperity and strength are labor, management, and agriculture.

Collapse any one leg—management, labor, or agriculture—and the whole structure must fall.

We are in the Fourth of July week end. It is the greatest of all American patriotic holidays—the commemoration of the birth of our independence.

My fellow Pennsylvanians, the way to keep that independence is to remain strong. We are strong when labor, management, and agriculture are all strong. We cannot remain strong if we continue to give away to foreign countries the jobs of our American workers.

This is ED MARTIN, speaking from the Nation's Capital and assuring you that I sincerely appreciate your attention.

HAPPENINGS IN WASHINGTON

(Program No. 3)

This is ED MARTIN, speaking to you from the Nation's Capital and bringing you another report on happenings in Washington.

Two weeks ago I told you about the reciprocal trade agreements and how they were taking jobs away from our Pennsylvania workers.

Since my talk with you the United States Department of Commerce has released figures showing that another half million men and women have lost their jobs across the Nation. That brings the total of unemployed up to nearly 4,000,000

Today I want to bring to your attention another international question. It involves one of the most important decisions our country has ever been called upon to make.

I want to discuss the North Atlantic Treaty and how it will affect us right here at home.

Not many years ago foreign relations and international agreements were far removed from Main Street. They didn't seem to touch the average man in his home, his job, or his daily life.

But two world wars have changed all that. Death and destruction on a global scale have transformed our way of thinking.

Today we know, through tragic experience and vast cost in blood and treasure, that peace and freedom cannot be taken for granted. We know that we continue to pay for war long after the shooting has ended.

The military cost of World War II has been estimated at $1,117,000,000,000.

Of course, none of us can possibly visualize a trillion dollars. But that's not all. In addition, property loss in World War II has been estimated at more than $230,000,000,000.

The United States share of this most costly of wars was about $330,000,000,000 up to the time victory was achieved over Germany and Japan.

When I speak of these unbelievable sums of money I am not unmindful of the greater and more tragic cost in suffering and in precious lives that were sacrificed in the hellfire of war.

Remember that we are still spending billions upon billions to pay for the wars of the past and to strengthen our country's defense.

It is therefore clear that we must do everything within our power to maintain peace in the world.

That is exactly what the North Atlantic Treaty aims to accomplish. It was planned to end the threat of aggression against any of the North Atlantic Nations.

Now, what is the North Atlantic Treaty? It is a contract signed by 12 North Atlantic countries. They are Belgium, Canada, Denmark, France, Iceland, Italy, Luxemburg, the Netherlands, Norway, Portugal, Great Britain, and the United States.

It is a contract not to make war but to preserve peace. It is a defensive agreement containing 14 short articles.

The principal provisions may be found in articles 3, 5, and 11.

In article 3 these countries agree "to maintain and develop their individual and collective capacity to resist armed attack."

Article 5 states "that an armed attack against one or more of them—shall be considered an attack against them all."

It is further provided that all will assist the country so attacked by taking, forthwith, such action as each country deems necessary—please note that phrase—as each country deems necessary—"including the use of armed force, to restore and maintain the security of the North Atlantic area."

Article 11 provides that the treaty shall be carried out by each country according to its own constitutional requirements.

You will note, as has been pointed out on the Senate floor, these articles do not commit the United States to go to war, and do not violate the constitutional provision giving Congress the sole authority to declare war.

On the other hand, it was argued on the Senate floor, that even though no nation is legally bound to go to war in the event another is attacked, there would be a strong moral obligation to do so.

Now let me point out that the theory of the North Atlantic Pact is not new. In 1776, at the signing of the Declaration of Independence, Benjamin Franklin said: "We must all hang together or assuredly we shall hang separately."

If each of the thirteen colonies had stood alone they would have been wiped out one by one.

If the peace-loving countries of the world had been united in a defensive pact such as this I dare say that Kaiser Wilhelm and Adolf Hitler would not have dared to move their armies beyond the German boundary.

Had the German warlords known that the United States would come to the defense of the invaded countries World War I and World War II probably would have been prevented.

We had no defensive pact then but we could not and did not keep out of either of these wars.

For many years I have advocated a defensive compact against the enemies of civilization.

In a speech delivered in Philadelphia early last year, I said:

"We must, without delay, take leadership in bringing the God-fearing peace-loving nations of the world together in a defensive pact, joining the old world and the new, for mutual protection against communistic domination and enslavement. We must tell the aggressors, clearly and forcefully, that if any one of these nations is molested all will fight to preserve its freedom. We must leave no room for doubt.

"That policy, if backed by military strength will avert war.

"We must take decisive action before it is too late. Delay will prove costly to us and the world."

That is what I said on March 9, 1948. Perhaps some of you now listening heard me express the same thought when I was Governor. I urged such a defense alliance as far back as World War I.

I am satisfied that this treaty will be recorded in history as one of the most important steps ever taken for the preservation of peace.

I am equally satisfied that my vote for the treaty is in the best interest of our country and the world.

Now the President proposes a second program. It calls upon the United States to supply arms to the other countries in the pact for mutual defense.

The two programs are not inseparable. Senator CONNALLY, of Texas, chairman of the Senate Foreign Relations Committee, who is the administration's floor manager for this legislation, made that very clear. He said and I quote:

"Each program should be passed upon separately by the Congress. Each should be accepted or rejected on its own merits."

The present proposal is to give these countries about $1,250,000,000 worth of arms in the first year.

That is just a start. More and more billions will follow.

Now this is the part of the program that has given me the greatest concern and worry.

The worry is not over the question of whether these countries should be rearmed but whether, in view of the present rate of Federal spending and our financial condition, we can possibly rearm these nations without destroying our own country.

Where are we going to get the money? We have a debt of nearly $253,000,000,000, which must be paid. In spite of a record-breaking national income last year we ended the fiscal year on June 30, with a deficit of $1,811,000,000. Business is falling off, national income is decreasing, but new schemes for spending are springing up all the time.

If the present rate of spending continues we will end next year at least six to eight billion dollars in the red.

That is something to which you and I must give the most serious thought. If we continue to adopt all the fuzzy-minded spending proposals we will be signing our own death warrant as a free Nation.

Is it better to gamble and take a calculated risk that the North Atlantic Pact alone, with its warning to aggressor countries, will in itself prevent war?

The Monroe Doctrine, enunciated 126 years ago, has prevented foreign aggression against the Western Hemisphere without the purchase of a single gun or the firing of a single shot.

We have but one other sound course.

We must review our whole spending program. We must cut away all the waste. We must eliminate all the fancy frills developed in the years of extravagance. We must reject socialistic experiments disguised as social welfare projects. Nonessential functions and services must be discarded. The Federal Government must be streamlined in accordance with the Hoover Commission recommendations.

We must decide whether we will continue to spend billions of dollars in Europe to support socialistic programs that are proving day by day to be complete failures.

The cost of Government must be cut and cut to the bone. Economy must be installed as a major objective in every department of the Government.

Let me say frankly to you, my fellow Pennsylvanians, unless I can see a definite policy to economize and cut the cost of Government I don't know how I can conscientiously support the program to rearm the North Atlantic countries.

I am your representative in the Senate. I need your help. Together we must arouse public opinion and convince the entire Congress of the urgent need for the strictest economy.

Many in Congress know it is possible, without endangering sound and efficient government, to cut four or five billion dollars out of the present budget. Some of us, Democrats as well as Republicans, will continue to work, fight, and vote for these economies.

Strong and solvent we are the hope of the world, the cornerstone of the North Atlantic Treaty—insolvent, debt ridden and tax burdened, the North Atlantic Treaty will become nothing but another scrap of paper.

That must not happen.

This is ED MARTIN, speaking to you from the Nation's Capital.

I will be with you again in 2 weeks. Thank you for your attention.

The Brannan Farm Program

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, July 22 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a statement which I made over Station WCAU, Philadelphia, on July 10, 1949, during a debate with Representative FLOOD, of Pennsylvania, on the question, "Should Congress adopt the Brannan farm program?"

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

You have just heard Congressman FLOOD, of Pennsylvania, give some rather flowery arguments as to why he thinks Congress should adopt the Brannan farm program. As he describes the Brannan plan we find that:

1. For the farmer it promises greater security and higher income than under any previous legislation.

2. For the consumer it promises lower prices for the kind of food that he wants.

3. For the taxpayer it promises no higher costs.

In other words, simply stated, the Brannan farm program is another New Deal pipe dream which promises to give something to everybody for nothing. This program is the prime objective of the bureaucrats for a planned economy, repealing the law of supply and demand and setting up in its stead a welfare state here in America.

The truth of the matter is that the proposed new Brannan farm program is one of the most socialistic pieces of legislation which has ever been proposed during the past 16 years. If adopted, it would mean that we would be placing in the hands of some bureaucrat in Washington the power to control production, marketing, and distribution of all agricultural commodities in America.

Under this proposal, the Secretary of Agriculture is seeking the authority to tell every farmer how many pigs or chickens he can grow or how much of any specific crop he can plant and how much of that crop he can sell. Under his proposal any farmer who fails to carry out his instructions as to the filing of required reports, or exceeds his acreage allotments, or produces more livestock

than he is told to produce, would be subject to legal penalties which could result in the loss of his farm to the Federal Government.

As a specific example of how this program would work, let us assume that the Secretary of Agriculture was supporting the price of potatoes at $2.50 per hundredweight. Under his proposal, the farm price of potatoes would be thrown on a free market; and if the potatoes were sold for $1.50 by the farmer, he would apply for the difference of $1 from the Government. If the farmer sold potatoes for $1 per hundredweight, he would receive $1.50 from the Government. All other commodities would be handled on a similar basis.

Mr. Brannan attempts to justify this by pointing out that the commodity thus sold would be moving to the consumer markets at lower prices. He fails to recognize that the adoption of any such proposal which removes incentive from the farmer to realize a good price for his crops would pave the way for the greatest era of graft and racketeering since the days of OPA.

Since it would make no difference to the farmer whether he received $1 or $1.50 for a product which was supported at $2.50, it is only natural that a group of unscrupulous operators and corrupt Government employees working together would have a field day at the expense of the American taxpayer.

Another and by far the most misrepresented part of this program is the ultimate cost to the American taxpayers. In the first place, no one in any responsible position—not even the Secretary of Agriculture, Mr. Brannan—has as yet dared to estimate the cost of this utopian plan.

Theoretically, since this program embraces all types of agriculture, many with which the Department of Agriculture has had no previous experience, it is impossible for anyone with any degree of accuracy to estimate the ultimate cost. No one disputes the fact that at the minimum the cost to the American taxpayer will run into many billions of dollars annually. In fact, some economists estimate its cost as high as $10,000,000,000 or $12,000,000,000 a year.

And where will this money come from to pay the cost of this program? It will come from additional taxes levied against the same farmers and consumers who are supposed to reap these benefits, or else through deficit Government financing, it will be charged against your children and grandchildren. Do not overlook the fact that during the past 16 years we have already levied a mortgage of about $2,000 against each and everyone of these children.

No stronger argument has ever been given against these so-called Fair Deal or socialistic programs than that which was given by the Honorable James F. Byrnes, former United States Senator, Supreme Court Justice, Secretary of State, and one-time administration stalwart. Here is what he said in his speech of June 18, 1949:

"Every segment of society is demanding special privileges—the farmer wants higher prices, the wage earner wants increased wages, pensions, and hospitalization. Too many people want more pay for less work. We are going down the road to statism. Where we will wind up, no one can tell, but if some of the new programs seriously proposed should be adopted, there is danger that the individual—whether farmer, worker, manufacturer, lawyer, or doctor, will soon be an economic slave pulling an oar in the galley of the state."

I agree that the Government does have an obligation to safeguard the interests of the American farmers, but it has always been my contention that a support price on any agricultural commodity should never exceed the cost of production and all formers regardless of geographic location or type of crops produced must be treated on a basis of equality. I do not believe that the support price of any agricultural commodity can successfully be maintained above the cost of production without the adoption of strict acreage controls and the complete regimentation of the American farmer.

If America will only wake up and think this plan through, I am confident this socialistic give-me-something-for-nothing program will be rejected. Let us never forget the wise words of Benjamin Franklin, who once said, "He who trades freedom for security will lose both."

Tribute to A. F. Whitney, Late President, Brotherhood of Railway Trainmen

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Friday, July 22 (legislative day of Thursday, June 2), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial in tribute to A. F. Whitney, late president of the Brotherhood of Railway Trainmen, who died during the past week. Mr. Whitney was a great general among the labor leaders of the country and a devoted believer in the future of American democracy. Labor has lost an effective spokesman and the country a dynamic crusader for the democratic way of life.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A. F. WHITNEY, UNION CHIEF—A WARRIOR

The American labor movement has lost one of its sharpest fighters in the death of Alexander F. Whitney, long-time head of the Brotherhood of Railway Trainmen, at 76.

His New England ancestors and minister father bequeathed him courage, iron of the soul, and readiness to meet hard circumstances with hard tactics. In his career, he drove as hard as he could for the elevation of the railroad worker, for the political power of the labor union, and for the socializing of America. His faith in his three objectives never could be shaken.

With the political revolutions of the 1930's and the Rooseveltian cultivation of the labor vote, his prestige, brains, and will power came into the national limelight. He became as powerful as John L. Lewis, yet he was somewhat more humble about his power. He veered as far to the left as any other intelligent union chieftain, yet he refused to be put off as a mere radical—he could produce the blueprints for his highways to utopia.

He dabbled in all political parties at one time or another, but always with the justification that his views were founded on the separate welfare of his Brotherhood of Railway Trainmen. That enabled him once to support President Hoover; and once to spurn as enemy, then accept as an ally, President Truman, after the rail strike threat of 1948 and its collapse under Washington pressure.

Privately and personally, he was a man of wit, education, distinction, and great ability to express himself. It was his leadership which raised a union badly hit by mismanagement and depression to one of the most influential, well-managed trade-unions in history. He will not soon be forgotten.

Use of Economic Report for Campaign Purposes

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Friday, July 22 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Truman Seen Using Economic Report as Campaign Speech" which appeared in the Washington Evening Star on Thursday, July 14, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRUMAN SEEN USING ECONOMIC REPORT AS CAMPAIGN SPEECH—STATEMENTS IN ATTACK ON EIGHTIETH CONGRESS ARE CALLED MISLEADING

(By David Lawrence)

President Truman had possession of the major radio networks in order presumably to give an economic report to the country, but he used the occasion in large part to make a political campaign speech lambasting the Eightieth Congress which was controlled by the Republican Party.

Mr. Truman made several misleading statements. The principal one was his repetition of a claim which he first gave to a press conference last May and which has been contradicted again and again since. In the radio speech just delivered, Mr. Truman said:

"When we had an excess of receipts over expenditures, we applied it to reduce the national debt. We have already paid off more of the debt than the total size of the national debt after the First World War."

CLAIM WITHOUT FOUNDATION

This claim is without foundation. Just after World War II ended there was left on hand the proceeds of a victory loan which were not needed because hostilities were terminated sooner than expected. This amounted to $20,000,000,000.

The only amount of debt retirement that can be called an "excess of receipts over expenditures" in the sense in which such a phrase should be used is $7,000,000,000, and that was accomplished in the early part of 1948 when the Eightieth Congress had kept the expenses of Government down to a minimum.

The debt that remained after World War I was approximately $27,000,000,000, so when Mr. Truman contends that his administration has reduced the public debt by more than the total size of the national debt after the First World War and that this has been accomplished by an "excess of receipts over expenditures," he has certainly given a misleading impression of what really has happened.

Mr. Truman has "ghost writers" who help to prepare his speeches, and doubtless this inaccuracy was due to the carelessness of the ghost writers, though it is a puzzle why they should have made the same error now that was made last May.

Another error in the President's speech relates to the tax cut made by the Eightieth Congress. He said:

"The leaders of the Eightieth Congress thought they could wish the facts away. They insisted on passing a tax reduction against my advice and over my veto. I warned that this tax cut of $5,000,000,000 was almost certain to produce a deficit. It did

produce a deficit. For the year ending July 1, 1949, the deficit was $1,800,000,000.

"The economy was running at a high level when this untimely tax cut was made. People then could pay the taxes necessary to balance the budget and to provide a surplus for debt reduction. Today, because profits and income have fallen, taxes bring in less money."

WHAT HE DIDN'T TELL

What the President didn't tell the people over the radio was that the deficit of $1,800,000,000 in the fiscal year ending June 30, 1949, was largely because of refunds of about $3,000,000,000 paid to taxpayers because they overpaid their income taxes for the calendar year 1948 due to the delay in passing the tax cut till almost the middle of the year. There was more than enough surplus in 1948 to take care of the tax cut, provided expenses had not been increased in 1948.

What the President also failed to note was that if the tax bill had not been passed over his veto, the high rates in effect until mid-1948 would have brought in far less tax money this year. For the national income started to drop in the latter part of 1948, and hence during this calendar year the individual income payments of the Nation are estimated to be only at the rate of about $207,000,000,000 as compared with $219,000,000,000 in the calendar year 1948.

Certainly keeping the high tax rates in effect as of January 1949 might have merely started the recession sooner. For it is significant that the tax cut last year did not increase purchasing power to the point of augmenting inflation. The deflationary trend started anyway in the autumn of 1948.

Mr. Truman failed to tell the people that the Nation got along with a $38,000,000,000 budget 2 years ago, and now he has increased it to $42,000,000,000 at a time when receipts have come down from a peak of $44,000,000,000 to $37,000,000,000.

If the 1950 budget had been trimmed to the level of fiscal year 1948, there would be no deficit ahead.

The whole theme of the Truman speech was that an unbalanced budget of several billions is needed. He opposes the idea of pruning expenses as tax receipts fall off. This doctrine can produce a return of inflation and a lack of confidence in the integrity of the dollar.

League for CVA Terms Pacific Northwest Development Association "Front Group" for Private Power Companies

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial regarding CVA from the Oregon Teamster, of Portland, Oreg.:

OVERSTEPPING THE BOUNDS

The hotly controversial issue of a Columbia Valley Administration has witnessed a spirited exchange of opinion between the pro-CVA and anti-CVA forces.

Up until now this verbal tilting has been, for the most part, within the bounds of reason, decency, and common sense.

Now these bounds have been overstepped by an organization which calls itself the Pacific Northwest Development Association.

The association is opposed to a Columbia Valley Administration. In a propaganda skyrocket, dated July 4, it hysterically alludes to the CVA proposal as a national Socialist-Fascist superstate, and, by strong implication, labels as Fascists the people in Oregon who want a CVA.

This is scraping the bottom of the barrel when it comes to invective. To tag the name "Fascist" on thousands of Oregon workers and farmers who want a CVA is to display a type of intellectual delinquency that hasn't been seen in these parts for many a year.

When the name calling starts in any battle, it's pretty generally accepted that the caller has run out of ideas and arguments. The Fascist smear will win no friends for the anti-CVA forces and it would not be surprising if many who are opposed to CVA now find the Pacific Northwest Development Association's brand of ojective discussion a little more than they can stomach.

As an interesting sidelight on this name calling, the facts behind the Pacific Northwest Development Association should be brought to public attention.

Private power companies are required by law to file statements of financial expenditures. The League for CVA recently delved into the 1949 expenditures of power firms doing business in Oregon. These statements are on record at the State capitol in Salem.

The league says it found that the Mountain States Power Co., Pacific Power & Light Co., Portland General Electric Co., and the Idaho Power Co. all had made contributions or donations to the operation of the Pacific Northwest Development Association.

The League for CVA has termed the association a front group for the private power interests.

It will be interesting to see whether these private power firms continue to support an organization which has recklessly smeared thousands of workers and farmers in Oregon with the Fascist epithet.

Economic Aid To Spain

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the statement of my friend, Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs, explaining the benefits to the United States of economic aid to the Spanish people in a letter appearing in the New York Times of July 20, 1949, and I recommend his views to the attention of the Members of the Congress and to the general public:

FOR COOPERATION WITH SPAIN—RECORD OF PRESENT LEADERSHIP HELD JUSTIFYING ECONOMIC AID

To the EDITOR OF THE NEW YORK TIMES:

When we needed Spain and cultivated the friendship of the same head of the Spanish state that the editors of the New York Times criticize as a mean and vindictive little man (the Times, July 16, 1949), an editorial was published in this newspaper praising the appointment of Dr. Carlton J. H. Hayes.

Throughout his mission in Madrid, wartime Ambassador Hayes was upheld by President Roosevelt, who had appointed him. Whatever opinions our fellow citizens may entertain about Spanish policy throughout the war, it is agreed, I believe, that Dr. Hayes carried out his instructions in the national interest of the United States and made a substantial contribution to our victory.

Now that we are face to face with the grave threat of totalitarian Marxism, it may be important, from the standpoint of fairness and national honor, to study the claim of the Times that the head of Spain's Government is not only a bad credit risk but also a bad moral risk.

In this connection I will cite the judgment of Professor Hayes, available in the CONGRESSIONAL RECORD, July 14, 1949, pages A4737–4738:

WAR SERVICES

"It is very unfortunate that propaganda of the Soviet Union, and of its conscious or unconscious apologists and appeasers in this country, has served, especially during the last 3 years, to conceal from the American people the signal services which Spain rendered us in the critical war years from 1942 to 1945, and to induce our Government to adopt toward Spain a policy which I can only regard as contrary to American interests and derogatory of American honor. Our fellow citizens should be enlightened, not deceived, about the actual facts in the situation.

"Under Don José Félix de Lequerica, as under his predecessor, Count Francisco de Jordana, the Spanish Foreign Office, with the obvious approval of the head of the Spanish state, granted us more favor than did any neutral government, whether Sweden, Turkey, Switzerland, or Portugal. Not only did the Spanish Government pledge itself not to interfere in any way with our fateful landings and campaign in North Africa; not only did it assure us as early as February 1943 that it would join us in the war if the Axis should attempt an invasion of Spain; not only did it permit us to use Spain as the base for invaluable espionage of Axis activities in France and the Mediterranean, it also accorded us important positive favors.

"It allowed us to get over 1,200 American airmen safely across the peninsula, without any internment. It permitted the transit and exit of over 25,000 members of the French resistance movement as reinforcements for the Allied armies in north Africa. It choked off export of strategic war materials to Germany before any other neutral had done so. Spain, too, was the first country to conclude a permanent air agreement with us, and one whereby we were enabled to obtain landing rights for military as well as civilian planes.

"In the light of all such facts, it is simply hypocritical to countenance the notion that Spain has been hostile to us and should therefore be treated as a pariah among the nations. It certainly belies the solemn assurances which President Franklin D. Roosevelt gave to the head of the Spanish Government in writing in November 1943."

TESTIMONY ON RECORD

This is the same Professor Hayes who, in 1949 as in 1942, is a true liberal, open-minded, Catholic and patriotic. If his present testimony is compared with the Times editorial, it indicates that morally Spain's record is better than that of some of our own leaders who sought and received help in an hour of need and then subordinated the claims of honor and gratitude when it was deemed expedient to appease the Soviet Union and Soviet sympathizers.

Our diplomacy under Secretary of State Cordell Hull and wartime Ambassador Hayes was glad to utilize the strategic Iberian Peninsula. Our morals did not demand a change

in the leadership of the Spanish state from 1942 to 1945. The one and only loan, negotiated by the Export-Import Bank to Spain for cotton purchase in 1939, was repaid in full. How do the credit records of European countries, many of which accepted United States gifts, compare with the dollar-for-dollar repayments from the Spanish people and the Spanish Government?

If we sincerely sympathize with the people of Spain, who want no more bloodshed, still less, Soviet domination on the style of what prevails in Czechoslovakia, Hungary, eastern Europe, and the Far East, we will express that concern by practical measures of cooperation, diplomatic and economic. This is suggested by good ethics as well as by enlightened self-interest.

JOSEPH F. THORNING.

WASHINGTON, *July 18, 1949.*

Our Flag

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, July 22 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, Dr. James A. Reese, of Waynesburg, Pa., has written a very fine poem entitled "Our Flag," which was used in various parts of the world during the war. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

OUR FLAG

Ofttimes our flag seems commonplace,
Quite like a mother's smiling face
Whose ever-present word of cheer
Is always sure to greet the ear
Of those who chanced to pass that way
From early morn till close of day.
Then like a bolt from out the blue
Our mother's tender voice is stilled;
We never knew until the day
Our loving mother went away,
How much she really meant to us.
And so the emblem of our land,
Though oft neglected by our hands,
Keeps flying from her mast on high,
Proclaiming to the passer-by
That this is free and sacred soil.
And then the sullen mists of war
Are wafted o'er our native shore.
So not until that very hour
Do we really know how much
The Stars and Stripes do mean to us.

Murphy Stores Head Sees Sales Topping 1948

EXTENSION OF REMARKS

OF

HON. HARRY J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include a news item from the Pittsburgh Sun-Telegraph which is a report of a speech made by Paul Sample, president of the G. C. Murphy Co. stores, in which he takes a highly optimistic view of present business conditions and is critical of those who are causing harm to our national economy by their too much "viewing with alarm." I am in perfect agreewith Mr. Paul Sample. We must not allow chronic pessimists talk us into a recession or depression. There is plenty of business to be had for the wide-awake firms which employ smart, modern, aggressive, streamline methods of getting it.

MURPHY STORES HEAD SEES SALES TOPPING 1948'S—SAMPLE REJECTS ALARM OVER BUSINESS AS RETAIL FIRM OPENS CONFAB HERE

Paul L. Sample, of McKeesport, president of the G. C. Murphy stores, yesterday refused to go along with men who view with alarm the business situation.

Mr. Sample said sales for the firm's 214 stores are expected to hit the $150,000,000 mark this year, as compared to $137,000,000 in 1948.

"Our sales to date are running 8½ percent ahead of the same period in 1948," Mr. Sample said at the outset of the Murphy stores' semiannual fall and Christmas merchandising convention at the William Penn Hotel. "We expect the last half of 1949 to show a modest increase."

OPTIMISTIC OUTLOOK

Mr. Sample said store executives are optimistic about fall and winter business.

"Part of this optimism," he said, "is due to the fact that many items have been reduced in price, yet are improved in quality and workmanship. Lower prices are here and it is foolish to wait for them to drop even lower. Manufacturers have pared their costs and have passed on lower costs to retail stores which in turn are passing them on to their customers."

Mr. Sample said his firm's optimistic viewpoint is reflected in the opening, in the near future, of new stores in Clarendon, Va., and Oak Hill, W. Va.; the recent opening of a modern store in Parkersburg, W. Va., and remodeling programs at stores in Erie and Harrisburg and Fort Wayne, Ind.

FIVE HUNDRED ATTEND PARLEY

The 4-day meeting of Murphy executives that opened yesterday brought together approximately 500 store managers and buyers, district and division heads and key salespeople from the stores, located in 12 States and the District of Columbia.

Basic Power Policy for the Northwest

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, July 22 (legislative day of Thursday, June 2), 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Basic Power Issue," from the Oregonian of Tuesday, June 21, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BASIC POWER ISSUE

An appropriations subcommittee of the Senate will decide this week, after many hearings, an issue of basic policy for the Northwest. It is whether the Bonneville Power Administration (or its CVA successor) shall transmit electricity from a fully integrated system to major load centers in Montana and Idaho, or whether private power companies will be permitted to take deliveries at isolated dams, such as Hungry Horse, and build their own transmission lines.

The dispute does not involve any proposed change in distribution of power to individual customers, which still would be by private utilities, PUD's, municipalities, REA's, and cooperatives. It does involve, first, the interconnection of Federal dams, and second, transmission of power to the big centers of need in Idaho and Montana.

The main fight in the Northwest involves Hungry Horse Dam on the Flathead River in Montana, but the decision on this dam will affect the later decisions on Hells Canyon Dam on the Snake River in Idaho and Oregon, as well as interconnections with Anderson Ranch Dam in Idaho and others. Hungry Horse will be completed in 1952, a year before McNary Dam on the Columbia, and will be the first important source of new energy following completion of the installation of generators at Grand Coulee in 1951.

The House of Representatives approved an appropriation to build an interconnecting line between the main Bonneville System at Grand Coulee and Hungry Horse Dam, via an intertie with the Montana Power Co.'s Kerr Dam on the lower Flathead, as well as funds for a 230,000-volt transmission line south from Kerr Dam to Anaconda.

Montana Power Co. has attacked both these proposals in Senate committee hearings. It has been supported vigorously by Idaho Power Co., which wants to block a similar invasion of Idaho by Bonneville lines extending from authorized Hells Canyon Dam and interconnecting with Anderson Ranch and the Montana line.

The Senate can scarcely deny the wisdom of tieing Hungry Horse Dam into the main Columbia River system. As an isolated project, providing some but not a great deal of firming-up advantage to Grand Coulee by water storage and release alone, Hungry Horse could produce only 77,000 kilowatts of firm power though with a rated capacity of 285,000 kilowatts. Intertied with the Columbia grid the firm power benefits would increase the 399,000 kilowatts—a gain for the entire Northwest of 322,000 kilowatts.

Such an intertie has been approved by a conference in which private power-company engineers participated, and were in agreement.

Montana Power Co., while objecting to an intertie via its Kerr Dam, is not adamant against a connection between Spokane and Hungry Horse by a northern route via the proposed and distant Libby Dam on the Kootnai—a more costly line and one not needed for many years, and then only if Libby is approved by Congress.

Here is the nub of the opposition. Montana Power wants to take Federal electricity at the bus bar at Hungry Horse and transmit it via Kerr Dam to Anaconda on its own 230,000-volt line. Similarly, it may be assumed that if Congress appropriates money to build Hells Canyon Dam on the Snake, Idaho Power Co. will seek to take the power at the bus bar and transmit it via its Snake River Dam interconnections to Boise and other Idaho load centers.

The fundamental controversy is not so much interconnection as it is the question of whether the Bonneville Power Administration will have authority to transmit power to areas of demand throughout Montana and Idaho—phosphate beds, mines, and other industrial centers—in the grid pattern developed in Washington and Oregon—or whether the responsibility assumed by the Federal Government for development of energy from the rivers of the West shall end at the generators of widely separated dams.

Adequate Health Service for School Children

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony which I submitted on my bill, H. R. 5284, to provide for more adequate school health services, before the Subcommittee on Public Health, Science, and Commerce of the House Committee on Interstate and Foreign Commerce:

Mr. Chairman and members of the committee, it is a privilege for me to join with other members in support of legislation to provide adequate health services for our school children. As a sponsor of H. R. 5284, I appreciate that no pride of authorship, no claim of party, can be stamped upon a measure so profoundly important to the health and welfare of our Nation. The proposed legislation was the subject of extensive hearings in the preceding Congress; during the present session it was wholeheartedly sponsored and endorsed by the Senate Committee on Labor and Public Welfare and passed the Senate on April 29 of this year. I urge this committee in the House to take prompt and favorable action.

We have here a bill to help the States improve health services for the prevention, diagnosis, and treatment of physical and mental defects of school children. This measure of assistance is inspired by a declaration of high and noble purpose; namely, "that no American child shall come to adult life with physical or mental defects or conditions which can be prevented or corrected at an early age." Every right-thinking person will subscribe to that purpose; enactment of this bill is a modest but necessary step toward its realization.

Your committee undoubtedly has been informed that three-fourths of the States now provide some kind of physical examinations for school children. My own State of Washington, for example, has a law allowing hearing and sight examinations by physicians or nurses, and the hearing test has been made mandatory. However, the evidence is compelling that among the several States, the scope and quality of health services vary greatly and in many, these services are grossly deficient because of inadequate financial support.

The formula specified in H. R. 5284 for allotting $35,000,000 each year insures that all States will receive aid, but takes into account the greater financial needs of the poorer States. This formula has been utilized in legislation for allotment of hospital construction funds. State initiative and responsibility is recognized by the requirements in the bill for the preparation of approved plans and the contribution of funds for school health services.

It is important to note that all children in public or nonpublic schools, whatever their race, creed, color, or nationality, will have access to the services contemplated in the bill.

The available statistics on child-health defects show an appalling drain on the vitality of American youth. Some 4,000,000 children are estimated to have defects of vision, 1,000,000 of hearing, one-half million with rheumatic fever, 200,000 with epilepsy. Possibly one-fifth to one-fourth of all the children in the country have diseased tonsils or adenoids, and 75 percent need some kind of dental care. Many so-called problem children are shown, upon examination, to be suffering some simple ailment that can be remedied by proper treatment. Children of normal intelligence often do poorly in school because they cannot see or hear or speak well.

Although we may debate the exactitude of the statistics, we cannot argue away the fact that remedial defects blight the health and life of so many American children. It is our moral duty to give these children their rightful opportunity to live and grow and learn without handicap and to become useful citizens of the community. It is also good common sense to check these ailments at an early age. Ill health is costly to the community as well as to the individual. The sooner it is treated the better for all concerned.

Too often we ignore the wastage of human resources until some great national emergency falls upon us with sudden impact. In the late war we were shocked to learn that 5,000,000 young men—30 percent of all those examined—could not meet the standards for military service. How many of these millions were needlessly unfit because of defects that could be corrected earlier I cannot say; it is agreed that the number is large. Manpower in the mass becomes a precious commodity during war, when the very life of the Nation is at stake.

In peace, let us regard each individual life as a precious thing, giving to our children the basic advantage of good health.

Address Before Luggage and Leather Goods Salesmen's Association

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the following speech which I made before the National Council and the Luggage and Leather Goods Salesmen's Association in New York City:

Mr. Chairman, distinguished guests, ladies, and gentlemen, I appreciate your kind invitation to meet with you here this evening.

On the shoulders of the salesmen rests a tremendous responsibility. They have the open sesame that means the difference between depression and a sound economy, and that word is "order," when they produce the orders there are jobs for labor. The factory wheels keep turning, the assembly lines keep rolling, and the manufacturers stay in business. The salesman is the big link on which both labor and businessmen depend because it is the results of his labor that keeps them alive. If he can't sell, nobody can buy and nobody can manufacture. Now only by united effort on the part of the salesmen can they carry on the important task and at the same time they can protect themselves in this picture of economy—labor on one side and business on the other.

In these days of clannishness among our different economic groups, let me say at the outset how pleased I am to be addressing an audience composed of different levels of American business. I am not particularly pleased by the partisanship growing up in American life. There is a tendency to meet only with those who agree beforehand with everything you have to say. I deplore this trend. For within my own experience I have learned that whenever groups can be brought together to listen to the viewpoints of others, mutual understanding is most often reached. This I have found to be true of people generally.

Understanding requires a willingness to listen to new ideas. The words of the late Chaplain of the Senate, Dr. Peter Marshall, come to mind:

"Oh, Lord," he said, "let us never be afraid of new ideas or unreceptive to a new thought, lest we pull down the shades of our mind."

Understanding the other fellow's viewpoint and being willing to bargain with him on that basis is the first essential to the unity Americans need today. Understanding is the keynote of democracy.

Well, we are finally undergoing our postwar readjustment. Predictions of economists that we would have 8,000,000 unemployed in 1946 did not materialize. Since then the economists have been wary of predictions. I don't blame them. But you don't need a crystal ball to see that the buyers' markets which came into existence for the first time last year, have now become widespread. They are not alarming, though they are serious. They cannot be ignored. They point the direction we are now traveling. The state of our economy is a serious matter both to ourselves and to the world in general. We account for more than one-third the total world production of industrial goods. Without our continued high production economic recovery in those countries devastated by war will be seriously impeded.

In 1949, the whole of the democratic world will be looking toward the United States to show the rest of the world what a free people can accomplish. The nondemocracies are basing their postwar plans on our disillusioning people generally. They repeat and repeat that the United States will soon undergo another depression. If they are right, we will have indeed lost the peace. A depression would cut sharply into our influence abroad.

Under the Employment Act of 1946, the United States Government is pledged to use all practicable means * * * to promote maximum employment, production, and purchasing power. So far with employment, production, and purchasing power at all-time highs, the Government has wisely refrained from stepping in and upsetting the boat. In the future, Government activities to stimulate the economy will tend to increase. We can expect such things as public-works programs to increase. But we can't expect the Government to do the whole job. Most of the job will be the responsibility of private business.

In order to maintain an employment level of 62,000,000 persons and a national income of more than $200,000,000,000, the greatest efforts will have to be made by sales forces throughout the Nation to dispose of manufactured products at a steady and high rate.

If this is not accomplished, business profits will fall, business failures will jump, unemployment will increase, consumer expenditures will decline, and more and more Government action will be necessary. Private enterprise and its sales forces have a real responsibility.

A great American, Franklin Delano Roosevelt, once said that "The liberty of a democracy is not safe if its business system does not provide employment and produce and distribute goods in such a way as to sustain an acceptable standard of living."

One thing we have learned is that economic stability is something we must work for. It is not a natural force.

I do not wish to imply that salesman have the whole burden of the economy resting on their shoulders, but I do wish to point out that in 1949, each wholesale salesman will mean the livelihood or unemployment of about a dozen men on the production line. That is indeed a great responsibility. Every successful sales campaign will mean that much less Government action.

I believe in organization. Before I entered Congress I was an employer. No one has to tell me what little chance a small-business man has against the giant corporation unless he organizes with other small-business men in the protection of their interests. In this world no one will speak for you unless your name is Charlie McCarthy.

The same applies to workers, to teachers, to retailers, and to salesmen.

While Americans enjoy the reputation of being great joiners—who doesn't belong to at least three groups?—it wasn't until a few decades ago that they took seriously the need of economic organizations. They came to realize that on the economic front as well as on the social-front organization could do them much good. I can remember when to belong to a union earned you the title of a radical or a Red. And I can remember when to belong to a businessman's association earned you the title of "A tool of Wall Street." But these days are gone fortunately and we now accept organization as necessary and democratic.

Organization means stature. Organization means strength. Stature brings dignity. Strength brings respect. An organization adds a moral tone to the activity of the individual member.

Let me give you an example: On the international level we have the United Nations Organization. It is nowhere as strong as we should like it to be. Yet it has more stature and it has more strength than any single country. To the individual country it means acceptance into the company of other nations.

Strength can be misapplied. I am well aware of this. Yet if an organization is founded on need and its methods and structure are democratic, I shall never fear it. I shall welcome it.

Many times it is only through organization that employers become aware that better employer-employee relations are not only possible but can be had at no cost. I know this well from experience. Good employer-employee relations can benefit both sides many times over.

I do not profess to know much about the relationship of manufacturers to their wholesale salesmen. But from my experience in related fields, I should conclude that both groups have much in common. Because of our need to stabilize our economy at a high and productive level during 1949, I should like to point out that it is in the interest of the entire Nation that each manufacturer and each salesforce realize this.

Speaking from my end, as a Congressman down at the Capitol in Washington, many things can and will be done by Government to make your task easier in stabilizing the economy at a high level. I want to go on record as saying that I shall be pleased to do everything in my power to correct the injustices that impede your efforts.

I am against the 20 percent Excise Retail Sales Tax. It may have some meaning during the peroid of inflationary spirals when we wanted to discourage consumer purchases. But today we must think in terms of selling more goods and increasing consumer expenditures. The excise retail sales tax is diametrically opposed to our objective. It must go.

As for the Government's 15 percent excise tax on communication services and on transportation, the need for their continuation has gone the way of the excess retail sales tax and other attempts to drain off excessive purchasing. Let our income-tax laws be used to raise revenue and not penalize those persons who must travel for a livelihood.

I should like to repeat and repeat that our big problem this year is to increase purchasing power and not to reduce it. I am agreed that in good times we should utilize higher Government revenues to lower our national debt. But I see no reason why excise taxes should be used to lower our national debt if they cut into our mass purchasing power.

The other day I was reading a document which does much to explain the difference between small business and big business. This was the third annual report of the Council of Economic Advisers to the President. This is the organization set up under the Employment Act of 1946 to advise the President on the economic health of the Nation and the means to achieve economic stability.

The Council of Economic Advisers concluded that the instinct of the small-business man is to expand his production, to seek new markets, and to improve his sales efforts. As for big business, the Council had this to say: "If market demand falls"—and please note these words carefully—"he may try to sustain the market price by reducing his volume of output."

This is only one difference between small and big business, but this difference alone may spell disaster to this country. High production is part and parcel of our general need for high levels of employment and purchasing power.

Again quoting from the annual report of the Council of Economic Advisers:

"With more than 3,000,000 centers of business initiative, the realm of small business offers a moving panorama of self-employment and responsibility for the employment of others, of competition for the patronage of customers, of new ideas and trials and errors that, taken together, make for a dynamic society and insure the American economy against sterility."

Concentration seriously impairs the economic effectiveness of private enterprise. I shall propose and support legislation to reduce the cartels and monopolies that exist in American life.

Small business is the life-blood of this great democracy of ours. Hurt the more than three million retailers in this country and you hurt the greatest champions of individual rights and freedom. Make small business a losing proposition and the great mass of the middle class of this country will disappear. Eliminate the middle class and this great country will be reduced to extremes and bitterness.

Congress is amenable to facts. But the facts must be presented on the excise retail sales tax and on anything else that impedes the efforts of small-business men to stay in business and the efforts of salesmen to sell their products. Sometimes the facts must be presented over and over again. Do it. Congress is busy. More than 10,000 bills and resolutions are introduced each session. These must all be studied. Committee hearings go on almost continually on the Hill. Congressmen read their mail. They talk to visitors. But to do a thorough job, I would strongly urge you to act in unison, in organizations as well as individually, to contact and relate the facts to each of my 530 colleagues. I would also urge you to appear as witnesses at hearings.

I take a personal interest in our social security laws. I believe that every American is entitled to social security. I see no reason why salesmen should be deprived of benefits under those laws. It makes no sense to me that 30,000,000 nonemployers are still unprotected. The Gearhart amendment to the social security law, which excluded 1,500,000 wholesale salesmen on the ground that they were independent contractors, was a selfish and narrow action.

If I had a salesman working for me who was selling my product under agreed-upon terms, I certainly wouldn't consider him an independent contractor. I would consider brokers and independent sales agents who were in business for themselves to be nonmembers of my business. To me the test would be to ask the salesmen whether they consider themselves to be part of the firm or independent contractors.

President Truman and the Democratic Party are on record to extend the benefits of the social security laws to those not covered today. I have faith that the Eighty-first Congress will abolish this wrong to salesmen before it adjourns this summer.

Other injustices affecting sales of goods need organization and continued reminder to correct. Over these I have no real voice.

Mobility is the keynote to effective salesmanship. To do an effective job, salesmen have to be able to move about with a maximum of speed and comfort and with a minimum of expense and hardship. The parking ban in the downtown areas of many American cities cuts into the number of daily calls. It works a severe hardship on those salesmen who must carry heavy sample equipment. The parking bans cut drastically into vital orders. They hurt sales. They hurt production. They affect profits and employment and purchases. This problem must be taken up with city authorities wherever it exists. I hope manufacturers and sales organizations are doing this.

The high—I should say excessive—transient hotel rates for sleeping rooms and showrooms is another problems to the salesman, who must watch his costs in order to make his travels profitable. So few hotels have been built since the end of the war that it will take concentrated effort to convince the managers of decontrolled hotels that their rates should not be increased to excessive levels.

Rugged individualism is not the way of 1949. It sounds good to say that you did everything yourself and that you are not dependent on others. But what is actually the case? Can we exist today without the help and cooperation of countless others?

Beware in 1949 of opportunistic politicians who agree that we need better housing, international cooperation, better health plans, better education, et cetera and et cetera. But pin them down with a detailed plan on any subject and they will retort that they didn't mean that. We must watch out for these abstract do-gooders who are realistic do-nothingers. We have too much at stake.

We all have responsibility for each other. We cannot let the individual suffer because of society's deeds. Neither can we let society suffer because of the individual's deeds.

We are in this all together. We are in this all the way. There is no turning back. Let us face the future with an understanding of our common problems and an understanding of each other's needs. Let us help each other whenever we can. Let's keep this great country of ours a shining example for the rest of the world. Let us work together for the good of ourselves and the faith of our friends in other lands.

In conclusion, let me say that I have known Louis A. Capaldo, the president of the National Council of Salesmen's Organizations for many, many years. He has an excellent knowledge of the salesmen's needs—for he has been one for 35 years. He is the most unselfish man I know. Give him your full support, and he will lead you in the right direction, fighting all the way for the best interests of the salesmen of America in obtaining for them all the protections under our laws that rightfully belong to them.

A Judge Ought To Be Appointed

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following editorial from New Orleans States of July 20, 1949:

A JUDGE OUGHT TO BE APPOINTED

The vacancy created on the United States Supreme Court by the death of Justice Murphy is one that should be filled by the President and the Senate with due regard to the ill repute into which the Court has fallen in the past dozen years.

Appointments to the Court have been made, ever since President Roosevelt tried unsuccessfully to pack it, with more consideration paid to the political persuasion of the nominee than to either his learning in the law or ability as a judge.

The result of this has been a collection of ideological entrepreneurs and judicial prima donnas who have succeeded in upsetting respect for the Court by their quarrels and in creating turmoil in the legal profession by their antic decisions to such extent that there is little precedent left to which lawyers can point with any reasonable expectation that prior rulings will be upheld.

The most sensational rupture in the court occurred in June 1946 when Associate Justice Robert H. Jackson issued a statement from Nuremberg, where he was chief prosecutor at the war-crimes trials. This statement charged Associate Justice Hugo Black with threats of a Court vendetta if Jackson did not refrain from issuing a dissenting opinion in a coal-mine case which Black's former law partner, Crampton Harris, won. Jackson said at the time that Black's vote was the deciding one in favor of Harris' client.

Charges and countercharges flew about Washington, with Senator LUCAS, now Democratic floor leader, demanding that both Justices resign their positions. Neither, of course, did.

Fred Vinson was then named Chief Justice in an attempt to settle the quarrels. And, if memory serves, Vinson once had to virtually gavel Frankfurter into silence in one case to prevent another open rupture on the Court.

The latest examples of questionable conduct occurred when Frankfurter and Reed appeared as character witnesses for Alger Hiss, being tried by the Government for perjury, in a case which might have come before their Court upon appeal if he had been convicted, and which might still come before the Supreme Court if his second trial results in conviction.

One of the most recent decisions placing the Supreme Court in rather peculiar legal light was that written by Justice Murphy which held that since a quorum was not present when Harold Christoffel testified before a House committee that he was not a Communist, Christoffel could not be found guilty of perjury. In other words, a lie is not a lie unless you've got a quorum. The minority opinion held this decision to be "quite contrary to all recognized parliamentary rules, our previous decisions and the Constitution itself."

The cause of all this can probably be found in the lack of prior judicial experience of the Justices. Only two, Vinson and Rutledge, had ever been judges before their appointment to the highest court of the land. The others had been law professors or Attorneys General, or Members of Congress.

Thus, of nine, only two have had the sort of strict legal training on the bench which, in our opinion, the Supreme Court necessarily demands. It should be no forum for ideology; it should be no extra-legal legislature; but it has been both too often in the past.

The President ought to submit the name of a qualified Federal appeals court judge to the Senate, and if he doesn't the Senate ought to force the issue by holding up confirmation. The Supreme Court ought to be composed of judges, not politicians and emotionalists.

The Small-Business Man

EXTENSION OF REMARKS
OF
HON. RAYMOND W. KARST
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. KARST. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following quotation from a small-business man in St. Louis, Mo., Milton J. Burns:

A small-business man: He may be a grocer, druggist, jeweler, furniture dealer, confectionery owner, or a drygoodsman. He is a good guy. He is the most sought-after man when the school patrons, mothers' clubs, or organizations need a prize—he is allowed the privilege of buying tickets from five customers, for the affair he gave the prize. He is a cowardly individual; he is afraid to go to the polls on primary day because he is afraid he will hurt himself by offending some precinct captain. He is a good taxpayer—he is small—so he does not have an auditor who can show him just exemptions. He is the neighborhood stand-by—he loans money in times of sickness or sorrow; no interest, and many times he does not get it back, but is abused if he asks for it. He may need money. He goes to the bank—pledges everything but his eye teeth, plus cosigners. He has never heard of RFC and that a smug financial statement can get aid from the Government—for the chosen few.

MILTON J. BURNS.

The Region's Responsibility in the "Fill-up" Campaign

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Anthracite Institute Bulletin of July 20, 1949:

THE REGION'S RESPONSIBILITY IN THE "FILL-UP" CAMPAIGN

Residents of the anthracite-producing region can do much to make the industry's "fill-up" campaign a success and at the same time help to maintain good business conditions within the region by anticipating their winter's requirements of anthracite now and filling their bins. The anthracite-producing region considered as a whole uses more domestic sizes of anthracite than any city in the United States or Canada except New York City and more than any State except New York, Pennsylvania, and New Jersey. When it is considered that there are over 300,000 dwelling units in the five principal producing counties, it is not surprising that the region consumes 2,250,000 tons of domestic sizes of anthracite annually.

Unfortunately, however, most residents of the region have developed the habit of purchasing their anthracite requirements as needed, with needs being dictated by the severity or mildness of the weather. This is demonstrated in the table below which shows that shipments of anthracite within the region during the months of July, August, and September represent only 18 percent of annual region shipments whereas shipments outside the region during the same months represent 26 percent of annual outside-the-region shipments.

Quarter of coal year average of last 3 years	Percent of shipments within the region	Percent of shipments outside the region
April-May-June	22.6	24.9
July-August-September	18.0	26.1
October-November-December	28.9	26.3
January-February-March	30.5	22.7
	100.0	100.0

For the past few years consumers outside the region have bought their anthracite requirements during the summer months in sufficient quantities to sustain maximum production with resultant full working time for the industry during the summer months. This year we cannot be sure that outside-the-region shipments will be sufficient to maintain full working time during the balance of the summer, and August will be a crucial month in the current fill-up campaign.

Every segment of the industry is engaged at the present time in urging upon dealers and consumers the necessity of filling their bins to capacity in order that anthracite may be shipped as produced. Maximum production during July and August is vital to insure adequate supplies of anthracite to meet a normal heating season. Therefore, if region anthracite users will buy now and during August, they will not only save money at prevailing prices, but will do much to insure full working time for the balance of the year with all the additional benefits which sustained high pay rolls can give to the region.

Improve the Waterway

EXTENSION OF REMARKS
OF
HON. JAMES V. BUCKLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. BUCKLEY of Illinois. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial from the July 20 issue of the Chicago Daily Tribune entitled "Improve the Waterway." This relates to the Great Lakes to the Gulf waterway for which Chicago, and particularly the communities in and around the Calumet region, have been fighting for many years, not only for what this improvement will mean to the great Calumet region but to the industries in the entire Middle West and the country as a whole.

I agree wholeheartedly with what the Tribune advocates and believe the Congress should go further and authorize an appropriation sufficiently large to complete the work which has been recommended by the Army engineers.

This project is in the heart of my district and I have worked for it for the past 40 years. I will bend every effort to bring about the realization of this long sought development and I am sure I will have the support of all the Democratic Members of the House from Illinois, as well as that of the two United States Senators from Illinois, and from my colleague the Honorable RAY MADDEN, of Indiana, whose district adjoins mine.

The editorial is as follows:

IMPROVE THE WATERWAY

Traffic on the Illinois waterway connecting the Great Lakes and the Mississippi River has increased so rapidly that the present system of locks has become inadequate. As a result, the Army Corps of Engineers will conduct a public hearing in Chicago August 10 to consider whether it is advisable to build a duplicate set of locks.

There seems little doubt that a favorable report on the project will be forwarded to the Army Chief of Engineers and to Congress. This year the waterway is carrying about 12,000,000 tons of freight, and the temporary failure of a single lock would be a serious matter. When the proposed widening of the Calumet Sag Channel is completed, the total tonnage on the waterway is expected to reach 27,000,000 tons, far more than the capacity of the present lock system.

Ultimately, and the sooner the better, the present 9-foot channel on the Lakes to Gulf waterway will be deepened to 12 feet. A survey of the feasibility of the deeper channel on the entire Mississippi River system is now being made by the Army engineers, with attention to economic as well as engineering aspects of the problem.

The studies unquestionably will show that the cost of a 12-foot channel would be met by the cheaper transportation that it would make possible, especially on the Illinois waterway, which not only serves the great Chicago industrial district but provides a link for water-borne commerce between the Great Lakes and the inland rivers.

Chicago's industries require immense quantities of bulk commodities such as coal and petroleum products. A deeper channel would permit the handling of larger tonnage in barge tows, with consequent savings to shippers and consumers.

For many years Congress has been generous in its hand-outs for little-used rivers and harbors, especially those in the East and South. Chicago business interests and our representatives in Congress need have no apologies for demanding a 12-foot channel on that primary artery, the Lakes to Gulf waterway.

The Hour Is Later Than You Think

EXTENSION OF REMARKS

OF

HON. JOHN PHILLIPS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. PHILLIPS of California. Mr. Speaker, many Members of this House are acquainted personally with Mr. Fay George Child, of Maynard, Minn. For years he was secretary to the gentleman from Minnesota [Mr. HAGEN]. Always interested in printing, and always ingenious in handling ideas in type, he furnished some of us, year after year, with our Christmas or New Year's cards. Later he went to Maynard, bought the local newspaper, the Maynard News, and now holds that position for which some of us would willingly exchange our seats in the Congress, that of publisher of a country newspaper.

I represent a California district, Mr. Speaker, and Maynard is in the home district of my good friend, the very able Representative from the Seventh District of Minnesota [Mr. H. CARL ANDERSEN], with whom I had the pleasure of serving on the Subcommittee on Agriculture of the House Committee on Appropriations, and who is now the ranking minority member of that subcommittee. However, I see a copy of the Maynard News occasionally and I read Mr. Child's editorials with increasing interest.

He wrote one, in the issue of April 29, which 3 months later is even more prophetic and pertinent than it was at that time. It defines the path by which socialism and communism is being brought into this Nation, to our eventual destruction.

Although it applies primarily to Minnesota, it should be read by all our citizens. I have asked permission, Mr. Speaker, to extend my remarks in the Appendix of the RECORD, and to include the editorial to which I have just referred.

Mr. Child's editorial follows:

THE HOUR IS LATER THAN YOU THINK

A few short years ago, Communists conspired in dark cellars in New York with little or no hope of promoting a successful revolution in the United States.

In Russia, Trotsky, one of the leaders of the successful revolution, was exiled to Mexico, because he persisted in advocating that the new Communist regime launch a world revolution. Lenin and Stalin knew that the people of Russia were tired of fighting and wanted "peace, bread, and land." To participate militarily in revolution in other countries would have doomed the new Communist government within Russia. It was then that the popular-front theory of infiltration into other countries became the policy of the Kremlin—and that technique has worked alarmingly well.

Communists and fellow travelers have been trained and have found their way into thousands of organizations and political groups, and through intelligent and persistent effort, they have used those groups to further the cause of socialism and communism in the United States.

These groups have been used to apply pressure on Congress and Government agencies.

Propaganda was cleverly manipulated through the radio and press to build up the prestige of fellow travelers and smear those who opposed communism or socialism.

Minority groups were stirred up and made fearful.

Segments of our population were convinced they were being exploited by the rest of the country, and they became resentful and pugnacious—ready tools of the Communists.

The American of yesteryears, who could take what life had to offer without a whimper, is now on his knees imploring his Government for security that does not exist and, fool that he is, he cannot see that he is traveling at breakneck speed toward socialism and ultimately communism.

Taxation is driving to the wall our system of free enterprise.

How did all this come about?

Not by accident—and not because the socialization of America is inevitable, as Ed Morrow recently stated over the air. It has come about because socialism is being fanatically promoted by the best brains in the country.

These fanatics have the advantage because they can resort without compunction to trickery, deceit, indirection, and if necessary, sabotage and treason. They are like a prizefighter with a horseshoe concealed in his glove.

Probably the most effective radical leadership ever to be projected on the American scene was that of the late Sidney Hillman, who came to America from Russia in 1907.

Sidney was trained in revolutionary procedures, and his own historians have described how he had participated in earlier revolutions in Russia (source material p. 73, H. Rept. No. 1311), March 29, 1944—United States Congress).

Sidney Hillman, by a process of divide and rule, became the president of the Amalgamated Clothing Workers Union in New York City.

About this time Hillman made numerous trips to Russia where he conferred with Lenin and Stalin, and as a result he organized the Russian-American Industrial Corporation for the purpose of building textile factories in Russia. This venture failed, but Hillman did succeed in funneling several millions of American dollars into Russia at a time when our Government did not recognize the Communist regime and had forbidden the sending of American dollars to Russia to help finance their program of oppression.

It was Sidney Hillman, aided by others, who organized the CIO, and through this new industry-wide type of organization, he has exerted unprecedented control over the political thinking of the laboring men and women of America.

It was Sidney Hillman, aided by others, who conceived of and organized the CIO Political Action Committee, and through this organization collected money from over 6,000,000 members of the CIO. This money was spent under the personal supervision of Mr. Hillman, who was the national president of the PAC. Because of his control of tremendous blocks of CIO votes, and huge campaign funds, Hillman became a powerful influence in America, from the State level of government right up to the White House. His protégé, Mrs. Francis Perkins, became Secretary of Labor. The attorney for the Amalgamated Clothing Workers and Hillman's close personal friend, Felix Frankfurter, was appointed to the United States Supreme Court, and Hillman himself, held several important policy-making posts in the Government during the last war. Many more of his friends now hold vital jobs in our Government.

With excessive power within the Government and adequate funds with which to operate, Hillman succeeded in attracting the best brains in the country to promote the political-action program.

He has succeeded only too well.

Not content to confine his operations to Washington, D. C., and New York, Hillman invaded Minnesota with his money and his workers. His union took an active interest in the campaign of Elmer A. Benson for governor. At that election the Communists in Minnesota were instructed to support Benson's campaign for reelection and not to place a candidate in the field against him.

After his defeat Benson became chairman of the board of directors of the Citizens Political Action Committee, a wing of Hillman's PAC.

While extending the hand of friendship and cooperation to the Democratic New Deal, Hillman was working behind the scenes, setting up counter political groups which harassed and drove to the left, the Roosevelt and Truman administrations. It is a technique so effectively used by Communists in Europe and Asia.

When Sidney Hillman died about 3 years ago, his organization work went on unabated. The spirit of Sidney Hillman still permeates the ranks of radicals in America who are seeking frantically to make all good Americans wards of a paternalistic, socialistic government.

While many of the leaders of the Political Action Committee were officially supporting President Truman for reelection, a great many others were campaigning vigorously for Candidate Henry Wallace.

Louis F. Budenz was a former editor of the New York Communist Daily Worker. In an article in the October issue of Collier's magazine titled "How the Communists Cap-

tured Wallace," he told of how Wallace visited Russia, and while he was there, the executive committee of the Communist Party in New York received a message from Stalin to the effect that the Communists of America would be expected to support without reservation, any political ambition Wallace might have. Mr. Budenz was present at that meeting and he quoted the message verbatim in his article in Collier's.

It is significant that Elmer A. Benson was national chairman of Wallace's campaign for President.

It is also significant that the Wallace candidate, James M. Youngdale, of Benson, Minn., who ran against Congressman H. CARL ANDERSEN last November in the Seventh District, received from the Amalgamated Clothing Workers of New York City $500 for his campaign. A record of this contribution is in the hands of the Clerk of the House of Representatives in Washington, D. C. Because of the clever manner in which his campaign was handled for him; and because he promised everyone the world with a fence around it, Youngdale came within 6,000 votes of defeating our experienced and capable Representative in Washington, Congressman H. CARL ANDERSEN.

Youngdale is still active. He is circularizing a bulletin each month throughout the district which unswervingly follows the line adopted by the Communists.

Yes, the Communists have come out of their cellars. They now number among their fellow travelers some of the most prominent and able people in the country. Their plan is going well. Even the President of the United States has been forced to advocate socialized medicine, more socialistic bureaucratic controls over production, distribution, and manpower. In his message to Congress in January he openly advocated the ultimate socialization of the steel industry of this country.

No, the President is not a Communist. Nor would this publication venture to accuse the late Hillman, Frankfurter, Perkins, Benson, or Youngdale of being Communists. Very likely they are sincere, do-good fanatics the like of which have unwittingly or otherwise aided Communists in other lands to win bloodless revolutions.

It is important for us to know who is serving the cause of socialism, and then withhold from them any of the responsibilities of molding Government policies.

Add to this action a real upsurge of democracy that will unite the people of America behind a progressive program that can be confined within the framework of our free-enterprise system and democratic way of life.

We've lost the most of the battles thus far—let's not lose the war.

The hour is late.

Wake up, America.

Hon. John A. Danaher

EXTENSION OF REMARKS

OF

HON. JOHN A. McGUIRE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. McGUIRE. Mr. Speaker, this is a rather unusual speech to come from a rabid organization Democrat. I am a great believer in the two-party system, and I feel that America will be the better if the Democratic Party and the Republican Party both remain strong.

Therefore, it was with deep regret that I heard John A Danaher would not accept the chairmanship of the Republican Party.

John Danaher was born and raised in Meriden, Conn., which is in my congressional district and only 6 miles from my home. He and his entire family are highly respected by both Democrats and Republicans in Connecticut. In fact, the Danahers are known as the royal family of Connecticut politics. At one time, while John A. Danaher was United States Senator, his father, Cornelius J. Danaher, a lawyer, was State labor commissioner; his brother, Cornelius J. Danaher, Jr., a lawyer, was judge of the city court in Meriden; and another brother, Francis A. Danaher, a lawyer, was mayor of Meriden.

For your information, John A. Danaher is an excellent lawyer, he served as secretary of state of Connecticut in 1933 and 1934, was a member of Gov. Wilbur Cross' State board of finance and control, and was United States Senator from 1939 to 1945. In 1942 the entire Senate Press Gallery voted that Prentiss Brown, of Michigan, was the most valuable to the Democratic Party and John A. Danaher was the most valuable to the Republican Party.

John Danaher knows politics from the ground up. He is honest, capable, and a deeply religious family man.

If he cannot be persuaded to reconsider, I hope that the person who does eventually take the position will compare favorably to John A. Danaher.

Critics Wouldn't Dig Coal at Twice Miners' Pay, Asserts Doctor in Tribute to Lewis

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the United Mine Workers Journal:

CRITICS WOULDN'T DIG COAL AT TWICE MINERS' PAY, ASSERTS DOCTOR IN TRIBUTE TO LEWIS

"Industry will survive if the miners receive the pay and comforts deserving them because of the hazards of their occupation"—that is the plain-spoken challenge directed to the public and the powers-that-be by a Colorado doctor who has witnessed unforgettable scenes of suffering among miners who fell victim to the perils of the coal industry and has watched with a highly critical eye the perennial attacks on the leadership of the UMWA.

Dr. Byron B. Blotz, in an analytical commentary published recently in the letters-to-the-editor column of the Pueblo (Colo.) Chieftain, laid it on the line, asserting:

"Over 1,000 miners died last year from accidents, besides those whose lives have been shortened through the inhalation of the fumes and dust. No other group, surely not editors or doctors, would accept employment under those hazards at twice the pay. * * *

"Neither you nor I nor society in general raised a hand in their behalf.

"John L. Lewis made the fight. A much better American today than many who are on the Federal pay roll breathing God's pure air above the ground. May we all unite in asking that the huge fine against our miners be suspended and that the press may in the future evaluate Mr. Lewis' activities in a truer light."

Telling of the misery he witnessed many years ago while an interne at the Denver General Hospital, Dr. Blotz, who now lives in a farming community, said: "I stood at the bedside of miners dying before their time with 'miner's consumption,' unheralded and unsung, in a charity hospital, every breath difficult until death brought relief. These scenes would affect the hearts of the most callous observers."

State Veterans' Bonus

EXTENSION OF REMARKS

OF

HON. HARRY J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio talk made by me over Pittsburgh Station WCAE, Wednesday, July 20:

One of the most important issues to come before the people of Pennsylvania is the State veterans' bonus. Already, in Connecticut, Illinois, Indiana, Ohio, Michigan, New York, and 14 other States a State bonus law has been passed. Reports from these States bear out that it was highly successful legislation. As a matter of fact, it has been revealed after extensive study of the bonus laws in these States that more than a third of the vets used their bonus as a down payment on a home or an automobile, and certainly we all have to agree that every vet is entitled to a car and a home where he can raise a family after the job they did for all of us.

Of course, the vets need the bonus—they should get the bonus, but my purpose in coming back to Pittsburgh and talking to you by way of radio, is to point out to you that the only way you are going to get the bonus is to go out and vote for it. The Pennsylvania Constitution requires a referendum which means that the only way for you ex-GI's to get your bonus is by your votes on election day. You cannot vote if you are not registered. Now get this, this is important to you: You have only 3 days—Thursday, Friday, and Saturday—to register. Go to the registration commission office in the county office building, at Ross and Diamond Streets. The office will be open tonight until 9 p. m. and Thursday, Friday, and Saturday from 9 a. m. to 9 p. m. Not only is it important that you vote your preference for the bonus, if you desire such, but you must take an active part in the bonus question in order that it is not used as an excuse to pass a sales tax, for we all know that once a sales tax is on the statute books, even for such a good reason as to pass a bonus, it is impossible to repeal it even after the expense of the bonus is paid.

Now as to the 52–20 law, let me quote to you from a speech that I made on the floor of the House the day before yesterday: "Unless the 52–20 benefits now provided for our veterans are extended beyond the deadline of July 25, we will have committed an unworthy deed toward these boys.

"In Allegheny County more than 10,000 veterans will lose their benefits unless Congress acts. These are mostly persons who have not earned sufficient money to qualify for State unemployment benefits. In addition to the 10,000 veterans in Allegheny

County who are now receiving 52–20 benefits, there are almost 15,000 other veterans now unemployed and not getting Federal benefits.

"I have introduced H. R. 5569, to extend the 52–20 benefits until February of next year. By this time Congress will be able to make a more permanent and just settlement. In any case the continuation of benefits beyond the current period is most essential since current business lay-offs have chiefly hit the young veterans with little seniority. In addition many veterans recently graduated from school have not been able to find jobs in the shrinking employment market. In order to help the young unemployed veterans with little seniority and those who have graduated recently from school, it is unfair to cut off their benefits. For a Nation which threw away hundreds of millions of dollars in 1948 for unneeded potato subsidies, the cost of continuing the 52–20 benefit program would be negligible. We must act quickly to extend these benefits or we shall not have acted fairly to our veterans.

"I appeal to the members of the Veterans' Committee to get this 52–20 legislation to the floor of the House for a vote as soon as possible."

During the war Congress passed a law to give unemployment compensation to veterans. The terms of eligibility were clear. If a veteran was to be entitled to a total of $20 per week for 52 weeks it was to have gone 2 years after the end of the war. Now everybody knows what the end of the war is; the war does not end until peace treaties are signed, so we are actually still at war with Germany and Japan, so what happened? The Eightieth Congress, acting almost secretly, passed a law which said that for certain purposes only the war would be declared at an end as of July 5, 1947, and that means that the veterans' rights to unemployment compensation expires July 25, 1949. While the battles were going on we made promises to our GI's. It's up to us now to redeem those promises in good faith. Only you, the voters, can see that this is done. Write or wire your Congressman. Do it now. Tell him that you want 52–20 extended.

The bonus that you will win by going out and voting for will help many a vet to buy a home, and the 52–20 is just as General Bradley explained, "like money in the bank to be drawn upon as needed." When General Bradley was Administrator of Veterans' Affairs he repeatedly urged them not to draw their unemployment compensation right away, but to hold it as sort of a reserve for lay-offs which might be expected and which are actually happening now after the postwar boom.

I cannot urge the veterans too strongly to take an active part in city, county, State, and national politics for their own benefit.

My local office on the fifth floor of the Federal building is open every day; vets with problems are welcome to come in.

Arizona's Colorado River Program

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. BARING. Mr. Speaker, recently the State of Nevada was accused by the Arizona Governor as being paid off by the State of California for opposing Arizona's Colorado River program. Gov. Dan E. Garvey, according to newspaper information, made the accusation upon his return from Washington, D. C., where he had gone to urge consideration of establishment of Army projects in northwestern Arizona. The Governor is quoted as saying that on two occasions the Federal Government had planned to establish projects in Arizona, and that in each instance Nevada got them instead. It is reported that he also made the statement, "We have the idea that Nevada is getting paid off by California for its support in the water fight."

Such a preposterous charge cannot go by unanswered, although it is ridiculous enough to warrant no reply. There are many reasons why there is opposition in my State toward Arizona's fantastic Bridge Canyon project, but receiving bribes from California is not one of them. We, in Nevada, believe that Arizona is proposing a program which would constitute a severe threat to Nevada's share of Colorado River waters. We oppose this project because it is a billion-dollar plan that would have to be paid for by the general public, and not the Arizona irrigators.

The State of Nevada needs its share of the Colorado River for irrigation and low-cost power in the rapidly growing southern section of our State. We intend to protect our rights, and we do not have to be paid off by anyone to do so. The Arizona Governor did not explain in what manner one State goes about paying off another State for favors granted. This would be interesting to know. It is not very likely, however, that California would cede some of its territory to Nevada, when we Nevadans are not given even the special privilege of being spared quarantine inspection when crossing over California's State line. It would be a real pay-off for us Nevadans if we could accomplish that, and no longer have to be subjected to California's intensified, to say nothing of distressing, search for plant pests, when a Nevada car pulls up at the checking station. Anyway, it is a thought worthy of consideration, and maybe the Arizona Governor will be responsible for putting some ideas into our heads. Seriously speaking, the State of Nevada is not interested in making any demands upon the State of California for opposing the Arizona project. We have some exceedingly good reasons of our own, to make our opposition to the project legitimate.

Postal Reclassification Bill

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith insert my remarks before the House Post Office and Civil Service Subcommittee this morning:

POSTAL RECLASSIFICATION BILL

Mr. Chairman, may I say that I very much appreciate the courtesy of the Chair in permitting me to make a brief statement in support of the postal legislation pending before your committee. I particularly want to place my endorsement on H. R. 4495, introduced by our colleague, the distinguished gentleman from California, [Mr. GEORGE MILLER]. I think it is a very good bill. I do not think it is excessive in its demands and I believe that if this committee decides to report the bill to the House, it will meet with overwhelming favor among those of us who are interested in the welfare of our postal people.

I might say that my mail during the last several weeks has increased considerably and in almost every instance the people in my District in Buffalo, N. Y., who are employed by the Post Office Department, are asking that something be done at the earliest opportunity to provide certain much-needed benefits. They further advise me that the provisions of H. R. 4495 would best provide for their needs and desires at this time.

From my own personal standpoint, I am particularly glad to learn that H. R. 4495 carries a provision to grant the men and women in the Post Office Department a modest increase in their salaries. While it is true that from time to time during the last several years post-office people have been given slight increases, nevertheless, those increases have not been in sufficient amounts to enable the postal people to stay at a level with the cost of living. I think, if we are to insure the progress of our social and economic way of life, we must make available to the greatest number of our citizens the riches we find in this Nation. We are a rich and bountiful Nation, and as long as the Government is an employer it is up to the Congress to provide a living wage for its employees. I feel that the $150 that would be granted postal workers through the enactment of H. R. 4495 is a very modest request. I doubt seriously that it can be considered more than a token wage adjustment, since from that amount there will be the usual withholding-tax deductions as well as the retirement contributions which the employee makes on every dollar he earns in his basic wage. At this point I should like to interpose that if I were a member of this committee, I would vote for a flat increase to all postal employees of an amount between four and five hundred dollars.

There is another section which particularly appeals to me from a standpoint of justice. I am referring to section 3 of the bill, which would do away with the four lowest salary grades of Public Law 134, which now determines salaries in the post-office service. I have made inquiries among the carriers and clerks and railway mail people in my own district and other employees elsewhere and it appears as if at least 50 percent or possibly more of the new recruits in the postal service are veterans of the recent war. If these men were asked to start in the post-office service for a wage of $2,550 per annum, it stands to reason that their take-home pay will be considerably less after income-tax and retirement deductions are made. I do not think the continuation of low wages in the postal service is going to attract the caliber of employee we all want to see in that Federal activity.

President Truman, in a recent message to Congress, voiced the sentiments of the American people when he said: "We may justly take pride in the achievements of the Post Office Department." If we are going to continue to make that boast, we are going to find it necessary to make the job attractive for young men starting out on life's highway.

There are two other sections in the bill which I want to touch on briefly and then I will conclude my statement as I realize the committee has a great many witnesses who will want to testify and, for that reason, I will merely confine my remarks to the sections of the bill which I consider most worthy.

One other provision which I think is commendable and which I hope the Committee will favorably report without amendment is the section providing for an equalization of the sick and annual leave law. There is no justification for the seeming discrimination which exists against postal employees in the matter of annual leave and sick leave. I do not want to leave the impression that I oppose the 26 days annual leave and 15 days sick leave which most Federal employees receive, rather I want to impress upon the record the fact that I believe postal employees should be brought up to the same level of other Federal workers. I do not think there is any one of us who will say that a postal worker's job is an easy one. The letter carrier is out in all types of weather day in and day out. A great majority of the men who work in the terminals and post offices throughout the country perform their duties at night. Because of the arduous type of work these employees perform, it would seem that a request for an increase in their vacation allotment and sick leave time is justifiable, particularly so when we find that almost every other group within the Federal Government receives this extra dividend for relaxation and recuperation in the event of illness.

The final section in the bill which I want to commend to the committee is the provision which would grant a $100 uniform allowance for those employees who would be directed by the Postmaster General to wear a distinctive type of uniform in the performance of their duties. I received a letter the other day from my district in which the writer pointed out that Postmaser General Donaldson has on two different occasions indicated his approval of legislation that would grant a uniform allowance for carriers and possibly other employees whom he would designate. It is well known, I think, to the committee that the Postmaster General is a career man in the postal service. I think we all have great respect for his judgment in matters pertaining to the postal service. I know he has been before this committee and I am sure he has impressed you with his knowledge and the sincerity of his devotion to the postal service. I think we could well go along with his recommendation of a uniform allowance for employees.

Again I want to say that I hope the committee will see the wisdom of approving H. R. 4495 at the earliest possible date. I know the postal employees in Buffalo are interested in this bill. I have promised them repeatedly that I will support the measure when it is brought before the House. I hope I will have that opportunity in the very near future.

Thank you, Mr. Chairman, for the courtesy afforded me. I also want to express my appreciation to the members of your fine committee along the same lines.

District of Columbia Home-Rule Bill

EXTENSION OF REMARKS
OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. McMILLAN of South Carolina. Mr. Speaker, under unanimous consent to insert my remarks, I include a statement on the pending home-rule bill made by the Washington Board of Trade. I would like to state that the Washington Board of Trade has gone to a great deal of expense and time in effort to give the Congress a true picture of the bills now pending before Congress on home rule.

I hope that every Member of Congress will read the statement made by the Board of Trade.

Following is a tabulation of the results of a poll mailed to members of the Washington Board of Trade to secure their views respecting S. 1527, the Kefauver home-rule bill. The poll was taken during the week ending July 12, 1949.

Washington Board of Trade home-rule survey, July 1949

Number of ballots mailed	7,867
Number of ballots returned	2,357
Percentage return	29.96

Question No. 1: You have just read the major provisions of the Kefauver bill, S. 1527. Do you favor its adoption?

	Total ballots	No answers	Total answering	Yes	No
				Pct.	*Pct.*
Total	2,356	8	2,348	20.0	80.0
District of Columbia	1,552	5	1,547	18.8	81.2
Maryland and Virginia	804	3	801	22.2	77.8

Question No. 2: If you answered "Yes" to question No. 1, would you oppose this bill if it meant a lower Federal payment? Or, would you favor this bill regardless of the effect upon the Federal payment?

	Total ballots	No answers	Total answering	Opposed if lower Federal payment	Favor bill regardless of Federal payment
				Pct.	*Pct.*
Total	469	8	461	60.3	39.7
District of Columbia	291	5	286	61.9	38.1
Maryland and Virginia	178	3	175	57.7	42.3

Question No. 3: Do you think persons now voting in other States and Territories should be allowed to vote in the District of Columbia for: (a) District Council members? (b) the District to incur debt?

	Total ballots	No answers	Total answering	District Council members		District to incur debt	
				Yes	No	Yes	No
				Pct.	*Pct.*	*Pct.*	*Pct.*
Total	2,356	57	2,299	13.7	86.3	10.9	89.1
District of Columbia	1,552	37	1,515	11.7	88.3	8.6	91.4
Maryland and Virginia	804	20	784	17.3	82.7	15.4	84.6

Question No. 4: Under the present system, the Board of Education is appointed. The Kefauver bill proposes it be elected. Do you favor election of the Board of Education?

	Total ballots	No answers	Total answering	Yes	No
				Pct.	*Pct.*
Total	2,356	65	2,291	30.0	70.0
District of Columbia	1,552	44	1,508	28.5	71.5
Maryland and Virginia	804	21	783	32.4	67.6

Question No. 5: Do you think local suffrage without representation in Congress is desirable?

	Total ballots	No answers	Total answering	Yes	No
				Pct.	*Pct.*
Total	2,356	76	2,280	9.6	90.4
District of Columbia	1,552	46	1,506	9.1	90.9
Maryland and Virginia	804	30	774	10.6	89.4

Question No. 6: Do you believe this bill provides real home rule for the District of Columbia?

	Total ballots	No answers	Total answering	Yes	No
				Pct.	*Pct.*
Total	2,356	61	2,295	6.0	94.0
District of Columbia	1,552	41	1,511	5.8	94.2
Maryland and Virginia	804	20	784	6.5	93.5

Question No. 7: Do you live in the District of Columbia? Maryland? Virginia?

Total (100 percent)	2,356
	Percent
District of Columbia	65.9
Maryland	23.8
Virginia	10.3

Question No. 8: If you live in the District, how long have you lived here?

	Total ballots	No answers	Total answering
Total	1,552	26	[1] 1,526
			Percent
Less than 5 years			5.7
5 to 10 years			9.0
11 to 15 years			7.6
16 to 25 years			16.4
26 to 50 years			43.4
Over 50 years			13.2

[1] This figure represents 100 percent.

Question No. 9: If you live in Maryland or Virginia, is your business located in the District? Do you own property in the District?

Total living in Maryland and Virginia	804
No answers	5
Total answering	[1] 799
Business located in the District:	*Percent*
Yes	92.4
No	7.6
Own property in the District:	
Yes	27.7
No	72.3

[1] This figure represents 100 percent.

MEMORANDUM BRIEF IN BEHALF OF THE WASHINGTON BOARD OF TRADE

This memorandum will be addressed directly to the bill, S. 1527, which passed the Senate on May 31, 1949, and is now pending in the Committee on the District of Columbia of the House of Representatives which, we understand, will be at least the central point of discussion on the whole subject of home rule for the District of Columbia.

The Washington Board of Trade has taken and held a consistent position throughout its history which was expressed to the Senate Committee on February 17, 1949, by the board's representative, in the following language:

"We have concluded, after study over a period of many years, that local suffrage in the District cannot be effective unless the

people of the District also have full representation in the Congress of the United States.

"No bill to grant local suffrage for the District of Columbia will be complete unless it is accompanied by provision to amend the Constitution of the United States in such a manner as to permit local residents to send representatives to the Congress and to vote for President and Vice President of the United States.

"Referring to that last point I realize, as the chairman pointed out in his opening statement, that it involves the proposal of a constitutional amendment; I also realize that while in the Senate everything that has been embraced in my statement comes within the jurisdiction of this committee, the Senate Committee on the District of Columbia.

"In the House of Representatives there is a divided jurisdiction between the Committee on the District of Columbia and the Judiciary Committee, but I do not regard that division of jurisdiction as presenting an insurmountable difficulty."

That is the position of the Washington Board of Trade today. The two great political parties expressed themselves on this question in their national platforms adopted by their conventions in 1948, as follows:

The present majority party:

"We favor the extension of the right of suffrage to the people of the District of Columbia."

The present minority party:

"We favor self-government for the residents of the Nation's Capital."

They were interpreted by us as declarations that the citizens of this District should have representation in the Senate and House of Representatives, presidential electors in the electoral college and, if that participation in our Government was granted, then that our citizenry should assume the rights and responsibilities of the franchise in the election of a local government, but not otherwise.

The bill, S. 1527, contemplates the abolishment of the commission form of government and the substitution in its place of a partly elected, partly appointed District Council, a District manager appointed by that Council, and 12 departments, each headed by a director appointed by the District Manager, and various boards and commissions, some appointed by the District Council and some by the District Manager. These 12 departments are to be created by abolishing, in most instances, substantially similar departments and immediately setting up new departments under new directors, selected by the District Manager.

This complete change is to be made almost overnight and, so far as is known, may involve the removal of the competent, tried, and true heads of those departments now functioning in a government which has frequently been called the best municipal government in the United States of America.

We challenge anyone to find any substantial group in the established business and professional fields in the Nation's Capital who will say that this change is not a pure gamble; and who will not say that it is likely to produce a less desirable municipal government than the one which Washington had had from 1878 until the present day.

THE DISTRICT COUNCIL

The provision creating the District Council is as follows:

"SEC. 301. (a) There is hereby created a Council of the District of Columbia consisting of 11 members, 9 of whom shall be elected as provided in title XII, and 2 of whom shall be appointed, without regard to political affiliation, by the President by and with the advice and consent of the Senate."

The functions of the Council are stated as follows:

"SEC. 321. (a) Except as otherwise provided in this act, all functions granted to or imposed upon the Board of Commissioners of the District are hereby transferred to the District Council."

By subsequent provisions, the District Council is empowered to pass ordinances and to make to Congress legislative proposals. A legislative proposal passed by the Council shall take effect as law only if after it is reported to Congress, as provided in title IV of the bill, it is not rejected by joint resolution of the two Houses of Congress within 45 days, and is not disapproved by the President within 10 days thereafter.

These provisions will not grant self-government for the residents of the Nation's Capital, nor the right of suffrage in any real and full sense.

Here we have a city council made up of a majority of members elected by the voting residents of the District of Columbia, but with two appointees of the President, confirmed by the Senate, in their midst who are not beholden in any manner to those voting residents.

It would be a strange thing, indeed, if in an act of a State legislature granting a charter to a city in which would be included the setting up of a city council, there should be retained the power in the governor to appoint approximately one-fifth of the members of the city council by and with the advice and consent of the State senate. Any attempt to do this would be rejected by the voting citizens of the area to be chartered as a city as being an absurdity and an attempt to deprive them of their right of autonomy. The present provision for the appointment by the President of 2 out of 11 members of the District Council, by and with the advice and consent of the United States Senate, stands on a par with such an action in a State. If this provision should be enacted into law, the President and the Senate would retain a string to be pulled at any time which might affect every action of the District Council. It would tend to deprive the members of the Council of their freedom of thought and action.

The qualifications for membership on the District Council are stated in the bill as follows:

"SEC. 302. No person shall hold the office of member of the District Council unless he (1) is a qualified elector, (2) resides and is domiciled in the District, (3) holds no other elective public office, and (4) holds no appointive office for which compensation is provided out of District funds."

These qualifications are objectionable on at least two grounds, namely:

1. There is no requirement of domicile in the District for more than the 1 year required for a qualified voter. This should be extended to at least 3 years.

2. The language as to holding other office is such as to permit a Federal employee holding a high position, whose office is not elective and whose compensation is not provided out of District funds, to be a member of the District Council. This should not be permitted.

LEGISLATIVE PROPOSALS

Title IV provides that such a legislative proposal shall become a law only if it is not vetoed by joint resolution of the two Houses of Congress within 45 days after it is presented to them, and if not disapproved by the President within 10 days after it is presented to him. By this provision, every proposal by the District Council is left subject to attack in the Congress by any Member of the House or Senate and the complete power over its becoming effective as a law, or failing to become effective, is retained in the hands of the Congress and the President. On this subject of enactment of general laws, the present bill wholly fails to grant the effective right of suffrage to the people of the District of Columbia, as promised by the majority party, or real self-government for the residents of the Nation's Capital, as promised by the minority party.

THE DISTRICT MANAGER

The provision for the District Manager is as follows:

"SEC. 501. The District Council shall appoint a District Manager who shall serve at the pleasure of the Council and who shall be chosen solely on the basis of his executive and administrative qualifications, with special reference to his experience in, or his knowledge of, the administration of the affairs of local government."

There is no requirement that the District Manager shall ever have lived in the District of Columbia, nor that he shall have experience in the executive affairs of any city of the size of the District of Columbia. Obviously, it is intended that he shall be chosen from outside of the District of Columbia; therefore, he would be a man not acquainted with the administration of local government as extensive and complex as ours.

According to the Municipal Year Book of 1948, all cities in the United States having a population of 500,000 or over were governed by a mayor and council. Only 6 cities having a population ranging from 250,000 up to 500,000 had the city manager and council form of government. The problem of governing a city of nearly 1,000,000 population, soon to be more than a million, by the city manager form of government presents an utterly untried field.

In section 502, the District Manager is made the chief executive officer of the District government, responsible to the District Council; and by section 504, the functions of the various principal divisions of the District government are transferred to him, with the power to reorganize or abolish any agency and to create new agencies, and to abolish the position or office of any officer or employee (other than a member of a board) transferred to his office, and to create new offices and positions.

In title IX, section 901, 12 executive departments are created, each to be headed by a director who shall be appointed by, and serve at the pleasure of, the District Manager.

By succeeding sections of title IX, the various present departments of the District government are abolished and new departments created, each under the direction of a director to be appointed by the District Manager. It is not even required that the heads of these departments appointed by the District Manager shall be subject to confirmation by the District Council, which fixes the amount of their salaries.

Under these provisions, it is entirely possible for some person who may have been the city manager of a small city in some remote part of the country, without experience in handling the affairs of a great city, to be appointed city manager and he, in turn, to select and appoint 12 directors of executive departments of the city's government who may come from 12 different parts of the United States to direct the affairs of the Nation's Capital. This would not be home rule, and it certainly would not be within the language heretofore quoted from the 1948 platforms of the two great political parties. This certainly would not be self-government for the residents of the Nation's Capital.

SPECIFIC DEFECTS IN THE BILL S. 1527

There are certain specific defects in the bill S. 1527 upon which we wish to comment:

1. Department of Law: The placing of the office of the Recorder of Deeds in the Department of Law, under the Director of that Department, who would be the successor to the present Corporation Counsel, would be an example of undesirable mingling of inconsistent functions.

2. Department of Public Works: Section 908 of the bill is as follows:

"SEC. 908. (a) The functions of * * * (lists all engineering departments and officials) are hereby transferred to the Director of the Department of Public Works.

"(b) The Department of Construction, Sanitary Engineering, Inspection, and Highways are hereby abolished."

Under the above-quoted provisions, all the functions now exercised by Army engineers, as Engineer Commissioner, and Assistant Engineer Commissioners of the District of Columbia, would be transferred to a Director of the Department of Public Works, who might be a civil engineer, of more or less experience and capacity, but who almost certainly would not have the experience and ability which has been devoted to the engineering affairs of the District of Columbia by the various men who have held the office of Engineer Commissioner and Assistant Engineer Commissioners from 1878 to the present day. These men have functioned to the greatest possible benefit of the District of Columbia in its engineering affairs and with no public or official criticism so far as the Board of Trade is aware. We respectfully urge that this provision of the bill be changed so as to require that the Director of Public Works shall be an officer of the Corps of Engineers of the United States Army, and that his assistants shall also come from that corps. * * *

4. The Chairman of the District Council: Section 331 provides for the election of a Chairman by the District Council from among its members, but does not limit the chairmanship to an elected member of the Council. This would permit the election of one of the Presidential appointees who, under the provisions of section 331, "shall be the presiding officer of the District Council, the official spokesman for the District, and the head of the District for ceremonial purposes." Certainly, if there is to be an elected home-rule government, the Chairman should be one elected by the qualified voters.

5. Department of Libraries: In title IX of the bill, S. 1527, 1 of the 12 executive departments created is the Department of Libraries. In section 909 of title IX the functions of the Board of Library Trustees and of the Librarian are transferred to the Director of the Department of Libraries, and the office of Librarian is abolished.

This is contrary to the best recognized library experience and practice. If the bill should be enacted, its provisions regarding the public library should be such as would continue the Board of Library Trustees and the office of Librarian, "together with all powers and duties as provided under existing law."

6. Board of Education: In title XI, sections 1101 and 1102 (a), a new Board of Education is created, consisting of seven members elected as provided in title XII, and the present Board of Education is abolished and its functions transferred to the new Board.

These sections do not define the qualifications for membership on the new Board of Education, which we suggest should not be less than 5 years' domicile in the District preceding their election.

7. Board of Elections: In title XII, section 1201 (a) (1), there is created by the bill, S. 1527, as an agency of the District government a Board of Elections, consisting of five members who shall be appointed by the President by and with the advice and consent of the Senate. The further provisions of said section contemplate the appointment of the successors of the first Board of Elections in the same manner. This Board of Elections is given complete power over elections to the District Council and to the Board of Education, and thus a very powerful string, it might almost be called a rope, is tied to the so-called home rule tendered by Congress to the citizens of the District of Columbia in the bill, S. 1527.

8. Department of Labor: Section 910 (a) (1) provides that the functions of the District Unemployment Compensation Board are transferred to the Director of the Department of Labor.

We believe that the functions of the District Unemployment Compensation Board should not be made a part of the Department of Labor, nor that the Director of the Department of Labor should have the authority to appoint the public representative of such Board. * * *

9. Public Utilities Commission: By the provisions of section 1002 (a), the present Public Utilities Commission is abolished and its functions are transferred to the new Public Utilities Commission created by subsection (c).

Subsection (c) creates the new Public Utilities Commission, of three members, all to be appointed by the Chairman of the District Council with the approval of the Council. This method of appointment is a startling departure from the manner of appointing such commissions in the States, where they are appointed by the governor and confirmed by the State senate. That procedure is long established and now generally accepted as a salutary method of establishing a commission to regulate public utilities which will impartially represent the interests of the citizens of the State and needs of the utility companies. As such as commission is a quasi judicial body, the only proper authorities in the Federal District to appoint and confirm its members are the President of the United States and the Senate. If the bill is to pass, it should provide that one member of the Commission be an officer of the Corps of Engineers of the Army.

ELECTIONS

Title XII, section 1201 (a) (2), provides that the members of the board of elections shall be appointed from among the qualified electors who reside and are domiciled in the District.

In contrast to this requirement, section 1206 provides that a qualified elector of the District shall be any person who has maintained a domicile, or a place of abode, in the District continuously since the beginning of the 1-year period ending on the day of the next election or, if such period has not begun, maintains a domicile or place of abode in the District, with other requirements specified as to citizenship, age, etc. It further contains the following:

"SEC. 1206. (a) To be qualified to vote in the District, it is not intended that a person be required to relinquish his rights in another jurisdiction."

The effect of the above last-quoted provision of section 1206 will be to permit the civil-service employees of the United States Government who have a place of abode in the District, but consider themselves as only temporary residents thereof, not domiciled therein, to be at least the balance of power in the local elections of the District Council and the Board of Education. Such persons, under the provisions of the bill, would have the right to vote at such elections even though they come from American Samoa, Guam, Virgin Islands, Panama Canal Zone, Puerto Rico, Hawaii, or Alaska, all of which are included in the provisions of the Civil Service Apportionment Act. This provision is an attempt to legalize dual voting, with one vote in the District of Columbia and the other in the voter's home State, * * *

This is a far cry from self-government for the residents of the Nation's Capital, and from the extension of the right of suffrage to the people of the District of Columbia.

BORROWING FOR CAPITAL IMPROVEMENTS

Under title VII, the District is authorized to incur indebtedness by issuing its negotiable bonds to finance any capital project which it may lawfully construct or acquire, to a maximum amount not exceeding 5 percent of the taxable real property in the District.

Such a bond issue must be approved in a referendum to be conducted by the Board of Elections, but all qualified electors may vote in such referendum, and thus a bond issue indebtedness may be laid upon the District of Columbia by the votes of the people who are here only for a period of years, perhaps much less than the 30 years maximum maturity of the bond issue, and who intend to return to their home States, Territories, or islands, and doubtless will do so, leaving the actual residents of the District of Columbia to pay the bond issue debt.

COMMISSION FORM OF GOVERNMENT SATISFACTORY

The Board of Trade wishes to be recorded as well satisfied with the high-type of municipal government which has prevailed from 1876 to the present time in the commission form of government, the two civilian commissioners and one engineer officer of the Army constituting the same. From our study of the several proposed so-called home-rule bills, we are convinced that none of them offers a better form of government for the District of Columbia than it now has. Therefore, until some better proposal is brought forward, the Board of Trade will be opposed; and any such better proposal in order to obtain the support of the Board of Trade must have as one of its essential features voting representation in Congress and the right to vote for President and Vice President.

Congress necessarily is, and we believe always will be, the legislative body which, alone, can make final enactments of law for the District of Columbia, and no subordinate form of government will constitute home rule and franchise for the citizens of the District of Columbia that does not afford such representation.

CONCLUSION

The Board of Trade respectfully submits that there can be no real home rule for the District of Columbia, no real grant of suffrage to the citizens of the District of Columbia, unless the following elements are included in such grant:

First. That, in elections in the District of Columbia, only the genuine citizens, resident, and domiciled within the District, who maintain no domicile elsewhere, and who do not claim exemption from taxation by the District of Columbia by reason of a domicile elsewhere, shall be permitted to vote.

Second. Voting representation in the Congress of the United States, in a number in accordance with the population of the District of Columbia, and in the electoral college. * * *

The Board of Trade hereby proposes that, if the bill, S. 1527, or any similar bill, is to be passed by the Congress and approved by the President, it should contain a further condition as to its effective date, substantially as follows:

"The charter shall take effect only if and when the following constitutional amendment shall have been proposed by the Senate and House of Representatives, as provided in article V of the Constitution and ratified by the legislatures of three-fourths of the States within 7 years of the date of its passage, namely:

" 'The Congress shall have power to provide that there shall be in the Congress and among the electors of President and Vice President Members elected by the people of the District constituting the seat of the Government of the United States, in such numbers and with such powers as the Congress shall determine. All legislation hereunder shall be subject to amendment and repeal.' "

The provisions of title XVIII, of S. 1527, as to effective dates, should be modified accordingly.

Respectfully submitted.

E. F. COLLADAY,
General Counsel, Washington Board of Trade.

Excise Taxes Should Be Cut Now

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. WOLVERTON. Mr. Speaker, there is a decided demand upon the part of our people—farmers, merchants, industrialists, workers, transportation and communication industries, businessmen of every kind and description, and consumers generally—for repeal of the excise taxes adopted during the war period.

These taxes were adopted for war purposes. The reason for them has long since passed. Their present continuation constitutes a drag upon business. The revenue that would be lost to the Government as a result of their repeal would be more than made up in increased sales and greater utilization of our transportation and communication facilities by our people. The additional business promoted thereby would result in increased income and corresponding increase in Federal income tax revenue.

An editorial appearing in the Courier-Post newspapers of Camden, N. J., in the issue of July 20, 1949, on this subject is entitled to the careful and serious consideration of Members of Congress, and, I am therefore including it as part of my remarks under the unanimous consent granted to me by the House. It reads as follows:

FIGHT SHOULD BE PUSHED TO CUT EXCISE TAXES NOW

Prospects of any cuts in Federal excise taxes by Congress this year are extremely dim, according to latest reports from Washington.

The Senate Finance Committee last week voted, 7 to 6, to roll these wartime emergency taxes on such items as transportation, telephone calls, and various so-called luxury goods, back approximately to their 1942 levels.

The bill embodying the reductions now takes its place among the many on the Senate Calendar awaiting action. It is believed to stand a fair chance of passage should it come to a vote.

Chairman DOUGHTON, of the House Ways and Means Committee, however, has told Senate leaders that even if the Senate passes the tax cut the bill will be pigeonholed in the House. DOUGHTON, who dominates his committee, is in position to see that the bill is denied consideration unless public sentiment is shown to be strongly for it.

DOUGHTON has formerly been in favor of revising the excise taxes, but believes that the issue now should be postponed until the next session because of the threat of a Federal budget deficit.

In spite of DOUGHTON'S stand, industrial and business groups, including those whose members are affected indirectly as well as directly by the taxes, intend to put up a determined fight for reductions now.

Chambers of commerce are among the organizations on the side of revision, and President Howard C. Wickes, of the Camden County chamber, has just sent a letter to all members urging them to write, and to ask consumers to write, to New Jersey Senators and Representatives demanding a vote on the tax reductions.

"Reduction," says the letter, "is decidedly in the public interest."

"Because of the stimulus to sales and employment," Wickes points out, "the loss in receipts by the United States Treasury would be substantially less than would appear on the surface, for a lower tax will increase sales and tend to offset the loss in excise tax receipts, in addition to increasing the Government's revenue from corporate and individual income taxes."

Wickes notes that these wartime excise taxes "were designed not to raise revenue but to discourage the use of scarce materials and skilled labor in commodities not deemed essential to the war effort. These wartime-imposed excises are now having their greatest influence as deterrents of consumption, as evidenced by the declines in production and sales and the increase in unemployment in many of the affected fields."

These arguments for reduction of the excise taxes are difficult to refute. So is the argument that they are actually selective sales taxes against certain businesses that have been singled out for discrimination from among all others—sales taxes at rates far higher than any rates imposed under a general sales tax.

Though the term "luxury tax" has been loosely applied to these levies, it actually is a misnomer and completely erroneous save in perhaps one or two instances.

The main classifications of products and services they cover are: Transportation; telephones, telegrams, and leased wires; electric light bulbs; toilet preparations and cosmetics; theater and amusement tickets; jewelry; furs; luggage; and cameras and photographic equipment.

By no stretch of the imagination can light bulbs, transportation, telephones, and some of the other items be classed as luxuries, rather than necessities. Cosmetics and toilet goods are indispensable in our modern life. Some jewelry may be in the luxury class, but these taxes cover the lowest-priced fields. An excellent case could be made out against calling any of the products covered real "luxuries."

Obstructionist legislators who seem to think they are elected only to tax and tax, never to make economies and reduce expenditures, are perhaps our biggest "luxuries" today. They are certainly not necessities, and we could spare them far easier than the "luxuries" affected by the excise taxes.

Advocates of excise tax reduction are wise in determining to fight for it now. If the issue is longer deferred these imposts will tend more and more to become a permanent part of our tax structure, as is historically the way with all such levies.

Unquestionably, this was not the intention when they were originally enacted. This is one of many compelling reasons for action on them now.

The Pursuit of Happiness—Commencement Address at Wilson College, Chambersburg, Pa.

EXTENSION OF REMARKS
OF
HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks, I include the commencement address delivered by me, on June 6, 1949, at the seventy-ninth commencement of Wilson College. On that occasion the bachelor of arts degree was conferred on 88 young women representing 10 States, the District of Columbia, and 3 foreign countries—the Philippines, Liberia, and Spanish Guinea, West Africa. The honorary degree of doctor of letters was conferred upon Marianne Moore, whom literary critics consider America's outstanding woman poet. The honorary degree, doctor of laws, was awarded to Mabel Lindsay Gillespie, one of Pittsburgh's outstanding civic leaders.

Dr. Paul Swain Havens, president of Wilson, paid special tribute to Dr. Cora E. Lutz, associate professor of classics, and to Dr. Dorothy W. Weeks, professor of physics, who have won Guggenheim fellowships for study and research during the coming year. Only 17 of the 144 Guggenheim fellowships awarded were assigned to women; and of these 17, 2 were awarded to Wilson faculty members. Dr. Weeks is only the second woman to receive a Guggenheim fellowship in physics.

Wilson College at Chambersburg is situated in the beautiful and historic Cumberland Valley of Pennsylvania. It is one of the Nation's pioneer colleges for women, being chartered in 1869. Today its 4,900 graduates and former students are scattered on every continent. The great majority are married and the survey of their activities has shown how widespread is their constructive influence in their homes and communities. Wilson alumnae are also serving successfully throughout the world in every avenue of endeavor open to women. Whether career or homemakers, Wilson graduates have risen to the challenge given to them on the opening day of college in 1870 "to be leaders, not followers, in society."

The address follows:

THE PURSUIT OF HAPPINESS

This is my first speech to a college graduating class. I am as thrilled over it as you are over receiving your diploma and marching forth to take your places in this fascinating, intriguing world.

Congress is like a college. We have to study but we never know what our next courses will be. Our curriculum covers all national issues and reaches across the seven seas. We have our tests to pass, our essays and papers to prepare. The world's our stage. The campus has been yours. The same emotions interplay. There is the same conflict of varied interests, the same need for decision and judgment. Ours is more intense, perhaps more varied, certainly upon a larger scale. The difference is in scale, rather than in character. If this be true in these two varied spheres of action, would it not be wise to select a leit motive to guide you, wherever destiny may call?

Why not make your leading motive the pursuit of happiness? This is not a selfish thought because no one can win happiness for herself without giving it in full measure to others. The founders of this Nation in the Declaration of Independence proclaimed happiness one of man's inalienable rights—ranking only after life and liberty. But many have substituted material welfare in its stead. Others have confused it with power, influence, social position, or fame.

Thirty years ago, my class graduated from Yale. At that time we were certain there would never be another big war because the war to end wars had been gloriously won a few months before. You do not have that illusion. You are aware that building an enduring peace is a slow and arduous task. We aren't worried about conflicting philosophies. The world had just been made safe for de-

mocracy. The value of our republican form of Government was given at least lip-service by all nations. Today democracy is challenged and must prove its worth on a world front. This opposition is undoubtedly a thorn in our flesh but its stimulation can do more good than harm. If we are wise the constant nudging should urge us on to speedier progress.

Despite the turmoil of the war years, we counted upon a quick return to normalcy. Indeed, "Back to normalcy" was the slogan of the Presidential campaign of 1920. You know that change is ever present and that the past will not return. We had pretty definite ideas about what we intended to do and paths to our goals seemed clear and well-charted. In general, these goals were centered around material welfare. The prospects for gaining wealth were bright, for in those days high taxes did not interfere with starting or expanding a business or with saving out of earnings. Now, men and women seek reasonable safety and security. Possession of property is not so determining of social values. So you will not be so easily tempted from the pursuit of happiness by the lure of gain. If the feverish tempo of the times does not distract you too greatly, you will learn earlier than we that the happiness of men and women depends far more upon peace of mind than upon money or fortune.

After all, it is not so different today. Your awareness of the speed of change and the imminence of problems, which must be faced and conquered, are the chief distinctions. New problems arise like magic to replace those solved. Life demands a zest for the new. If one door shuts, another one will open. Training alone is not enough—you must have brave caution and high courage to succeed in your pursuit of happiness.

More men and women than ever before in the history of the United States are receiving college educations. Between 1930 and 1948, the number of persons graduating from college more than doubled. In 1946, 1,677,000 young men and women attended these institutions.

What does this mean to you? Competition for the better jobs will be keener than ever. Technique, know-how, and specialized training are at a premium. Graduate schools are filled to overflowing. Noncollege graduates are at a disadvantage. In many areas of both Government and private industry, practical experience will not be taken in substitution for required college work. So you start the race with an advantage.

However, a college education does not guarantee success. Your training is a means to an end—not an end in itself. Indeed, the main purpose of a college education is better to equip you to continue your education in the school of life. Intelligent self-education has enabled many to outstrip the university men and women. Abraham Lincoln was a self-made man. He studied a few great classics over and over again. The keystone of Lincoln's education was a deep knowledge of human nature, gained slowly over the years by a sympathetic and kindly study of his fellow men in every walk of life. "The proper study of mankind is man." There is an old Arab proverb: "Let me never judge another until I have walked 2 weeks in his shoes." You can acquire and develop this quality. We admire the moral and religious aspects of Lincoln's sympathy. We are apt to overlook how much this helped him to reach the pinnacle of success and to be a great national leader. Everyone alive today has something to give you which you do not already possess. Conversely, you have something to give each of them. You cannot get if you do not give. "With what measure ye mete, it shall be measured unto you." Here the thread of education weaves into the pursuit of happiness closely. By understanding others, you educate yourself.

The rate of change has never been so rapid, nor the future more uncertain. No one can tell what is going to happen. Boundless opportunities more than offset the risks. In this shifting, social structure, training is of far more value than in the static periods of the past. No matter what turn the wheel of fortunte takes, no one can take from you the skill and knowledge stored in your mind. That is why your parents and your teachers have made sacrifices to give you the best in education.

What will you be doing in this new world of ours? According to the official United States Census Bureau reports, about 75 percent of the girls of America marry. I am cautious indeed when I predict the marriage of one-half of your class within the next 5 years. Check up on this at your fifth reunion. So, it isn't old-fashioned to say that marriage is still the principal career of the American woman—whether college graduate or not.

Marriage will continue with increasing importance and greater responsibility. The family is the basis of custom. Custom sprouts in the family and then spreads outward in an ever-widening circle. Upon custom and social usage, our day-to-day relationships are woven together. Finally, laws recognizing and sanctioning some of these customs are established. Thus the family charts the direction of Government. It will be a sad day for our Nation and for civilization, if we ever allow this process to be reversed. As mothers, you must recognize and accept a large portion of responsibility for forming the world of tomorrow.

The present era of scientific development began some 400 years ago. Science is an endless frontier. Man has made amazing strides in understanding nature. Man is now seeking to understand himself. Psychoanalysis and psychiatry are in their infancy. It is a scant 50 years since Freud first began to apply the principle of cause and effect to human behavior. Present theories are constantly being revised and changed in the light of new experiments and added knowledge. Here is a field in which woman, with her intuition and acute sensibilities, should have a distinct advantage over men. Child psychology offers the chance of making your home a greater success. Through your children you will be able to project yourself into the future and from your study of your own children and their friends, you may be able to contribute to the science of human behavior which is now in its infancy. By rearing your children properly and thereby adding to the success of your marriage, you will improve your own character while following the broad highway on the road to happiness. Marriage is a glorious career of new and magic possibilities.

Marriage no longer implies a quiet retreat into the home and nothing more. You must be prepared to become a full partner to men engaged in any of the many modern occupations and callings—a scientific manager of the home and active in all kinds of community work, according to your taste. Those of you who marry and do not accept employment have an opportunity to become strong influences for good in your community. This assumes that you will be able to spare some time from the innumerable duties and obligations of marriage for the study of the world picture. In this era of specialization—of learning more and more about less and less—few have the time or opportunity to obtain a well-rounded picture of human events. Those who do acquire an over-all viewpoint of the national and international scene qualify at once for sound leadership.

One of the most significant social developments in recent history is the increase of married women in industry. The number has grown from less than 2,000,000 in 1910 to more than 8,000,000 in 1940. Let us consider a few of the trends and effects of marrying and pursuing a career at the same time. A decision on this issue will face most of you, sooner or later.

The extra job in the family means added income, a higher standard of living, the preservation of old talents and skills, the development of new ones. It establishes economic equality in the marriage partnership. It gives a sense of security in case of the illness or death of the husband. But there are disadvantages. There's a distinct loosening of home ties, for the working wife spends half her waking time away from home. Many statistics show a distinct relationship between the working mother and juvenile delinquency. A busy day at work does not make it easier to meet the needs and wants of husband and children at night. There's a tendency for the birth rate to decline. The absence of the mother from home during the child's early years has it effects. A demand for institutionalized day care for children develops. The home becomes less and less the center of all family activity and turns into a place for eating and sleeping. If this tendency increases, it will mark a distinct change in our folkways. You should determine consciously and, oh, so carefully which path fits in with your capabilities, ambitions, and desires. Which road will lead to happiness?

What of the 25 percent who do not marry? Suffice it to say there are no limits to your activities. Every avenue open to men can be chosen by women today with equal chance of success. And there will be new jobs and positions within the not too distant future about which we do not know or even dream today.

During the First World War, Josephus Daniels, Secretary of the Navy in Woodrow Wilson's Cabinet, asked Will Rogers how the seemingly insurmountable submarine menace could be overcome. Will replied, "Why don't you set the ocean on fire and burn them all up?" Mr. Daniels replied, "Fine, but how would you go about doing that?" Rogers answered, "I've given you the big idea. All you have to do is to fill in the details." I know this talk is somewhat of that nature. But, this is your commencement, your life, your future. I am trying to emphasize that you, and you alone, can fill in the details, that each item is important and that you should bring your training and knowledge into action in connection with all that you do, work, or play, momentous or trivial.

A character in one of Moliere's plays asked the question, "What is prose?" Imagine his delight in learning that he had been speaking it all his life. Just as everything you have done or experienced through your life has been a part of your education, in like manner all you will do and think from now on will be part of your education and training. It was Michaelangelo, a genius in so many spheres of activity, who said, "Trifles make perfection, but perfection is no trifle." If a stroke here and a touch there will transform cold marble into a masterpiece, shouldn't the same be true of a life? Aristotle, another great thinker, taught that character is a habit formed by the daily choice between right and wrong. Commencement, that great milestone in your lives, is the ideal time to emphasize this truth so that you will enbrace it more and more in your conscious daily thinking and acting.

Actions are influenced, if not entirely controlled, by thought. In making this discovery modern science merely reaffirms the teachings of Christ. "As a man thinketh, so is he." A few months ago Dean Burchard, of the Massachusetts Institute of Technology, stated that the ability to control man's thoughts with precision is by no means out of the question. I hope we will never be able to control each other's thoughts. Our ambition should be to stir up and stimulate thoughts, not to lay down dogmas. However, I am convinced that we can control

our own thoughts to some degree, at least, if we consciously and continuously make the effort. We have all seen physically weak men and women make themselves strong by careful and patient exercise. So we know this can be done from personal observation. Then why cannot men and women of weak thoughts make themselves strong by exercising themselves in right and intelligent thinking? You have seen instances of this kind right here in Wilson College. What have these fine, sincere, teachers of yours been doing? While guiding you through laboratory experiments, the study of irregular verbs, the background of history, and a thousand and one other facts, they have been training you, first of all, to think and then to have that thinking take a right direction. If you can make this right thinking a part of your day-to-day existence, part of the trivial, of your sport, of your play, instead of leaving it up on the shelf for use only in case of emergency, then proper action will follow naturally. You will be able to meet each of the myriad problems of life without undue worry, in stride, and with the zest of a conqueror. You will have exercised that neglected, ofttimes forgotten inalienable right of every American citizen, the right to the pursuit of happiness. You must freely give of your time and patience, sympathy, and understanding, kindness, and love to capture the bluebird of happiness. Happiness is a state of mind and is found in all men and women who are in sympathy with their fellow men and in harmony with the universe. It is within the reach of all of you at all times. May you find and hold forever your bluebird of happiness.

The Late Van A. Bittner

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to comment on the deep loss to labor circles of one of its great leaders.

Mr. Van A. Bittner, trouble-shooting international vice president of the CIO United Steelworkers, died Tuesday, July 19, in the Mercy Hospital, Pittsburgh, Pa., of a heart attack. He was 64 years of age.

The fiery labor leader, who was head of the CIO southern organizational campaign, was stricken several months ago in Atlanta, Ga., where he had established headquarters for the CIO's big organizing push into the South.

Mr. Bittner, veteran official of the United Mine Workers before joining the United Steelworkers in 1936, was a close friend and confidant of CIO-USW President Philip Murray. Together they represented the CIO's biggest one-two punch.

Mr. Bittner's career with both unions, coal and steel, was packed with action. He passionately hated Communists in labor unions and fought them all his life. He banned them from helping to organize the South and refused to accept contributions from Communist-front organizations.

In recent years, Mr. Bittner waged a bitter war against labor legislation, particularly the Taft-Hartley law. To him, efforts to legislate industrial peace were like "trying to pass a law to compel a man to love his wife."

Industrial representatives regarded him as a friend. They respected his word and admitted he was shrewd and tough.

Labor has lost one of its greatest leaders, but his efforts will live on to help spiritually in the forward progress of the labor movement.

To his widow and family goes the expression of sympathy of every public official interested in the labor movement.

Following is a sketch of his life:

VAN A. BITTNER

Van A. Bittner, director of the new CIO organizing committee, had 50 years of trade-union organizing experience to draw upon when he opened the CIO's drive in the South.

Fifty years ago, when he was 11 years old, Bittner went to work in the coal mines near his home in Bridgeport, Pa., and joined the United Mine Workers after getting his first pay envelope.

Five years later, at 16, he was elected president of his mine workers local. When he was 23 he was elected a vice president of UMW district 5, centering around Pittsburgh, and 3 years later he was elevated to the district presidency.

Bittner went south for the first time 30 years ago as an international mine workers representative. He was 31 years old when he began organizing miners in Tennessee, Alabama, and West Virginia.

He remained in West Virginia for 18 years, 9 of them as president of UMW district 17. Under his direction hundreds of thousands of coal miners were organized into the union.

While he was an officer and member of the United Mine Workers, he served as a member of the Appalachian Wage Conference from 1933 to 1941.

At the start of the CIO's first campaign to organize the Nation's mass industries, Bittner became director of the CIO's drive in the Great Lakes-western area.

Bittner's direction of the CIO's program of higher wages and better working conditions brought thousands of workers in the steel mills, the farm equipment factories, and packing houses into the CIO as active members.

In 1942, Bittner was elected assistant to president Philip Murray at the first constitutional convention of the CIO United Steelworkers. As a representative of the steelworkers, he became a member of the CIO executive board.

When war struck, Bittner was recommended by Murray to represent the CIO on the National War Labor Board and was appointed by President Roosevelt in 1942. He served until December 1945.

Peace opened the way for the CIO's new organizing campaign which, as Mr. Bittner said, would be carried on in the South just as it was carried on when the steelworkers flocked into the CIO.

"This campaign is a single-minded organizing drive," he explained, "We will organize the workers so that they can get the same good wages and working conditions that the CIO has secured for all of its members."

Bittner was born in Bridgeport, Pa., on March 20, 1885. He was married and had one daughter and two grandchildren. He was a member of St. Matthews Lutheran church.

How To Turn the Tables on Russia—By Arnold J. Toynbee

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. JACKSON of Washington Mr. Speaker, under leave to extend my remarks, I include the following article by the eminent British historian, Arnold J. Toynbee, entitled "How To Turn the Tables on Russia" appearing in the Woman's Home Companion for July 22:

HOW TO TURN THE TABLES ON RUSSIA

(By Arnold J. Toynbee)

For the last year or two we have been grimly facing the possibility of a war with Russia. It is easy to see why. Twice in our lifetime we have been forced into a world war by an aggressive power. So now we say to ourselves: Well, if we are going to be put through it a third time at least we won't be caught napping.

That is a natural reaction. The past is all we have to guide us in guessing the future. And in the light of our own generation's experience, it certainly seems common sense to insure against the worst that might occur.

Probably most of us believe that the Atlantic Pact is a wise political insurance policy. I, for one, believe that it is not merely an insurance. It is a preventive. At the risk of being proved a fool, I will venture to state that there will be no third world war in the sense of a "shooting war." In fact I don't believe that anything sensational is going to happen in international affairs for a long time.

A third world war seems unlikely to me because we know that the western countries are not going to attack Russia and I do not see what could induce Russia to attack us with physical weapons. In a "shooting war" with the west, Russia would be at an enormous disadvantage. The west's technological superiority is crushing. For as far as one can see ahead, Russia has no prospect of drawing level with us, even if she does manage to get hold of this or that bit of know-how. So why should Russia ask for trouble by starting a "shooting war," especially when she is already waging another kind of warfare—the "cold war," as we have learned to call it—in which she seems to think that the know-how is her own monopoly?

The prospect before us is not a third war of the shooting kind. But if we believe this consoling idea we must also be careful to remind ourselves that a reprieve from catastrophe does not mean a release from trouble and anxiety. In our personal lives we may win freedom from fear and want but first-hand experience teaches us that in this mortal life there is no hope of winning freedom from worry. This is equally true of public affairs. The worry of the cold war is already with us and we can be sure it will long keep us under a strain. Perhaps we shall have to live with it all our lives and our children through their lives too. In public, as in private life, we have to learn to live with our troubles. But it does lie in our hands, if we choose, to turn unavoidable worries to good account.

Let us get to grips with our political worries by translating them into familiar terms.

We believe that competition is the life of free enterprise. Well, the Russians have entered the idea market with the offer of a competitive substitute. In competitive business we believe in advertising. Well, advertising is merely the businessman's name for propaganda. Our business experience tells us that the one advertisement that stands all tests is to produce the best goods on the market. And isn't that just what our Russian competitors are forcing us to do?

They wish to impose their way of life on the rest of the world. I don't believe they will succeed. But I do believe that by being there and worrying us they will cause us to do all kinds of things in our own way which will change our way of life, develop it, and I hope improve it—and thereby make it quite impossible for the Russians to impose their way of life upon us.

Perhaps I can make my point clear by telling an English story. In England we are herring-minded because we have an inexhaustible herring pond off our east coast in the North Sea. So long as herrings choose to browse there, we shall not starve; but there is all the difference in the world between a fresh herring and a stale one. Our fishermen are always competing with one another to bring their fish fresh to their customers. Dead herrings soon turn flabby and tasteless, so the fishermen took to building tanks into their trawlers and keeping their catch alive till they could bring them into port. Even those tank-trapped herrings, though, came to market the worse for wear. They were prisoners and they felt it. They felt it and turned sluggish. They turned sluggish and lost their savor, almost as if they had been already dead.

Was there no trick for keeping them, not just alive, but lively? Evidence showed that there was. One captain used always to bring his catch in so beautifully fresh that the buyers tumbled over one another in their eagerness to take their herrings from him. What was his secret? One day the successful captain whispered it to a friend of mine.

"It is really very simple," he said. "With every thousand herrings I put into my tank one catfish and that catfish can be trusted to keep the herrings lively. To be sure, he will eat one or two of them on the way to port; but that is the catfish's wages. And he is worth his keep for, my, those herrings do come in fresh and the price that they fetch on the market pays for the catfish's toll on them 50 times over."

I am suggesting now that in the herring tank we call the Western World Russian communism is the obliging catfish and Providence the resourceful captain. The Russians' providential mission (and, for all we know, we westerners are performing the same service for them) is to keep us westerners fresh and lively—to make sure that we carry out alertly and efficiently all kinds of things which we long ago placed on our agenda, things which we may have always meant to do but which—being human—we might not have done so quickly or so thoroughly if Providence hadn't tossed that Communist catfish into our tank.

The joke is that this mission, which looks like communism's deep historic role, is the opposite of the mission that the Russians have fancied for themselves. What they actually are going to do for us—if we seize the opportunities that the cold war is thrusting into our hands—is to stimulate us to improve our own way of life along our own lines by our own choice. What the Russians want to do, of course, is to impose their Russian way of life on us in place of ours. For the Russians the actual outcome of their activities is going to be exasperatingly disappointing if we take their challenge in the right spirit. It is exasperating to produce great effects which are the reverse of what you intended; but such is life.

What we westerners can do in this cold war which the Russians have started is to let the Russians keep us lively in getting on with our own business. The cold war is a kind of wager. Each of the two competitors is betting that he can make his own way of life so manifestly superior to his rival's that all mankind is bound to become his customer and thereby put the rival firm out of business.

In such a cold war you cannot put your competitor out of action by dynamiting his plant. And your rival cannot prevent you from defeating him by improving your own product to any extent you choose. On your own premises you have a free hand. Your competitor cannot frustrate you. You can go straight ahead. It is up to you, and you alone.

In our democratic social plant we have a free hand in two senses. We are free to do whatever we set out to do, without being exposed to frustration through Russian interference. And we are free from being bound by any uniform blueprint of our own making.

This freedom within our own family to pursue common aims in different ways is one of the strong points of our western way of life. It is well illustrated in the Constitution of the United States. Within the framework of the Federal Constitution each State is free to follow its own policy, enact its own legislation, and maintain its own standards. This freedom is the strength of the Union. The lessons of local experience are at everybody's disposal to apply, if he chooses, to his own situation with any necessary modifications. But the unregimented variety in the parts is balanced by an unforced unity in the whole community's way of life.

What is true of the relation between the States and the Union in this country is also true of the relation between the United States and the other countries of the western world on both sides of the Atlantic. Our common way of life and common aims give us mutual understanding, sympathy, and confidence. In this spirit we can profit from one another's experience without feeling constrained either to take our neighbor's particular path toward our common goal or to push him into taking ours.

What is the main objective of our western society in our time? I should say that it is to go on extending to the whole of society the material and spiritual benefits already enjoyed by the middle class. We have been moving fairly steadily in this direction for the last 100 or 150 years and have made such progress that the great majority of people in all classes in all western countries have fixed their hopes on it as an obviously attainable ideal. When people believe that they are going to obtain substantial social justice by agreement, the Communist doctrine of class war does not attract them. The effect that communism will have on the course of our social evolution in the west can be, not to deflect us into its own path of violence but to keep us on the move along a path of our own—a path we were following in the west before communism was ever heard of.

The distinctive feature of our western philosophy of social progress is our belief that a humane and Christian end ought to be pursued by humane and Christian means. Good will toward underprivileged sections of the community is ill-served, we believe, by vindictiveness toward privileged sections. Our aim is to make our common life better for all without making life impossible for any.

The general improvement we seek for the majority can be provided for partly out of the general increase in our wealth resulting from our continuing advances in technology. Yet even in the United States it also requires adjustments demanding considerable sacrifices from a minority. And this minority, being human, is always likely to be conservative-minded about social reforms that have to be made somewhat at its expense. So if there were no catfish in the herring pond, the pace of social change might be in danger of slowing down to an unwarrantably sluggish rate. The catfish has his use in keeping the herring moving at a maximum velocity. The Russians will stimulate us to put our own house in better and better order.

In different western countries, of course, the same amount of general social betterment will demand different amounts of sacrifice from a well-to-do minority and of planning from society as a whole. Western countries possessing the largest margin of capital resources and productivity can achieve the same social results with the least degree of socialization. It all depends on the local circumstances at the time. In our western world the issue between the advocates of more or less private enterprise and of more or less socialism is not an ideological question of principle or a political question of liberty versus tyranny. It is a practical question of business management. We can afford to tolerate one another's diverse day-to-day trial-and-error solutions of these social problems because we are aware that on the fundamental question of principle—the issue between freedom and coercion—we all see eye to eye.

States whose people share a common ideal are capable of entering into an intimate political association with one another, as the history of the United States has demonstrated. Are the western countries that have entered into an Atlantic Pact for mutual defense likely to go forward to some closer form of cooperation? No states, of course, have ever come closer together just for the fun of it. When sovereign states have federated, for instance, they have always turned out to have been moved by some strong practical consideration. The Original Thirteen States of the American Union joined forces because they saw that if they remained single and separate they would not be able either to secure themselves against European intervention or to develop the resources of the North American Continent. Does this precedent have any application to the states of our Western World today?

In our time, owing to our enormous and rapidly continuing progress in technology, the scale of military and economic operations has become so vast that separate political units the size of England or Holland have perhaps come to be out of date, just as separate political units of the size of Pennsylvania or Rhode Island were put out of date by the opening up of this continent. Today it seems about as unbusinesslike for the west European countries and Canada to go on trying to do their local housekeeping as separate concerns as it would be for the Commonwealth of Massachusetts or the Empire State of New York to apply for release from its partnership in the Union in order to set up in business by itself. Even New York State would soon go bankrupt on that footing. Its huge assets in population and equipment would be transformed into huge liabilities by the stroke of the pen that changed the State line into a frontier.

Conversely, might not the western world enormously increase its business efficiency by making the boundaries between Atlantic Pact countries less like a frontier and more like a State line? For Luxemburg or Belgium the answer to this question is obviously "Yes." But might it not, under modern technological conditions, even benefit so large and rich a country as the United States?

Private enterprise seems to flourish best in an expanding economy and the expansion of the American economic system within the frontiers of the United States has been perceptibly slowed down in our time by the restriction of immigration a quarter of a century ago and the halt in the advance of the farming frontier a quarter of a century before that. I can see a possibility of business advantages for the United States as well as for Belgium in a closer partnership between the Atlantic Pact countries and we

can none of us afford to be unbusinesslike with the Communist catfish at our tails.

What countries would be the last to come into a world community with its nucleus in North America and western Europe? Presumably those countries whose conditions of life today are the most unlike our present conditions in the West. When we put the question in these terms, the name of Russia will probably be the first to rise to our lips. Can the catfish turn into a herring any more easily than the leopard can change his spots? Any intimate association of the Soviet Union with the western countries is no doubt still very far off. But in the long run I fancy the greatest problem for the architects of "One World" is going to be, not Russia, but that majority of mankind which is neither western nor Russian but Asiatic.

A majority of the human race today still consists of a primitive peasantry living just above the starvation line in Pakistan, India, Indonesia, Indochina, China, and Japan. With the Communist catfish chasing us, we western people cannot afford to say of the Asiatic majority of mankind that we are not our brother's keeper. These Asiatics are underprivileged with a vengeance. Their dawning awareness of the possibilities of technology is arousing among them expectations and resentments which they have never felt before. Their continent, rather than Europe, is today the main battlefield between the western and the Communist ideology. In the competition between the two, the Asiatic peasantry may have the last word. We cannot afford to leave them in the lurch. The famous point 4 of President Truman's inaugural address, it seems to me, has an even greater part to play in Asia than in Europe.

[The President said: "Fourth, we must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas."] As I read it, Mr. Truman is aiming at restarting the normal flow of private investment from the United States and any other countries where private individuals have savings to dispose of, into countries that need more capital investment in order to make their latent resources productive. To make this happen, conditions would have to be worked out that would be satisfactory to both the lenders and the borrowers. A fresh flow of private investment would be of great value in supplementing, and perhaps eventually relieving, the present flow of loans or gifts between governments.

"What, Asia next?" you may exclaim. "Why, we have hardly begun to see our way through the problem of Europe and already you are telling us that we must be worrying about Asia too. Are we to have no rest from toil and trouble?" Well, no, would be my frank answer. That would be more than mortal man could expect. While there is life there is always trouble, as well as always hope. One can't expect freedom from trouble but one can hope and pray and plan that one's trouble and toil may bear fruit in something that is constructive and worth while. If we found that through our labor we were building up a better world to hand on to the next generation I believe we would not resent the cost in trouble and anxiety. I also believe that this rewarding goal is within our reach today.

We can be of good hope, I believe, because if we take the opportunity of the cold war, if we are inspired by it to set our own house in order, to improve our own conditions in the western world, the future lies in our hands. We shall create a social and spiritual climate in the world which eventually, in a rather undramatic and gradual way, will affect the Russian one sixth of the world, and make one world, not in our lifetime, but in the lifetime perhaps of our children or our grandchildren.

Why Such a Drastic Slash in Shipbuilding Fund?

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. WOLVERTON. Mr. Speaker, under date of July 13, 1949, the newspaper, Courier-Post, of Camden, N. J., published an editorial entitled "Why Such a Drastic Slash in Shipbuilding Fund?" Under the unanimous consent granted to me I am including this editorial as part of my remarks. The article plainly sets forth that while economy in Government expenditures is desirable, yet it would be false economy to cut appropriations for shipbuilding to an extent that would handicap our shipping and shipbuilding interests in maintaining that high level of efficiency and sufficiency so necessary today to meet the competition of foreign interests.

The editorial to which I have referred, and which deserves the careful consideration of all Members of Congress, reads as follows:

WHY SUCH A DRASTIC SLASH IN SHIPBUILDING FUND?

In general, Congress has been having a terrible time of it trying to effect economies in Government expenditures and has shown a disposition to lay the whole problem on the doorstep of the White House.

Not so in all cases, however.

Comparatively negligible in the whole Federal budget, but far from being that to the agency affected, is the slash in the Maritime Commission's construction fund just voted by the Senate Appropriations Committee.

In submitting its budget in January, the Commission asked a rather modest $100,000,000 for its shipbuilding program, designed to restore our merchant marine to a competitive position with other nations and to maintain the nucleus of an adequate skilled working force in our shipyards in peacetime.

The House slashed $15,000,000 from the request, setting the fund at $85,000,000. When the bill was reported out for consideration on the floor of the Senate this week, another $20,125,000 had been lopped off, leaving only $64,875,000 available for new construction in the next fiscal year.

It is possible, of course, that part or all of the cuts may be restored on the floor of the Senate or in the House-Senate conference after the upper House has voted on the appropriation bill.

If the present Senate figures stand, the Maritime Commission will be permitted to use $14,875,000 as a cash outlay during the year with the remaining $50,000,000 committed against future contracts.

Construction contracts already signed are not expected to be affected by the fund reduction. These include the American President liners being built at the New York shipyard here, the new superliner for the United States Lines, the two luxury liners for American Export, and a few other vessels.

The reductions are likely, however, to throw a monkey wrench into plans for ships projected by Moore-McCormack and Grace lines and will be regarded as a go-slow signal by the shipbuilding and operating industries as a whole.

The congressional desire for economy is laudable but those connected with our shipping industries will be mystified as to why this particular fund is being singled out for such a heavy cut.

At present, for the first time since the war, the shipbuilding industry is just beginning to get on its feet and our obsolete and obsolescent merchant fleet is in prospect of being raised to standards more nearly equal those of other maritime nations by the addition of a few modern passenger and passenger-cargo vessels.

If the Senate committee reductions in construction funds are finally approved, our merchant shipping program will be given a severe set-back, all the more discouraging because it comes at a time when some progress was being made after years of fruitless effort.

There would be no serious complaint if the Maritime Commission fund were subjected to a whittling of 5 or 10 percent, such as Congress is seeking for appropriations as a whole.

With the needs of our merchant marine and shipping industry what they are, however, a cut of 36 percent in construction funds seems drastic and out of line with what most Government agencies are being asked to take.

The South Cannot Afford To Continue To Lose Its Human Resources

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. ELLIOTT. Mr. Speaker, the South is rich in undeveloped natural resources. The district, which I have the honor to represent, has great deposits of coal, iron ore, clay, sand, gravel, chalk. Timber is a most important resource. It is believed that oil and natural gas will soon be found. Our waterways—the Warrior, the Tombigbee, the Sipsey, the Mulberry, the Locust, Blackwater, and Bear Creeks, to name only a few—have great potential uses, and are waiting to be developed for navigation, flood control, electric power, and other uses.

Our good climate, an adequate labor supply, our many natural resources are awaiting capital for their employment and development. A lack of local capital and inequitable freight rates militate against our development. These handicaps, however, are gradually being overcome.

Our farms produce good crops of cotton, corn, hay, strawberries, and truck crops. Our district has a great future in dairying.

But, Mr. Speaker, the greatest and most precious resource the South has is its boys and girls. And, we are losing that resource from year to year. Some 300,000 of the more than 2,000,000 Southerners who were separated from the armed services at the end of World War II did not return to the South. One hundred fifty thousand of the more than 1,000,000 boys and girls who were graduated this year from the high schools and colleges of the South are seeking employment in other sections of the country. The South is suffering untold economic loss in the migration of its human resources.

In the South we must seek a better balance between agriculture and industry to the end that our people can find employment in the South.

As a part of my remarks, I include an editorial from the Anniston Star which was carried in the Mountain Eagle of Jasper, Ala., in its Thursday, July 14, 1949, issue:

SOUTH LOSES TALENT

More than 2,000,000 southerners served in the armed forces during World War II; yet one-seventh of them did not return to the South after their separation from the service.

And of more than 1,000,000 students who were graduated this spring from the high schools and colleges of the South, an estimated 15 percent are seeking jobs elsewhere.

In such circumstances, no complicated computation is required to establish that the South is suffering a great economic loss. After its young people have been trained and educated for leadership, too many of them continue to migrate to other regions in search of employment.

Our task is to develop in the South a social and an economic climate that will serve to retain in this region the talent that is being developed here. This is a prerequisite to the South's continued progress.—Anniston Star.

In Support of Extension of the Servicemen's Readjustment Allowance Act

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter which I have received from Dr. Robert M. Ashley, commissioner of the Michigan Unemployment Compensation Commission:

MICHIGAN UNEMPLOYMENT COMPENSATION COMMISSION,
Wyandotte, Mich., July 20, 1949.

Hon. GEORGE G. SADOWSKI,
District Representative,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN SADOWSKI: I feel that I should be remiss in my duty to the 700,000 veterans of Michigan if I were to fail at this eleventh hour to call your attention once more to the imperative need for extension of the servicemen's readjustment allowance title V provision of the GI bill of rights. This provision expires July 25, unless extended.

More than 200,000 Michigan veterans will be without unemployment compensation whatsoever.

Even now, with a declining claims load, there are some 19,500 veterans now receiving benefits from SRA, who will be transferred to the State unemployment compensation rolls, and draw nearly $490,000 per week, or $20,280,000 per year, from the State unemployment conservation reserve fund. You can imagine what this will mean to experience ratings of Michigan covered employers

At the end of this week, there will be, according to the current claims load, approximately 6,400 Michigan veterans lopped off the SRA benefit rolls, who have no other protection against unemployment from which they are now suffering. They probably will be forced to appeal to welfare agencies for assistance for themselves and for their families.

Add to this number the comparable numbers of veterans in the various States who meet the same fate, and you may view the Nation-wide picture in its proper perspective.

Add to the cost of administering the State unemployment compensation program the cost of administering the claims of the additional 19,500 veterans transferred from SRA to the State rolls (now borne by the Federal Government) and you will have another viewpoint.

The GI's in schools, who are graduating every day, the GI's in hospitals who are being released every day (they total about 50,000 in Michigan in both categories) next Monday will lose the benefit rights they have had under the current law, even though they never have been called upon to ask for their just share of the unemployment benefits.

I want to thank you once more for the courtesy and attention you have shown all of us who have been interested in extending the SRA unemployment benefit provisions, and for your own efforts in behalf of the service men and women who wore their country's uniform to such good purpose and effect.

Should there be anything at all which you can do to expedite or assist in any manner at all, in the passage of this proposed extension, please be assured that you will have our sincere appreciation.

Respectfully yours,
DR. ROBERT M. ASHLEY,
Commissioner.

States' Rights—Soldiers Voting Bill

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. RANKIN. Mr. Speaker, on next Monday the so-called anti-poll-tax bill, which is another one of those vicious measures designed to destroy the rights of the various States, is to be brought before the House for consideration.

In 1944 a similar attempt was made to take over the election machinery of the various States under the pretense of helping the servicemen. We exposed its vicious provisions on the floor of the House, and defeated it by an overwhelming majority.

Under permission granted me to extend my remarks in the RECORD, I am inserting at this point my speech on that subject, made in the House on February 2, 1944, which I trust every Member will take the time to read before he commits himself to this monstrosity which is now being proposed.

Remember that this is just the first step toward the destruction of the election machinery of every State in the Union.

The speech referred to follows:

Mr. RANKIN. Mr. Chairman, as I listened to the gentleman from Virginia [Mr. ROBERTSON], who seems to have strayed so far from the beaten path of his usual constitutional attitude, to follow a will-o'-the-wisp of an opinion rendered by the attorney general of Virginia, I said to myself, "Shades of John Marshall, shades of Thomas Jefferson, shades of James Madison, shades of Patrick Henry. When did an attorney general of Virginia assume the right to read a clause out of the Constitution of the United States." He reminded me of that expression of Shakespeare:

"Man, proud man,
Drest in a little brief authority,
Most ignorant of what he's most assured,
His glassy essence, like an angry ape,
Plays such fantastic tricks before high heaven
As make the angels weep."

If that opinion is sound, we might as well abolish the Supreme Court, not only the Supreme Court of the United States, but the supreme courts of the various States of this Union. Public Act 712 attempts to fix the qualifications for voters in violation of section 2 of article I of the Constitution of the United States, which provides that—

"Electors of each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature."

After that provision had been in the Constitution for 126 years, and for 35 years under the eagle eye of John Marshall, Chief Justice of the Supreme Court, and the greatest in all probability that the Union has ever had, it was reenacted in the seventeenth amendment without any qualification. So, when the attorney general of Virginia attempts by that verbose argument to read that provision out of the Constitution and hold valid a law that is conceded by almost everyone else will be held unconstitutional, in order to induce us to tie into it legislation that would not only violate the Constitution, but would wreck the election machinery of the various States, I must say to my friend from Virginia that I cannot follow the argument of that attorney general. I say that with all deference to the gentleman from Virginia [Mr. ROBERTSON], whom we all love and admire.

Mr. COCHRAN. Mr. Chairman, will the gentleman yield?

Mr. RANKIN. Not at this time.

Mr. COCHRAN. I would like to ask the gentleman from Mississippi a question pertinent to the remarks that he is making.

Mr. RANKIN. I yield.

Mr. COCHRAN. The gentleman has read from the Constitution. Will the gentleman read section 4, of article I, of the Constitution, which reserves to Congress the right to change the laws and regulations of the States?

Mr. RANKIN. With reference to the Representatives in Congress?

Mr. COCHRAN. Will the gentleman read that provision?

Mr. RANKIN. It does not say anything of the kind.

Mr. COCHRAN. The gentleman can read the English language?

Mr. RANKIN. It does not say anything of the kind.

Mr. COCHRAN. Yes; it does, if the gentleman will read it, and he understands the English language.

Mr. RANKIN. The gentleman from Mississippi who is now speaking understands exactly what it means. He does not need any lecture from the gentleman from Missouri. It reads as follows: "The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the legislature thereof, but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators."

That is what it says. It does not say it shall alter the qualifications of electors.

Mr. COCHRAN. The gentleman from Mississippi knows this reserved to the States the right to make or alter such regulations except as to the places of choosing Senators.

That is no longer operative because of the provisions of the Norris amendment.

Mr. RANKIN. I do not yield further. The gentleman is so far wrong that it is useless for me to argue with him.

Mr. O'CONNOR. Mr. Chairman, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Montana for a question.

Mr. O'CONNOR. I would like to have an interpretation of the Supreme Court decision in the case of United States against Clason.

Mr. RANKIN. I am not going to go into any interpretation of a Supreme Court decision. I want to speak on this bill.

Mr. O'CONNOR. This has to do with this bill.

Mr. RANKIN. God knows if the present Supreme Court rendered the decision I would certainly have to scrutinize it with care. I am backed up in that by Justice Roberts, one of the ablest lawyers on the Supreme Court, this morning. One or two men on the Supreme Court of the United States have pulled that august tribunal down to the lowest level it has ever reached in the estimation of the American people.

The last hope of constitutional government, which is democracy as we know it, rests in the Congress of the United States, and especially in the House of Representatives. For that reason I have gone through this battle to preserve the Constitution and to preserve the rights of the States and guarantee to those boys who are fighting our battles that when they come back they will find that flag flying over the same institutions their fathers established. That is the reason I am going through all this punishment at the hands of those who would deprive our soldiers and sailors of their rights.

Now, Mr. Chairman, a day or two ago the gentleman from Illinois [Mr. SABATH] supposedly representing the Committee on Rules, but really attacking the attitude of the majority of that committee, took the floor and questioned us who are trying to pass this constitutional bill, and said we were trying to keep the soldiers from voting. That statement is absolutely without foundation. Of all men on earth for him to make that charge against, I ought to be among the last. The last one to make such a charge should be the gentleman from Illinois [Mr. SABATH].

Whether I have been right or wrong, if I have sinned with reference to the servicemen of this country, it has been in leaning to their side, because I have gone through the fiery furnace for two decades, fighting for the servicemen who have fought our battles.

Years ago, when I did not hear the verbose gentleman from Illinois protesting, we discovered a racket against ex-servicemen in St. Elizabeths Hospital. One man had 98 ex-soldiers in St. Elizabeths Hospital, for whom he was the guardian. He paid little or no attention to them, but he had almost a million dollars of their money in the bank. I went after him. It resulted in a very serious physical difficulty, but I finally convinced President Coolidge and he removed him from office. We went out to St. Elizabeths Hospital and on writs of habeas corpus released 19 of those men who were not crazy, and some of them never had been crazy. Go back and read my brief at that time in the CONGRESSIONAL RECORD. Oh, where was Roderick then? Where was the gentleman from Illinois then, when I was trying to protect those helpless ex-servicemen who were incarcerated in St. Elizabeths, and some of whom were not crazy and never had been.

In 1933, when the Democrats came into power, one of the first bills that came before the House was the economy bill. When I think of it I feel like transposing the words of Addison and instead of using the word "eternity" exclaiming "Economy, thou pleasing, dreadful thought."

Poor old Billy Connery, of Massachusetts, who has now passed to the Great Beyond, and I, were the two men who were called to the White House who stood up and opposed the cutting down or taking away from those disabled men the compensation they were getting. We knew that many of them were dying in the hospitals of this country of tuberculosis and other fatal maladies. We knew that they knew that if they were cut off; that is, if these presumptive cases were cut off their wives and children would be left, in many cases, without anything to live on; a great many of them would be left entirely destitute. When they heard of the passage of that bill, several of them turned their faces to the wall and died of the shock. Oh, where were these critics of mine then who are now playing politics and clamoring to give the soldiers a bob-tailed ballot that they will probably resent?

After the last war we decided we had not paid the soldiers enough. They were entitled to $60 a month. It took a 17-year battle to get it paid and we had to override the veto of every President it was put up to; and I helped to do it.

In 1930 those boys came here. They called it a march on Washington. I saw those men; I was out there among them. They were nothing in God's world but ragged, hungry soldiers who had fought our battles and who had come here asking the Government of the United States to pay them the money that we had already said we owed them. I have no apology to make for that. They were within their rights.

It was my bills that put the widows and orphans of these men who had service-connected disabilities, but who died from other causes, on the roll during those years of depression through which we passed. By the way, I want to say with reference to the economy bill, they took that money away from those disabled soldiers and put people on the pay roll who had never worked or fought either, and probably some of them never will. Am I to be criticized by men who say, "Give us this bill, and we will go to town"? What town? Chicago?

I introduced a bill here, or a resolution, to straighten out the jurisdiction of veterans' legislation. We sent it to the Committee on Rules, and the representatives of the great veterans' organizations went with me before the Committee on Rules and asked for it to be voted out. The chairman of the Committee on Rules [Mr. SABATH] never did give us a vote on it. It stayed there a solid year, and we had to file a petition in the well and get 218 signers to get it before the House. The resolution was passed and, through what I consider an erroneous ruling, there was some question raised as to whether or not we have cured the evil. I am asking the Committee on Rules now to override the chairman, if necessary, and bring that corrected resolution out.

In the meantime the Senate put a rider on a bill that came before the Committee on Ways and Means affecting veterans' insurance. Unfortunately, they left a loophole that is one of the most unjust propositions to disabled veterans I have ever known. The men of the First World War who kept up their insurance and who have become permanently and totally disabled may collect their insurance monthly, as long as they live or remain in that condition. But in this legislation they left that provision out of the bill. When these boys that we have in the service now come home, permanently and totally disabled, they cannot collect their insurance. It is payable only after the death of the veteran. Now, if that measure had come before the Committee on World War Veterans' Legislation, where it belongs, that would have been straightened out. I still have a resolution for a rule on a bill to take care of the widows and orphans before the Committee on Rules. Many of those boys died really from service-connected disabilities that they could not prove. But their widows have gone on and tried to rear and care for their little children and educate them as best they could.

Today many of those children are fighting the battles of this Nation on every front in the world.

Not only that, but last year I told you in advance that when the time came I was going to raise the base pay of the men in the armed forces to $50 a month. I meant what I said. I offered an amendment for that purpose and it passed by a vote of more than 10 to 1. Strange to say, some of the very stalwarts who are now fighting me and criticizing me in the press and on the floor of both Houses voted against that amendment.

Go to the men in the service and ask them how they regard me. Go to the men in the hospitals in your State, do not come to my State but go to your own State and ask them. Go to the widows and orphans of World War veterans and ask them if they think I would take from the servicemen of this country anything that belongs to them and see what answer you will get.

Mr. MAY. Mr. Chairman, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MAY. In my State election officers are required to sign——

Mr. RANKIN. If the gentleman from Kentucky does not mind, please let us take that matter up a little later.

So much, Mr. Chairman, for my services to the servicemen. I have never attempted to ride the veterans politically. When I go home to make a campaign I have something else to talk about, besides playing up to the servicemen. But I am not going to sit idly by and have a man strut down here in the well of the House and accuse me of trying to keep the soldiers from voting when I am doing my eternal best to give them the right to vote in a constitutional election for everything from President to constable—and also to vote in the primaries.

Now, Mr. Chairman, I yield to the gentleman from Kentucky for a question.

Mr. MAY. I was going to say to the gentleman that in my State the State law requires that two election officials of opposite political faiths endorse the backs of the ballots. It provides a penalty to the extent of being a felony and carrying imprisonment in the penitentiary for willful failure to do so, and provides also that the ballot cannot be counted unless it is so endorsed. How would they count one of those ballots under that law without going to the penitentiary?

Mr. RANKIN. If they counted the ballots provided for in the Worley bill, this bobtailed ballot, they would go to the State penitentiary; and if they did not count them they would be subject to the Federal penitentiary.

Mr. MORRISON of North Carolina. Mr. Chairman, will the gentleman yield?

Mr. RANKIN. I will after a while.

The same thing applies to my State.

I now yield to the gentleman from North Carolina.

Mr. MORRISON of North Carolina. Is it not a fact that the Federal law would supersede the State law in every respect, provided the Federal law were constitutional?

Mr. RANKIN. Listen, I cannot yield further. The gentleman has answered his own question. It is not constitutional; there is no use to argue that point any longer; the Worley bill is not constitutional. I just read the sections of the Constitution it violates. Not only that but it violates the constitution of practically every State in the Union, certainly of my State.

Mr. MORRISON of North Carolina. Mr. Chairman, will the gentleman yield for a further question?

Mr. RANKIN. I cannot yield further.

Mr. MORRISON of North Carolina. I yielded to the gentleman yesterday and tried to be courteous.

Mr. RANKIN. I will have to yield to the Governor again.

Mr. MORRISON of North Carolina. I certainly would appreciate it if the gentleman would not look at me so ugly and get so mad.

Mr. RANKIN. The gentleman is seeing things. He is evidently thinking of his opponent, Governor Hoey.

Mr. MORRISON of North Carolina. If I was I was also thinking of an opponent who would not be discourteous to anybody under any circumstances.

Mr. RANKIN. All right; go ahead.

Mr. MORRISON of North Carolina. My point is this and I should like to get the gentleman's answer to it: If this law is constitutional, or insofar as it is constitutional, would there be any danger of anybody's going to the penitentiary in any State for respecting it as the supreme law of the land?

Mr. RANKIN. A fellow asked John Sharp Williams a question like that one time. John Sharp said: "That makes me think of a question I have been wanting to ask you. Do you think if the moon was made of limburger cheese that moonshine would smell bad?"

Mr. MORRISON of North Carolina. Mr. Chairman, will the gentleman yield for a further question, just one more question?

Mr. RANKIN. I will yield when the House quits laughing, so I can hear.

Mr. MORRISON of North Carolina. I am certain my friend's recollection must be wrong because I cannot believe that John Sharp Williams ever dodged a question as the gentleman has dodged this.

Mr. RANKIN. I doubt if John Sharp Williams ever had a question of that type put up to him, because he knew that if a law was unconstitutional, that settled it.

Mr. MANASCO. Mr. Chairman, will the gentleman yield?

Mr. RANKIN. I yield.

Mr. MANASCO. I want to call the gentleman's attention to a brief placed in the CONGRESSIONAL RECORD on September——

Mr. RANKIN. Wait a minute; let me finish with the gentleman from North Carolina. I want to say to the gentleman from North Carolina [Mr. MORRISON] that the law he refers to is unconstitutional, this Lucas-Worley bill, and Public Law No. 712 passed last year, both violate those clauses of the Constitution; and all the perfumes of Arabia would not sweeten them. Nothing he could do would help them, they are unconstitutional, null and void.

Mr. MORRISON of North Carolina. That is the opinion of the gentleman, but just as good lawyers as he is and who love the South as well as he does do not agree with him.

Mr. RANKIN. I am one who loves not Caesar less but Rome more. Some of those lawyers in the South, I fear, love their own political positions more than they love the Constitution of the United States; and for that reason they bend, they warp their judgment to try to make something constitutional that is not only not constitutional but dangerous in the extreme.

I now yield to the gentleman from Alabama.

Mr. MANASCO. I wanted to call attention to a statement made by the attorney general of Virginia on September 22, 1942; the junior Senator from Virginia inserted in the RECORD an opinion by the attorney general declaring that the poll-tax bill was unconstitutional.

Mr. RANKIN. Why, of course. The attorney general seems to have changed his position as the gentleman from North Carolina, Governor Morrison, did on yesterday. He was making an argument, and when I asked him if he would be opposed to a bill that was unconstitutional, he answered—well, his answer reminded me of the colored fellow who was stealing a ride on a railroad train one night when it was wrecked. He was thrown clear of the wreck and ran from the train so fast that he hooked his chin over a clothes line. When he finally quit spinning he was turned around in the opposite direction and continued running so fast that he ran back into the train and broke his leg. That is what the gentleman from North Carolina did on yesterday in his argument; he met himself coming back with such a collision that I am surprised he is able to be on the floor this afternoon.

Mr. MORRISON of North Carolina. Mr. Chairman, will the gentleman yield?

Mr. RANKIN. I cannot yield further.

Mr. MORRISON of North Carolina. Then let me alone.

Mr. O'CONNOR. Mr. Chairman, will the gentleman yield?

Mr. RANKIN. No; I am sorry, I cannot yield.

Now, Mr. Chairman, who is behind this bill? Who is the chief sponsor of it? The chief publicist is PM, the uptown edition of the Communist Daily Worker that is being financed by the tax-escaping fortune of Marshall Field III, and the chief broadcaster for it is Walter Winchell—alias no telling what.

Mr. HOFFMAN. Who is he?

Mr. RANKIN. The little kike I was telling you about the other day who called this body the "House of Reprehensibles."

Now, let us see what this bill does. I have been trying to find out who wrote this Lucas-Worley bill, and I want to give the gentleman from Texas a clean bill of health; he did not write it. I want to go a step further and give him a little more clearance because I do not think he knows who did write the original bill. I am sure that the distinguished gentleman at the other end of the Capitol did not write it. We are told that the original Green-Lucas-Worley bill was prepared by a man who pronounced his name "Wexler," but who spells it W-e-c-h-s-l-e-r, Herbert T. Wechsler, down in the Department of Justice—I mean in the Attorney General's department.

Mr. SABATH. Mr. Chairman, will the gentleman yield?

Mr. RANKIN. No; I will not yield further.

Mr. SABATH. For a correction?

Mr. RANKIN. No.

Mr. SABATH. The original bill was drafted by the gentleman from West Virginia [Mr. RAMSEY].

Mr. RANKIN. No; the gentleman from Illinois is just as wrong on that as he is about some other things.

This man pronounces his name "Wexler." I want to connect up this PM now. If you are going to bring in the Communist Party to write the legislation for Congress, let us find it out. This man Wechsler—and I will put this in the RECORD—was a member of the legal advisory committee of the International Labor Defense, legal arm of the Communist Party, together with Joseph R. Brodsky, attorney for the Communist Party; Ben David, Jr., Communist councilman of New York City; David J. Bentall, Communist attorney and candidate of Chicago; Carol King, attorney for Harry Bridges; and others connected with Communist cases such as Leo Gallagher, Edward Kuntz, Edward Lamb, Yetta Land, Saul C. Waldbaum, A. L. Wirin, and so forth. Now, let us take a look at today's issue of PM. On page 4 appears the names of Members who voted for the previous question on yesterday. On the next page there is a venomous attack on every man who voted to uphold the rules of the House or who voted for the previous question, and it is signed by James A. W-e-c-h-s-l-e-r, spelled exactly like the name of the man that they say prepared the original Lucas-Worley bill. He comes out in PM to denounce us Members of Congress because we do not fall for their propaganda.

The other day the gentleman from New Mexico, our angelic friend from the Far West [Mr. ANDERSON] almost sprouted wings talking about the fraud we were going to perpetuate and lo and behold, as a result the gentleman from New Mexico has his picture in PM with approval; which ordinarily is the kiss of death. I certainly hope if they ever put my picture in that scurrilous publication they will denounce me for everything they can think of, because every time that thing shows up in my district, when the people learn that this is a part of the old Trotsky International—these are Trotskyites running this paper, PM, trying to browbeat Congress into wrecking the Constitution—when they realize that I am in bad standing with that bunch of communistic kikes, they will have more respect for me.

Mr. Chairman, it is useless for me to comment on the message that came in here the other day. I am going to say this in all deference: Franklin D. Roosevelt never had a better friend than I have been when he was following the lines of the Democratic Party as laid down by Thomas Jefferson. I have fought with him when these men were fighting him at every turn. It is unfortunate that he let that message come in here a few days ago that I am sure he did not write and I am afraid he did not read. Even today in the New York Times he is quoted as saying he could not cast an intelligent vote in an election without knowing how his Congressman voted.

Nobody has a right to try to browbeat Congress into calling the roll on a measure that is not before the House. The rules of this House were written by Thomas Jefferson. Turn to the rule book, and you will find that to be true. They have in them the parliamentary wisdom and experience of English-speaking legislators for a thousand years. We have followed them down to now. Never in our history has a message ever come in here demanding that the Congress call the roll on a bill not before the House.

I want to say, Mr. Chairman, that I am for giving every serviceman the opportunity to vote in the coming election. But this Worley bill will not do that. I want to show you this bobtailed ballot that they figure on sending him. They tell you that a State ballot will be too heavy to send. I heard the gentleman from Virginia quote some figures which I hope he will correct before they go into the RECORD, because I did a little figuring myself. Assume there are 12,000,000 men in the Army, and they use troy weight which I presume they do. That will be 1,000,000 pounds, because none of these ballots will weigh over an ounce. I showed you that on yesterday. Two pages of the New York Times will only weigh six-tenths of an ounce. Suppose they weighed a full ounce! that would only be 1,000,000 pounds. I believe there are 2,000 pounds in a ton, so that would only be 500 tons. That would not overload the mail and it would not overburden the traffic.

Let me tell you something else: I like Secretary Stimson personally, and I like Secretary Knox personally, although I do not agree with their political views all the time. The last time they tried to run a political party they carried both Maine and Vermont, in spite of all I could do.

The CHAIRMAN. The time of the gentleman has expired.

Mr. WORLEY. Mr. Chairman, I yield the gentleman 10 additional minutes.

Mr. RANKIN. Mr. Chairman, my proposal today is to leave the election machinery in the hands of the States. Every State in the Union is moving its primary elections back so they will have ample time to send these ballots. Everyone who is trying to stall off and delay this legislation is keeping the soldiers of Illinois and Pennsylvania from having the opportunity to vote in the primaries which takes place in those States in April.

Now, let us see about this ballot. They are moving their primary back to allow 90 days before election. Mississippi, Georgia, Iowa,

Ohio, and other States are doing that. Let us see what you propose to send them. This bobtailed ballot is not a printed ballot with your name on it. The one we propose to send them is a ballot with the names of all candidates printed on it. If your name is printed on here so the man can read it he will not have to fill out any blanks. This bobtailed ballot does not give him a chance to vote for anything but President, Senator, and a Member of Congress. Those men are just as much interested in their brothers, perhaps, who may be running for sheriff, or an uncle, who is running for clerk, or some one who is running for county attorney as he is in voting for President, Vice President, or Congressman.

Sometime ago they had an election in New York. I think the President must have had that election in mind when he spoke about fraud, because that was known as the Aurelio election and the nearest comparison I can make is that this is the Aurelio ballot.

They had a provision on there for them to vote just opposite the party name. In my State we do not put any party name on the ticket. You must read the name and vote for the individual. This bill here would disfranchise every serviceman in Mississippi, and I am informed by a well-informed man in that State that it would disfranchise everyone in Texas. I think it would disfranchise them in Ohio and in Pennsylvania and in practically every other State of the Union. But they had this man Aurelio up, and the Democrats met one night and nominated him. I see my friend Fay laughing. He did not have anything to do with that nomination.

Mr. BUCKLEY. Will the gentleman yield?

Mr. RANKIN. For a question only.

Mr. BUCKLEY. I suppose that if every sailor and soldier——

Mr. RANKIN. I decline to yield further.

Mr. BUCKLEY. Would sign an affidavit that they were all for President Roosevelt, the gentleman would favor the ballot?

Mr. RANKIN. Let me answer that. I want to clear that up. I voted for President Roosevelt every time he has run and I expect to vote for the Democratic ticket this time no matter who is the nominee. I voted the Democratic ticket in 1904 when President Roosevelt voted the Republican ticket. I voted the Democratic ticket when Mr. Knox was running on the Republican ticket. I voted the Democratic ticket when the Taft administration was going down to defeat with Secretary Stimson as a Republican in the Cabinet. I voted the Democratic ticket when Mr. Ickes was a Bull Mooser. I voted the Democratic ticket when Harry Hopkins was a Socialist.

I do not want any fly-by-night or fair-weather Democrats try to tell me how to vote.

Mr. Chairman, they nominated this man Aurelio. The Republicans thought they had picked a good man and nominated him on their ticket. Fine, there was going to be an election of a judge without a contest. But it developed this man had been handpicked by one of the most crooked underworld racketeers in New York. The decent Democrats and decent Republicans tried to get him off the ticket, but they could not do it, unfortunately. They appealed to the people of New York to vote against him and put independent candidates on the ticket. I wonder if the gentleman from New York [Mr. BUCKLEY] voted for Aurelio? When they went to vote they voted by machines.

Mr. BUCKLEY. I will answer the gentleman from Mississippi.

Mr. RANKIN. Yes or no.

Mr. BUCKLEY. Will the gentleman let me answer it?

Mr. RANKIN. No; I do not care for any other answer. All I want to know is whether the gentleman voted for Aurelio or not. I decline to yield for any other purpose.

Mr. BUCKLEY. Did the gentleman vote for Al Smith when he was running for President?

Mr. RANKIN. Mr. Chairman, I am glad the gentleman asked that question. I not only voted for Al Smith, but I stumped both Kentucky and Ohio for him. I had nothing personally against Herbert Hoover, of course. I regard Herbert Hoover as one of our greatest living Americans. But Al Smith was the candidate of my party, and I supported him and spoke for him for weeks.

Let us get back to this Aurelio matter and the ballot that you are trying to ram down the throats of the people of other States. This is just a denatured copy of the Aurelio ballot, I might say. They voted by machine and many of them just voted blindly. Where they saw the party label they voted opposite the name. They were either too indifferent or too lazy or too ignorant to read the names and vote for the man that the best people in New York were appealing to them to vote for; therefore, this man Aurelio, since he was on both tickets, this man selected by an underworld racketeer, was foisted upon the people of the State of New York as supreme court judge to preside over the destinies of the people of New York, the best people of New York, for 14 years at a salary of $25,000 a year. Now, they want us to adopt that kind of a ballot and have it sent to the soldiers, denying them the right to vote for State and county officers, because if you ever send that ballot to them no other ballot will ever reach them.

What we propose to do is to send the entire State and National ballot. More men will vote that ballot than will ever vote that bobtailed monstrosity.

Another thing, I have been jibed and criticized by a lot of these reformers from other States who want to reform the South. We have been reformed at before.

We had a little misunderstanding at one time. Gov. Bob Taylor, of Tennessee, once said that when you won you put Yankee Doodle on the pension list and Dixie on crutches. I presume if we had won we would have put Dixie on the pension list and Yankee Doodle on crutches.

The other day one of the gentlemen on the other side of the aisle was apologizing for the carpetbaggers you sent us. I said, "Look around and think what we might have sent you if we had won."

Mr. Chairman, we are all Americans. We are fighting to maintain our American institutions. Yet some people accuse me of being in an unholy alliance with northern Republicans, me and my southern Democratic friends, because we are trying to give the men in our armed forces an opportunity to vote for everything from President to bailiff, in a constitutional election.

Do you think it was an unholy alliance when George Washington and Benjamin Franklin and James Madison and John Adams worked to frame the Constitution of the United States? Do you think it was an unholy alliance when Thomas Jefferson, the greatest political philosopher of all time, joined hands with that glorious old statesman from Massachusetts, John Adams, to bring about the Declaration of Independence? Do you think it was an unholy alliance when Thomas Jefferson and Alexander Hamilton joined hands to write into this Constitution a Bill of Rights, which this Worley bill would destroy? If they were unholy alliances, then please brand me as being in an unholy alliance with some Americans on the other side of the aisle in this fight for States' rights and constitutional government.

Mr. Chairman, they have told you we would not have time to get these ballots to the soldiers. This is all nonsense. I pointed out only yesterday that these ballots can go anywhere in the world and come back within a few days.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. LECOMPTE. Mr. Chairman, I yield 5 minutes to the gentleman from Mississippi.

Mr. RANKIN. The figures show that they can go to almost any corner of the globe within a very few hours: to Cairo, Egypt, in 21 hours; to Bombay, India, in 32 hours; to Auckland, New Zealand, in 37 hours and 36 minutes; to Australia in 42 hours. These ballots can all go and come back in ample time to be counted. They will be stamped so that everybody will know what they are. If the Army and Navy will only lend their assistance, we can get these ballots to every man and every woman in the armed services, and get them back in ample time for the election, and thus save not only the Constitution but the rights of the various States.

Mr. COX. Mr. Chairman, will the gentleman yield?

Mr. RANKIN. I yield to the gentleman from Georgia.

Mr. COX. Will the gentleman state to the House the number of terms he has served in this body?

Mr. RANKIN. I have served since 1921.

Mr. COX. Has the gentleman had to take an oath of allegiance to the Constitution each time?

Mr. RANKIN. Yes; and I meant it every time. I am going to come to that in a moment.

Besides, our bill provides free air-mail service for ballots for the primaries. You deny that to us and you will disenfranchise every serviceman south of the Potomac River. What about the people in Pennsylvania who are going to vote in the primary in April? What about the people in Illinois who are going to vote in the primary in April? Pass this bill, S. 1825, with amendments, call on the Army and Navy to do just what the bill provides, give them free air-mail service, and those ballots will go to them and come back in plenty of time.

Mr. Chairman, I have taken more time than I expected to. This is one of the greatest questions that has ever come before the Congress of the United States. This is one of the greatest assaults that has been made on constitutional government and on States' rights since 1890, when the fires of reconstruction were still burning, and burning to the detriment of the people of every section of the Nation. I hope you will stay with the committee and pass this bill and send it to the Senate and the White House. Let it become a law at once and preserve in its entirety that great document, the Constitution of the United States, the ship of state upon which our destiny depends.

They can abuse me all they please, and I will answer them all in due time. Since I have been a Member of this House, I have not submitted to being browbeaten or intimidated by anyone. I have tried to follow my own conscience and to represent the people of the First District of Mississippi. I have tried to do what I thought was right. When my conscience is clear and when I have studied a question as I have studied this one, I am not afraid of all the forces of evil, from Drew Pearson to PM and back to Walter Winchell.

When I turn to behold for the last time that flag behind the Speaker's desk, or to take a last long-lingering look at the receding dome of this Capitol, I want to feel in my heart that I have done my best, that I have fought a good fight and have kept the faith.

In all sincerity, I can say that—

"Out of the night that covers me,
Black as the pit from pole to pole,
I thank whatever gods may be
For my unconquerable soul.

"In the fell clutch of circumstance
I have not winced nor cried aloud.
Under the bludgeonings of chance
My head's been bloody, but unbowed.

"Beyond this place of wrath and tears
May loom the horror of the shade,
And yet the menace of the years
Finds and shall find me unafraid.

"It matters not how strait the gate,
How charged with punishments the scroll,
I am the master of my fate:
I am the captain of my soul!"

[Prolonged applause, the Members rising.]

Suit Against the Du Pont Co.

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES

Friday, July 22 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, on July 14, 1949, I had inserted in the Appendix of the RECORD a letter from the president of the Du Pont Co., Mr. Greenewalt, to the stockholders answering the antitrust charges of the Department of Justice. I now ask unanimous consent to have inserted in the appendix of the RECORD a statement by Mr. Merwin K. Hart, president, National Economic Council, which appeared in its letter under date of July 15, 1949, entitled "It's a Crime To Be Successful." This article discusses the motives of the suit and points out the real meaning behind the action of the Government against the Du Pont Co. I believe this letter too should be read by every American who believes in our free enterprise system.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

IT'S A CRIME TO BE SUCCESSFUL

On June 30 the Attorney General of the United States filed a suit in Federal court "to dissolve the du Pont industrial empire," as reported in the New York Times. It was loudly hailed in the leftish press of the Nation as "an attack upon monopoly."

In the American language "monopoly" implies something reprehensible, and it is a part of American tradition to be as much against it as we should be against sin. But some people disagree about both sin and monopoly, because they haven't agreed on definitions.

So, if one is to "come into court with clean hands," what is his record on monopoly? Does the accuser favor it for himself?

WHAT IS A MONOPOLY?

Webster's New International Dictionary defines it as:

"a. Exclusive possession of the trade in some article or exercise of some business. b. The exclusive right, privilege, or power of selling or purchasing a given commodity or service in a given market; exclusive control of the supply of any commodity or service in a given market; hence, often, in popular use, any such control of a commodity, service, or traffic in a given market as enables the one having such control to raise the price of a commodity or service materially above the price fixed by free competition. * * *"

In simple words, a monopoly means possession of all, or substantially all, of something the holder offers at an unreasonably high price which the purchaser must pay because he can get it nowhere else. In the political-legal jargon now current, such a price is called "administered."

Keeping this definition in mind, it isn't hard to see what makes a real monopoly bad. In a society based on the principle of free competition, monopoly stifles free competition. The only form of monopoly which our laws have consistently protected is that given a holder of a patent. That a man should be able to enjoy the fruit of his own inventive skill seems right and just to almost everybody. Yet even this right is limited: First of all, it runs only for a specified term of years and, second, it has increasingly been provided in our laws that holders of patents must be willing to license their use by others—even competitors—upon payment of a fair fee. Moreover our bureaucracy has increasingly tended to undermine the value of patents.

Any genuine objection to monopoly, then, includes two related beliefs. The first is that a free market, in which prices are fixed by competition, with the public the final judge of what it will pay, is sound and good. The second is that any combination of forces which renders the free market helpless or inoperative, is bad.

DIFFERENT KINDS OF MONOPOLIES

There are differing kinds of monopolies. Government is given rightly by our Constitution a monopoly on the use of force to preserve law and order to provide for the common defense.

But there are those who seek to extend the monopoly power of Government beyond simple and necessary fundamentals. What we call statism—whether Communist, Socialist, or Fascist—is in its essence the extension of political monopoly power over the whole economic and social life of a people. Classical socialism, for example, wants to make Government monopolies of most basic manufacturing, transportation, and distribution facilities, and to turn control of natural resources into a political monopoly.

Communists, Socialists, and Fascists, therefore, are not really against monopoly at all. They believe in it. They believe in administered prices. They sneer at the free market. Their basic objection to a private (that is, nongovernment) monopoly is merely that prices are being administered by the wrong people. According to them, prices should be set by monopolist-politicians and not by monopolist-businessmen.

As believers in the free market, we do not like monopoly, either governmental or private. But that ought not to blind any of us to the fact that when a socialist-minded politician starts to cry "monopoly," he is insincere, for he is raising the cry in order to establish his own kind of monopoly.

IF WE HAD TO CHOOSE

If we ever should have to choose between private monopolies administered by businessmen, and political monopolies administered by bureaucrats, we should unhesitatingly choose the former. For private monopolies, when and if they exist, can be taken into court and, if they are proved to be violators of law, can be broken. But monopoly of the statist variety, once it gets its grip on the economic life of a nation, is almost impossible to dislodge. For there will be no court or other human power above it to compel it to desist. Such economic monopoly, administered by politicians, has almost unlimited power over the daily life of the individual—such power as a private monopoly could never dream of achieving.

It is important to understand all this before it is possible to evaluate the real meaning of the action of the Attorney General, professedly designed to dissolve a du Pont monopoly.

Just what is it the Washington administration is really trying to do?

The answer can be found in the record of the administration itself. It is a collectivist-minded, statist-tending, National Socialist-bent administration. It is a matter of record that many Communists have been, and some are still, in its employ. It does not believe in the free economy and the free market. Both as legatee of the unlamented New Deal, and in its own right, this administration is driving hard for a controlled economy, to be directed by itself. Its passion for controls is not hidden but notorious.

It is silly, therefore, for anyone to imagine that in suing du Pont or any other corporation this administration is the friend of the ordinary citizen and is seeking to preserve for him the competitive prices of a free market. So far as monopoly is concerned, this administration does not come into court with clean hands. It is using the cry of monopoly to deceive the people in order to get power to fasten upon them real monopolies of its own, or monopolies the administration is willing to license its specially favored minorities to establish and administer in return for votes.

IS DU PONT A MONOPOLY?

The question to be answered is—do the du Pont holdings constitute a monopoly, in the only sense in which the word represents something harmful to a free economy with a free market? Not even Attorney General Clark was so bold as to say they do. The du Pont holdings represent about a quarter of the outstanding stock in General Motors. They represent stock control of E. I. du Pont de Nemours & Co., producers of rayons, plastics, nylon, cellophane, antifreeze, and a multitude of other products—better things for better living. General Motors and the du Pont Co. together own Kinetic Chemicals, a maker of refrigerants. Together with Standard Oil of New Jersey, the du Pont Co. owns the Ethyl Corp., owners of an antiknock gasoline compound. The du Pont family holds about 17 percent of the stock of the United States Rubber Co., but the du Pont Co. itself has never owned a dollar of United States Rubber stock.

That, in brief, is the du Pont empire. Its total assets are estimated at about one and one-half billion dollars—roughly about 3 percent as much as the Federal Government is spending this fiscal year alone. And the entire capital is owned by roughly 100,000 stockholders.

General Motors certainly has no monopoly on the manufacture and sale of automobiles. Everybody knows that. Kinetic Chemicals has no monopoly on the manufacture of refrigerants. Ethyl Corp. does have a patent right in its component, but it sells that compound to any manufacturer of gasoline who wants it and will pay for it. If the du Pont empire were dissolved, Ethyl Corp. would still possess its patent rights secured to it by law—assuming that in the future our laws are held to mean what they say.

E. I. du Pont de Nemours & Co. is not the only manufacturer of many of the items it produces. It is true that on some of its products it holds patent rights guaranteed by law. But even on many patent-protected processes du Pont, in accordance with law, issues licenses to other manufacturers, some of whom then compete with du Pont in the free market. It holds no monopoly among American manufacturers of chemicals, which is a thrivingly competitive segment of our economy.

United States Rubber Co. unquestionably does not have a monopoly in the manufacture of automobile tires or the other articles

it produces. With such competitors as Goodyear, Goodrich, Seiberling, Firestone, and others, nobody of intelligence could make such a claim. Moreover, for 10 years, while the finances of United States Rubber were being put into shape, the company paid no dividends even on its preferred stock.

CLEARLY NOT

So we find this curious situation: In no case does any component part of the du Pont empire have a monopoly on goods offered for sale, so that prices may be administered by the du Ponts, rather than set by the operation of the free market. And if the parts do not exercise monopoly, it is certain that in combination they cannot be a monopoly. That they may be helpful and cooperative among themselves in reducing their costs and in the transaction of their respective businesses, does not make them a monopoly. If any of our readers owned two businesses which could be helpful in buying and selling to each other, he would certainly consider such helpfulness ethical and businesslike. If one of his companies could save money by buying from the other and avoiding a higher price, why should he not do so, and pass the saving along to the consumer? If he should decide to go out and pay more elsewhere, resulting in a higher price for his final product, he would be rendering no economic service. He would only prove himself a poor businessman.

The spirit in which the Department of Justice has brought this du Pont suit reminds us of the Federal suit 2 or 3 years ago against the Lincoln Electric Co., of Cleveland. That company, by a system of incentives, had long paid large bonuses to employees. The suit was for some $2,000,000 alleged to be due on the theory that the purpose of the bonuses was really to evade additional corporate taxation. The Lincoln Co. pointed out that through its bonus system it had been able to sell the Government at prices far less than those of its competitors, thus saving the Government alone some $150,000,000. Government representatives implied they were not interested in that—that the Government was interested only in recovering the $2,000,000 of taxes allegedly due.

WHY THIS PURSUIT OF DU PONT?

Why, then, does the administration pursue the du Pont Co. and the du Pont family as monopolists, and ask that they be forced to sell their interests in General Motors and United States Rubber?

It is not because du Pont enterprises have cornered the market in any manufactured goods or commodity, thus forcing the people to pay artificial prices.

It is not because the administration is following in the steps of the trust busters of 30 to 50 years ago. In those days we had administrations which really wanted to preserve the free market, and which acted only to preserve it. This Socialist-bent administration has done more already to destroy the free market than the du Ponts and other large enterprisers could do if they made every effort.

As realists, we must find the true reasons for this action elsewhere. And those true reasons are of vital concern to every American.

ALL SOCIALISTS HATE COMPETITION

All Socialists hate, with religious fervor, the principle of competition—the mainspring of any free society. "Cooperation, not competition" is their favorite theme—a false, dishonest slogan designed to deceive good people who do not happen to know much about economics. Cooperation, of course, is an economic and social necessity. On balance, no greater example of cooperation—voluntary cooperation—can be found than in private enterprise. But to have either economic or moral value cooperation must be voluntary. Socialist cooperation is not voluntary. By its very nature it begins with a little compulsion and winds up as completely compulsory.

The real antithesis, then, is not between those who cooperate and those who wickedly compete against each other. It is between compulsive work (Socialist cooperation), and work done freely in the hope of reward. This hope of reward we call incentive, and it is incentive that leads men to compete with each other to produce a better and less expensive product, to win a greater reward. Those who do this perform a real economic and human service. It was the encouragement of incentive that gave us our magnificent machinery of production and distribution.

What is it that creates incentive? What nourishes the dream of success in the minds of young men and women in business or the professions? Is it not the example of those who have been successful? Without that example what reason would they have to feel that great effort, intelligent effort, will result in great reward?

HERE IS THE REAL MOTIVE

This, we think, is the primary motive behind the suit against the du Ponts. The du Pont story, like the Ford story, is a saga of American success. It had small beginnings almost a century and a half ago. It has been characterized, not by ruthless smothering of possible competitors, but by an almost uncanny genius for providing new and better products that have incalculably raised the standard of American living. How immeasurably du Pont has added to feminine enjoyment af day-to-day living through the single item of nylon!

But one can almost hear the slow wheels turning and meshing in the socialist mind: "du Pont is a shining example of what private enterprise, spurred on by incentive of reward, can do. We must smash it. We must destroy what such an example means. We must make it a crime to be successful!" The attack upon du Pont is an attack upon the nerve center of our free society.

We think there is also a second reason for this attack. A hint of it is given in the statement of the Department of Justice in instituting the action. The Department said the suit was directed "to breaking up of the largest single concentration of industrial power in the United States."

Mr. Crawford H. Greenewalt, president of the du Pont Co. remarked, we think rightly, that this means the Government is attacking "bigness in business as such." But to say only so much is not to uncover the inwardness of the attack. Why does the Truman palace guard want to attack bigness as such? If we look for a moment at a historical parallel, the answer becomes apparent.

LET'S GO BACK INTO HISTORY

During the last 50 years of the Wars of the Roses in England, the contest became one between the crown and the great barons. The stake was political power. The crown, in order to gain the power later to be exercised by the despotic Tudor and Stuart Kings, had to smash the great feudal landholders, with their ability to maintain forces strong enough to resist centralized power. The crown did not need to attack the small landholders or the merchants, because they were not sufficiently strong to form centers of resistance except in combination with the barons. But the crown and its advisers knew that once the great centers of resistance were smashed, they could impose the royal will on everyone—small landholders and merchants alike. In other words, to achieve absolute power the crown attacked "bigness as such."

The parallel is, of course, not wholly complete. But the essence, the heart of the parallel is freighted with meaning for our times. An administration whose inspirers, like the Yorkist kings, are driving for complete and absolute control over a whole nation must, if it is to be successful, attack possible centers of resistance, and reduce them one by one. The du Pont empire is, it suspects, such a possible center of resistance. And it is a possible center of resistance to tyranny precisely because it is big.

Just as Edward IV got the small merchants on his side by telling them hypocritically that he was fighting for them against the barons, so the alien-minded Truman palace guard tell American small business that in attacking du Pont it is fighting monopoly on their behalf. But just as Edward IV, after he had disposed of the barons, turned on the merchants and instituted the tyrannical mercantilism against which the American Revolution was a final revolt, so if the Truman palace guard can rid itself of resistance from large business organizations, the small business that remains will inevitably be easier to reduce to servitude.

PART OF THE DRIVE FOR COLLECTIVISM

The drive to collectivize America is now in full blast. The attack is from every quarter. It is in the light of what the collectivists are trying to do in the large, that every separate tactical move must be understood and weighed. When that is done, these salient facts emerge:

1. In defending itself, du Pont is not defending monopoly. For the du Pont enterprises are not a monopoly.

2. The purpose of the attack is to advance the creation in America of an American national socialism indistinguishable in any essential sense from German national socialism (Hitler's nazism), fascism, or British national socialism.

3. The present administration has no interest in preserving the free market for goods and services. Its profession of "opposing monopoly" is purely hypocritical, since its real interest is in destroying the free market and substituting state monopoly for it.

4. In attacking du Pont, our National Socialist planners are seeking to destroy the psychological basis underlying the free economic society. In place of the expectation that effort and ingenuity will find great reward, they would discourage ambition by making it a crime to be successful.

5. In attacking "bigness as such," our alien-minded Fascist palace guard shrewdly recognizes that before statist monopoly can be fastened upon the American economy large centers of potential resistance must be ruthlessly crushed. When the fortresses are reduced, the small householders in the countryside, the small merchants in the towns, can be "mopped up" at will.

THE REAL INNER MEANING

Here is the inner meaning of the anti-monopoly suit against du Pont. It is being presented cleverly by the administration as a device to help small business and the consumer.

It is neither. It is another step in a superbly designed plan to reduce all Americans into the servitude of the monopoly state.

The du Pont company has announced it will fight this Government suit with every resource available. We welcome this news. For du Pont will thus be fighting the battle of the many millions of men and women who, trusting in the American system of private enterprise, have invested their savings in corporate securities.

It is a fight between bungling Government bureaucracy and free American citizens.

President,
National Economic Council, Inc.

Cream and Skimmed Milk—A Challenge

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. O'HARA of Illinois. Mr. Speaker, responsive to the wishes of many of my constituents I appeared today before the subcommittee of the House Committee on Post Office and Civil Service at the public hearings being held on the bills affecting postal and other workers in the Federal service. Under the leave granted I include the following statement made by me to my distinguished colleagues sitting on the subcommittee:

Mr. Chairman, my purpose in appearing here today in response to your gracious and appreciated invitation is to give a positive assertion to the sentiment of my constituents in the second district of Illinois in the matter of fair treatment to the men and women in the Federal service who do the hard work and are never paid more than a sufficiency for bare necessities.

I could not return to my district and face my constituents unless while here I had done everything within my power to help these humble workers attain some measure of relief. The Eighty-first Congress has given consideration to Federal workers in the high salary brackets. If the Federal workers in the low salary brackets do not receive the same consideration, I do not know of any explanation that any Member of the Eighty-first Congress can give on his return home which will satisfy his constituents.

I wish, Mr. Chairman, at this point to compliment this subcommittee on its industry in conducting these public hearings covering in all some 75 or more bills, most, if not all, of them, meritorious. I am sure that my distinguished colleagues on this committee, after they carefully examine all of the bills which is their responsibility, intend to report out in the proper forms and with such amendments as may seem to them advisable at least the best of these bills. I think, in all fairness to my colleagues on this committee, that such a statement should be made.

I do know, and am certain that my colleagues on this committee are fully aware of the fact, that there is such an overwhelming sentiment in favor of these bills that their passage when once they reach the floor of the House by a great majority is as certain as the coming of daylight tomorrow morning. We cannot accept the recommendations of the Hoover Commission in increasing salaries already large, and at the same time ignore the recommendations of this same Commission which apply to wages of Federal workers always too low.

Let me quote from page 26 (personnel management) of the report of the Hoover Commission:

"Pay adjustments for white-collar and postal workers have tended * * * to lag behind similar adjustments in industry."

And again from the report of the Hoover Commission, on page 29:

"OUR PERSONNEL POLICIES

"Our personnel policies committee has concluded that the present efficiency-rating procedures in the Federal Government have the effect of undermining supervisor-employee relationships. * * * This system is not used to the extent that it should be as an aid in the development of the employee and for the purposes of measuring the employee's potential usefulness to the organization."

In respect for your time, and in consideration of many of my colleagues who are here also to testify, I will make my remarks brief. I would not want to contribute to a delay, which might prove fatal, by discussing the bills in too much detail or even a considerable number of them. The important thing—and I say this in all respect and with the utmost confidence in my colleagues on this committee—is that your committee take action as promptly as possible and that it report at the very earliest moment possible at least some of the bills now under discussion.

As to H. R. 4495, there is very little difference of opinion among the Members with whom I have talked. There is, in all truth, a growing impatience that this bill has been so long delayed in reaching the floor of the House. Again, I wish to make it clear that I do not intend in any way to reflect upon this committee or any of its members. I fully realize the studious attention to details which it is your duty to give as members of the committee. I fully realize, too, how hard you have been working and the great demands that have been placed upon your time by the multiplicity of bills of the nature of that under discussion. Now that H. R. 4495 by the petition of a majority of the Members of Congress, of which I was one of the first signers, seems assured of early passage, your committee may have the greater opportunity to study the remaining bills, which are of vital concern to the Federal workers.

Our constituents at home are letting us know how they feel about the delay. I just cannot tell a single man or woman in the Second District of Illinois that it is an urgent matter to give a salary boost to a Federal worker who is now making considerably more than many or most of the people in my district, and that there is no urgency at all in even giving consideration to the request of a Federal worker on a wage pretty close to the bread line.

I have heard it said that some of this legislation does not have the approval of the Bureau of the Budget, the Civil Service Commission, or the Post Office Department itself. I do not know about that. I have not taken the time to run the reports down. If it is the fact, and I hope that it is not, that these agencies are opposed to legislation which would help the rank and file employees, then I regret exceedingly that my vote was cast in favor of giving very substantial increases in wages to the heads of these departments.

I just do not have any use at all for any man who looks out for himself and dips into the cream for himself and then begrudges giving to someone else a little larger portion of skimmed milk.

I do not see any vestige of right that we in the Eighty-first Congress have to delay any of the very modest requests that these humble Federal workers have made. Certainly postal workers are entitled to 26 days vacation and 15 days sick leave, as are classified Federal employees. Why shouldn't they be? What argument can possibly be made against the granting of that request? What is there unreasonable about a $100 uniform allowance and the longevity increases? I mention these items as being fairly reflective of the features covered in all of these 75 or more bills now before your committee. Our constituents believe that they are good bills. And if they all die, or most of them die, with our adjournment along about Labor Day, I can assure my colleagues that there will be a lot more labor involved for us in 1950 in coming back to Washington.

If the little fellow working for Uncle Sam has to take it on the chin while the big fellow gets the orchids, then I think the American people would do a mighty good job in picking out for themselves another Congress.

I know that this committee is doing a most thorough job in a most conscientious manner, but people who are standing pretty close to the bread line and needing a little help do grow a little restive over debates and deliberations and conferences that delay the relief immediately needed. I repeat again that in what I have said and in urging immediate action by this committee I intend no criticism upon the hard-working members of the committee. I have told my constituents in letters I have written them and in radio programs that I was confident that this committee would report the bills out and that the delay up to this time had been occasioned only by the time which the committee necessarily had to give in conducting these public hearings and in the proper consideration which as members of the committee they are charged to give to each of these legislation proposals.

In what I have said, I have been speaking the sentiments of my constituents. Also I have been speaking my own deep and abiding convictions. Aside from that, or perhaps supplementing it, has been a circumstance of a personal nature. My eldest son and my namesake, Barratt O'Hara, Jr., at the present time a partner in my law firm in the city of Chicago, while in the service of the Government, was the president of Lodge 146 of the American Federation of Government Employees, a lodge which covered completely the Civil Service Commission, Department of Justice, and Treasury employees in the Chicago area. There are 24 lodges of the American Federation of Government Employees in the Chicago area, covering practically all the Federal agencies, departments, and instrumentalities. Among the leaders and those who worked day and night with my son for the advancement of the interests of Federal workers are such men as William I. Conners; the brilliant Harry O'Reilly, director of organization for the A. F. of L.; John F. Griner, national vice president of the organization and beloved by every Federal worker in the Middle West; and our own distinguished and admired former colleague, the Honorable Thomas O'Malley, now regional administrator of the Wage and Hour Administration with headquarters in Chicago. Numbered among the membership of this organization are some of the finest men and women in our city of Chicago, all doing well and brilliantly the hard work of Federal Government. For my son, I am happy to have had the opportunity to present to this committee the endorsement of the legislation you are now considering from such a fine organization and such a worthy group of public servants.

From the CIO, from the A. F. of L., from the National Federation of Post Office Clerks, from every labor organization, I have received solicitations of my support for this proposed legislation. Organized labor is unitedly behind it and for no selfish reason. But the demand comes not alone from organized labor. It comes from the rank and file of our people. It comes from manufacturers, merchants, housewives, from the veteran organizations, from the women's clubs, from the churches.

If ever the American people with one voice have demanded something of the Congress of the United States, it is for this legislation benefiting the postal and other Federal workers in the low-salaried group. It is a challenge to common decency that we cannot refuse. If the Eighty-first Congress has found that it is hard for some men and women in Federal jobs to live on $10,000 a year, the Members of that same Congress will be hard put to it to find a good reason why a low-paid Federal worker can carry along merrily and in abundant comfort on the $2,600 a year of a postal clerk.

Good Prices for Wisconsin and All American Farmers

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 25 (legislative day of Thursday, June 2), 1949

Mr. WILEY. Mr. President, I send to the desk a statement which I have prepared on the subject Good Prices for Wisconsin and All American Farmers—an answer to misrepresentations which have been spread among the farmers for a long time now. I ask unanimous consent that this statement be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WISCONSIN FARMERS ANSWER ADMINISTRATION "BUNK"

The farmer of Wisconsin and America is a realist. He can spot truth from falsehood, fact from fancy. He knows bunk when someone tries to hand it to him. Well, for a long time now, the administration has been handing him "bunk" and lots of it. But the Wisconsin farmer has seen through it.

I would like to set forth now some basic facts as we of Wisconsin agriculture see them. I would like to answer, just as Wisconsin farmers in letters answer, the baloney handed out by the Fair Dealers.

ADMINISTRATION FIGHT TO HURT DAIRY FARMER

1. The present administration pretends to be the friend of the dairy farmer. It makes believe that it is deeply concerned with his declining income.

That, however, is so much "bunk."

This Democratic administration, which is the supposed friend of the dairy farmer, consists of the very same group of people who are trying to cut the dairy farmer's throat by bringing about oleo fraud against the farmer's natural product, butter. The Southern Democratic segment of the administration has, of course, always led the fight to cut the economic heart out of the Midwestern farmer. Right now, too, the Democrats are trying to rescind the 18-year prohibition on sale of oleo to the armed forces. We Republicans of the Midwest are, of course, fighting that move.

LABOR "BIG SHOTS" FIGHT DAIRYMEN

Who is it that is helping to cut the dairy farmer's throat? The labor "big shots" who testified before Senate and House committees on behalf of repeal of oleo taxes and free shipment of yellow-colored eleo in interstate commerce. Thus, these labor bigsters who pretend to be the farmer's friend are actually lobbying for an action that will result in disaster to butter production and the slaughter of 2,000,000 dairy cows. How is the dairy farmer going to buy the workers' manufactured products if his livelihood is destroyed?

I should like to quote at this point an important editorial from last Saturday's edition of the Janesville Daily Gazette. This is what the Gazette said in its editorial column of July 23, 1949, pointing out the interconnection between Wisconsin dairying and the economic level of Wisconsin city folks:

"WHAT'S HAPPENING TO WISCONSIN'S DAIRYING

"All citizens of Wisconsin, regardless of whether they are in factories, offices, or on farms, should be vitally interested in what is happening to butter and other dairy products. They should be concerned about the loss in this rich area of southern Wisconsin where dairying brings in millions of dollars yearly to our farmers.

"Wisconsin butter production last year skidded to 100,000,000 pounds or 15,000,000 pounds less than the production in 1927, Senator WILEY states in his weekly news letter. Except for the year 1946 the butter output last year was the smallest in nearly 30 years. Total cheese production in Wisconsin last year dropped to 482,000,000 pounds or 10 percent less than 1947. The number of milk cows throughout the country, now 23,300,000, is the smallest number in the last 10 years although the average milk production per cow has gone up to 5,000 pounds compared to 4,625 in 1940.

"Wisconsin, the Nation's foremost dairy State, feels this contraction more than any other. Our farmers whose milk checks are received every month notice the difference.

"The cow is a very essential factor in conservation of the land. She demands grassy meadows which prevent erosion. She helps to fertilize the fields and this is no small factor in the productivity of this rich soil in the southern tier of counties. She is an essential part in the conservation cycle.

"We in the cities cannot ignore the effect of the dairy industry upon our economy. We can't ignore the fact that our cows are in smaller numbers, that our cheese production has dropped, that our butter production is less, and that the sale of margarine has jumped. These changes affect all the community including those who work in offices and factories as well as those who work on the farm."

Yet, when we of the Midwest demand action on the Wiley amendment to prevent interstate shipment of yellow-colored oleo, the great mass of opposition comes from Democratic sources.

DEMOCRATS SEEK TO REGIMENT FARMER

2. Now, second, this same administration is constantly yelling about freedom for the farmer and supposedly everybody else. "Liberty," "liberalism," "democracy" are terms used (or rather misused) constantly by the administration.

They're telling just so much "bunk," however.

The dairy farmer knows that this same administration is planning all sorts of controls on the farmer and is planning to regiment him as badly as the Soviet Government regiments the collective farmers.

NO SINGLE FARM CURE-ALL POSSIBLE

3. The administration holds out the false hope that one single bill, whether it's called the Brannan bill or any other bill, is going to be a cure-all for the farmer's problems. Its tactics remind us of the old medicine man who claimed that his snake oil would cure any ailment.

That is so much "bunk and baloney."

The Wisconsin farmer knows that nothing but a comprehensive farm program consisting of many constructive pieces of legislation will meet the farmer's needs.

REA, COOP, CONSERVATION LEGISLATION ALL NECESSARY

The farmer knows that in addition to price-support legislation, there must be sound bills to promote further rural electrification so that the farmer and his wife and family can enjoy the electrical conveniences that the city folks enjoy.

Wisconsin farmers know that the Government's investment in REA co-ops pays itself off with interest in the manner of a sound loan. This idea of a repayable loan (in order to help produce wealth and assure a high standard of living) is the very same principle that we are fighting for in the Great Lakes-St. Lawrence Seaway bill, of which I was a cosponsor in the eightieth and in the present Eighty-first Congress. Significantly enough, the opposition to the Great Lakes Seaway—a project which means so much to Wisconsin farming—again stems in large measure from southern ports represented by Democrats who needlessly fear competition with Great Lakes ports.

Let's go on, however, and point out that the farmer knows that in addition to sound REA legislation, there must be helpful soil-conservation bills in addition to measures to promote nutritional standards, so that the people of the Nation will consume more milk, more cheese, more butter, more ice cream.

The farmer doesn't believe in single cure-alls. He has been burnt too many times by fellows with starry-eyed ideas of concocting some theoretic bill by a slide-rule formula.

HOKUM ABOUT FARMERS' PRICES

4. There is the notion foisted by the labor big-shots that farmers are profiteering, that they are price-gougers and chiselers, that they have made a pile of money during the war and postwar years.

That is so much bunk.

The farmer's income has always been far lower than the city dweller's income. During the base years of 1935 to 1939, the average income of the individual on the farm was $243 compared to $603 for the nonfarm individual. Even during the postwar years, average farm income was always merely around 50 percent of what it was in the cities.

Moreover, about the only farmer who made a large income was the huge wheat farmer with lots of hired hands and a tremendous amount of machinery. The small family-sized farmer trying to make a living in the face of rising costs, barely made his cost of production plus a reasonable profit.

INEXPENSIVENESS OF MILK

The Democrats have been telling the American people that the farmer is getting too much for the food he produces. Since when, however, is man's most nutritious food, milk, high-priced when a quart can be bought for 17 to 20 cents. It is just about the most inexpensive of all foods or liquids that men and women consume. Why complain about 20-cent milk when Democrats do not seem to encourage complaints about booze that costs $6 for a fifth?

Moreover, let's point out that the milk bought by the consumer for 17 cents to 20 cents a bottle gave the farmer perhaps 5 or 6 cents (for all his investment, his cows, his machines, his barn, his back-breaking labor) or perhaps 9 or 10 cents if he lives near a big city milkshed.

DEMOCRATS LIED TO FARMERS ABOUT PRICES

5. During the 1948 presidential campaign, the Democrats started a rumor campaign among the farmers to the effect that if Dewey were elected he would force farm prices down. At the same time as they were telling that story in the rural areas, they were telling a completely opposite story in the city areas. They were telling the city worker that if Dewey were elected, he would skyrocket food prices. Actually, of course, both rumors were inconsistent, but the Democrats didn't mind lying from both ends. It was a fact that Governor Dewey believed in a sound farm structure which would give the farmer his cost of production plus a reasonable profit, and which would give the city consumer nutritious food at fair prices.

Now, however, the 1948 campaign is only a memory, but farm prices which Mr. Truman was supposed to save have been dropping

through the floor. The Democrats promised prosperity and instead they bring us recession.

Read what a farm organization leader in Wausau, Wis., states:

"DEAR SENATOR WILEY: Compare our milk prices and the price of butterfat. A year ago we were getting $1.28 per pound for butterfat, now we are getting 80 cents per pound. Hay is from $5 to $7 higher per ton. Machinery average price is about the same. Labor is from $5 to $10 higher. I think you will agree that one need not be very much of a mathematician to see that the ends will not meet. If agriculture is to go through another session like it did in 1939, then our Nation will be in a sorry state of affairs.

"Thank you for your past favors and personal interest in the farmers."

Here is what another farmer in Cato, Wis., writes to me:

"Cheese dropped another cent last Friday. This brings the price of milk down to $2.50 a hundredweight or 5 cents a quart. How in the world will we dairy farmers exist? Enclosed is just another sample of auction posters. Thousands of farmers throwing up their arms. Right in our own community, the heart of dairyland, every other farm for sale with the finest buildings and cattle and no buyers."

NEW LIES BY DEMOCRATS

Well, in face of this evidence, what are the Democrats doing? They are inventing new lies.

In fact, they are never at a loss to spread new rumors and lies. Now, they are telling the farmer that the recession is due to the Aiken law enacted by the Eightieth Congress (even though that law has not as yet even gone into effect and would not go into effect until next January.) As a matter of fact, the House of Representatives has just decided to extend 90-percent parity support and to kill the Aiken flexible-parity system completely.

Let's get the facts straight. The Republican Party is committed, has been committed, and will always be committed to a sound agriculture.

MEMORIES OF DEPRESSION

Turn back a few years and look at the record. While the Democrats were still plowing under land and killing little pigs, the Republicans were urging constructive measures in the interests of the Nation's farmers.

The farmer has a long memory. He doesn't forget the crises he experienced in the past. When I came to the Senate in 1939 (6 years after the start of the New Deal), one of the first bills I introduced was a measure to prevent the foreclosure of federally held mortgages on farms throughout Wisconsin. At that time, milk, which was costing me on my farm in Barron County $1.80 per hundredweight to be produced, was being sold for 90 cents to $1.10 per hundredweight. The farmer doesn't want to go back to those days. He doesn't want to go back to the days of $1.10 milk, 5-cents-a-dozen eggs, 10-cent corn, 25-cent wheat, $3-a-hundredweight hogs.

Now let's point out some more Democratic "bunk."

FARM-LABOR COST MUST BE INCLUDED IN PARITY

6. The administration has always refused to include the cost of labor in determining the farmer's parity. It says that would be "inflationary." That is so much hogwash.

The farmer knows that it is ridiculous to talk in terms of 90 percent of parity, or 100 percent of parity, or 110 percent of parity, unless the farmer's heavy labor costs are computed in defining parity in the first place. For years and years I have recommended that labor costs be included in farm parity. Twice the House of Representatives has passed legislation for that purpose, but the Senate has never confirmed it.

ADMINISTRATION IS SEEKING TO DESTROY CO-OPS

7. The administration pretends to be the friend of farm cooperatives.

That is so much more hokum.

Actually the present administration's plans would severely damage dairy cooperative marketing associations as well as other cooperatives by turning all power and all control over dairy affairs over to the Secretary of Agriculture and his hirelings.

DEMOCRATIC BALONEY ABOUT HELPING FIND FARM LABOR

8. The administration pretends to help the farmer in helping to meet the problem of a serious labor shortage. It tells the farmer that it is trying to help get him the necessary hands.

That is more "bunk and baloney."

Wisconsin farmers know that the administration has been constantly promoting the phony idea that working people could sit on their dignity all day and draw huge wages with little productivity. The administration has constantly been promoting the idea that city wages could be increased indefinitely without continuous increases in prices. The administration has encouraged a few big labor racketeers to call unnecessary strikes which, in turn, have been translated into shortage and high cost of farm machinery. For many months the administration complained about the present displaced-persons law, under which many DP's could be brought to help man Wisconsin farms. Now, however, we Republicans in the Eighty-first Congress have been leading the fight to revise the DP law, but in the administration-led Senate our efforts to revise the law have been blocked thus far.

THE FARMER DOES NOT FORGET OPA RUIN

Yes; the farmer has a long memory. He remembers the days following the war when it was impossible to get a farm tractor or machinery. Why? Because the administration was recklessly shipping tractors abroad to lands which didn't have the vaguest idea about how to maintain the equipment. What was the result? The machines rotted in the field. The farmer remembers that this same so-called friendly administration is the one which almost wrecked Wisconsin's 1,300 cheese factories, 620 ice-cream plants, 300 butter factories, its milk-powdering plants, its cottage-cheese plants, its condenseries by fantastic OPA orders.

Wisconsin farmers remember all these things and more. They will not be fooled or hoodwinked by the siren songs of the administration.

I remember that during the days of the great depression the administration was spending a billion dollars a year on the Department of Agriculture. But how much of that was actually going to the dairy farmer? Let me quote from a statement that I made in the Senate March 19, 1940:

"The only item in the entire bill that is earmarked for the dairy industry is an appropriation for the Bureau of Dairy Industry * * * $731,405 * * * of which amount $353,000 would be expended in Washington, D. C. That does not leave much for dairy farmers. The bill is top-heavy in its administrative costs and lopsided in the benefits."

OUR PAST FIGHTS TO SAVE BADGER CROPS

That same condition of overcentralized personnel and spending still exists. The farmers of Wisconsin recall the troubles we had when we tried to assure enough farm hands to harvest crops so they wouldn't rot in the fields. They remember the continuous battle that we fought with OPA in order to save Wisconsin peas, Wisconsin cherries, Wisconsin sauerkraut, Wisconsin beans, Wisconsin sweet corn, Wisconsin tomatoes, Wisconsin beets. The farmer does not forget his friends nor does he lightly forget the deeds of his enemies.

FARMERS BELIEVE IN FREE ENTERPRISE

The farmer of Wisconsin and of America has always been the strongest believer in our free-enterprise system. He doesn't go in for the New Dealers' or Fair Dealers' alien ideas of socialistic experimentation. Wisconsin farmers are not hoodwinked by the phony appeals of the same men who have consistently coddled and befriended Communists in the Government's executive branch.

During the past decade millions of people have left the farms, and the trend still continues. The administration, of course, would prefer our people to congregate in our already overcongested cities so they could become the tools of corrupt city machines and could become a center for agitation.

Our farmers know that upon their prosperity depends the prosperity of the town, the village, and the city. Unless the farmer can go to market and sell his products at a fair price he and his wife and children can't go into the town to buy clothes and machines produced by the city worker and sold by the businessmen.

The administration is constantly trying to gets its stranglehold clutch on food-processing companies in order to bring them under administration regulations. We have had a constant battle with the Wage and Hour Administration on this issue, but still it is reaching out its tentacles to strait-jacket the canneries and other processing plants.

CONCLUSION

Let me sum up by pointing out as follows:

1. Wisconsin farmers insist on fair prices, and they recognize that the principal champion of fair prices to the farmer is now, and always has been, the Republican Party.

2. Wisconsin farmers recognize that there is more and more of a trend toward State socialism in our land and that the Democratic Party has been aiding and abetting that trend. Our farmers know enough to live within their own income, even if it means sacrifices. But they know, too, that the national Democratic administration, in a crazy spending spree, wants our Government to increase its already huge $250,000,000,000 debt. Wisconsin farmers believe in Government economy, in tax reform, in balancing of the budget, and they know that the principal advocates of such sound principles are to be found in the Republican Party.

3. Wisconsin farmers see through the lies that have been spread by the Democratic Party. They recognize the bunk and baloney which the national administration has been handing out for these many years.

Let me point out that I don't believe that the Republican Party consists entirely of angels. We have made our mistakes, and we are far from perfect, but one principle to which we have always given our unwavering allegiance is the principle that the American farmer shall not be crucified, but that he shall get a fair living for the back-breaking toil that he and his family put in.

GOP Disunity

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, July 25 (legislative day of Thursday, June 2), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an important editorial entitled "GOP Disunity," published in the Charleston (W. Va.) Gazette of July 19, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOP DISUNITY

Relatively unimportant in itself, the current row in the Republican Party over who will be the national chairman shows how deep-seated is the disaffection upon the leading figures of the party.

Realistically speaking, whoever is selected will be plopped into a thankless and, probably, fruitless job.

It has been apparent for a long time that there was no cohesiveness in the party and little, if any, vitality.

This has been demonstrated by happenings in Congress, but it remained for the North Atlantic Treaty to emphasize the deep and widening split in a party that has been hopelessly in the minority for more than 18 years.

It is a party that has been crushingly defeated in five consecutive national elections.

In the last one, with everything apparently overwhelmingly in its favor, it somehow managed to bungle things so that it lost the farmer vote of the Middle West—a vote which up until that time had been regarded as impregnably Republican.

Recent developments show the lack of dependability of its Members in Congress as well as the hopelessness of attempting to weld the many different factions of the party into anything resembling a working unit.

The other day Senator TAFT was triumphantly leading his Republican-Dixiecrat coalition to a victory to retain the Taft-Hartley labor law upon the books and only a few days later we find him leading a few die-hard isolationists against the majority of his party on the North Atlantic Treaty question.

Now, the GOP as the minority party—with a capital M—cannot afford serious splits in its ranks.

But it faces two incontrovertible and never-ending differences among its leaders.

When the reactionary, big business, monopolistic wing of the party combines with the die-hard Southern Democrats to pass antilabor laws and oppose progressive social legislation, it alienates a large liberal group and it may have caused a permanent break in its once solid farmer bloc.

On the other hand, when its internationally minded Senators stand up to be counted for world progress they butt their heads squarely against the isolationists in the party.

There is no conceivable compromise here and these rifts do not heal easily; indeed every evidence points to the fact that they are constantly widening.

It is obviously hopeless to expect a national victory while this condition exists.

If any proof were needed it was furnished in abundance last November, when Mr. Truman won with four Southern States and their 39 electoral votes lost to him, and the two big States of New York and Michigan handed over to the GOP by the Wallace defection.

This was an open rift in the Democratic Party yet it could not prevent Mr. Truman from winning handsomely.

Is anyone so fatuous as to claim that the Republican Party could stand such a rift?

Actually, the Republican Party right now has a much worse split in its ranks even though it is operating more or less under cover and not yet actually in the open.

This split, from a national standpoint, has reduced the Republican Party to impotency.

It is an opposition party with no program to offer the voters other than a "Me too" or a "We can do it better" or, more naively, "Let us try it awhile; it's our turn."

It has a few able men but not a single national leader of the first rank, and by that we mean a leader who could command the united support of his own party without alienating great chunks of independent voters.

And there is evidence that the State machines are floundering just as hopelessly as the national one.

Certainly, no one in his right mind would contend that the Republican Party as at present constituted offers any serious threat to the Democratic Party in West Virginia.

And, equally certainly, no sensible person will seriously maintain that the national Republican Party is any serious menace to the national Democratic Party.

The bald fact is that there are many more Democrats than Republicans.

The GOP is a minority going steadily downhill.

The Democratic Party is a majority that has been steadily growing.

It has some idea of what it wants to do and of where it is going.

Beyond the old trick of name-calling and epithets such as socialism and communism the Republican Party doesn't know what it wants and it certainly is not going anywhere.

The old adage still holds good:

"You can't beat something with nothing."

Promotion of Artificial Alarm

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 25 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Astonishing Statement Made by Mr. DULLES," published in the Fargo (N. Dak.) Forum of July 20, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ASTONISHING STATEMENT MADE BY MR. DULLES

There was an astonishing reference in the first speech made in the Senate by New York's new Senator JOHN FOSTER DULLES. He was discussing the meeting of a short time ago of the Council of Foreign Ministers in Paris.

Said he:

"At Paris last month there was discussion as to whether to accept at all the Soviet-proffered truce and to resume, even on a tentative basis, four-power consultations. Some feared that any relaxation of east-west tension would bring a corresponding relaxation on the part of the American people and that they should artificially be kept alarmed."

After the statement had been made by Senator DULLES, Secretary of State Acheson confirmed it in its entirety.

We are facing critical facts in the world of today, and there is reason for awareness of them on the part of the American people.

But it is amazing that there are those in position of trust, apparently, in the American Government who would go so far as to advocate that the American people be kept artificially alarmed.

Mr. Acheson was at Paris, of course. So was Mr. DULLES, as an adviser to the Secretary of State. They have revealed this information, and it is perhaps logical to assume that, because of that, they probably were against promoting artificial alarm.

But Mr. DULLES says that some were for it. Mr. Acheson says it is so.

This is a serious charge.

The American people are entitled to the facts from their elected or appointed representatives. They are quite capable of drawing their own conclusions. It is not in keeping with our way of life that representatives of the Government should even suggest that the thinking of the American people should be managed through falsifications, through methods of attempting to keep matters stirred up in order to make things appear worse than they are.

The American people cannot but resent such tactics.

Now that we have been told that some wanted to create artificial alarm, the natural question is: Who are those included in this word "some"? It is not enough to say that, since they were not successful in getting their idea across, it doesn't matter. It does matter. Representatives of the American Government who will advocate that sort of thing should not be in the Government service.

Private Building of Grain Storage Facilities

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, July 25 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article which appeared in the Wall Street Journal today. The article describes how the shortage of storage facilities for grain has been considerably overcome through private efforts and with inconsequential aid by Secretary of Agriculture Brannan.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEAT SURPRISE—NEW PRIVATE BUILDING GETS BIG CREDIT FOR PREVENTING STORAGE GLUT—CROP SHRINKAGE ALSO FACTOR; BUT ON-THE-GROUND LOANS PLAYED ALMOST NO PART—FARMERS PAY CASH FOR BINS

The great wheat storage squeeze of 1949 that never came off was avoided largely because farmers and private grain companies—without Government help—put up enough new bins and elevators to prevent it.

That's the consensus among farmers and grain experts survey by the Wall Street Journal through the wheat country from Texas to Nebraska. All say the smaller-than-expected crop helped. All say the Federal program of price-support loans for wheat piled on the ground had practically nothing to do with sidestepping the squeeze.

Before the combines started humming a few weeks ago, agricultural economists were sure they saw super-congestion ahead. Big elevators in key grain marketing centers bulged with last year's wheat. It was expected that more new wheat would be piled on the ground than ever before.

CLEAN GROUND IN KANSAS

Then last week end a Kansas City grain man was able to say: "There is less wheat on the ground in these parts than there has been at this time of year in the past decade. Some of the temporary storage space is going begging for grain."

At Tribune, Kans., the Greeley County Grain Co., with a capacity of 225,000 bushels, advertised that it had space available for 150,000 bushels of wheat.

All over the wheat country there's evidence that farmers, since last year's harvest,

have been making more extensive storage preparations than most people realized.

Says Oscar Nelson, president of the big grain bin manufacturing firm, Butler Manufacturing Co., in Kansas City, Mo.: "Farmers bought more bins this year than ever before. We turned out more than 10,000 of them this year at our Kansas City, Minneapolis, and Galesburg, Ill., plants. The chief request was for the 1,000-bushel size."

REPORT FROM WICHITA

In Wichita, Kans., alone one firm sold 80 1,000-bushel steel bins this year, and another sold 40.

H. L. Collins, Federal agricultural statistician at Topeka, Kans., estimates that storage space on Kansas farms has been increased by some 13,000,000 bushels since last year's harvest.

"Farmers early this year," says L. R. Perkinson, general manager of the Pearlstone Mill & Elevator Co., Dallas, "just got out and put up enough facilities to rely on for emergencies."

And at Enid, Okla., C. M. Newberry, of the W. B. Johnston Grain Co., declares: "Failure of the jam to materialize can be traced primarily to a lot more storage space than anyone believed we had." The Johnston firm alone sold 350 steel bins, each with a capacity of 2,200 bushels, during the 4 or 5 weeks just ahead of harvest. Farmers paid $500 cash for each of them. Some took as many as five.

CASH, NOT CREDIT

This report of farmers paying cash for their bins is echoed in all parts of the wheat country. Early in June, when the Agriculture Department announced its decision to give price-support loans for wheat piled on the ground, it also announced it would give loans up to 85 percent of cost of construction for storage put up on farms. Grain men say the effect of this building loan offer was almost nil because (1) farmers had by then about finished storage preparations, and (2) they didn't need to borrow money to do it anyhow.

But farm bin expansion hasn't been alone in providing new housing for wheat. Commercial elevator building has boomed—and is still booming.

It is estimated that, since last year's harvest, about 12,000,000 bushels of commercial space has been added in Kansas alone. Dodge City has elevator facilities for 2,000,000 bushels more than it had a year ago.

Within 100 miles of Liberal, in southwestern Kansas, some 4,000,000 bushels of new commercial storage has been built—including four elevators in Kansas, six in Oklahoma, and four in Texas.

ENID'S BIG ONE

At Enid, Okla., the Union Equity Cooperative Exchange, which claims the world's largest wheat storage elevator (18,500,000 bushels) has added 4,225,000 bushels to its capacity since last year's crop was harvested.

Grain men in Nebraska say about a dozen new elevators, with capacities ranging from 60,000 to 235,0000 bushels, have been built in that State this year. Small country elevators, they add, have substantially expanded their storage space.

Blueprints point to still more elevator building just ahead. Plans recently have been announced for construction of about 6,000,000 bushels of new elevator facilities in Kansas.

The Kansas Milling Co. is building a 1,000,000-bushel addition at Wichita and the Wichita Terminal Elevator, Inc., will add 2,000,000 bushels. The Farmers Cooperative Commission Co. is expanding by 2,000,000 bushels capacity at Hutchinson. The Dodge City Co-op is adding 500,000 bushels of space at Dodge City. And at Ellsworth the Farmers Union is planning a 250,000-bushel elevator.

CROP DAMAGE FACTOR

While some grain experts still think the storage squeeze would have been pretty severe had the harvest turned out as big as expected, most think the new wheat could have been handled with reasonable smoothness even if the crop had been as large as earlier estimated.

One Kansan puts it this way:

"The latest official estimate places the Kansas crop at about 181,000,000 bushels. As of June 1 it had been estimated at 251,000,000 bushels. Adding that June figure to some 90,000,000 bushels of grain brought over from last year would have given a total of about 341,000,000 bushels. But it is now estimated that farmers have a total of about 282,000,000 bushels of permanent and temporary storage space which, added to about 150,000,000 bushels of commercial space, gives a grand total of 432,000,000 bushels of storage in the State."

The most Kansas wheat reported on the ground at one time this year was 2,000,000 bushels.

"We can take care of more than that in Wichita," says D. L. Mullen, secretary of the Wichita Board of Trade. "We have room right now for 3,090,000 bushels in public elevators and bills, with further space for 3,000,000 bushels as soon as new construction is completed."

Mark Foote

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by James J. Butler, Washington correspondent of Editor and Publisher, from the issue of July 16, 1949:

MARK FOOTE, CAPITAL DEAN, SERVES SINCE 1913

WASHINGTON.—It is, perhaps, conservative to say that not one of 100 correspondents working the Washington beat today were on the Capital assignment when Mark Foote arrived here in 1913 to represent the Grand Rapids (Mich.) Press.

And it probably is safe to say that, since the retirement of Arthur Sears Henning of the Chicago Tribune, Mr. Foote, who celebrates his sixty-seventh birthday anniversary this week—July 21—is the dean of Washington major bureau chiefs (Booth Newspaper Syndicate) in point of age and continuous active service.

Mr. Foote is passing the birthday anniversary on a brief vacation from his desk. Next week, he'll be back pounding the Capital corridors, reporting political and legislative doings to a readership which includes subscribers who have followed his writings for more than 4 decades.

With the exception of 1 year with System magazine in Chicago, after his graduation from the University of Michigan in 1903, his journalistic career has been in association with Booth Newspapers of Michigan.

WIDELY TRAVELED

While he is nationally known as an authority on politics and news generally affecting Michigan, he has traveled extensively and was the author of a newspaper series on the Far East, in 1935, which became important background for the holocaust which was to flare half a dozen years later. With a small group of journalists he had been invited on a trip which took the party through that region in a combination of work and touring.

Honors have been numerous during the long newspaper career enjoyed by Mr. Foote. In 1941, his alma mater, the University of Michigan, called him back to bestow an honorary degree upon him. His colleagues in journalism have elected him to the presidency of both the Gridiron Club and the National Press Club—a dual distinction enjoyed by only a few. He also is a member of the Overseas Writers and other organizations of his profession.

Frank Murphy

EXTENSION OF REMARKS

OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, the late Justice Frank Murphy was one of the most distinguished citizens in the history of the State of Michigan. He was a soldier in World War I. He was thereafter a lawyer in the city of Detroit and his natural gifts, his earnestness, and zeal would have won him high attainment had he confined himself solely to service in that profession. In addition he had a remarkable personal magnetism and was one of the most brilliant public speakers of his day with impressive power to sway audiences with his eloquent speech. It was inevitable therefore that he should be attracted into the political arena where he displayed his prowess in achieving election after election to high offices in his native State. He was never personal in his campaigns and confined his appeal to his eloquent presentation of public issues. His service as mayor of Detroit and as Governor of Michigan revealed administrative ability of outstanding character. As the last Governor General of the Philippines and the first High Commissioner he guided the people of those islands toward the organization and establishment of their present Republic and won for this Nation the enduring good will and friendship of the Filipinos. In Washington, he received appointment to the two highest law offices within the Government, Attorney General and Justice of the Supreme Court of the United States. No one can question that he carried into the performance of his duties in those offices the high ethics and the distinguished ability which had characterized his career and that he left a record for posterity in his State and in the Nation.

Miss Loula Dunn for Secretary of Welfare

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. ELLIOTT. Mr. Speaker, a few days ago, I inserted in the CONGRESSIONAL

RECORD an editorial from the Mobile Press Register, nominating Miss Loula Dunn for Secretary of Welfare in President Truman's Cabinet, if and when the Congress approves the reorganization plan, providing for the creation of a Department of Welfare in the Cabinet.

Since that editorial was inserted in the RECORD, Miss Dunn has accepted a position as executive director of the American Public Welfare Association with headquarters in Chicago, Ill. Her brilliant record as director of the Department of Public Welfare of the State of Alabama led to the Nation-wide recognition which she has received.

In an editorial under date of July 22, 1949, the Mobile Press Register again points out that the new job of executive director of the American Public Welfare Association does not make Miss Dunn ineligible for the Cabinet position of Secretary of Welfare, but instead this new recognition which she has received increases her stature for the Cabinet post.

As a part of my remarks, I include the editorial of the Mobile Press Register of July 22, 1949, entitled "What Others Think of Loula Dunn."

WHAT OTHERS THINK OF LOULA DUNN

When the Mobile Press several weeks ago nominated Loula Dunn for Secretary of Welfare (a job yet to be created) in President Truman's cabinet, this newspaper had no idea that this week she would accept a position almost as big—executive director of American Public Welfare Association.

But lo and behold. What happens? Miss Loula does accept this new job, presently the highest welfare post in the United States. She is leaving Alabama, her native State, which she has served with distinction, and going to Chicago, her new headquarters, in September. In the new job she will serve the 48 States and United States possessions. Thus there will be afforded an opportunity for greater use of her exceptional talents.

Since the Mobile Press already had paid Miss Loula what it considered the highest compliment, that of nominating her (and seriously) for the Secretary of Welfare post in the cabinet, there was little more to be said, from this newspaper's standpoint, when the other new job bobbed up.

We're leaving that to the other newspapers in Alabama. Here's what some of them had to say when Miss Dunn announced her resignation as director of the Alabama State Department of Public Welfare:

Birmingham News: "The loss of Miss Dunn's services will be a blow to the State. That does not mean, of course, that there are not capable persons left in Alabama to carry on her work, but she will be sorely missed. We congratulate her for having found a larger field in which to work and for having performed here in such noteworthy fashion that others have coveted her abilities."

Montgomery Advertiser: "She was an altogether admirable and high-type Alabama public servant. The Advertiser is more than passing gratified to see her abilities recognized in such an impressive manner, but we are not gratified about the loss to the public service of this State."

Alabama Journal: "The departure of Loula Dunn * * * to become executive director of the American Public Welfare Association is not only national recognition of the great task Miss Dunn has performed in Alabama but is national acknowledgment of the sort of people Alabama produces. Alabama will miss her talent, her genius and her charm, but wherever she goes she will shed luster upon her native State."

And now is as good a time as any for the Mobile Press to have another word or so.

The United States Senate Committee on Expenditures in the Executive Departments is considering President Truman's proposal for setting up a Department of Welfare, administered by a secretary with full Cabinet rank.

The plan would automatically become law on August 19 if Congress should remain in session through that date and if, in the meantime, neither the House nor the Senate had disproved the plan by a required constitutional majority.

Here and now, the Mobile Press renominates Loula Dunn to head this new Department, if it is created. Her new job does not make her ineligible; it increases her stature.

Veterans Readjustment Allowances

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. RODINO. Mr. Speaker, it is a regrettable fact that this day will mark the end of the so-called 52–20 Club. As a member of the House Veterans' Affairs Committee, I had hoped that in view of the increase in unemployment among our veterans that action would have been taken long before today for an extension of the readjustment allowance benefits. It would seem that such an extension would have been justified when it is noted that most deserving veterans will now be precluded from enjoying any GI benefits at a time when they are in actual need. It is significant that many of those hard hit by unemployment are veterans who did not seek any aid from the Government, but who immediately upon their discharge from the service sought to make their own way.

In one county alone in the district which I represent, as of May 1949, there were some 7,700 unemployed veterans. And the number has been steadily rising. A substantial number of these veterans are in fields of uncovered employment; that is, they are not entitled to State unemployment compensation.

Under leave to extend my remarks, I wish to include excerpts from a letter addressed by Harold A. Keats, national commander of the AMVETS, wherein I believe a good case is made out for the continuation of these benefits:

It is the contention of this organization, a contention borne out by a multitude of reports from the field offices and individual members of our organization, that due to economic conditions within the Nation at the time of the mass discharges in late 1945 and early 1946, which were due to the conditions within the body politic of America, the period of readjustment chaos that was expected by your committee and by our Nation did not happen in the degree expected. However, it is our contention, that now as the first signs of real unemployment due to the reversal of our economy from inflation to deflation hits the country, that period of readjustment that we expected then is now occurring. The veteran who served from 3 to 5 years in the armed services is now the low man in seniority scales in the employment field. Therefore, quite naturally the veteran is the first man to be displaced in this period of growing unemployment. It is therefore an actuality that the period of readjustment that was considered in the enactment of the servicemen's readjustment allowance, is now upon us.

One of the very basic questions in consideration of the extension of the readjustment allowance is its past performance. In this connection we are indeed proud of the veterans of World War II and the method by which they have utilized this benefit. It is true, undoubtedly, that there have been some few veterans who have taken unfair advantage of a generous offer by their Government, but the vast majority of veterans have utilized the serviceman's readjustment allowance constructively and in keeping with the intent of the act. AMVETS has made an intensive survey of this subject and has these figures to report. During the period of readjustment allowances, 49.3 percent of the total veterans in our survey have filed a claim. By this we mean that only this percentage, which is less than half the veterans surveyed, have filed any claim. Actually, only 38.1 percent of them have drawn any payments from the Government in this program. Of those 38 percent who have drawn, only 31.06 percent of all the veterans surveyed drew unemployment benefits, the remainder drawing self-employment benefits, at which no criticism has been leveled. Therefore, less than one-third of these veterans have drawn any benefits as unemployment compensation under this program. Out of that one-third who have drawn, a further review of our figures reveals that the veteran has drawn an average of 21 weeks, or approximately one-half of his entitlement.

We draw particular attention to the fact that only 3.6 percent of the veterans surveyed have exhausted their benefits. We therefore believe conclusively, that there is no foundation whatsoever in fact to the statement that veterans have made use of the readjustment allowance as a gravy train.

We particularly call your attention to the fact that with an extension of readjustment allowance as provided in H. R. 1374, which provides for no duplication of benefits, those few veterans who have exhausted entitlement would continue in a stage of exhaustion of the benefits. Further, without passage of this act, 50 percent of the veterans who have never filed a claim will never have the opportunity, although this period in the economic history of America will probably be the first time that they have had any real need for the benefits. Also the 96.4 percent of the veterans who have drawn less than their full amount will definitely be in need of this protection during this oncoming period.

At the same time we would like to draw your attention to the fact that 41½ percent of the veterans surveyed are in so-called uncovered employment. That is, they are not entitled to State unemployment compensation. A report from the State of Michigan reveals that there are approximately 36,000 veterans now drawing this readjustment allowance, who will not be covered by State unemployment-compensation proggrams. This is a typical thing. In this connection, we would also draw your attention to the fact that there are no duplications of benefits between State unemployment-compensation and servicemen's readjustment allowances.

Therefore, we plead with the members of this committee to consider this bill, to hold hearings, and to favorably report it to the Congress, for it is our contention that, by failure to extend this bill, you are breaking faith with the veteran who has shown good faith with his Government during the period since the end of the war and who now faces the cold shoulder of unemployment. The unemployment that strikes at the veteran today, strikes at the veteran for but one reason, because of his loss of seniority, experience, and time on the job due to his service for all of us.

Sincerely yours,

HAROLD A. KEATS,
National Commander, AMVETS.

Farm Program

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 19, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial written by Mr. C. L. Ziegler in the Carlton-Yamhill Review, of Carlton, Oreg., which contains a very interesting discussion of a proposed permanent farm program:

MAN IS CAPABLE OF FINDING SOLUTION

Agricultural prices bid fair to become the top domestic question of the day. Certain commentators state the Brannan plan will be used to return the Democrats to power at the next election. Some even point to the fact that Brannan himself will be the new fair-haired boy of the party because he has come forth with the plan that promises most to producer and consumer.

If it were not for the fact that the "gravy" which he promises to both producer and consumer must come out of taxes, and that these taxes must come out of the pockets of these self-same producers and consumers, the plan might attract widespread support. As it is, that is still a possibility for producers and consumers have not yet become sufficiently aware that it is they who must pay the taxes.

Therefore, our biggest economic question will become a political football and men will put their political fortunes ahead of their country's welfare.

Sometimes it is wise to restate our problem, in order that we do not stray too far from the subject.

Food prices fluctuate. When they go too high, the cost of living goes up, and that starts a vicious cycle of price and wage raises, inflation, and many unorganized and unprotected groups are caught in the squeeze and suffer.

Then when food prices fall the farmer receives less than cost of production and loses his farm. Then everything else tumbles and we have deflation, depression, high Government spending for relief, and more taxes.

Extreme fluctuation, gambling, and speculation which thrive on fluctuation, must be eliminated before our problem will be solved.

The principal excuse given for fluctuation in prices is shortage and surplus. When analyzed, it is not shortage and surplus so much as it is the absence of orderly and planned marketing.

As an example, in the Oregonian of July 8 is the following:

"The glutted cattle market which developed at Portland Union stockyards at midweek continued and perhaps was even more so Friday. Heavy marketings found little or no interest on the part of buyers.

"About 400 head were unsold at the close and were without bids for the most part.

"The sudden increase in marketings was attributed by observers to two main factors. Producers, it was said, lacked confidence in the market later in the season, and were seeking to unload now in anticipation of a possible price break."

No crop can be mentioned but what has its fluctuation, either due to local manipulation, lack of planned marketing, or overwhelming cheap competition from foreign imports, encouraged by free trade.

So much for the problem. Now for the solution.

It is nothing short of criminal to allow such a fundamental problem to become a political springboard for power-hungry politicians.

The problem cannot be solved by farmers' organizations or co-ops, because farmers' organizations do not pull together and are more or less political in themselves.

It will require participation of the Department of Agriculture to act as a planning and coordinating agency.

In order that taxes may not be increased, it will require payment by the farmer out of crop money into a stabilization fund to take care of cost of handling surpluses. Something on the order of Federal Deposit Insurance for the protection of banks; pension and social-security premiums on the part of labor.

The farmer is the only producer in America who, when he sells, says "How much will you give me for my produce?" Therefore, farm commodity prices should be set by the farmer, through his triple A committeemen, acting in conjunction with the United States Department of Agriculture.

As an example, instead of wheat fluctuating between $1 and $3, set the base price of a base grade for the 1950 wheat crop at $2 per bushel. Each grower pay a predetermined amount, say 10 cents per bushel, into a stabilization fund. If a surplus develops which is beyond our ability to store against a possible shortage, then it can be sold at a reduced rate or given away to some nation that needs it, the loss to come out of the fund set up by the grower.

It might be necessary to impose restrictions and set a lower price the following year if production became too plentiful. It might even be necessary to vary the protection according to the size of the unit, in order to protect the family-size type of farm and protect farming as a way of life.

Is this advocating a planned economy? Yes. Would it destroy freedom of enterprise and the American way of life? No. General Motors adopted a planned program when it decided strong dealerships were necessary to the success of their organization.

With the help of a revolving fund they established and strengthened one of the most successful distribution organizations in the automotive industry. The dealers paid the money back. They stand on their own two feet, entirely independent. Did the use of a plan ultimately result in their control? No. Did it go contrary to the American way of life? No. In fact, it is intelligent planning which has built the American way of life, and it will be further planning that will preserve it.

The whole point is, if we remove politics and put forth an honest effort toward solution, a workable solution will be found, for man is capable of it.

Political School Bells

EXTENSION OF REMARKS
OF
HON. FRED L. CRAWFORD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, July 22, 1949

Mr. CRAWFORD. Mr. Speaker, under leave to extend my remarks, I include the following from a letter which I have sent to some of the residents of the Eighth Congressional District of Michigan:

Political school bells are ringing as students from labor unions wend their way to summer schools to learn how to take over in the 1950 elections. It's all a part of the drive for a labor-socialist Government in this country. Labor itself makes no bones about it. The United States News reports some labor leaders feel if they gain 15 seats in House and 5 in Senate they will have clear control of Eighty-second Congress. In their own private publications, however, labor leaders are talking in terms of need for 39 House seats for safe margin.

Labor has opened its campaign to win the 1950 election. On July 1, Phil Murray, CIO boss, issued an edict to all CIO members declaring, "I issue this call for political action now" and directing "each member of the CIO to contribute his dollar now to our Political Action Committees." AFL's Labor League for Political Action has voted to call on the 8,000,000 AFL members for $2 each.

Leaders in this vote drive throw a flimsy screen of "nonpartisan politics" around their campaign but in their own private union publications they reveal they seek to set up a Labor Government by using the Democratic Party as the vehicle and by ousting old-line Democrats and "put in their place liberal Democrats."

CIO summer schools giving courses in political action will start in August and run through September. The schedule follows: for Indiana, Kentucky, and Illinois, at Bloomington, Ind., August 7–13; for Michigan at Port Huron August 14–September 2; for New York, Pennsylvania, New Jersey, Massachusetts, Vermont, and Connecticut, at University of Connecticut August 21–26; for northern New York, at Farnham August 25–28; for Georgia, North Carolina, Alabama, Maryland, Virginia, Florida, Delaware, Tennessee, and South Carolina, at Black Mountain, N. C., August 27–September 2; for Ohio-Pennsylvania, at Camp Muskingum, Ohio, August 28–September 3; for Missouri, Texas, Colorado, Arkansas, Oklahoma, Kansas, and Louisiana, at Hollister, Mo., September 4–10; for Illinois and Wisconsin, September 12–17, at Waukegan. Schools for Pacific coast States scheduled late September or early October. AFL's UAW summer school has already been held at Madison, Wis.

There is nothing new about labor schools. Under the guise of "workers schools" the Communists have operated the Abraham Lincoln school in Chicago, the California Labor school in San Francisco and the Jefferson school of social science in New York. All are on the Attorney General's subversive lists. Current conspiracy trial of red leaders in New York reveals workers attending these schools were told how to take over the country through a third-party movement. This they tried in last election when the Communists supported Henry Wallace. However, the two major labor groups of the country plan to get control of Congress through the two-party system.

CIO leads training of labor politicians. In 1946 the CIO launched a school of political action in Washington. It was the first practical school of political instruction of its kind attempted. A representative of this office attended and a complete file of the course is on file here. The scope of the course covered the entire political field from building precinct organizations, raising funds, organizing the clergy, veterans, nationality groups and others to advertising and election-day techniques. The school was so successful that courses are now given in regular labor summer schools throughout the country.

This is labor's right. The question is, Does the country want a labor-socialist government? If not, what do those who oppose current ideological schemes propose to do? If members of both major parties who are opposed to the drift to a socialist state continue to slumber, they may have a rough awakening November 8, 1950—the day after next election. To date we have heard little about any activity within the two major parties except that stirred up by labor over the Taft-Hartley law and socialized planning.

Is this the way you taxpayers want it? Too many Republicans awakened last November to learn the wages of their political inactivity. You can't buy good government. You have to vote it.

CIO GOAL CLEAR

The United Auto Worker, the paper that speaks for Reuther's union, declares in its July issue, "A switch of 39 votes would make the next Congress definitely prolabor." Then it points out, "There are 64 districts now represented by Republicans where a 5 percent shift in voting would make a difference. This CIO union leaves the nonpartisan field when it states, "Labor and liberal forces, if properly organized, can unseat scores of conservative northern and western Republicans in the next election and put in their place liberal Democrats."

AFL's auto workers union will designate a leader in each congressional district to head up a political organization which is to begin work at the precinct level, listing union members, getting them registered, seeing that they vote and even determining the number of favorable votes expected so the local union committee will have a constant finger on the political trends of the community.

Its call to action appears in the CIO News under the heading "No Time to Cry—So Go to Work" and said regardless of what happens on Capitol Hill during the remainder of this congressional session we have a job cut out for us. It's political action of the same type we engaged in last year, but more of it. A lot more of it.

Directions have gone forth for labor to begin now and not only set their sights on congressional seats but also on State and county and even city and township offices. CIO ties its dollar-per-member to the laborer's pocketbook. It says (CIO News, July 18), "There's a definite and close connection between the buck you give to PAC and the bucks you get—or don't in your pay envelope. The amount withheld to pay your income tax, the charge imposed on you for water and sewage service, the kind of a school your children attend and the type of roads you drive on are determined to a large degree by political action.

Artificially Alarmed

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., Sunday, July 24, 1949:

DULLES' REPORT POINTS NEED OF WATCHING OUR OWN REPRESENTATIVES—THIS POLICY OF "SCARE" METHOD NOT NEW IN WASHINGTON PLAN TO CREATE DESIRED PUBLIC OPINION

(By John Griffin)

One of the most revealing statements ever made by an American diplomat was uttered in the United States Senate during the debate on approval of the North Atlantic Pact. It was made by JOHN FOSTER DULLES, recently appointed to the Senate by Governor Dewey, of New York.

Senator DULLES, who is one of the most influential Americans and through his specialized knowledge of foreign affairs has represented the United States on many occasions, was arguing in behalf of the pact and in order to bolster his point, told something about the Paris meeting which resulted in lifting of the Berlin blockade but which failed to achieve a working agreement with Russia.

Senator DULLES said: "At Paris last month there was some discussion as to whether to accept at all the Soviet-proffered truce and to resume, even on a tentative basis, Four Power consultations. The reason was that some feared any relaxation of east-west tension would bring a corresponding relaxation on the part of the American people, and, therefore, they need to be kept artificially alarmed."

Take note of that phrase which says the American people "needed to be kept artificially alarmed." It is an amazing statement, any way you want to look at it, and it is a startling confession.

AN APPALLING SUGGESTION

At the time Senator DULLES made the statement it was hardly noticed, but later, when he was questioned about it, he said the suggestion came from some American diplomats on "a lower level." In other words, it was not offered by any of the official representatives who were at the top of the group.

But it was made by representatives of the State Department, and it is an appalling thing. Here is a democracy in which the people should at all times be fully informed, for theoretically decisions affecting important affairs are supposed to represent the thought of the American people.

And yet some of their representatives hold to the theory that the people must be played for suckers. Now, this is no shock to those who have kept track of the way things have developed in the last few years, for there has been evidence right along of the fact that some Washington officials believe in fooling the people.

But this is the first time the bald fact has been stated, and all the explanations can't erase the fact. Senator DULLES went on to say that "that thesis we rejected. We believed that the American people could be trusted with the truth."

That's what he felt, but that isn't what some members of his delegation felt. They wanted to keep the American people "artificially alarmed."

If the United States Senate passes up the obvious duty to investigate into that attitude of mind on the part of American representatives, it is going to find a great loss of confidence will result.

EXTREMELY DANGEROUS ATTITUDE

That viewpoint on the part of State Department representatives is an insult to the American people, but, more than that, it is extremely dangerous. It is putting things over on the people who are supposed to make the decisions on matters involving a departure from traditional American policies.

But it isn't only in the State Department that such views are held. There are others in Washington and in high places in the Capital who have acted on that theory for a long time. It was evident throughout the discussions on the draft and universal military training.

This column has remarked on it many times, but people are reluctant to believe that their own officials would deliberately set out to sway them through propaganda. And that is just what it amounts to; propaganda used by American officials against the American people.

It doesn't require a remarkable memory to recall the use of that technique in the fight over the draft and universal military training. The scare method was widely used, and the effort was to make people believe that if they didn't support compulsory training there was great danger of immediate war.

It was phony all the way, but some people took it all, hook, line, and sinker, and never realized they were being played for suckers. The scare technique has been so widely used that it has become almost commonplace.

It is being applied almost every time an important question arises. The people are artificially alarmed as every sort of argument designed to stir up the people was attempted by those in favor of universal military training, and although most of them were disposed of long ago, there are still advocates who insist on prolonging the discussion.

DIDN'T WORK THAT TIME

But most of those who honestly believed in such a program finally got down to the point of admitting that the only legitimate reason for such a program is military necessity. Others, who have a stake in it one way or another and stand to benefit by it, offered such inducements as health benefits, civil loyalty, and educational values.

When it was realized by the people that military necessity was the only possible justification, the scare technique was brought into play and the people were artificially alarmed.

It didn't happen to work that time, but from the statement of Senator DULLES, it is clear that that technique has not been abandoned by some American officials.

To say that the American delegation decided at Paris not to undertake such artificial alarming of the people doesn't dispose of the fact that it was seriously suggested by members of the delegation. Whether they were on a high level or a low level makes little difference; they were in responsible advisory positions.

Apparently the American people need to be on guard not only against foreign encroachments, but also against some of their own representatives.

Roosevelt Wrong Again—British Blame Him for Present German Program

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the British now charge that President Roosevelt is responsible for the policy of "unconditional surrender" which has led to the present situation in Germany, including the dismantling program. It seems strange that this charge would be made when the accused is dead and cannot reply. Winston Churchill is thus in a bad light. But there is corroboration for his charge right here in Washington. The Associated Press reports, "that former President Roosevelt was solely responsible for the unconditional surrender policy."

And so, Mr. Speaker "unconditional surrender" and all that has happened to Germany since is in the same category with Tehran, Yalta, and Potsdam. In all of our history there has been no more dismal failure of foreign policy than those I have cited. Hate, revenge and vindictiveness has led us down a blind alley and today our "ship of state" is swamped.

Mr. Speaker, I am including a news article that appeared in the Washington Post today:

SURRENDER POLICY DECRIED—BEVIN BLAMES ROOSEVELT FOR DIFFICULTIES IN GERMANY

(By Ned Russell)

LONDON, July 21.—President Roosevelt's demand for unconditional surrender of

Germany was blamed today by Foreign Secretary Ernest Bevin for most postwar difficulties of remodeling Germany into a western-type democracy.

Bevin clashed with wartime Prime Minister Winston Churchill in the House of Commons over the German problem, particularly in connection with the Labor government's policies on dismantling Germany's potential war industries and the trials of accused German war criminals.

Churchill wanted the dismantling and trials stopped now on grounds their continuation discourages the German people from their tendency to align themselves with the West.

Bevin struck back bitterly at his Conservative critics and forced Churchill to explain his attitude toward Roosevelt's famous declaration at their Casablanca conference in 1943.

"Our German policy," Bevin said, "began with the declaration at Casablanca of unconditional surrender, on which the British cabinet or any other cabinet never had a chance to say a word.

"But it did leave us a Germany without a law, without a constitution, without a single person with whom to deal, and without a single institution to grapple with the problems. We have had to build absolutely from the bottom with nothing at all."

Bevin said the first time he heard about unconditional surrender was when he read it in the newspapers.

Churchill said he never had heard of the idea of unconditional surrender until Roosevelt announced it at their press conference after the Casablanca meeting. He revealed also he seriously considered disassociating the British Government from the declaration, but he could not. Anyway, he said, he still does not think it had any "very evil consequences."

"Hitler * * * and those guilty men around him were in the position that they could not look for pardon or safety for their lives, and they certainly would have fought to the death," he said.

"I have not the slightest doubt," Churchill said, "that the British Cabinet, if they had considered the phrase around the table, would have decided against it. But working in a great alliance, we have to accommodate ourselves."

Bevin acknowledged his share of responsibility for British indorsement of the President's declaration. He was Minister of Labor in Churchill's coalition government.

"I am not making any complaint," Bevin said. "In war all things arise. * * * When this matter was reported to me I said (to Churchill): 'Well, it's done. We have got to make the best of it.'"

But Bevin insisted that the "unconditional surrender" demand was responsible for the shambles in which Germany ended the war. As a result, he said, the German problem had been made enormously complicated and he admitted that there is a new danger of nationalism emerging in Germany.

"All the difficulties of remodeling Germany," he said, "have largely come undoubtedly from that very grave decision."

On the dismantling issue Bevin also criticized the United States for its numerous changes in policy. Harold MacMillan, who had opened the debate for Conservatives, had accused him of unnecessary delays in carrying out the original dismantling agreements and warned against the danger of "a new Russo-Germanic coalition" resulting from German dissatisfaction at the policy of the Western Allies.

"America took one view of dismantlement (the severe Morgenthau plan) and then altered it. Then they had inquiry committees and put up entirely different proposals," Bevin explained.

After dropping the Morgenthau plan, so named because it was proposed by then Treasury Secretary Henry Morgenthau, Jr., the United States later proposed stopping almost all dismantling in order to leave equipment for rebuilding Germany. Britain insisted on continuing substantial dismantling operations and a compromise was reached this spring.

Bevin recalled how the United States originally had urged a maximum of only 5,800,000 tons of steel production for Germany, while he had to argue for 2 years to get the limit raised to 11,000,000 tons.

Pointing out that most of the disputed German plants were in the British zone, Bevin said: "I had to hold up all this dismantling for months while two committees were trying to decide what to do. I promised Moscow that I would clear up this No. 1 war plan by June 19, 1948, and here I think the Russians have a grievance.

"I said I would try my hardest to do it, but I was completely upset by the Allies. America took one view at one time and then altered it and then put up an entirely different proposal."

Churchill, however, thought the dismantling program should be stopped where it is.

Discussing the Morgenthau plan, Churchill said:

"It was a document published by Morgenthau on this (Quebec) conference. There was an agreement, and it was initialed by the President and by me and it undoubtedly proposed treatment of Germany which was harsh in the respect that it largely limited her to being an agricultural country.

"But," Churchill said, "it all came to nothing because the American State Department as well as the British Foreign Office rejected it."

"Anyhow," Churchill said, "If the document is ever brought up to me I shall certainly say: 'I did not agree with that and I am sorry I put my initials to it'."

Both Churchill and MacMillan criticized the long delay in trying some German generals and field marshals.

Bevin admitted the delays were disturbing, but he added: "Many privates, corporals, and sergeants have been shot and I cannot see why an eminent field marshall who is alleged to have given the orders should not be tried for giving the orders."

Then he taunted Churchill: "I don't find any Conservative who subscribed one penny for the defense of a single private.

SURRENDER-POLICY LINK NO SURPRISE TO CAPITAL

(By the Associated Press)

Statements by British leaders that former President Roosevelt was solely responsible for the unconditional surrender policy in World War II caused no surprise among American officials.

Top American wartime leaders have reported that Roosevelt did initiate and insist on the policy.

There was no immediate comment on Foreign Minister Bevin's complaint this policy caused difficulties in Germany.

The Indonesian Situation

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting four newspaper articles by the late S. Burton Heath which appeared in the Washington Daily News on July 13, 14, 15, and 16.

S. Burton Heath met a tragic and untimely death in the terrible disaster which overtook a Dutch passenger plane at Bombay a short while ago. Mr. Heath was 1 of 14 newspapermen whose lives were lost in this lamentable catastrophe.

These articles are highly illuminating and substantiate the contention that many of the so-called Indonesian republicans are hardly imbued with the spirit of '76. I place them in the RECORD in order that my colleagues may read this valuable testimony by a reputable and talented man who lost his life in the process of collecting it. I insert this evidence also in order that those who have been under a misconception about the Indonesian situation may learn the truth before Indonesia, too, has been enslaved by godless Communist imperialists.

[From the Washington Daily News of July 13, 1949]

OUR BLUNDER IN INDONESIA

(By S. Burton Heath)

BATAVIA, JAVA.—United States diplomacy has committed another major blunder in the Far East. Having lost China, we have now given Moscow the opportunity, for which she has been waiting and working, to move into Indonesia, an area that might prove the key to a major war in the Pacific.

Directly and through the United Nations, we have forced the Dutch to free Indonesia so quickly and suddenly that, for the next 5 years, during which world war III may be made either unavoidable or improbable, there will be no stable government here.

We have thrown our wholehearted support to the least democratic, least western-minded political group in the islands, thereby giving it a position of dominance in the coming new government.

Military and businessmen feel sure that Washington must be aware of the strategic importance of Indonesia, in any possible war between Russia and the democracies. There are two major reasons for this:

First, because these islands are an aerial cross roads of the South Pacific. From Batavia to Australia is only 1,600 miles; to the Philippines is about 1,400 miles; to Singapore is only 500 miles. From Java, from Borneo, from Sumatra, from Celebes, modern long-range bombers could harass the Philippines, Australia, the sea routes of the Indian Ocean, the South China Sea, the South Pacific in general.

Second, because the islands are rich in vital oil. There are known reserves of a billion barrels. A. Wright, acting general manager for Standard-Vacuum, has no doubt that another billion could be discovered when needed.

SOVIET AGENTS BUSY

China is pretty thoroughly in Moscow's hands now. Soviet agents are operating diligently in Indochina, Burma, Malaya. Observers who have studied that area would be surprised if the Communist push is not continued southward from China toward Indonesia.

This fear is strengthened by statements made in Moscow the other day by Evgency Zhukov, corresponding member of the Soviet Academy of Sciences. In a report shortwaved to this area, he told of the role played by the Soviet Union in independence movements here, in Malaya and Burma and Viet Nam and elsewhere.

TREMENDOUS STAKE

Many non-Dutch observers here believe that the United States, Britain, and other western democracies have a tremendous

stake in the maintenance of a stable government here. Such a government would be anxious and able to resist Soviet aggression, and, against a real attack in force, could be trusted to call upon the western military powers for assistance.

There was a chance to get such a government here. The United State deliberately turned its back on that opportunity, and gave its whole-souled support to a group whose intentions are questionable and whose ability is yet more doubtful.

[From the Washington Daily News of July 14, 1949]

INDONESIA NEEDS 5 YEARS' HELP TO RESIST THE REDS

(By S. Burton Heath)

BATAVIA, JAVA.—Before the end of 1949, the Indonesians probably will be free, after more than 300 years as a Dutch colony. Their freedom will be complete and unconditional.

It will be at least 5 years, after that, before the government of the United States of Indonesia will be stable enough to resist strong pressure from Moscow.

That is the estimate of Sutan Sjahrir, political adviser of the government of the republic, which the United States has backed unreservedly against the Dutch and a majority of Indonesians.

Even that 5-year period, Sjahrir says, depends upon assistance from the Western World. Without such aid, stabilization might take much longer, or Indonesia might have to turn to Russia.

But President Soekarno said he could not imagine any circumstance in which he would invite the Dutch, or the Americans, or the British, to help resist Soviet or native Communist interference.

He expressed complete confidence—which few impartial observers feel—that he has enough loyal troops to handle anything that might arise. He says there are only a few hundred armed Reds in Indonesia. He did not account from some 30,000 Communists who were arrested by his government in the Stalinist coup last September, and released from prison in December when the Dutch attacked Djokjakarta in the second military action.

President Soekarno and Vice President Mohammed Hatta have been bitterly attacked for their collaboration with the Japanese during World War II, on the one hand, and have been branded as Communists on the other.

Sutan Sjahrir, who led the anti-Jap underground during the war, says it was formerly arranged that Soekarno and Hatta should pretend to collaborate, while he and Amir Sjarifuddin—who is supposed to have been executed as a leader in last year's Red revolt—served under cover.

REDS IN CABINET

Most credible observers, including most of the Dutch, do not believe that either Soekarno or Hatta is a Communist. But they have appointed 17 recognized Reds and fellow travelers to their cabinet. The general opinion is that Soekarno is a sincerely patriotic rabble rouser, a figurehead but not a strong man.

His army—the TNI—appears to include a large proportion of genuine patriots who believe they are fighting for liberty, and who, in a guerrilla fashion, are organized. But it also includes organized bands of Communists, and other organized bands who seem to be little better than bandits, who use the TNI as a cover for their activities.

STABILITY REMOTE

It has been difficult to find any indication, beyond the mere words of the Republic's leaders, that they possess sufficient control over their followers to set up that stable government which is so badly needed here in the next few years.

[From the Washington Daily News of July 15, 1949]

INDONESIAN REPUBLIC JUST ONE STATE IN NEW NATION

(By S. Burton Heath)

BATAVIA, JAVA.—The Republic, proclaimed out of Japanese headquarters by two wartime collaborators, will be only one negara—state—of the United States of Indonesia that is to be created this fall in The Hague.

There will be six or eight others. The exact number, and their territorial limits, have yet to be decided.

These and other details of the constitution will be debated by a provisional parliament that will be convened after independence has been formally granted.

But because the United States has boldly and unswervingly backed this Republic in all its controversies with both the Dutch and the rest of Indonesia, the Republic—and President Soekarno and Vice President Mohammed Hatta—will go into the constitutional convention in a very strong position.

The Republic has never held an election for any office—executive or legislative—in the almost 4 years it has been in existence. On the other hand, the negara of East Indonesia has held elections by secret ballot for all local offices, and in September will elect a negara parliament by secret ballot. And Borneo is preparing to establish an island-wide negara with democratic elections.

So the American action has served to give undue weight, in the framing of a constitution for the United States of Indonesia, to the least democratic of all major groups in the islands. This creates a possibility of trouble next year that would be just what any Communist group would love.

The Federalists—typified by the East Indonesians and the Borneans—and the Republic are meeting in an inter-Indonesian conference to agree on a provisional government to which the Dutch, at The Hague, can turn over sovereignty.

Since both groups are anxious for freedom, some observers feel they will avoid every possible ground for disagreement, putting it off to the constitutional convention.

At The Hague, these observers reason, the Dutch will sign almost anything to get out of this mess.

UNSOLVED QUESTION

The Indonesians will get their independence without having solved the question that has caused bloodshed and rioting ever since 1945—how far can the Soekarno-Hatta republic impose itself on the rest of Indonesia?

Then, probably next year, the constitutional convention will meet. If both sides are of good will, there is no question that cannot be solved.

But, with the Dutch gone, with the only important armed force the Republic's TNI, the Republic is going to have an argument out of all proportion to its importance or the logic of its position.

CIVIL WAR?

It may well be able to force its will on the rest of Indonesia, or start a long period of civil war as an alternative.

[From the Washington Daily News of July 16, 1949]

OBSERVERS CONVINCED REPORTS ON INDONESIA ARE DISTORTED

(By S. Burton Heath)

BATAVIA, JAVA.— Two years ago, the United States still had two choices in Indonesia. Desiring a stable, strong, friendly government as a bulwark against communism, it could have chosen the republic—which it did—or the Federalists.

Our State Department took the Republicans at their own face value. It ignored the collaborationist wartime records of President Soekarno and Vice President Mohammed Hatta. It waived the strong infiltration of Moscow-trained Communists, most of them now dead or gone, but all then in high places.

It accepted as democrats a self-appointed oligarchy which had never gone through the pretense of democratic processes—and has not to this day.

The State Department, and the United Nations under American leadership, refused to listen to a delegation of four eminent Indonesians who went to the United States to tell the world that the Republic did not represent all of Indonesia, but only one part.

WHO SOLD BILL OF GOODS?

A group of American newsmen, circulating freely through the islands, has been trying unsuccessfully to discover who supplied the State Department with the information on which this course was based.

Only two things have been established beyond doubt:

One is that representatives of the State Department here actively resent the coming of American newspapermen, who almost unanimously condemn the State Department's Indonesian policy as a menace to United States security.

ANTI-DUTCH BIAS

The other is that American and Australian junior officers, assigned as field observers for the United Nations, are convinced that their factual reports are being disputed before they are passed on to Washington, Canberra, and Lake Success. They say it is useless to submit anti-Republican or pro-Dutch reports.

(NOTE. — Scripps-Howard correspondent, William H. Newton, killed in the same crash as was Mr. Heath, reported the same thing in a dispatch which was published in the News.)

These reports pass through the hands of Australian Brig. C. E. Prior and United States Col. W. B. Carlock, whose responsibility it is to blend them into a homogeneous picture of what is going on.

There is no question, in the mind of anybody who has traveled around these islands, that all the Indonesians want independence, as quickly as possible. There is no question—even the Dutch here admit it—that the Dutch have been most inept in handling a touchy situation and in presenting their side of the controversy to the world.

STATE DEPARTMENT CHOSE

The question for Indonesia was simple: Should the self-appointed Republic oligarchy, representing principally Java, impose a unified national state on some 39 other nationalities, scattered over an area almost as big as the United States? Without even hearing the other side, the United States answered that one "yes."

The question for the United States, also, was simple. Should the change-over be in the hands of a moderate group—free alike from Jap collaboration and from Stalinism—that would welcome advice and assistance while they were getting on their own feet? Or should it be in the hands of Soekarno-Hatta, who wants every Dutchman out at once, and cannot conceive of needing help from the United States?

The State Department chose Soekarno and Hatta.

Churchill Says Britain Must Earn Its Way

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. REED of New York. Mr. Speaker, I notice that Mr. Winston Churchill, in

his July 23, 1949, speech at Wolverhampton, said among other things:

Never before in the history of human government has such great havoc been wrought by such small men.

I note also his denunciation of "Socialist spendthrifts and muddlers." We have been cursed over here, I would say to Mr. Churchill, with New Deal incompetence, social quackery, blundering planners, interventionists, internationalists, all of them trying to support with our taxpayers' money the very socialistic government in England which Mr. Churchill indicts and condemns.

Now we are about to arm, at our taxpayers' expense, the continental governments which from time immemorial have not infrequently been England's enemies. When billions have been spent to arm a group of foreign nations, then will it be another case of furnishing not only the materials but the money, the men and the cost of maintenance required by this great military Frankenstein. Are we to repeat the blood fiasco of arming Japan. God forbid.

I wish our spenders and those in both our political parties would, before our people become more deeply mired in the New Deal swamp of financial quicksand, listen to this observation of Mr. Churchill's, that—

Our Socialist spendthrifts and muddlers have dissipated every overseas asset they could lay their hands on and, in addition, have exacted and extracted from our people a higher rate of taxation than was required at the very height of the war.

Under a unanimous consent heretofore granted, I am inserting an article as a part of my remarks which appeared in the New York Herald Tribune under date of July 23, 1949:

CHURCHILL SAYS BRITAIN MUST EARN ITS WAY—LINKS LABOR'S POLICY WITH COMMUNISM—ASSERTS THAT NEVER BEFORE HAVE SUCH SMALL MEN WROUGHT SUCH HAVOC

WOLVERHAMPTON, ENGLAND, July 23.—Winston Churchill said today that the Conservative Party's main aim is to restore the greatness of Great Britain, and "the first essential step is to regain our economic independence by earning our own livelihood."

Socialism and communism, he charged, differ only in methods.

The wartime Prime Minister, speaking before a sell-out crowd of 40,000 in the Wolverhampton soccer arena, said the Labor Government had steered Britain near to a ruin which would "carry many other nations with us into chaos and communism."

"Never before in the history of human government has such great havoc been wrought by such small men," declared Mr. Churchill, departing from his prepared text. The aside recalled his tribute to the Royal Air Force fighters in the Battle of Britain: "Never in the field of human conflict was so much owed by so many to so few."

DENOUNCES "SPENDTHRIFTS"

Mr. Churchill denounced "Socialist spendthrifts and muddlers" in a major policy speech bidding for public support in the Parliamentary election due some time before the expiration of the Labor Government's 5-year term in mid-1950.

The crowd that jammed the stadium here, the home of the national champion Wolverhampton Wanderers soccer team, gave Mr. Churchill a hearty reception. There were cries of "good old Winnie" as he entered, standing in the rear seat of an open car. He waved his high-crowned derby and, with the inevitable cigar jutting from his lips, gave the "v-for-victory" sign.

Mr. Churchill, in his speech, elaborated on the Conservative Party platform made public a few hours earlier today.

EXPLAINS PARTY PLATFORM

"We mean to set the people free, so far as possible and as soon as possible, from wrong-headed planning and from official interference with our daily life and work," he said.

"Our Tory (Conservative) faith is that the gifts and genius of our men and women, if released, will not be found unequal to the first task and duty of every community, namely, to earn its daily bread."

He declared socialism is a costly fallacy and "its most direct expression, nationalization, is a failure." The Socialists "have brought Great Britain low alike in prosperity and reputation, both at home and abroad," he said.

"They have squandered the reserves and resources which had been gathered in the past and have darkened and narrowed the future of every man, woman and child in this famous island," Mr. Churchill said.

"It is all the more amazing that they should have brought us down like this and given us such hard times during 4 years when they have not only been eating up our savings but have enjoyed the enormous advantage of outside help on a scale never known in the history of any country in time of peace.

"The United States and the Dominion of Canada together have given to us subsidies which amounts to nearly £2,000,000,000—£1,750,000,000 ($7,000,000,000) have come into this island by loan or gift from these two great capitalist countries, who also have their own troubles and burdens to bear. * * *

"Our Socialist spendthrifts and muddlers have dissipated every overseas asset they could lay their hands on and, in addition, have exacted and extracted from our people a higher rate of taxation than was required at the very height of the war."

Mr. Churchill said the sterling area's dollar holdings of $1,600,000,000 are the last reserves that stand between us and insolvency.

"The present Government," he said, "have obviously no effective plan for dealing with this imminent peril."

Mr. Churchill said the greatest help Britain can give the world is to stand erect in her native strength. "Every country west of the iron curtain has made a better postwar comeback from Britain," he said.

He charged that nationalization spells the doom of trade unionism and that the workers themselves, in nationalized industries, are far from content because of the wage freeze, rising costs, and loss of freedom of bargaining by union leaders. Labor unions form the backbone of the Labor Party.

It is impossible to "undo the harm that has been done by nationalism," he said, "but a conservative government would decentralize the management of industries already under state control, such as coal and railways, and stop further steps in the same direction."

Very Rev. Mortimer A. Sullivan

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following excellent eulogy in final tribute to the Very Reverend Mortimer A. Sullivan, a native of the city of Lawrence, Mass., and provincial of the eastern province of the Order of St. Augustine. It was delivered by the Very Reverend Vincent A. McQuade, O. S. A., Ph. D., president of Merrimack College, North Andover, Mass., at St. Mary's Roman Catholic Church, at Lawrence, Mass., on Wednesday, July 20, 1949:

FATHER M'QUADE'S TRIBUTE

(Very Rev. Vincent A. McQuade, O. S. A., Ph. D., president of Merrimack College, delivered the following eulogy in tribute to the late Father Sullivan:)

"Blessed is the man that is found without blemish; and that hath not gone after gold, nor put his trust in money nor in treasures. Who is he, and we will praise him, for he hath done wonderful things in his life." (Ecclesiasticus 31: 8–9.)

Dearly beloved in Christ, we are gathered here today to pay a final tribute to a beloved priest. A merciful God has called a faithful servant to his eternal reward. We are sorrow-stricken and grieve because we have lost a true friend and loyal priest, but our hearts are comforted and our sorrow softened in the realization that a loving God has taken to Himself the soul of Father Sullivan.

The Old Testament tells us that when the chosen people of God were still living in the wilderness, and when Aaron, the newly chosen high priest was about to offer the first sacrifice, fire fell from Heaven and consumed the offering. The priests had thereupon taken that fire into their custody and it had accompanied the Israelites in all their wanderings. Finally, it was placed in a quiet place in the temple. Day and night the priests had to tend and feed that fire for from it all the lamps and altars in the sanctuary were fed and nourished. And thus, one divine fire was increased a hundredfold and it furnished warmth and light to God's chosen people in all their religious deliberations.

The church, since it was founded by Christ, needed a sacred fire which would be the source of light and warmth for the Christians throughout the world who would require encouragement and example if they were to preserve and live according to the teachings of Christ. Since the early days of the church, that sacred fire has been found in the many religious men and women who have offered their lives as a living sacrifice to God. God is the beginning and end of all things and it is a happy resolve for any man to consecrate himself to the Lord. And even though the world does not understand, yet it respects and feels the force of religious living, for it is the fire that enkindles hope and inflames the lukewarm to come to Jesus and grasp the salvation that is available for all men.

Today as we pay tribute to the earthly remains of Father Sullivan, we are reminded that we honor a religious priest who was most zealous and kindly in his priestly duties and exemplary in his religious life. By his deeds he clearly revealed how completely he had dedicated himself to the service of God. Truly his life was a sacred fire enkindling hope, encouraging the weak and counselling the afflicted. Well may we exclaim in the words of Ecclesiasticus "Blessed is the man that is found without blemish; and that hath not gone after gold, nor put his trust in money, nor in treasures. Who is he, and we will praise him? for he had done wonderful things in his life." Father Sullivan dedicated his life to follow in the footsteps of Christ, and he hath accomplished many wonderful things.

Born and educated in this parish, Father Sullivan heard the call of the Master at an

early age. Leaving home and friends, he entered Villanova College; there his religious superiors recognizing his outstanding attributes, soon sent him to Rome where he was ordained to the holy priesthood on July 4, 1909. Returning to the United States shortly thereafter he served the 40 years of his ministry as a loyal follower of the Master. Called upon to serve in responsible positions, Father Sullivan was tireless in the service of God. Throughout the troubled years of the First World War he was a naval chaplain and spent nearly all of his tour of duty on the turbulent waters of the North Atlantic. When he was called upon to serve Villanova College as president, that institution, under his leadership, further expanded and developed its facilities. During the critical years of the great depression and again admist the confusion and uncertainty of World War II, Father Sullivan was guiding the destinies of the order serving as provincial, the highest honor the order can bestow in this country.

Between times he served as pastor of various churches under the guidance of the Augustinians. All of these responsibilities he carried humbly and fulfilled honorably. Unmindful of self, he worked diligently to fulfill his mission. The years of labor took their toll; he gave freely of his vigorous strength; finally, death, sudden death, brought an untimely end to a brilliant career. The God whom he loved and served faithfully and well called him to eternal life.

Throughout his life, Father Sullivan was the instrument whereby God accomplished many good works. Among the many outstanding deeds of his career, I would like to dwell for a few moments on his great contributions in the field of education.

Well acquainted with the modern trends in education and understanding the underlying philosophy which canonizes the positivism of modern science, Father Sullivan vigorously pursued measures which would combat these ends. His experience in the armed forces had taught him that the best citizens are those who have a deep and abiding faith and belief in God. Half-educated men who are unmindful of their obligations to their Creator, even though they may have deep scientific learning, are a menace to society and the peace of the world. The frontiers of science and the horizons of knowledge must constantly be extended, but unless men vividly realize that the brotherhood of man can endure only when it is founded on the fatherhood of God, the peace we desire will never be achieved.

Foreseeing the results of secularism in education, Father Sullivan followed a policy whereby the order expanded and enlarged the training of its members so that they would acquire the knowledge and theological wisdom. He encouraged members of the order to acquire proficiency in various fields of specialization, stimulated activities and placed the men in strategic places where they would be in a position to do the greatest possible good.

Under his inspiring leadership the order has attained a new and greater recognition. He was the founder of the Catholic University of St. Thomas in Habana, Cuba, He was the founder of our own Merrimack College. His counsel, guidance, and encouragement were invaluable in the founding of both institutions.

Visualizing the process of education as a full and complete training for wholesome living, he believed that the immediate end of Christian education was to form the true Christian, the finished man of character who would act consistently in accordance with right reason, be faithful to his God, and loyal to his country. Death has stilled his heart, the call of God has muted his lips, but the work which he nurtured and cultivated will endure because it has been built on the rock of truth and founded on the principles of Christ.

Our heartfelt sympathy is extended to his sisters and his many relatives and friends. The order has lost a great man here on earth but I feel sure we have placed another bright star in the heavens. We treasured his guidance and counsel on earth, I trust that his intercession in heaven will be even more helpful and valuable. I feel sure that if Father Sullivan had the power to address to you a last request he would but repeat the words of the dying Monica to her son Augustine: "Lay this body where you will, let not any care thereof disquiet you; this only I entreat, that you will remember me at the altar of the Lord wheresoever you be" (Con. 9: 11). In your charity I know you will frequently pray for the repose of his soul.

Death is the gateway to eternity, the dawn of a new life. Every faithful priest has an abiding love for Jesus. It is the love of Jesus that inspires his life and leads him on to do great things. In the words of the Imitation of Christ: "The love of Jesus is noble and generous; it spurs on to do great things and excites us to desire always that which is most perfect. * * * Love feels no burden, values no labors, would willingly do more than it can; complains not of impossibility. It is able, therefore, to do anything. * * * The lover gives all for all, and has all in all, because he rests in one sovereign, God above all, Jesus Christ." (111: 5). I am sure that when a loyal priest dies, the Son of God and the angels in heaven escort him to Paradise. May the Divine Master receive the soul of his beloved servant; may he find lasting rest in his true heavenly home. May his soul, and all of the souls of the faithful departed, through the mercy of God, rest in peace. Amen.

The President and the Labor Monopolists Versus the People

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1949

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, entitled "The President and the Labor Monopolists Versus the People":

THE PRESIDENT AND THE LABOR MONOPOLISTS VERSUS THE PEOPLE

The threatened steel strike can be stopped by the Taft-Hartley law, but the President and the labor bosses don't like the Taft-Hartley Act. The people do, but the President and the labor bosses want to repeal it outright. The people want to keep it and their representatives refuse to repeal it. It is the law today.

The President and the labor bosses propose to raise wages and make the people pay. Since the people are not being protected by the President under the Taft-Hartley Act and since the steel industry is helpless to resist the fourth round of wage rises, the people, too, are at the mercy of this labor monopoly. The President, the steel companies' biggest customer, and the absolute Nation-wide labor monopoly are able to force the steel industry to do what they ask.

What happens in steel will set the pattern in all labor-controlled industry as it has on three previous occasions. Fundamentally the Taft-Hartley law was enacted to stop this. The law says:

"Whenever in the opinion of the President of the United States a threatened or actual strike or lock-out affecting an entire industry, or a substantial part thereof, engaged in production for commerce, will, if permitted to occur or to continue, imperil the national health or safety, he may appoint a board of inquiry to inquire into the issues involved in the dispute and to make a written report to him within such time as he shall prescribe. Such report shall include a statement of the facts with respect to the dispute, including each party's statement of its position but shall not contain any recommendations."

Under this law the Government must remain neutral. It is the guardian of the whole people—the collaborator and partner of no special group. The law provides for finding the facts. It denies the President the power to appoint political boards to make political decisions on wages and prices.

The exposition of the facts without political compulsions would help both labor and management reach the right decision under the influence of public opinion. If the facts show that the total national income justifies a fourth round of wage rises, then the people will support such a rise. They will have the money to pay it. They will not pay higher wages if their income is declining. The national income now enables the people to pay an average wage of only $1.26 an hour. Any monopoly attempt to force the average wage to $1.45 an hour will put the wage beyond the total amount of pay-roll money available. That means everybody can't be employed. Even now the average wage of $1.37 is 12 cents above the national ability to pay. As a result unemployment must follow as it has. When total national income decreases total wages must fall in proportion if everyone is to remain employed. If the average wage is not reduced some must lose their jobs. There is no other solution.

President Truman and the labor bosses have now put themselves in a position not only to reject the Taft-Hartley law but the law of economics itself. They place themselves above the economic law of supply and demand. They act as though they were the law. They propose to use compulsion and prestige of office to force acceptance of higher wages for the organized monopoly with lower real wages and unemployment for the rest.

This conclusion is obvious because both the President and the labor bosses are committed to the proposition that a fourth round of wage increases will create buying power and prosperity. Such reasoning is fantastic but the deception is the more obvious because of failures already demonstrated. The conspiracy of a President and labor bosses to set aside constitutionally enacted law and become themselves the makers of arbitrary personal rule must fail. All arbitrary monopoly power must fail whether it be in business combinations, Government assumptions of power, or labor-boss monopoly. Especially is this true in the face of the disastrous experience we had between 1929 and 1939. Then they set in motion a wage rise spiral that kept 10,000,000 workers unemployed. We don't want to see that again. The President should save himself and the country from the disaster of violating the laws of the lawmaking side of government as well as the laws of economics.

The Truth Will Out

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1949

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following article which recently appeared in the Unionist and Public Forum, a labor newspaper published at Sioux City, Iowa. The article simply confirms the general impression that the Brannan meeting at Des Moines last June was entirely political in nature.

DEMOS LAY FOUNDATION FOR 1950 ELECTION AT DES MOINES MEET

Farm leaders and labor leaders put their heads together at a 2-day conference in Des Moines several weeks ago and laid the political groundwork for the 1950 election. It was frankly and openly a political meeting, sponsored by the Democratic Party, at which farm and labor leaders cemented their political future with the Democratic organization.

The Democratic Party was represented by hundreds of party officials from the 16 Mid-West States. While the conference was called to discuss the Brannan farm program, the presence of the politicians made it obvious that the Democrats intend to make the most of the new farm program as a political issue, and that they intend to gain more offices in the farm belt next year.

We were at the registration table in the Fort Des Moines hotel when ex-Mayor Kelly, Jake Arvey and a few of their boys from Chicago came in and heard a Life magazine writer say "here come the Chicago farmers." Senator MCGRATH of Rhode Island, Democratic national chairman was very active all through the 2-day meeting.

It was Charles Brannan's show, however, and he made a good impression—not so much by his eloquence as by his seriousness and willingness to discuss his farm program. He admits that his plans are not full grown, but he insists that it is a practical program in the spirit of the old New Deal program. The important features are that the floor price principle, implemented by Commodity Credit, will be extended to most farm products; and that prices be permitted to fluctuate on the market so that consumers can get the benefit of lower prices. It is this latter principle that has attracted labor, and that has given the opposition its argument that the program will cost too much.

Vice President BARKLEY stole the show Monday afternoon. He knows the history of farm legislation for the last 30 years and did a fine job of showing that the Republican Party has consistently opposed farm legislation. Mr. BARKLEY is a liberal by instinct rather than by economic philosophy—it was a relief from the fact-and-figure speeches.

There was a shortage of top farm organization leaders. The Farm Bureau wasn't represented—which is understandable, since they are leading the fight against Brannan's bill. The Grange had the State president of their Ohio organization present and he made a few favorable comments.

Even the Farmers Union played cautious. The top-flight leaders stayed away and sent several State officials. It apparently was too much of a political rally and not enough of a farmers' meeting.

Labor leaders had no reservations about their understanding of the importance of the farm program or of the political necessity to work with farmers.

The labor leaders included A. F. Whitney, president of the Brotherhood of Railroad Trainmen; Joseph D. Keenan, director of the American Federation of Labor League for Political Education; Jack Kroll, head of the CIO political action committee, and James B. Carey, secretary of the National CIO.

Address of Dean J. L. O'Sullivan

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. McCORMACK. Mr. Speaker, Dean J. L. O'Sullivan, of the Marquette College of Journalism, is a man preeminent in his field and one to whom the Nation owes much for his tireless efforts, and so it was with real appreciation, as one who has also been honored by Boston College, that I noted the honor paid him by Boston College at its recent commencement exercises, June 8, when he became an honorary doctor of the college. Dean O'Sullivan's remarks bear repeating, and under leave to extend my remarks I include herein his major address at the recent commencement:

A year ago this month Boston, famous for its religious and educational traditions and accomplishments, honored the city of Milwaukee by sending its foremost citizen, His Excellency, your Most Reverend Archbishop, to speak at the Marquette University commencement exercises. This year Boston again honors Milwaukee by inviting me to participate in the graduation ceremonies at Boston College. While I am sure that you are conscious of the contrast, I hope you are not as sensitive to it as I am at this moment.

I have been invited here this afternoon mainly because I have been a teacher for 25 years in a sister Jesuit institution.

A quarter of a century is a short time in the life of a college, especially when consideration is given to the emphasis on tradition in education. However, when we realize that in only 4 years a generation of students who entered a freshmen, depart as alumni, experiences gained by a teacher are multiplied with astounding rapidity.

From these experiences I know that you as members of this graduating class have encountered many difficulties and faced many obstacles in achieving your goal. You have been forced to sacrifice much the modern man holds most dear. You may well take pride in those sacrifices which were not easy or simple but were necessary for intellectual development. The world offers appealing reasons for not following the difficult roads leading to wisdom. That is why tradition is highly regarded in educational circles. It is a force that assists men in maintaining true objectives in their search for knowledge.

Its effect is observed even in families. Where there exists a tradition that each child shall be educated to the full extent of his intellectual capacities, one by one without question they enter those institutions deemed best suited for their development. When the family tradition calls for training under Catholic auspices there most probably will be not even a suggestion that a child turn to secular agencies for guidance. Regardless of obstacles, the care and development of the young mind will be confided to proper authorities.

Unfortunately the traditions of education treasured by many are those that have developed as the result of the yielding of true principles to materialistic thought. You who will be graduated today may cherish highly the tradition in which you have received your training. It is a tradition that was developed by St. Ignatius of Loyola at the Monastery of Monserrat and has been effective for more than four centuries in producing for every generation armies of men to whom development of the intellect and will are more important than skills, social graces, and methods for acquiring material goods.

But of greater significance than the system of training are the principles of life which you have acquired. The principles taught by the Jesuit fathers at Boston College are the same that were ennunciated nearly 2,000 years ago on the shores of Galilee. They furnish the only sound guidance for mankind, the only reasonable explanation of existence.

The confusion and chaos that we witness in the world about us result largely because much of what we know as education has neglected these principles; because man has tried to turn from the supernatural to the natural, a feat which Chesterton says is impossible because when we fail to recognize the supernatural then we can only succeed in becoming unnatural. What other explanation is there for our present disorganized civilization? We see the result of love of self and the love of wealth substituted for the love of God. Men educated in this tradition face a world described by Matthew Arnold:

"For the world which seems
To lie before us like a land of dreams
So various, so beautiful, so new
Hath really neither joy, nor love, nor light,
Nor certitude, nor peace, nor help for pain:
And we are here as on a darkling plain
Swept with confused alarms of struggle and flight,
Where ignorant armies clash by night."

In pursuing your studies at Boston College members of this class have demonstrated their fidelity to have knowledge of the highest order. It was to this purpose that you dedicated yourselves when you were enrolled as freshmen; it was this spirit that guided your formal education.

You have maintained a firm grasp on the principle declared in the Psalms of David and reechoed in the Proverbs of his son, Solomon, that "the fear of the Lord is the beginning of wisdom."

The world highly regards technical training and accomplishments. It gives the accolade to acquirement of skills and amassing material wealth. But it fails to show proper regard for intellectual achievement. This is one of the tremendous pressures that you have been forced to resist in obtaining your education; one of the great obstacles you have faced and successfully overcome.

Real wisdom has little place in a world where the lives of men are dominated by their desires and emotions rather than by intellectual principles. Education implies at least an approach to wisdom which means acquiring of knowledge of the highest things in their ultimate causes.

Wisdom is prized when men's souls are prized. That is why the beginning of wisdom is fear of the Lord. We of Catholic tradition seek wisdom because we know ourselves to be intellectual beings; because the highest knowledge perfects our intellects in the highest way and because genuine wisdom helps us save our souls.

Man acquires wisdom by his own study and mediation but his efforts must be based on what he obtains from others, especially the enlightenment that comes from God. This means that the student must learn to lean on faith. Saint Thomas said the best light he received came from above.

The diploma you receive today signifies that you have made the approach to wisdom and that you have learned to depend upon faith as an aid to reason. This has required struggle and sacrifice in a world that prizes not men's souls but material goods; that esteems an education concerned with

imparting information on how these goods may be acquired.

The Gospel of St. Luke tells of a man whose wisdom was concerned only with producing a bountiful harvest. He said: "I will pull down my barns and build larger ones and into them I will gather my produce and my goods. I will say to my soul: Soul thou has plenty of goods laid up for many years; take thy rest; eat, drink, be of good cheer."

It is a story that is typical of modern times. By modern standards the man's life had been successful.

But the tragedy of his life became clear when God said to him: "Thou fool, this night they require thy soul of thee and whose shall those things be thou has provided?"

Malignant effects of this distortion of the objectives of man's intellect; the loss of understanding of the nature of highest wisdom; and attempts to ignore the necessity of dependence upon faith, may be seen in practically every activity of modern life. In the writing and publishing fields, with which I am most familiar, the emphasis is on material success; production of copy that will be interesting; that will be read; that will obtain a tremendous circulation without thought being given to the nature of the content or its effect on the readers.

Modern writers instead of looking upon their work as a means of communicating truth regard it as a way of accumulating wealth and attaining fame.

Man reads because he wants to know. His intellect is constantly searching for knowledge. Writers who would furnish the food to satisfy this hunger of man to know by giving him useful knowledge must first acquire that knowledge before trying to impart it through the printed page. They must be concerned with the highest knowledge that man needs for his welfare. Readers of today cry for the writer who understands, who thinks in the terms of the fundamentals of life, in the objectives of final ends; for the writer who believes.

Much of the writing and publishing of today is concerned with knowledge that is trivial and unimportant; writing that is useless for the welfare of readers. It doesn't even furnish them with salutary entertainment. Writers of such copy are praised for being realistic but, as one critic remarked, "I notice they don't include any realism that would not aid in the sale of the publication." Their first duty, said one publisher, is to survive. Rather dishonor than death.

At Boston College you have had the good fortune to be taught a certain and positive philosophy. Because of lack of such teaching in a large proportion of schools, we see youth lacking in conviction—young men and women who are timid morally and intellectually. This is bound to be the result of education that holds nothing is certain; that what is true today may not have been true yesterday and need not be true tomorrow. There is no standard by which men may order their lives, and disorder is the result.

Our way of life is ill because of the domination of the philosophical thought that man can live by his own standards. Without fixed standards there can be no honest criticism of writing and the other arts. It is the obligation of the critics to see that the various arts maintain the standards upon which they are established. A break-down in the function of the critics degrades the cultural life of the people. Yet without standards there can be no true performance of the critic's function. Instead of criticism we see the commercial promotion of the press without competent evaluation of the work.

Of course, it would have been much easier for you to obtain what passes for education if principles and standards were ignored; if the true intellectual and spiritual were neglected. It is never easy to give the necessary time and effort to preparation especially in an impatient world.

The struggle is not over because of the degrees you are granted here today. Father Allan Farrell quoted an old schoolmaster as saying that an educated man is one who can be safely entrusted with the continuation of his own education. Influence and pressure of a world that has lost its way will attempt to force you to surrender the principles you have been taught at Boston College. You will find it necessary to sacrifice much if you are unwilling to compromise those principles; if you are to continue to grow in wisdom and understanding.

Many of you are veterans of the recent World War. In preparation for various duties in the armed services you were subjected to a most rigorous period of physical discipline. In basic training you ran obstacle courses to harden you physically and to develop your agility. You were constantly participating in maneuvers and marches in preparation for the trial that was ahead.

In your years at Boston College you have been hardened intellectually and sharpened mentally. Here you have been prepared not for physical combat, but for warfare in the realm of ideas. You become stewards of the teachings and traditions that have come down from Judaea and Manresa. I congratulate you upon your heritage, your training, and the honors that come to you today.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, Boston, Mass., July 24, 1949:

UNITED STATES DEFENSE NOT ADEQUATE—FIFTEEN BILLION DOLLARS A YEAR IS COST—SERVICES PILING UP LOTS OF OBSOLETE WEAPONS

(By Lester Allen)

The poorest buy in the market today for the American people is the $15,000,000,000 they spend annually for defense, which doesn't guarantee adequate defense, doesn't promote anything but interservice rivalries, and succeeds only in piling up inventories of obsolete weapons, now estimated as worth $20,000,000,000.

The most immediate, pressing need is for enactment of a bill that will make certain of full military unification and economy that will end waste, duplication, and mismanagement. The bill offered in the Senate by Senator TYDINGS meets the approval of the Hoover Commission, and it would save $1,000,000,000 or more a year, if enacted.

SPECIAL INTERESTS

Too many special interests in the armed services, ranging from myopic admirals with pet theories to crackpot relatives and friends of politicians with a yen for a chunk of public money seem to have a hand in saying how the people's money will be spent for the Nation's defenses.

It is much later than the American people think on questions of defense. The disquieting move of the British to either be handed over the secret of the ultimate assembly and manufacture of the atomic bomb or to cut the American supply of uranium from the Congo isn't a patch on the real danger of our present situation.

The Army, in its present state and present strength couldn't fight its way out of a cellar full of cobwebs. The Navy has an enormous laid-up fleet which might just as well be at the bottom of the Atlantic—a fleet made obsolete by the development of the hydrogen peroxide fueled submarine engine, which can drive submarines under water faster than most of our escort and submarine hunting ships can travel on the surface.

When the collapse of Germany and the sportsmanship of the western allies permitted the Russians to grandstand their way into Berlin they also let fall into Russian hands virtually all of the technicians and facilities for producing the Walther submarine engine, which uses hydrogen peroxide for fuel. The Russians went to work producing the engine and building submarines which use the engine.

The United States got one engine out of Germany—and precious few technicians who knew anything about it. Over a period of several years since the end of the war there has been fitful work developing the Walther engine for use by American submarines. It is still in the experimental stage here. The Russians are operating it. The Navy is now seeking authorization to spend $2,000,000 on a submarine propulsion testing plant in Maryland, and $191,700,000 for all its other test and research projects.

NO SUCH BUILDING

Take a ride down the harbor on a Nantasket boat and look at the laid-up carriers jammed like sardines at the piers in South Boston. And, having taken a look at them, forget them, for they are worthless—unable to outrun a submarine equipped with the hydrogen-peroxide engine.

And then take a look at the navy yards. You won't see any submarine building there. There are a few conversions of wartime submarines to the use of the German snorkels which permit the submarine to remain under water, but our snorkel-type conversions bear the same resemblance to the Russian hydrogen engined submersibles as an outboard motor does to a 24-cylinder racing engine.

All this is supposed to be top secret merely because the Navy, having read the newspapers in which complete accounts of this deficiency has appeared, decides that their officers shall close their minds to it and keep the information in a top secret classification.

The high-ranking brass is well aware of the almost fatal lack, but the admirals can't be of one mind, and have no one who will make their minds up for them. There are carrier admirals, battleship admirals, and submarine admirals. The carrier admirals just lost a round when the building of a supercarrier was halted, a supercarrier which incidentally would have difficulty running away from a hydrogen-powered submarine such as the Russians are building in quantity.

DISPUTE RAGES

Then there is the dispute between the bomber enthusiasts and the jet fighter enthusiasts. It has been learned recently that, to the stunned astonishment of the British who are fairly good on aviation, too, American wartime B–36's were able to cope with jet fighters at high altitudes during air maneuvers over Britain. While the B–36's sailed serenely in at 5,000 feet toward a target, the jets were slowed and rendered inefficient by the thin air at high altitudes.

The American monopoly of the A-bomb has never been thought through to the point of how much cooperation and sharing would be done with Britain and France, or whether it is feasible to cooperate and share.

The Socialist government in Britain has been playing footsie with Moscow in trade pacts to get cereals in exchange for machinery. It would be a fine mess if they traded

off a little atomic information to the Russians in exchange for food.

Similarly, there are great scientists available in France to assist in atomic development, but the top man in French atomic energy administration is Frederick Joliot Curie, an avowed Communist, who, if he did what he is supposed to do as a Communist, would promptly hand everything learned about the secret of the A-bomb to the Russians. In fact, no responsible and informed atomic energy expert in the United States has ever given the American people any inkling of whether the Russians have or have not the A-bomb. If they have, there's no point to keeping it a secret any longer. If they haven't—every bit of information about atomic energy should be classified and protected.

The first priority should be given, however, to actually unifying the armed services and spanking the quarreling brass into line and tossing them out on their brass-bound ears.

The big advance would be restoration of civilan control of the defense forces—and today civilians are interested in getting their money's worth. We are saddled with a bill for the war and can't afford to spend our way out of a tight corner again.

It would be possible to save from $1,000,000,000 to $1,500,000,000 annually, a waste of about $20,000,000 a week. Not a little of this spending finds its way into the pockets of the 5 percenters, whose only contribution to the national defense is a neat 5 percent of what the Government spends to make the Nation secure. The 5 percenters know a politician or an admiral or a general and they wangle contracts, and their cut is, of course, added to the bill the Nation pays.

CAN'T SCRAP THEM

In the case of the Navy, any of the high brass will admit privately that the laid-up fleets are virtually worthless, but, they are terrified of public opinion which has been shaped to believe that the Nation built naval superiority during the war which makes it the greatest naval power in the world, and will not advocate scrapping and building new ones.

In the case of the Army, which always gets its brains beaten out when a war is over, about its only hope is a strong National Guard, and this is reflected in the equipment which the Guard's divisions took to training camp with them. But, on its Organized Reserve program it has nothing except files full of papers carrying a lot of names.

The bill before the Senate would place the National Security Council into the executive department, subject to the President's control and direction rather than leaving security matters to a statutory committee which the high brass have been able to outmaneuver and outvote.

It would also make the National Military Establishment an executive department in which the Army, Navy, and Air Force would be military departments without cabinet rank. It would give greater power to the Secretary of Defense, who now can't direct anything but must use the gentle powers of persuasion on high brass, who are about as amenable to persuasion as a herd of collicky mules.

What the country needs is defensive forces built along the best tactical and strategic plans for the Nation's defense, second to none in the world and within reach of the purse of the American people, without any consideration for the sensitive feelings of spiritually impoverished Europeans who can't seem to make up their minds whether the Communists are friends or enemies.

We decided quite a while back that the Russians mean no good for us, and it would seem about time to get to work on our chest expanders and biceps exercisers to beef up our muscles and make certain of getting in the first and the decisive punch in the fight.

Declaration of Independence, July 4, 1949

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1949

Mr. GWINN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Declaration of Independence, July 4, 1949":

DECLARATION OF INDEPENDENCE JULY 4, 1949

"All experience has shown that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same object, evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such government, and to provide new guards for their future security." (July 4, 1776.)

Such is the story of every people in every nation from the beginning of history. Such is our own present-day experience. We bear today more insufferable burdens of an evil government than our forefathers bore in 1776. Those burdens are increasing without promise of abatement. Up until now it has been easier to endure them than to abolish the administration of Government that imposes them. That endurance has been stimulated by false promises by Government to take by force from those accused of being greedy and selfish and giving their property to others alleged to be more deserving in the socialization or redistribution of wealth. The undertaking of the Government to take by force houses and food and health and provide security for others for the people's benefit seemed for a time easier than the imposition of moral discipline and personal responsibility on themselves. The result has been the loss of our liberty by the conquest of corrupting forces from within.

In ways too numerous and unnecessary to enumerate we have been intimidated and robbed outright of our monetary values, our savings and security, and we are exploited by such unbearable taxes that we have not sufficient means left to support ourselves. Millions of our people after paying taxes are unable to provide for themselves the bare essentials of shelter, food and health. Millions more have been deprived of the use and value of their property both by exploitation and taxation for the use and benefit of others without their consent and without due process of law to the degredation of all. Without any promise of reduction of our burdens we are threatened with even greater taxes and with deeper exploitation.

The administration of Government has created a multitude of new offices from which it has sent hither swarms of officers to examine, intimidate and render personal judgment against us from which there is no adequate appeal to the courts of law. They eat out our very substance.

Armies of bureaucrats appointed over us for the duration of war have not been reduced but actually increased in peacetime. They grant favors and patronage and exemptions to some and withhold the same arbitrarily from others. They have abandoned all semblance of rendering equal justice and affording equal opportunity for all before the law. They take personally by force the property of some and make outright gifts to others of housing, food, pensions, subsidies, allowances, loans, public works, contracts, jobs, and patronage of every conceivable variety. It is all made the more shameful by the exaction of votes in exchange for such favors to keep themselves in power. They have excited domestic disturbances, set class against class, and granted to certain powerful organized groups total exemptions and immunities from the observance and operation of ordinary law and order. They have packed our courts.

Our form of government, instituted to secure and maintain and even to extol life, liberty, right to property, and the pursuit of happiness by the people for themselves, is now dedicated to the proposition that the people are no longer fit for liberty. It denies the capacity of the people any longer to do right as self-governing, self-disciplined people under God's laws and His Commandments.

It separates the right of property from the right of life and liberty itself. It pretends to make human rights higher than property rights as a justification for seizure of other people's property without compensation. The right to individual property and its disposition has been generally violated. The administration of government, mere men themselves, assume to know best how to divide and redistribute and do charity with the inventions, discoveries, and production of their fellow citizens. They observe no rule of equality but use the power of taxation to destroy whomsoever they will. This Government holds that its own nonproducing, uninventive, uncreative, compulsory bureaucracies are better suited, more just and merciful to dispose of what the free individual alone can produce than the individual himself. Thus it dries up invention, discovery, and production for he alone is capable of it, and society is denied the blessings that come from the free mind and spirit of man.

It ascribes to itself alone the true sentiments of charity while it denies the capacity of the free citizen to do charity. What is clearly recognized in all legal systems as outright robbery when done by an individual is made to appear legal when done by the same individual acting for the crowd which gave him the power to rob for it and keep a goodly part for himself.

Finally it appears that by the exploitation and waste by government of other people's property, who alone supply the taxes and make good the losses of Government enterprises, the welfare state now in possession of us is liquidating its very source of support. It consumes the seed stock of the people. Its conduct of economic and political affairs is so immoral and unpredictable that freedom to plan individual life and enterprise is not only unrewarding but impossible. Thus the productive and inventive elements in our society are constrained from production and progress. Their savings and experiments and inventions, discoveries and science languish because of uncertainty of the law and the rights of persons and property.

We hold that the citizens of this great land ought to be free and independent once more in the exercise of their inalienable rights to life, liberty, property, and the pursuit of happiness. Therefore, we hereby resolve to recover liberty from the encroachment and powers of the tyranny of the world Socialist welfare state so "that this Nation, under God, shall have a new birth of freedom."

GOP Anti-Scott Fight

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1949

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Herman A. Lowe from the Philadelphia Inquirer of July 23, 1949:

BITTER ENDERS GAIN LITTLE IN GOP ANTI-SCOTT FIGHT

(By Herman A. Lowe)

WASHINGTON, July 22.—This is a good time to get some facts on the record about HUGH D. SCOTT, JR., who is quitting as chairman of the Republican National Committee, how he came to get the job, and what happened afterward.

There's been a lot of heat but little light on the subject lately. SCOTT is a Philadelphia Congressman. The least he deserves is to have the home-town folks know the truth. This story starts in June of 1948 at the Republican National Convention, shortly after Senator ED MARTIN and National Committeeman G. Mason Owlett had swung the bulk of the Pennsylvania delegation behind Dewey. They were a major factor in putting him across for the nomination.

But, contrary to what is generally believed, that did not ask Dewey for the national chairmanship as a reward. And SCOTT neither asked for it nor dreamed he would get it. Politicians from many States approached Dewey and asked for the job. They said it should go to their States for the support given the nominee.

Things got a little embarrassing. Then Herbert Brownell, Dewey's political adviser, approached MARTIN and Owlett and said in effect:

"We can't give the job to any of those fellows without causing hard feeling among the others. However, if it goes to Pennsylvania, there will be no complaints. They all recognize Pennsylvania's importance. It will solve our headache, so please take the job."

With that settled, Dewey asked that the Pennsylvania selection be a Member of Congress. "I'm a Governor and Earl Warren is a Governor," he said. "We've got to have a Member of Congress to balance this."

The convention ended with no selection made. ED MARTIN left for Washington. Owlett finally felt that SCOTT could do the job best, and brought the Congressman around to meet Dewey. In the early morning hours, Dewey telephoned MARTIN at Washington to inquire whether he had any objection.

MARTIN had none. He warmly indorsed the selection of SCOTT. And that is how it happened.

But at the same time that SCOTT was named chairman, Dewey appointed Herbert Brownell as his campaign manager. This eased SCOTT out of the picture until after the election. SCOTT has been attacked because Dewey did not win. But every Republican politician, including the ones who hatcheted the Philadelphian, knows it to be a fact that SCOTT did not run the campaign.

After the campaign, SCOTT began stumping the country, handshaking, speaking at meetings, and spreading Republican gospel. The fact is that he made a lot of friends in the Midwest and far West. Proof of this is that, immediately after he announced he was resigning, 26 members of the GOP National Committee from the West banded together to refuse to accept his resignation.

But while SCOTT was working to rebuild his shattered party, a group of dissenters went after him hammer and tongs. Among them were national committeemen like Colonel Krieger, of Texas; Clarence Buddington Kelland, of Arizona; John Jackson, of Louisiana; Harrison Spangler, of Iowa—men whose States went for Harry Truman in the election in which HUGH SCOTT's Pennsylvania was giving Dewey a 150,000 plurality.

They tried to drag down SCOTT at the Omaha meeting last spring. It was interesting that these fellows—the party's isolationist wing—teamed up that time with Victor Johnston and others who supported Harold E. Stassen for President (and not of the University of Pennsylvania, either).

SCOTT won at Omaha. But the rule-or-ruin boys continued a whisper campaign, backed up by hired press agents, all aimed at ousting SCOTT. At a time when he should have been working to build up the party, he found himself forced to defend himself from increasing attacks within the GOP.

This crowd, whose brain trust was mainly Senator OWEN BREWSTER, of Maine, and Sam Pryor, former national committeman from Connecticut, threatened to file an ouster petition against SCOTT.

That brought a quick reaction. They were told to go ahead and file. But they did not have the votes to oust SCOTT. They never filed their petition. As a matter of fact, there is no doubt that SCOTT could rally a majority of the national committee votes today.

However, that would not solve the problem of the cold war within the party.

So SCOTT and his friends here met and talked over the situation. They decided that for the good of the party, when things died down, SCOTT would resign.

The occasion came last Monday. SCOTT discussed his statement with Senator MARTIN and Representative LEONARD HALL, of New York, a spokesman in Washington for Dewey.

The statement was approved by MARTIN and HALL and was issued. Neither Dewey nor Senator ROBERT A. TAFT, the party leader here, was consulted.

And that is the way it happened. Just what the Stassen faction can gain is pretty vague. They haven't the votes to do anything about SCOTT's successor. They are liable to get a new chairman who will be a lot less to their taste than SCOTT.

The Farm Bill

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1949

Mr. McCARTHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial from the St. Paul Dispatch of July 22. This editorial repeats the basic argument against the Gore bill which was adopted by the House last week. I am hopeful that the Senate bill on agriculture will provide a support program insuring farm income and at the same time provide for adjustments to meet the changing agricultural market.

I am hopeful also that the Members of the House will reconsider their ill-advised action of last week and accept in conference such a bill.

PUTTING OFF

The House of Representatives has voted to postpone for another year the day of reckoning for agriculture. The reckoning in this case is merely the readjustment of farm production to the long-run needs of the postwar world.

This postponement of itself would not be so bad, except that it reflects a high affinity in Congress for the easiest political course. Since every year is a political year nowadays, it seems as if Congress will stall along this way until it gets hit flat in the face by a major calamity.

By the votes taken Thursday, the House repealed the Aiken plan enacted last year by the Republican Eightieth Congress, and also rejected the administration's revision of that act with a slight installment of the Brannan idea added as an experiment. It voted to keep the support policy at a flat 90 percent of parity price. The Aiken Act would have discouraged surplus production by lowering the supports in proportion to supply. The Brannan plan calls for more direct regulation. The plan that will stay in effect unless the Senate decides differently is long on support of prices and very weak on controls.

There, of course, is something to be said for supporting farm prices at 90 percent or even 100 percent of parity. That just means that the farmer's prices come down, stand still, or rise in tune with the general price level. But the intention of the support policy is to avert a drastic smash of farm prices and to allow an orderly readjustment. Farmers, who were expected to push production up during the war, are entitled to this protection, but Congress is not doing the farmers any favor by doing this in a way that can be expected to have a bad result over the long run.

Over the years public opinion will not support huge outlays to subsidize production of undisposable surpluses, and when that happens Congress will be the first to ditch the farmer, for the simple reason that there are fewer farmers than taxpayers and consumers.

Will Your Answer Be "Lack of Funds" to Old-Age-Pension Groups?

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1949

Mr. VAN ZANDT. Mr. Speaker, the first session of the Eighty-first Congress is reaching its final stages and as yet nothing has been done about relieving the dire situation in which our aged folks find themselves. I deem this issue one of the most important before the American public today and am taking this opportunity to urge this Congress to do something about it now. The first great need for pensions is to provide security for our deserving elder citizens. For years I have been emphasizing the importance to our way of life—our Americanism—of the great need of security for those whose long service and great sacrifice have made America the envy of the world.

This is a national problem that will not solve itself. In fact, our aged folks find themselves in worse circumstances than even a year ago. Unemployment is on the increase throughout the country and the national income is on the down grade; both of these conditions affect the livelihood of our elders more than any other class of our citizenship.

The first to be discharged when industry cuts down its pay rolls, are the older employees. When replacement is made it is usually with younger workers.

I sometimes wonder if Members of this House give serious thought to this question of security against squalor and starvation for those who reach the sunset period of life without a job, income, or resources.

We find our national population expanding at a phenomenal rate. We have some 145,000,000 people living in our country today and growing at the rate of more than 2,000,000 annually. The major factor in this increased growth in population is the increased age span. As a result of medical care, hygiene, hospitalization, and so forth, people are living longer. About 70 years is the life expectancy now as compared to 58 or 60 a quarter of a century ago.

All this means more and more people being graduated into the old-age pension class. From the best information I can get there are some 16,000,000 people in this country who are 60 years of age and over and it is conservatively estimated that 10,000,000 of these are dependent upon someone else for living support. Oh, yes, the most desperate ones, to the extent of about two and one-half million, are getting old-age assistance of slightly more than $40 a month. Is there one of you, my colleagues, who thinks that any man or woman can possibly live in health or even decency on $10 a week? I remind you that these aged folks are good old-fashioned Americans, yes, they are our very own friends, neighbors, and relatives. They are in need now, and the situation is getting worse from day to day.

Mr. Speaker, we boast about our generosity, about our great humanitarianism, and how we are aiding the backward countries of the world. In fact, this Congress is appropriating billions to foreign nations for every conceivable purpose, yet we who strive to alleviate suffering among our own people and seek to have charity begin at home find our old-age pension legislation meeting with little or no consideration by the congressional powers that be.

Every Member of this House knows that there is an avalanche of old-age-pension applications in his district. It is Nation-wide and is increasing from month to month. I ask you, my fellow Congressmen, just what is your answer going to be when you face your old-age-pensions groups and they ask you why their legislation did not receive consideration in this session of Congress? Can you plead lack of funds? No; that answer would fall flat after authorizing the most lavish expenditure of money in the history of our Nation. Are you going to offer the excuse, lack of time to study the proposition? My colleagues, this has been a national issue for more than 10 years. Committees have held hearings, witnesses have testified, articles have been written, speeches made, and conferences held, all without number. But at this late date in this session of the present Congress nothing has been done about it.

There are perhaps a dozen bills before the Congress dealing with this old-age-pension question. I am sure that if any one of them were enacted into law it would be an improvement on the present social-security set-up. It is not a question of whose bill it is or what title it bears. The real issue at stake is, are we going to measure up to our responsibilities, face the facts, and do something about them, or are we going to continue to sidestep and again let time take its fatal toll. If we do the latter, we cannot in good conscience face our elderly constituents and attempt to answer their questions.

Yes, Mr. Speaker; now is the time to provide for our own needy aged. It is up to this Congress to protect them now against privation and suffering that may result from a prolonged economic recession.

Hugh Scott's Decision

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 25, 1949

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sioux City Journal:

HUGH SCOTT'S DECISION

Republicans should be proud of Representative HUGH D. SCOTT, Jr., the man who has announced he will resign as chairman of the Republican National Committee next month to promote unity within his party. In making public his decision, Mr. SCOTT said: "The Republican Party is bigger and its policies more important than any group or individual. Personal pride and ambition must be put aside by all concerned if we are to have harmony in our ranks. Because my only concern is for our country and for the Republican Party as the means of saving it, I have decided to issue a call for a meeting of the national committee (and) I shall then submit my resignation as national chairman * * *"

It should be made clear that Representative SCOTT's action is purely voluntary. An attempt to oust him at the committee's Omaha meeting last January failed by four votes and Mr. SCOTT contends he now has more support than he had at that time.

Among those leading the attack against him were Iowa's national committeeman, Harrison Spangler, of Cedar Rapids, and Carroll Reece, of Tennessee. Mr. Spangler himself says he has no desire for the chairmanship, which he once held, but the Tennesseean is said to be eyeing the job again.

Neither Mr. Spangler nor Mr. Reece showed particular brilliance while serving as Republican national chairmen. Like Governor Dewey, they have had their chance and it is now time for a fresh start made possible by Representative SCOTT's forthcoming resignation. When his successor is chosen—whether he is acceptable to the Spanglers and the Reeces or not—it is up to the national committee to realine its ranks, abolish dissension and petty bickering, and get on with the one and only job confronting the Republican Party—fighting the Democrats tooth and nail.

Thanks to the courageous and unselfish action of HUGH D. SCOTT, Jr., of Pennsylvania, the Republican National Committee has a golden opportunity to reaffirm its position and leadership, both of which have suffered immeasurably from back-biting and disagreement. That can be done if the dissenters will act as courageously as has Mr. SCOTT.

Where the Poles Will Never Yield

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the June issue of the Polish Review and East European Affairs:

WHERE THE POLES WILL NEVER YIELD

Throughout the ages Poland has been confronted with a German-Russian problem, that is, keeping itself safe from attack by either Russia or Germany, or both. This Polish situation, resulting from its geographical position, has been the point of departure for all Polish diplomatic and military procedures throughout the entire course of the nation's history.

The international situation at present is such that the political pressure of democracy from the west is directed toward Germany, which, hitherto only a passive factor in international policy, is with each day now coming nearer and nearer to being the active factor in that policy. It is therefore high time that statesmen of the west understood that there are certain points on which the Poles, no matter to what factions among themselves they may belong, will never yield.

There is complete unanimity among Poles, with regard to the western boundary—that it should follow the Oder and Neisse Rivers. They consider this due Poland not only as a matter of historic justice but also as compensation for the vast number of murders, the immense destruction, and the suffering inflicted upon Poland by the Nazis; likewise, it is a guaranty of future security and free development of the Polish people. Western statesmen should understand that a repetition of Yalta in a settlement of Poland's western frontiers cannot take place, for there is no Pole today who would put his signature to such a settlement.

It should be kept in mind that the Oder-Neisse boundary is the boundary not only of Poland but of all east-central Europe with its 100,000,000 population. On the maintenance of this boundary rests the economic base of a future union of the free nations of this region, assuring for all time the independence of these nations of either Germany or Russia.

All attempts on the part of the Western Powers to turn back the clock of history and move the boundary to the east, necessitating the removal of millions of Polish settlers in that area—all such attempts would drive the people of central-eastern Europe, quite against their will, into the arms of the Soviets, whose propaganda pictures the United States and England as encouraging a reviving German imperialism.

It should be remembered that the European union, now much talked about as a means of insuring peace, justice, and prosperity in Europe, requires that Germany be permanently deprived of those geo-political conditions that made it possible in the past

for Germany to undertake the conquest of the old continent. One of the chief of these conditions was the strategic control of central-eastern Europe, which was in German hands because of the location of Germany's former eastern boundary and German control of the Baltic.

As a result of this control, in their war plans the Germans could regard these eastern areas as a normal source of supply for labor, food, and raw materials. It also permitted them to develop their potential war industry on a scale greatly surpassing their normal economic resources.

With the Polish frontier on the Oder and Neisse, Germany is deprived of the privileged position discussed above, making possible a European union without danger of it falling under German domination.

These arguments are part of the foundation on which the idea of Polish independence rests. Surely they will be taken into consideration by the Americans and British when the time comes to decide questions of such importance for the future not only of Europe but the entire world.

Air Force Association Statement of Policy

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks I include a statement of policy of the Air Force Association, adopted at the third annual convention at Chicago July 2, 1949:

AIR FORCE ASSOCIATION STATEMENT OF POLICY

The Air Force Association, at its first annual convention in 1947, expressed steadfast belief in a strong United States as the best insurance of world peace, and in air power as the key to that strength.

Meeting for its third annual convention, the Air Force Association can take justifiable pride in the soundness of its concept. The events of the past year, as of the year previous, have confirmed its original premise. Air power has been peace power.

Although since 1947 a war of nerves has prevailed throughout the world, it has not resulted in global combat. That it has not done so is attributable in greatest measure to the influence of the United States. Nor can any successfully deny that the chief implement of American influence has been air power, existing and potential.

The expressions of this air power are known to all—the Berlin air lift, the presence of United States strategic air forces in Europe, the evidences of progress in supersonic flight and electronic control, the experience of the Air Force with nuclear weapons. These and kindred expressions of yet unveiled air power have been mighty deterrents to aggression.

Challenged and outmaneuvered in many ways by aggression, the free world has been able to offer its first effective checkmate through air power.

But while we take pride in the proven efficacy of air power as peace power reflected by world events, the Air Force Association cannot be complacent over the degree of recognition afforded air power's supreme importance.

The objective findings of the Presidential and congressional Air Policy Boards have not been implemented so as to produce maximum air power for the dollars expended. We attribute this deficiency to three major causes.

First. The United States has not achieved true unification—full unified direction of its armed services. The compromises necessary to the passage of the National Security Act of 1947 left it "lacking in strength, rife with duplication, inefficient, and saturated with waste." This conclusion the Air Force Association has pointed out previously. The Hoover Commission has come to a similar conclusion.

Second. The United States has no settled conviction concerning the strength of the air force required. Within a period of months we have seen the President's Air Policy Commission make one set of recommendations. Conversely we have seen the national administration make another and very different set. In one year Congress authorizes an air force in being of one size. The next year the unit strength of that air force is drastically cut.

Third. The United States is basing its defense budget not on strategic requirements but rather on political compromise. We do not suggest that air force is the sole line of national security. We recognize the importance of balance in military economy and planning. On the other hand we contend that a new strategic concept of security is requisite and that that concept rests primarily on air power. We believe with Winston Churchill that "air mastery is today the supreme expression of military power, and fleets and armies, however necessary, must accept a subordinate rank"; and that "this is a memorable milestone in the march of man." As we view our strategic requirements in the present world of cold war, we contend that effective balanced forces cannot be achieved merely by allocating substantially equal expenditures to each armed service.

We advocate revision of the National Security Act of 1947 (1) to give the Secretary of Defense the authority required by his responsibilities over the Departments under his charge along lines contemplated by the original unification bill; (2) to provide under that authority a National Military Establishment with a threefold organization—a Department of the Army, generally responsible for surface operations on land; a Department of the Navy, generally responsible for operations on and under the water; and a Department of the Air Force, generally responsible for all operations in the air; and (3) to provide for transfer of personel from one service to another;

We advocate legislation establishing the Air Force in being on the basis of the strategic requirements of this cold-war world. We seek necessary provision for procurement planning, programing, and actual procurement on a 5-year basis as recommended by the President's Air Policy Commission;

We advocate that the Chief Executive, the Secretary of Defense, the armed services, and the responsible committees of the Congress take every precaution to assure that budgets of the respective services be established on the basis of but one criterion—the strategic requirements of world peace and the security of the United States.

Turning to the civilian components of the Air Force—an important element in the air power of the United States—we have advocated at an appropriate time and under appropriate conditions, necessary steps to combine the Air Reserve and the Air National Guard into one federalized Reserve component.

We highly value the local support and organization which makes the Air National Guard effective. We believe that these underlying principles should be carefully preserved. We agree that the combination should not be initiated until it is clear beyond doubt that equivalent funds and organization will be as available to the federalized component as to the National Guard units.

The concept of 48 State air forces is, however, so foreign to the penetrating power and range of modern aircraft that we favor the ultimate well-planned and thought-out merger of Air Reserve and Air National Guard activities in one national component—when it is certain that the combined component will be more effective than the present divided strength.

Our belief in the principle of unification of our armed services and of our airpower already has led to us to seek unification of the organizations of former air force personnel, the objectives of which are the support and development of air power. We have within the last year given concrete evidence of our will to bring about such unity. We shall continue to do so.

We believe that United States airpower in being is the condition precedent to the survival of western civilization. We also believe that improvident and uneconomical expenditure of public moneys will be as disastrous to our security as a paper air force. We must constantly bear in mind that military defense must be phased with all aspects of our national life. Defense must be achieved at the minimum cost commensurate with reality. Our people are entitled to a dollar's worth of airpower for every tax dollar spent.

The total objective of peace and security for ourselves and a free world at a cost which permits a free and acceptable national economy is not an easy target. Yet with sound strategic concept based on the efficacy of airpower, and with careful budgeting based on the balance involved in that concept, we believe that objective attainable. To the furtherance of this objective the air force association once again dedicates its influence and its resources, with the firm conviction that air power is the balance between a world dominated by tyranny and a free world.

Are We Killing Our Leaders?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. MULTER. Mr. Speaker, the following article which appeared in the New York Herald Tribune of July 24, 1949, might well be reproduced by every Member of Congress and sent to each of his constituents:

ARE WE KILLING OUR LEADERS?

(By Carl Levin)

We are killing our national leaders. The tragic death of former Defense Secretary James Forrestal is just one count in an indictment which grows more and more ominous—for America and the world—as you learn the facts.

The biggest fact, and hardest to swallow, is that there are no tougher, crueler taskmasters than we Americans. Under our whiplash—call it our system if you wish—we have been working, driving, worrying, nagging, and harassing our most important officials into break-downs. We have been doing it, without even noticing it, ever since we inherited our new role as top dog and guardian of the Western World.

Even those of us on the spot do not know all the details of our national sadism in deal-

ing with our leaders. Many of them are concealed in confidential memoranda, in unpublished letters of resignation, and all too often—in the confidential talks between doctor and patient.

This, though, is evident. The upper echelons of our National Government are plagued today by a new kind of Potomac fever. Its symptoms, say the doctors, run from "occupational fatigue" to ulcers, coronary thrombosis, gastroenteritis, colitis, or any of a hundred other ills. It results from overwork, pressure and tension, from frustrations, personal attacks, and heartbreak.

A STRENOUS ORDEAL

Potomac fever is an epidemic which has crept upon us, without our realizing it. We were surprised, for instance, but thought no more of it when Cordell Hull collapsed after strenuous years of guiding our foreign policy through war and peace. We didn't quite understand why George Marshall wanted to quit as Secretary of State—until he moved over to the Army's Walter Reed Hospital.

But this is just part of the story. Senate Majority Leader SCOTT LUCAS, complaining of unbearable pressures, recently collapsed under the strain of trying to guide President Truman's globe-encompassing legislative program through the Senate. Lt. Gen. Walter Bedell Smith, like many others pressed into cold-war duty after winning the hot war, went from the Moscow Embassy to Walter Reed Hospital with a painful case of ulcers. The Navy has had its hospital list too, including Admirals King and Leahy.

We released General of the Army Dwight Eisenhower to take up the serene life of a university president while, miraculously, he still had his health. Then we called him back for temporary duty as chairman of the feuding Joint Chiefs of Staff. He collapsed under an attack of gastroenteritis and had to be rushed South for rest and treatment.

We were shocked when James Forrestal, broken in mind, body and heart after 9 years of uninterrupted service to his country, dropped to his death from the monumentlike tower of the Naval Hospital at Bethesda, Md. In the press and in Congress indignant voices were raised against those who had maligned the Secretary. But in their next breath those same voices were ganging up on another public servant, David Lilienthal, Chairman of our Atomic Energy Commission. And a few days later we were reading about intemperate, insulting congressional attacks on ECA Administrator Paul Hoffman, a man who gave up an upper-bracket business position to serve his country.

IT LURKS EVERYWHERE

We employ men's talents in high office until political expediency demands that they be cast aside at the high mark of their careers. Then we are amazed when they are seized with fits of despondency.

This is national tragedy, and it lurks in every important inner office in Washington today. It raises a crucial question. How long can we continue to drive our best men into hospitals and graveyards without finding our fate and fortunes in the hands of phlegmatic second-raters?

Ask the doctors, and they will tell you that Washington is ripe for more Forrestal tragedies. They make it plain that we don't know half of the story.

Maj. Gen. Paul H. Streit, commanding general, Army Medical Center (Walter Reed Hospital), warns bluntly, "Our Government officials are working too hard. They do not realize a man can't do it without burning out."

Dr. Leonard A. Scheele, Surgeon General of the United States, puts it this way: "Government service demands from Government executives today an output that is too much for the bodies of many men to take. The body psyche just cannot absorb that kind of punishment; the strain is terrific."

The American Psychiatric Association, meeting in Montreal the day after the Forrestal tragedy, added its warning in these words: "The war has shown that there is a breaking point for every one of us, if the pressures are great enough. No one is immune from the effects of strain and exhaustion."

HE KEEPS WATCH

President Truman recently referred to the Capital's peculiar pressures when he said that only iron men could hold Government office today. The President himself is under as great strain and pressure as any man in the world. But he has his personal physician, Brig. Gen. Wallace H. Graham, to keep a constant watch on his health. He receives preventive therapy, too, including his physician's aid in mastering the art of mental relaxation. And when the General notes excessive fatigue, he orders the President away for a complete rest and change of scenery.

In a single week not long ago the strain not only had Majority Leader Lucas in Johns Hopkins Hospital, but also had a score of other Members of both Houses away ill.

That was the week, too, that Senator RAYMOND E. BALDWIN, of Connecticut, wan and weary, was explaining to his friends and colleagues that after two backbreaking years he was quitting the Senate for the relatively tranquil life of a Connecticut judge. His reason, he could no longer subject himself to the strains and frustrations of Washington without depriving his wife and children of the benefits of a normal life expectancy for the head of their family.

Dr. George W. Calver, congressional physician, agrees. "Any man will live longer who gets out of this rat race," he says. His principal task is keeping a watch on the hearts of Federal legislators. But he asks, "How can this be done—when they are so busy that they send office boys for heart medicine instead of taking time out for an examination?"

It has never before been disclosed, but Secretary Forrestal, at the urgent pleading of a Government physician, made four successive appointments to go into a hospital for a rest. He canceled each one because of the pressure of his work.

You may say that the problems in Washington are not very different from the kind which our most important business executives must face and solve. To an extent that is true, but find the executive who is buffeted by the pressures stalking our national leaders.

Like eddies in a turbulent stream, the pressure currents build up from all directions. The Soviets and the cold war pressures the western world, including Washington; the rest of the western world pressures Washington for aid in defense and recovery; the people pressure the administration, and the administration pressures Congress. Over and above all that, the "social lobby" pressures all influential persons in Washington, feeding them cocktails, indigestible snacks, and small talk instead of rest and relaxation.

Finally, if this combination isn't enough to break even the strongest men, add the terrific awareness of responsibility our leaders must feel in every major decision. Rear Adm. Clifford A. Swanson, Surgeon General of the Navy, rates this realization of responsibility for actions which affect the welfare and even the lives of millions of people, here and abroad, as a major cause of Washington's peculiar fever.

ANOTHER VICTIM

When the signs show up—increasing fatigue, difficulties in sleeping, impaired appetite, increased irritability, inability to make decsions, depression—the doctors know that another man has fallen victim to our system, perhaps to be replaced by stolid mediocrity.

It doesn't have to be that way. We can alleviate the problem, if not solve it altogether. Many suggestions have been made, some by men who have learned from bitter experience themselves.

The most important proposals may be summarized as follows:

1. Adopt the major recommendations of the Hoover Commissions on the Organization of the Executive Branch of Government, particularly those which would straighten out lines of authority, reduce jurisdictional sniping, give our best men higher salaries to free them at least from financial worries, and provide more assistants to relieve top administrators of secondary problems.

2. Install a special office of medical consultants who would be charged with checking the health of high-level officials at regular intervals.

Navy doctors, during the war, had special staff assignments to keep an eye on admirals, and they could see to it that the admiral was ordered to rest when he needed it, not when it was too late.

3. Establish procedures under which competent, experienced officials would not be cast aside in the middle of their careers, whether for political reasons or because they have "gone stale." Instead, provide for their rotation to other important positions, as has been suggested by Columnist Walter Lippmann.

Such a change would be as good as a rest, and this would eliminate the heartbreaking experience some of our greatest leaders have suffered, of finding themselves suddenly unwanted after years of devoted and distinguished service to their country. Incidentally, it would also help solve another problem: finding qualified men for high Government posts.

4. Regulate lobbying and pressure groups in a way which would reduce the demands they make on the time of Members of Conress.

Withdrawing the privilege of ex-Congressmen to buttonhole Members on the floor of Congress would help. More important, every constituent should resist the temptation of taking up his Congressman's time with trivial requests and pointless visits.

5. Official Washington should gang up to overthrow the Capital's social lobby. A few dowagers have amassed so much influence and prestige that an invitation from them is considered a command. Many an important official, dog-tired from his day's work, has to rush out to a dinner party—if he declines too often, he may find his job given to a more gregarious man.

6. The public should insist that criticism of public officials should be honest, informed, and fair. This is tremendously important. Capt. George N. Raines, Navy psychiatrist, rates venomous criticism as the straw which can break the already overburdened backs of our leaders.

Finally, we need to realize that Potomac fever is a disease which can in the long run cripple us all. Our very survival in these times depends on attracting and holding in positions of national leadership the very best that America has in the way of brains, ability, and character.

Civilization—After the Civil War And—Now

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 20, 1949

Mr. WHITE of Idaho. Mr. Speaker, there is submitted herewith for the consideration of my colleagues an article appearing in the Sunday, July 24, issue

of the Washington Star containing a compilation of the figures of unemployment insurance payments made to war veterans, which I believe has a bearing on the national housing shortage.

When Lee surrendered his sword to Grant at Appomattox and the veterans of the two armies headed for home the forests and plantations of the South and the prairies of the Central States and the forests of Michigan, Wisconsin, and Minnesota were waiting the hands of the returning soldiers. What they did in reclaiming the lands and building the towns, cities, and communities of our country by going to the woods and felling the trees and manufacturing lumber from the sawlogs and brick from the clay beds—quarrying building stone from natural deposits to build homes for themselves and rear great cities and construct plants to house factories to supply the needs of our American commonwealth presents a matchless record of human accomplishment.

Today with manufacturing plants, power and transportation facilities undreamed of in the days of the veterans of 1861, the growth of our country languishes and we hear the incessant demand for houses to shelter the rising generation. The woods are there—miles and miles of uncut timber to the west and south of us—sawmills, big and little, are readily available in a country traversed in every direction by hard-surfaced roads gridironed with railroads. Transportation by truck and rail was never as comprehensive or easy as now. Our clay banks and quarries are opened and equipped waiting a complement of manpower to go into production. Our manufacturing plants, for the processing and production of every building necessity, were never more plentiful and efficient.

Now we have 10,000,000 young men released from the Army, boys who left their rooms in their homes in the cities and on the farms to do their part in the Nation's armed forces in the defense of our country. These men and the women who left home to join the armed forces have reached maturity—now they want homes of their own. Many of them are married and are seeking houses and employment to their liking where they can settle down as their fathers and mothers did before them. A benevolent government has come to their assistance to tide them over the period of transition from Army life to a career in the everyday world, by making liberal cash payments and provide them with unemployment insurance.

When we add up the figures of war veterans' unemployment insurance with industrial unemployment insurance and consider the effect on the incentive to work, we begin to see one of the causes of the critical housing shortage.

An analysis of the figures printed in the article clipped from the Star, inserted herewith, is revealing:

52–20 BENEFITS END LEGALLY TOMORROW, BUT MANY STAY ON ROLLS

The 52–20 program dies tomorrow night but thousands of veterans may be eligible for its benefits for years to come.

The program since its beginning in September 1944, has funneled $3,600,000,000 into the pockets of some 8,770,000 World War II veterans during their periods of unemployment.

By contrast, State unemployment agencies, functioning for 13 years for the benefit of the whole public, have paid out $6,000,000,000.

The 52–20 benefits paid through May were (1) $3,051,958,059 in unemployment allowances which allow a maximum of $20 a week up to a total of 52 weeks, and (2) $570,882,765 in self-employment allowances. The latter includes $100 a month for not more than 10⅔ months for unemployed agricultural workers and others working for themselves who earn less than $100 a month.

Despite the amounts paid and the number sharing, only 839,737 veterans had exhausted their full benefits. The World War II veteran population at the end of May was 15,163,000, all of whom were entitled to unemployment aid.

Teaming Up With Freedom

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 25 (legislative day of Thursday, June 2), 1949

Mr. MUNDT. Mr. President, our great American success formula of private ownership and political independence is today being attacked on many fronts by many men and nations. If we are to retain the sturdy strength which has made this country the envy of the world and the exchequer of the non-Communist areas of our times, it is imperative we do not yield to the siren calls and the luscious lures of various defunct and dying systems of collectivism, socialism, communism, fascism, and just plain authoritarian statism which dot and deface the world today from London to Leningrad and throughout so much of Europe and Asia.

In this connection, Mr. President, I desire to call to the attention of the Congress and the country a short editorial from the Radford News Journal, published in Radford, Va., and commenting on a recent address which I delivered in Atlantic City to the International Convention of the Kiwanis Clubs of Canada and the United States. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEAMING UP WITH FREEDOM

One of the most challenging statements we have seen in the past few years was delivered to the delegates to the annual convention of Kiwanis International last week in Atlantic City by Senator KARL E. MUNDT, of South Dakota.

The distinguished Senator asked the Kiwanis clubs of the United States and Canada "to team up with freedom in taking an active, leading part in turning back the tides of totalitarianism now threatening to engulf the fates and fortunes of all people still privileged to enjoy the basic freedoms of political independence and private, competitive enterprise."

He stated bluntly that "the issue today is tyranny, the source of our trouble is communism and its treacherous associated creeds, and the successful survival of our free institutions depends upon the degree of active attention which the voters of America devote to the all-important business of protecting our basic concepts against the seductive lures of today's false doctrines."

The South Dakota Senator continued by saying, "the decisive battles for freedom in our generation—both political and economic—are to be won or lost on American soil. Victory or defeat will depend upon the action or the apathy of the men of Kiwanis and other similar groups of patriotic people in the United States and Canada.

"All over the world the tempting offerings of the welfare state are being offered unwary citizens as the artful camouflage of total State controls and ownership which unerringly throughout human history have resulted in political tyranny. Sometimes the bait is communism, sometimes it is nazism, or fascism, or socialism, or statism, or collectivism, or nationalization, or the planned economy."

Senator MUNDT did not indulge in weak generalities. He gave the Kiwanians and other organizations in the country a specific program. He asked that they form what he called American enterprise committees charged with four specific community responsibilities. He recommended what he called a 12-word, 4-sentence program of action to protect freedom in which each of these so-called American enterprise committees could promote community activities which would:

1. Prepare our youth by making certain that in each high school of the land at least one course is taught which can accurately, appropriately, and consistently be called a course in what's right with America.

2. Publicize our creed by making each Kiwanis community set aside 1 week each year for a community program dedicated to dramatizing the basic concepts which have made America great through radio programs, editorial campaigns, public meetings, essays, and oratorical contests, pageants, window displays, special movies, posters, and public parades. He suggested these be called Know Your America Week.

3. Protect our dividends by an organized community continuing effort to give better opportunities and standards of living to the least fortunate folks of every community so that their dividends from freedom will help them become better apostles for the American way of life.

4. Protect our freedoms by helping to ferret out and expose un-American influences within the community which are corrupting the youth, polluting our minds, and undermining the private, political, and economic morals of the people.

It is hoped that these delegates will come back to their respective communities and put into action this program. It is hoped that Kiwanians everywhere will take the lead in this project—there is a definite need here in Radford, as there is elsewhere, for the people to realize that "The path toward the mirage of something-free-for-everybody and come-and-get-it Government is always different but the destination is always the same—at the end of the road the state is supreme and the individual is reduced to the subservient servant of the state."

Let's hope that this challenge will not go unheeded and that Rotary and Lions and other organizations will join in with Kiwanis to team up with freedom on an all-out war with tyranny in any form.

Arthur M. Rosencrans

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. MULTER. Mr. Speaker, another distinguished Brooklynite was recently honored by Mayor O'Dwyer by appointment to membership on the board of higher education of the city of New York. The Brooklyn Eagle has further honored him by naming him Brooklyn's man of the week. He is indeed one of Brooklyn's leading citizens. I am pleased to set forth a copy of the article about him which appeared in the Brooklyn Eagle of July 24, 1949:

BROOKLYN'S MAN OF THE WEEK—BOROUGH EDUCATOR A MAN OF BALANCED PERSONALITY

(By Jane Corby)

Arthur M. Rosencrans, the new Brooklyn representative on the board of higher education, comes under the heading of a balanced personality.

He is old-fashioned enough to live in a big, tree-surrounded, easeful house at Manhattan Beach, but modern enough to believe education today needs some renovation and a lot of revitalization; has built up one of the biggest insurance underwriting firms in the city, but in the words of his wife, "is too soft-hearted for his own good"; is realistic about the current world, but collects signed editions of all kinds of books, from historic records to poetry.

STRICT WITH CHILDREN

Believes in strict upbringing for children, but takes delight in trying to spoil his grandchildren.

Is a bit of tease where his wife is concerned, but, says she, "is the grandest person to live with."

Anyway, his teasing only amounts to saying such things as "tell the children the hardships you had to endure when you were going to school and had to ride a horse."

It was a Shetland pony named "Pet" that Mrs. Rosencrans used to ride to the little schoolhouse in Foxboro, Mass., where she lived as a child.

Arthur Rosencrans talked about education a lot and himself a little in his private office at the Irvin Agency, Inc., at 148 Montague Street, one of the three affiliated insurance underwriting firms of which he is president and which has offices here and at 107 William Street, Manhattan.

A HANDSOME COUPLE

His wife, auburn-haired and green-eyed, in slim black and pearls, had dropped by in the course of a shopping trip. They're a handsome, graceful pair—Mrs. Rosencrans, a mermaid, in her fondness for swimming. Mr. Rosencrans, though he has neglected his tennis arm, still keeps his tennis-trim figure.

They've been together since high-school days. Arthur was captain of the tennis team at Alexander Hamilton High School, the future Mrs. Rosencrans was a student at Eastern District High School, when they met at a high-school dance. He was with a young man whose sister had gone to the dance with her best girl friend, a bright-haired youngster who caught Arthur's eye. He went home with her from that dance, and their marriage, not much later, was no surprise to their friends.

Meanwhile Mr. Rosencrans had gone on to New York University and was toying with the idea of getting into the insurance business. He organized his own underwriting agency 30 years ago, subsequently acquiring the Irvin Underwriting Co. and after organizing its affiliate, the Irvin Agency, merged several companies with his two original corporations.

He considers himself an average man.

TALKS FOR AVERAGE MAN

"I'm talking for the average man when I say that I think that a stronger emphasis on business education is what is greatly needed today," said Mr. Rosencrans. "Particularly, I believe that the schools of civic and business administration, such as City College possesses, should be instituted in the other colleges under the direction of the board of higher education. I also am a strong believer in the further development of the field of adult education.

"I haven't thought these things through, but I have been told that considerable study is being given along these lines by competent authorities at the present time."

Mr. Rosencrans, businessman though he is, has been in close touch with educational problems many years. He has been a member of local school board No. 40 since 1942, and chairman of the board for the last 3 years. School District No. 40 is the largest in greater New York, and includes 26 schools, among them several junior high schools.

As a member of the board of higher education, he will be one of the group, made up of representatives for each borough, which acts in an administrative capacity for all four city colleges, and takes charge of such details as the appointment of college officials, approval of curriculums, budget recommendations, etc.

ACTIVE IN ORGANIZATIONS

His interests have been community-wide, and he is an active member of a score of organizations. For a number of years he was president of Temple Beth El of Manhattan Beach, where he is now an honorary life trustee.

Mr. and Mrs. Rosencrans brought up three children, now all married. Leslie M., an army veteran, and a Penn State graduate, is a member of his father's firm. One daughter, the former Edith Rosencrans, now Mrs. Angel Barnes, enlisted in the Coast Guard during the war, after taking her master of arts degree from Columbia University, and toured the country as a member of the Tars and Spars.

The elder daughter, Janet, who was graduated from New York University, is Mrs. Samuel Z. Jacobs of Manhattan Beach. There are three grandchildren in the family, which, said Mr. Rosencrans, "helps to keep me in touch with the problems of primary education."

Tireless in his civilian war efforts during the last war, he served as chairman of the National War Fund, Manhattan Beach Division, chairman of the Red Cross, and a member of the Kings County Price and Rationing Board.

LEADER IN JEWISH WORK

He has been a leader in United Jewish Appeal and Federation work for years, active in the Boy Scouts, the Men's Club of the Eighth Avenue Temple, the Grand Street Boys Association and various other civic, community, social, and fraternal organizations. He is a member of John Hancock Lodge, 70, F. & A. M., and BPOE 22.

His one hobby, the collecting of signed editions, he has pursued with such enthusiasm that the walls of the library of his home are filled with books, and two walls of his den had had to be fitted with floor-to-ceiling shelves to make room for more.

His collection of autographs is extensive. Among the important items is a complete illustrated volume of original letters signed by Napoleon and his marshals. The original draft call of New York City issued and signed by Abraham Lincoln in 1863, the year of the draft riots, is another. Not so popular but of great historical interest are various original documents signed by Adolf Hitler and many of his followers, including most of those who met their fate at Nuremberg. The collection is further varied by documents signed by Presidents—including Washington—kings, generals, authors, and poets.

"They make me feel akin to the great events of the past as well as the present," said Mr. Rosencrans. "I think that's why I like to collect them. I recommend my hobby. It revitalizes the past and helps one achieve a better understanding of the world we live in."

Address by Hon. Elbert D. Thomas, of Utah, on Point 4 of President Truman's Message on the State of the Union

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26 (legislative day of Thursday, June 2), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address of mine entitled "Point 4," which was broadcast over radio station KSL, Salt Lake City, Utah, July 20, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POINT 4

President Truman in his state of the Union message made a recommendation which is now called point 4. Point 4 is the simplest and most basic idea in connection with rehabilitating a broken world and putting nations and people on their own feet. It is the surest way of raising the standard of living. It is the cheapest method for bringing economic relief and aid. But it has the most vigorous and, in a sense, the most wicked opposition that any part of the Government's program draws.

The coalition between BYRD and his 18 Dixiecrats who line up with the Republicans in defeating the administration's program is evident on every hand. For example, I will give an illustration. The House bill for the last ECA appropriation set aside a few millions to be used to support one provision of the point 4 program. The provision was a simple one, tried often in our country without costing the people a cent. It is the principle used in FHA loans; that is, the Government guarantees the interest on investments made with private capital. The Government has never lost money because there is the best kind of supervision over investments where the interest is so guaranteed. The House of Representatives assumed that if private money became available for investment abroad in keeping with the theory of the Marshall plan, the American people with their surplus funds could associate themselves in rehabilitation projects. In this way there would be a restoration of normal conditions brought about in a normal way and invested money would come back to the American people with a profit. There was no opposition to this provision until someone suggested that this might be the beginning of the operation of point 4. When that was said, every one of my four

colleagues on the Senate side of the conference table objected. Finally, we were only able to preserve the point by making changes.

Put it another way. Here was a group of men willing to spend $5,000,000,000 if there were no guaranty on any return, but unwilling to spend a few million dollars if there were good promise of its return.

There is never any question of a military bill for money to be spent for running tanks, airplanes, or just in practice for defense. But if someone suggests spending money for a house which will be lived in and paid for out of its rent and which bill add to the wealth of the Nation there is always opposition. The appropriation for the Atomic Energy Commission to create more bombs is never questioned. But if it becomes known that the Commission is experimenting on some new way of producing energy for productive purposes you may rest assured there will be all of the opposition in the world. That, of course, can be explained. People who supply that which produces the old type of energy feel that their business will be jeopardized.

I had something to do with the setting up of a commission which went to Palestine years ago to study the economic possibilities of that land. The report of the commission was conclusive. It showed that between six and eight million souls could be maintained if the economic possibilities of the land were developed. Who can estimate the water power possibilities in the Jordan drainage. Who can estimate the mineral wealth in the Dead Sea. You might just as well try to estimate the mineral wealth in the Great Salt Lake. But it is easier for the Jews to return to Palestine now they know the land's economic possibilities rather than for purely sentimental reasons.

I saw so much of teaching and showing new methods when I was a missionary in the Orient. I saw the first sheep brought to Japan. I showed new methods to a group of students, professors and helpers at the agricultural college at Sappora, Japan, when that great school imported an American team of horses and a harness. I say new methods. They were not new to me, but the Japanese had never seen a horse driven. They knew how to hitch the horses up, lead them and the hayrack on to the hay fields. Then they unhitched the horses, and women carried the bundles of hay over to the wagon and loaded it. We say, of course, stupid people. But if you had never seen a horse driven you would handle a horse the way you were used to doing. I laughed and jollied them for a minute or two then I told them to hitch their horses up again. I jumped on the seat, took the reins, drove the horses and the rack to every little stack of hay. The Japanese workers were almost terrified. But as soon as they realized that the rack could be taken to the hay instead of the hay carried to the rack they saw the point. Point 4 of the President's program is, in its simplest form, merely, a way of teaching know-how, if I may use an American colloquialism stolen from the Chinese.

Everyone in Utah knows of the great studies carried on by President Franklin S. Harris, of the Utah State Agricultural College, for the Jews in Siberia and for Persians in Persia. His work was also connected with what is now called point 4. It cost very little, but the results of his activities produced great economic wealth. Dr. Walker, also from the Utah State Agricultural College, was lent to Burma. He, too, left ideas in that land that will pay back a thousandfold.

One of our great American corporations in Central America is experimenting with its worn-out banana lands and produces mahogany trees and manila hemp and other products needed in our country. They have established a world-renowned school to teach the Central American Indians modern agricultural methods. They have established schools to increase the health and welfare of their employees. The Americans who work for this corporation in those tropical lands have fine homes and recreational facilities furnished by the corporation so that their families can be happy. A past president of the great corporation said that to have good and happy employees the wives and families of the employees must also be happy. Does it pay that great corporation to carry on business in this way? Last year, two of the regular quarterly dividends to stockholders were tripled. Yet it would be hard to describe this corporation as just a money-making enterprise. It is in reality a great American economic, education institution. The aim of the men who are doing these great things, of course, is always to sustain and keep safe the investment which the American people put into their enterprise. That is merely point 4.

The Government has never subsidized this great institution unless their ships carry United States mail. But when they build ships, they build them in accordance with Government specifications so that if an emergency comes the Government can buy ships that are useful. The Government, of course, can ruin such a company by putting a prohibitive tariff on its products, but it does not.

Everyone receives Government aid. When you turn on the water you are getting water because the Government through the waterworks sends it to you. This notion that the Government is something that one is not related to is as silly as mothers in this day and age who try to scare their children by turning the policeman into a bogeyman.

Why did the Japanese not know how to drive a horse? They had never had occasion. Do you know how many hundred years men had domesticated horses without knowing how to ride one? The most commonplace things to us are wonderful beyond belief to some people in the world. The Chinese to this day do not know how to milk a cow, but they showed genius enough to domesticate both birds and insects and made silk from bugs and hatched eggs by incubators hundreds and hundreds of years before we of the West tried it. Point 4 will merely teach people how to help themselves.

In writing the constitution for the United Nations Food and Agriculture Agency with which I helped and which President Harris had so much to do with, our thought was merely to help people help themselves. Why should we be afraid of such a simple thing? The idea is not even new. Why the opposition? But I receive letters and one of them lately came from a thoughtful Utah man who wrote asking why we did not do more things like sending Dr. Walker to Burma instead of spending all of the billions in indirect help. I explained to him that if I told him that what Dr. Walker was doing was merely a part of point 4 he would probably be against it because all he had read about point 4 was bad and therefore he had become prejudiced against an expression and not what point 4 stood for. Someday maybe the American people will stand for or against great principles and mighty fundamentals instead of against a name.

Shield Against Aggression

EXTENSION OF REMARKS
OF
HON. E. E. COX
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star for today:

SHIELD AGAINST AGGRESSION

In his message calling upon Congress to enact a $1,450,000,000 arms-aid program to strengthen the defensive position of our friends abroad, President Truman has based his arguments on essentially the same logic as has led us into such other great and far-reaching enterprises as our assistance to Greece and Turkey, the Marshall plan for European recovery, and the 12-nation North Atlantic Treaty for mutual security against direct and indirect aggression.

The logic is the compelling logic of the cold war—the logic of the tumultuous and threatening events that have impelled the United States, in concert with the rest of the free Western World, to build up, step by step, a powerful defensive wall against the dominance-seeking forces of Red totalitarianism. Thus, our aid to Greece and Turkey has been designed, with telling effect, to save those two countries from being subverted and dragged behind the iron curtain. Similarly, the Marshall plan has been put into operation—again with telling effect—to prevent the kind of economic and political disintegration which for a time threatened to hand over the whole of Europe to Soviet control. On top of that, more or less evolving out of the Brussels Pact uniting Britain, France, and the Benelux trio, has come the Atlantic Treaty—an undertaking calculated to deter the Russians from further European aggression of the one-by-one sort that has wiped out the liberty and independence of such lands as Poland, Rumania, Bulgaria, Hungary, and Czechoslovakia.

But the defensive wall is not yet as effective as it can and should be. Accordingly, to strengthen it, to make it more formidable as a shield against aggression, the President has now asked Congress to provide for foreign assistance of three types: (1) Limited dollar aid to enable our overseas friends to make some increase in their own armaments production without impeding their economic recovery; (2) direct transfers of certain items of American military equipment; and (3) the assignment of experts from this country to help the recipients train personnel and familiarize themselves with our equipment. The program—though it would coordinate all our arms-aid projects, including that for Greece and Turkey, into a single operation—would be concentrated chiefly on improving the defensive position of the Atlantic Pact countries by making them capable of maintaining internal order and resisting the initial phases of external aggression. Its duration would depend largely on whether or not Soviet policy changed for the better. In administering it through the State Department, the President would have very broad discretionary powers.

Such a program obviously is wide open to debate, and Senator VANDENBERG, who has been one of the key architects and most eloquent supporters of our bipartisan foreign policy, has made clear that he is far from convinced of its soundness and intends to challenge it. In his opinion—still tentative—it seems too wide in scope, too generous in its grant of Presidential authority, too armaments-minded, and too heedless of the machinery set up in article 9 of the Atlantic Pact to effectuate the self-help and mutual aid envisioned in article 3. In short, his first impression of the project is unfavorable enough to make him feel that a curtailment may be necessary—a fact indicating that the undertaking faces real trouble in Congress.

Nevertheless, the program has been drafted with such apparent care that Mr. VANDENBERG and men of similar vision are not likely to modify it drastically unless facts can be produced to warrant such action. In essence, in principle, in purpose, the proposals are

both sound and necessary. If Congress decides to curtail them, it should do so in a way that will not make us lose any of the ground we have gained against Russia. For it is true, as the President has said, that wise application of the arms proposals can help the free west hold on to the initiative it has now and form a common front strong enough to persuade the Kremlin that its own welfare lies in the direction of mutual tolerance and peaceful foreign relations.

Parity Wins

EXTENSION OF REMARKS
OF
HON. BOYD TACKETT
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1949

Mr. TACKETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Arkansas Gazette:

PARITY WINS

It is curious how a system of Federal farm subsidies, which was admittedly experimental at its inception and has been bitterly criticized in the past, has become something to be cherished and defended by congressional conservatives.

A coalition of Republicans and farm State Democrats in the House has rejected not only the experimental Brannan plan offered by the administration, but the Aiken farm subsidy plan approved by the Republican Eightieth Congress. Unless the Senate reverses this action, which is doubtful, it means that the old New Deal system of rigid commodity supports will continue through the next growing season.

The Brannan plan was, of course, untested and for that and other reasons was open to question. For one thing nobody could even give a fair estimate of what it would cost. But the plan at least had a commendable objective—to alter the system of Federal price supports so that the consumer might benefit from the working of the law of supply and demand, which the present farm program largely nullifies.

The system which the House chose to continue rests fundamentally upon the philosophy of scarcity. It calls upon the Government, through outright purchases or loans, to take enough of any crop off the market to guarantee an arbitrary parity price. In the case of perishables like eggs and potatoes this has resulted in the destruction of millions of dollars worth of produce at a great loss to the Government. As a result of the war-born demands for such nonperishables as cotton, which is taken off the market under the loan and stored, the situation has been somewhat better. But even here the Government is committed to the ultimate purchase and storage of each year's cotton surplus with little prospect of ever finding a market for it in normal times.

The Brannan plan may not have offered a feasible answer to the farm problems with which the Government apparently intends to deal from now on. But the House was unwilling to even consider a limited test run of the plan on a few selected commodities, as it was also unwilling to test the Republican plan providing for more flexible price supports. This attitude would be understandable only if it could be argued that the present price support system is completely sound—and we see no reason for such an assumption.

Amending the United Nations Participation Act of 1945

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 18, 1949

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following thoroughgoing analysis of the bill to amend the United Nations Participation Act of 1945. This analysis was prepared by a member of the professional staff of the Committee on Foreign Affairs, Mr. C. B. Marshall. I commend it to the members' attention because of the light it sheds upon the nature and purpose of the legislation before us:

The first step in making clear the purpose of the bill H. R. 4708 might well be to make known 10 things that the bill does not do.

1. The bill does not change—it does not increase—in any way the obligations of the United States toward the United Nations.

2. The bill does not alter in any way the standing of the United States with respect to the United Nations Charter. It does not relate to the veto or any other controversial part of the Charter.

3. The bill does not increase the powers of the United Nations or any member thereof.

4. The bill does not affect the arrangements regarding the Untied Nations headquarters.

5. The bill does not relate to the status of United Nations personnel in this country. It does not add to their immunities in any way.

6. The bill does not relate in any way to the imposition of sanctions or any other such action under chapter VII of the Charter.

7. The bill does not increase the President's powers to deal with United Nations affairs.

8. The bill does not increase the United States' contribution to the United Nations.

9. The bill does not increase or otherwise affect our participation in the specialized agencies of the Unted Nations.

10. The bill does not give anything away.

The list of things which the bill does not do is stated not as an apology but merely to clarify the point that this is a simple piece of legislation. This bill is all to the advantage of the United States. It is merely a pattern for doing better some things that we are already doing. There is no reason why anyone should fail to support it.

Now that we have seen what the bill does not do, let us see what it does do.

1. The bill provides a deputy for the drastically overworked United States representative to the United Nations.

2. The bill provides for better continuity in representation before the United Nations.

3. The bill ends a pay discrimination against our United Nations diplomats by putting them on the same pay schedule as our regular diplomats.

4. The bill improves the quality of administration and operation of United States activities in the United Nations.

5. The bill makes possible the rendering of more efficient assistance to the United Nations in the peaceful settlement of disputes—in a manner better suited to United States interests than at present.

6. At the same time the bill puts limitations on the President's already existent and unrestricted power to use military resources and personnel in support of peaceful settlement of disputes under the charter.

7. The bill protects the rights of United States military personnel serving on such detail.

8. The bill makes it possible for the United States to collect repayment for such services rendered to the United Nations.

9. The bill actually opens the way for a saving, on balance, to the United States of $325,000 a year—based on experience figures.

10. The bill serves comprehensively and exclusively the interests of the United States.

Every one of the above 10 points is further discussed below:

First, as to the need for a deputy representative of the United States to the United Nations. This is provided for in section 2 (a) of the United Nations Participation Act as amended by section 1 of this bill.

It should be kept in mind that at the time of the enactment of the United Nations Participation Act of 1945 there was no experience on which to draw. No one had any notion as to what the load of business necessary to be handled by our United Nations representative would be. It was then thought that a representative and a deputy to sit in the Security Council would be sufficient for topmost representation.

Two factors have made this number insufficient.

For one thing, the volume of problems before the United Nations has been far greater than was considered likely in the more optimistic days when the United Nations was founded. The lessen of 4 years has been that the work of the United Nations has been many times as difficult and as great in scope as was then anticipated.

Also, the United Nations headquarters was established in the United States—be it remembered at the invitation of this Government. To the other duties incumbent upon our representative have fallen the obligations deriving from the fact that he is representative of the host Government. This adds greatly to the burdens of his post. It multiplies the demands upon his time. It results in many situations where our representative is required to be in three or four places at once.

Actually, Ambassador Austin has become one of the most seriously overworked men in the Government. He has never made a complaint about this. He has not pushed the plea, before the committee or elsewhere, for providing him with a full deputy.

Nevertheless, it is not in the interest of the United States to exploit its servants, even those who are uncomplaining. The best results in representation cannot be obtained so long as our representative is required to attend to a volume of problems beyond the span of any one man. This statement is in no wise a reproach to the quality of the work that has been done by Ambassador Austin.

An example to prove the point may be cited from what happened at the time of the Paris meeting of the Security Council last fall concurrent with the General Assembly.

Ambassador Austin became ill and was sent to the hospital. Overwork was a factor in the case. Then Ambassador Philip Jessup, deputy representative to the Security Council, also succumbed to the strain of overwork and had to be hospitalized. The result was, for a time, that the United States was without any representation authorized by law to deal with high-level matters in the Security Council. This incident amply illustrates the need of having a third high-level man in the delegation—not only to serve in emergencies but also to ease the strain on those already carrying the excessive load of work.

The answer to the problem is to provide a deputy with plenary power to act for the representative. This bill does that.

Second, as to better continuity in representation—this is provided for in section 2

(a) and (d) of the United Nations Participation Act of 1945 as amended by section 1 of this bill.

It is provided that the representative and the deputy representative may serve on any organ, commission, or other body of the United Nations. An exception is made only for the specialized agencies, such as the World Health Organization, or the International Refugee Organization, which deal with limited fields of operation and for which autonomy of representation and operation is necessary.

The bill provides also that any officer of the Department of State may be appointed by the President to represent the United States in the Security Council for a limited time incident to disability of the regular representatives or in connection with a special problem. This is limited to State Department officers subject to senatorial confirmation—in other words, the Secretary, the Under Secretary, the assistant secretaries, the legal adviser, and the counselor. This provision should take care of emergencies which might otherwise result in an interruption of United States representation. It also will enable State Department men who have developed great familiarity with a particular problem to follow it through its various United Nations stages. In some instances that might be of particular advantage to the United States.

Third, as to the question of compensation—this is provided for in several places in the bill as reported. Since then, however, the committee has developed an amendment which more amply states the principle in mind. This amendment is to be offered at the proper time.

The amendment strikes out all specific salary references in connection with the particular posts affected. It writes in a new subsection of section 2 of the United Nations Participation Act of 1945. This new subsection states the principle that compensation of United Nations diplomats of the United States shall be paid at the same rate as allowed by sections 411 and 412 of the Foreign Service Act of 1946 for people in our regular diplomatic service doing regular diplomatic work of a bilateral character. The basis must be the importance of the work done as determined by the President.

It should be kept in mind that the Foreign Service Act was enacted a year after the United Nations Participation Act of 1945. It did not occur to the Congress at the time that in providing for more substantial compensation for one sector of its diplomatic representation, it was overlooking another equally important sector.

Actually, multilateral diplomacy has become every bit as important as bilateral diplomacy, and in some senses of even greater importance. It is certainly not in the interest of the United States to make it more difficult to attract top-rate men and women into the United Nations sector of its diplomacy than it is to get them to work in the field of relations with other countries.

The bill wipes out the discrepancy and the discrimination.

Under the committee amendment it will be possible to grant Ambassador Austin the same status as a chief of mission, class 1. Surely no one can contest that the job of representative to the United Nations is just as important as the job of being ambassador in any of the world's major capitals.

It will be possible under the committee amendment to establish the new deputy's post on the level of a chief of mission, class 2. Surely again no one can contend that the number 2 man in our United Nations delegation will not be in as sensitive and important a post as any of the ambassadors in one of the capitals of secondary importance.

For such posts as our representative on the Trusteeship Council and the Economic and Social Council and our deputy representative in the Security Council it will be appropriate to establish a level equal to that of a chief of mission, class 3. The same goes for the members of special field commissions of the United Nations, such as those acting in the India-Pakistan problem, the Palestine situation, and the like. Also it will apply to our public delegates to the General Assembly. These latter, however, serve only for a few weeks out of the year and their number does not run over four or five.

How much will this cost? It is apparent that the increased cost in our representation will not be more than $75,000 a year. For our No. 1 representative the difference will be $5,000 a year. For his deputy—a new post—a salary of $20,000 will be appropriate. For the others mentioned an increase in the rate from $12,000 to $15,000 or $17,500 at most will be in order.

This must be weighed against four considerations.

For one thing, the rates will merely bring them into line with the people in other sectors of our diplomatic front.

For a second consideration, the increase in pay will reflect itself in an increase in status that will improve the prestige of our representation.

For a third thing, this is not an open-ended raise. The officials concerned are subject to senatorial confirmation. There will be this restraint to insure that the standards envisaged by the Congress are complied with.

Finally, the bill provides for savings to the United States which more than balance this extra cost. This will be explained in detail further on (eighth and ninth points).

Fourth, the bill improves the administration and operation of United States participation in the United Nations. This is just a way of summarizing all that has been said above regarding the changes in representation. The point is repeated here to emphasize the idea that this is not a bill to do anything about the United Nations. It is simply a bill to improve our manner of taking part. It does it in a way not to the advantage of the United Nations as a whole or to any other member of it. It does so in a way that will benefit this Nation alone. This is a bill clearly in the national self-interest.

Fifth, as to improvements in the basis on which the United States renders assistance to the political commissions of the United Nations engaged in the peaceful settlement of disputes between nations—these are concerned in a new section 7 of the United Nations Participation Act of 1945 as amended by section 4 of the bill as reported.

It must be emphasized that the President has power now to call upon the Departments of the National Military Establishment to assist the United Nations in such activities. This results from his inherent constitutional power as Commander in Chief of the armed forces and as primary agent of this Government in the field of foreign affairs.

The President at present, however, may detail such personnel or make equipment available only to some American serving on such a commission. The result is dual control and administrative confusion. For example, under existing law a vehicle of the United States Army detailed to the assistance of such a commission would have to be driven by an American driver at all times. Technically it could be used only by an American.

Section 7 (a) (1) of the United Nations Participation Act of 1945 as it will be amended by this bill will make it clear that the President can detail personnel and equipment to the United Nations. It will not be necessary to maintain the legal technicality that the detail is to American officials.

It is entirely in the interest of United States foreign policy that such assistance be rendered without impediment to the political commissions which are in the field or which may be established as new problems now unforeseen arise.

Such agencies as the Special Committee on the Balkans, the Commission for India and Pakistan, the Commission for Indonesia, the Commission on Korea, and the Palestine Commission represent activities which stand at the very apex of United States foreign policy interests. They represent the effort to settle problems by international action short of war and without the use of force.

Such Commissions must operate in the field under situations of extreme difficulty as to communications and supply. They could not operate without assistance from governments capable of supplying it, as the United Nations alone does not have the resources necessary. By providing a statutory basis rather than relying upon inherent constitutional powers, we can make such assistance more efficient. We also make it far less costly to the United States. We can define the limits of such assistance. All these things the bill does.

Sixth, as to limitations on assistance—these are found at various points in the new section 7 of the basic act as provided in section 4 of this bill.

The detailing of personnel and the loan of equipment is confined to peaceful settlements.

The number of personnel to be involved at any one time is limited to 1,000—a precaution lest there be any tendency to exploit unduly American resources of manpower.

The loan of equipment is put on the basis of the "agreed fair share." The terms of application must be worked out between the President and the United Nations in particular instances. It is intended to insure against any tendency to take undue advantage of American willingness to help and to emphasize that the United Nations can realize its potential only with support of governments on a broad basis.

The disclosure of secret information is specifically forbidden.

The bill also authorizes the President to set up other conditions and limitations in rendering such assistance. It is the committee's understanding that these conditions and limitations, whenever a vessel crewed by American personnel is made available, will invariably include the stipulation that the vessel is to remain under United States control while on such mission.

Seventh, the rights of United States personnel on such missions are protected by provisos in paragraph (1) of subsection 7 (a) of the act as amended by section 4 of the bill as reported. These provisos entitle such personnel to accept per diem recompense from the United Nations and to maintain their rights under law as members of the United States armed forces while so engaged. The right of members of our armed forces to accept such per diem payments has been called in question by the General Accounting Office. This legislation will clear up the legal technicality.

Eighth, under the present basis, with the President making personnel and equipment available only in pursuance of purely United States objectives rather than making them available to the United Nations directly, there is no way of collecting from the United Nations for the services rendered.

Section 7 (b) of the act as amended by section 4 of the bill as reported changes this. It directs the President "to require reimbursement from the United Nations for the expense thereby incurred by the United States." An exception is made only whenever and insofar as the President may determine that extraordinary circumstances and the national interest justify a waiver.

The out-of-pocket costs to the United States in assisting the United Nations field

commissions in the last year and a half have been approximately $1,000,000.

Had this law been in effect, we could have recovered that sum.

Since the United States pays approximately 40 percent of the United Nations budget, the United States, on balance, would have been ahead $600,000 had it provided assistance on a reimbursable basis as authorized in this bill.

There is every prospect that field commissions will continue to operate in substantial numbers for the calculable future. Some of the present ones may soon complete their missions. But there is no prospect that the world will become so calm and international relations so peaceful in the foreseeable future that the need of such work will die out. We can count, therefore, on this legislation as representing substantial savings to the United States.

Ninth, just how much of a savings does the bill represent?

As seen above in the discussion under the third point, it involves the outlay of about $75,000 a year more in salaries for top-level people.

But now we get to the compensating factor of a saving of about $400,000 a year by putting on a reimbursable basis our assistance to field commissions of the United Nations.

The bill thus involves a net saving, based upon experience figures, of $325,000 a year.

The Foreign Affairs Committee has often been reproached for reporting bills that involve a drain on the United States Treasury. But this time it has a bill that will result in a net saving.

In that connection, it is interesting to note that the Department of State already has a statement of account ready to go to the United Nations in the event this legislation passes. It is for $26,000 for repayment of expenses incurred by the Palestine Commission. There is no authority to collect the money without this legislation.

The State Department estimates that in all $100,000 of the expenses recently put out in connection with field missions will be recoverable if this legislation is enacted.

Thus it is accurate to say that the salary expenses added by this legislation will be compensated for by reimbursements already in sight—for the year.

Tenth, the bill is in the United States interest. It is in our interest from a dollar standpoint. It is in our interest from the standpoint of strengthening our conduct of foreign policy. It is in the interest of the United States in protecting the welfare of its servants.

The committee went over this bill most carefully. It held hearings for 3 days. It then wrote the bill detail by detail. It took every step necessary to make this bill entirely in harmony with the interests of the United States. It is an uncontroversial bill, worthy of unanimous support of the House—just as it had unanimous support in the committee.

Address by Hon Robert A. Taft, of Ohio, in Answer to the President

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26 (legislative day of Thursday, June 2), 1949

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio broadcast I made on July 15, 1949, in answer to the President.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

DANGEROUS TAXATION

As I listened to President Truman Thursday evening I got the impression that he had only one solution for every economic difficulty of the Nation—more spending by the Federal Government. He insisted that Congress should not cut a cent off the budget of a thousand Federal activities and he insisted that the necessity of Government spending was enough to justify every project.

Last January he wanted more tax money. Now while blaming the Eightieth Congress for reducing taxes by $5,000,000,000, he prefers a deficit to the restoration of those taxes. He opposes all cuts on the ground that we must spend ourselves into prosperity, and accepts the philosophy of those who believe that under present conditions the more the Government spends the better. Huge Government spending has from the beginning been one of the essential features of Mr. Truman's program to follow the Labor Socialist Government of England into a totalitarian state, directing the lives and activities of its citizens.

When we returned to Washington at the beginning of this year he presented a complete program to achieve that result. He demanded the right to fix prices, to fix wages, to ration commodities. He insisted that the Government undertake to go into a business whenever its left-wing economists thought that private industry was not expanding at a sufficiently rapid rate. He has since supported the Brannan plan which would necessarily result in a control of agriculture which would tell every farmer what he could raise and what he could not raise; pay the farmer the price he would like to have and sell the goods to the consumer at the price at which he would like to buy. The Brannan plan has that complete disregarded for the taxpayer which was so evident in Mr. Truman's speech last night, for such subsidies would amount to about $6,000,000,000 a year if they were on the same scale which is now in force in England in the socialized government. Furthermore the farmers and the consumers who supposedly would be benefited by this plan are the very taxpayers who would have to pay the taxes. The third item of President Truman's program was his plan to socialize and nationalize medical care and the medical profession. This is called compulsory health insurance. Actually it is a plan to increase the pay roll and other taxes about $6,000,000,000 and give this money to a Federal bureau to pay all the doctors and hospitals in the United States to give free medical care to all the people of the United States including those who can afford to pay for it themselves. Fourth, Mr. Truman proposed the repeal of the Taft-Hartley law to restore all the special privileges given to the labor union officials by the previous laws. Those laws were completely one-sided and while they regulated employers they made labor unions and their officials exempt from any liability either to the employers, their own union members, or to the public. The Taft-Hartley law, based on free collective bargaining, attempted to give complete equality in that bargaining. It has brought fewer strikes because when men no longer have arbitrary power they are less likely to make arbitrary and impossible demands.

Fifth, Mr. Truman proposed a system of universal military training to cost ultimately $4,000,000,000 a year. But finally the key to his whole program was a budget proposing that the Government spend $42,000,000,000 in the next 12 months, $8,000,000,000 more than Mr. Truman himself spent in 1947 under a Republican Congress. If we had followed his other recommendations the Federal budget would have been close to $60,000,000,000 annually in the course of the next 5 years. Already, if we include the taxes collected by the States and local governments, the tax burden is $60,000,000,000 or about 28 percent of the national income. We all work, on an average, more than 1 day in 4 for the Government. Such a burden kills the incentive of individuals and it particularly discourages those who want to start new businesses and create new jobs.

Mr. Truman is indignant at the Eighty-first Congress as he was at the Eightieth Congress for only one reason—because it will not approve his idea of a government which undertakes to do spending for all its citizens and direct all the details of the billions of transactions which occur each week in the United States.

Mr. Truman denounces Congress because it believes in a system assuring liberty to our people; because it believes that we have become the greatest Nation in the world only because of that liberty; because the high production, high national income, and high standard of living of which he boasts has been reached under a free system which Congress at any rate does not propose to abandon. Mr. Truman has no comprehension of the effect of the tax burden of $60,000,000,000 on the American people. These taxes affect the price of everything that you buy. Besides the direct taxes deducted from your pay roll, many taxes are passed on in the price of every product bought by consumers. Take the case of leather shoes. The producer of livestock adds in his tax to the price of his beef. The packer adds in his tax, and so does the purchaser of the hides, the tanner and the shoe manufacturer so that when you buy a pair of shoes at least 20 percent of the price represents taxes paid along the line to the Government. Pay-roll taxes become part of the cost of production and prices must be based on that cost. There are direct taxes on cigarettes, freight, transportation, passenger fares, leather, furs, jewelry, cosmetics, handbags, and many other products which of course directly increase the price. Taxes are almost as much of a burden on those who do not pay a direct income tax as they are on the income-tax payer.

Mr. Truman said "Businessmen should take advantage now of opportunities for modernizing their plants and for new business investment," but taxes are so heavy that any man who takes a risk and succeeds will have to pay the Government a large proportion of his profit, whereas if he loses he loses his own money. To maintain full employment, Mr. Truman admits that there must be a constantly expanding economy, new plants, new services, new machinery, and more jobs. But if taxes are so heavy as to discourage all investment there will be no expanding and there will be fewer jobs. If taxation becomes too heavy the Government will be forced to take over more industries and finance expansion itself. With more expense to the Government and a smaller private industry to pay the tax bill we will soon reach a point in which the Government alone can operate industry. Excessive taxation is about as certain a way to socialize the country as any other way.

Mr. Truman says that his programs are supporting "purchasing power" because the Government is paying out a lot of money. If the Government would let the people keep their money instead of taking it away in taxation you would have just as much purchasing power and a lot more freedom, because you would spend your money for what you want, instead of having the Government spend it for services which you may or may not want and may never receive. The prosperity of this country has been built not on

Government spending but on the vast market for goods provided by 140,000,000 independent Americans. No; we have reached a point where increased taxation will prevent the very prosperity necessary to produce the taxes. We have come to a point where we must determine the limit of our tax burden and then cut our expenses to meet our income and pay something on the national debt. Every individual in this country has to give up things he would like to have because he hasn't got the money to pay for them. The Government is no different from any individual.

It is complete nonsense to say that the Government cannot cut its expense. There is not a bureau in Washington which couldn't cut out 10 percent of its personnel and be more efficient. There are lots of desirable projects, some of them we could do without and every one of them can be cut. An average 10-percent reduction would balance the budget. Any President except one obsessed with the panacea of Government spending would have cut his budget to meet the revenue provided by the people.

President Truman blames Congress for not cutting the budget more than it has. When we adjourn there will be substantial cuts in his recommendations but we should have done a much better job. Unfortunately, whenever any economy is proposed the President and his departments rush to the public with their propaganda and stimulate a sentiment in favor of that particular project. Many people who are in favor of economy in general insist on their favorite spending proposals. Many of them today insist that we increase President Truman's budget by a billion and a half dollars this year and many more billions in the future to build up the armies of every country in western Europe. The welfare of the world depends more than any other one thing on the prosperity of the United States. We cannot afford to wreck it by going too far in subsidizing the entire world.

The Eightieth Congress reduced taxes by $5,000,000,000 and took 7,000,000 taxpayers among the lowest-income groups off the income-tax rolls altogether. They did it because they determined that the then existing tax burden was dangerous and a threat to future expansion. The President refused to accept that judgment of the people and now insists on a deficit-spending policy when the country is enjoying an average prosperity.

If we wish to recover from the present recession, if we wish to get back to full employment and a steady annual increase in the standard of living, then the first firm foundation must be a solvent efficient Government spending economically for those projects which the people can afford and which they approve. That spending must be within the means of a private enterprise system and not so great as to destroy the freedom and liberty which alone can make that system succeed. Congress disagrees with Mr. Truman because they represent the belief of the American people that government shall be the servant of the people's interest and not their powerful dictator.

The present Congress is not a negative Congress although its great merit will be that it has prevented changes which would affect the whole nature of our Government and the character of the American Republic. Affirmatively its program is (1) reduce expenses and avoid a tax increase; (2) adopt a welfare program to give Federal aid to States to help them do a better job in education, health, housing, and relief. This whole program would cost about a tenth of the President's compulsory health insurance alone. (3) Revise the Taft-Hartley Act to correct those features to which sound criticism has been directed but retain its basic principles of equal collective bargaining and union responsibility. The Senate passed that kind of a bill. (4) Maintain our aid to foreign countries but only to the extent absolutely essential to maintain peace without sacrificing the liberty and the security of the United States.

We have an educational job to teach the people what the administrative program really means. We have a job to convince them that no central government can cure all the ills of the people, particularly by spending more money; that no central government knows better than the people themselves what is good for them. Congress is fighting for the cause of free government, the cause of liberty, the cause of our local communities, our farmers, our workmen, our businessmen, to live their lives as they want to live them, the cause of the American Republic.

The Military-Assistance Program

EXTENSION OF REMARKS
OF
HON. JOHN FOSTER DULLES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, July 26 (legislative day of Thursday, June 2), 1949

Mr. DULLES. Mr. President, I ask unanimous consent to have printed in the RECORD a statement which I made yesterday relative to the military-assistance program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My impression is that Congress should rewrite the administration's military-assistance program to bring it into harmony with the North Atlantic Pact. The present program does not implement the Atlantic Pact. The State Department says so flatly. Since that is so, it should be held to a minimum until it is possible to proceed under the pact. By the time Congress reassembles next January it will have recommendations of the defense committee under the pact as to how to develop a cooperative defense of the area. Until Congress can act on the basis of such recommendations, there is need only of a modest, noncontroversial interim program. Instead the administration proposes an ambitious 1-year program to cost over a billion dollars to build up individual military establishments in the treaty countries.

If we stick closely to Atlantic Treaty procedures, we may be able to unite the 12 nations into a single defense program which will be economic and cohesive. If we start out on a large scale without awaiting the establishment of treaty procedures, we may end up with 12 independent military establishments, the cost of which will be crushing and the unity of which will not be assured. The present proposal seems to start off in the wrong direction.

Failure of Marshall Plan

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

Tuesday, July 26 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, in the Washington (D. C.) Times-Herald of July 26, 1949, there appears an article entitled "Marshall Plan is Wasted, Baruch Reports After Study." The first few paragraphs read as follows:

ABOARD THE STEAMSHIP "QUEEN MARY," July 25.—Bernard Baruch, American financier and adviser to Presidents, returns to the United States tomorrow with a gloomy view regarding the effectiveness of the Marshall aid plan.

Baruch is convinced that the billions of dollars poured into financially distressed nations have helped neither them nor the interest of the United States taxpayer as much as could be expected.

That is his conclusion after spending a month in England, France, Holland, and Belgium, and conferring with such leaders as Winston Churchill (who in a Saturday night speech accused the Laborite government of squandering nearly $8,000,000,000 of American and Canadian aid).

Baruch believes that loans or gifts to Western Europe were not sufficiently conditioned upon European nations helping themselves regain their prewar economic stability.

As a consequence he found that peoples abroad are not being required to produce to capacity and that their governments have not inaugurated obvious moves to improve business.

In short, both peoples and governments have come to look to America to keep them going, Baruch feels.

He found in England, for example, that the country could balance the budget if 40,000,000 more tons of coal were produced annually; instead, miners are working a short week.

I ask unanimous consent that the entire article be printed in the Appendix of the RECORD. I suggest that this is ample support of the amendment which I am sponsoring with the Senator from Missouri [Mr. KEM].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARSHALL PLAN IS WASTED, BARUCH REPORTS AFTER STUDY—LAZINESS CHARGED TO EUROPEANS FOR CUTTING DOWN PRODUCTIVE WORK

ABOARD THE STEAMSHIP "QUEEN MARY," July 25.—Bernard Baruch, American financier and adviser to Presidents, returns to the United States tomorrow with a gloomy view regarding the effectiveness of the Marshall aid plan.

Baruch is convinced that the billions of dollars poured into financially distressed nations have helped neither them nor the interest of the United States taxpayer as much as could be expected.

That is his conclusion after spending a month in England, France, Holland, and Belgium and conferring with such leaders as Winston Churchill (who in a Saturday night speech accused the Laborite government of squandering nearly $8,000,000,000 of American and Canadian aid).

GOVERNMENTS FAIL, HE IMPLIES

Baruch believes that loans or gifts to western Europe were not sufficiently conditioned upon European nations helping themselves regain their prewar economic stability.

As a consequence he found that peoples abroad are not being required to produce to capacity and that their governments have not inaugurated obvious moves to improve business.

In short, both peoples and governments have come to look to America to keep them going, Baruch feels.

He found in England, for example, that the country could balance the budget if

40,000,000 more tons of coal were produced annually; instead, miners are working a short week.

In his opinion France appears to be recovering rapidly, but though in deadly fear of Russia and Germany the country is not requiring the full production of raw materials and manufactured goods to increase the national wealth.

Holland and Belgium appear to Baruch to be making the most progress. But they, too, are not working to full capacity.

In contrast, Baruch feels that American workmen and business are being taxed heavily to permit Europeans to continue to evade hard work demanded by a serious situation in which they have been engulfed by the drains of war years.

Baruch believes that a war with Russia can be averted.

He says the policy to be formulated by John J. McCloy, United State Military Governor and High Commissioner Designate in Germany, concerning the future of Germany will determine the question of peace with Russia.

Baruch believes that McCloy is an exceptionally able official and he is optimistic of the future in this respect because he feels that up until now America has not had a German policy.

REDS LACK TROOPS, HE FEELS

From his experience with the Atomic Commission Baruch does not believe Russia has got the atom bomb or the knowledge to make one.

Baruch also declares that Russia does not own the satellite nations and knows that all would revolt in event of war.

Russia, in his opinion, has not sufficient troops to maintain both satellite control and operate a war.

Reduction of Excise Taxes

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Tuesday, July 26 (legislative day of Thursday, June 2), 1949

Mr. O'CONOR. Mr. President, in the current discussion regarding reduction of excise taxes it is particularly important to have the considered views of representatives of the jewelry industry. In this large group of our business population the greater number come under the category of small business, about whose progress and well-being the Congress has been rightly concerned during the past few years.

In a letter released for publication Mr. Leon J. Engel, chairman, Jewelry Industry Tax Committee, has put forth the case for himself and associates in convincing fashion that deserves the attention of every Member of this distinguished body.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EXCISE TAX VIEWPOINT

To the EDITOR OF THE EVENING SUN.

SIR: As chairman of the Jewelry Industry Tax Committee, I must refute some statements that you made in your editorial of July 11 captioned "Cut expenses first." I feel that the people of Baltimore and Maryland are entitled to a true picture of the excise-tax situation so that they may raise their voices in protest against these unfair taxes.

You state that a reduction in excise taxes (and I assume that you mean a reduction to the prewar level) would mean a loss in revenue to the Government of $550,000,000. That figure, I claim, is very erroneous. A reduction in excises would serve as a real stimulant to business, and with a greater volume of business there would be an increase in income taxes, both personal and corporate, in payable taxes, etc. I contend that if there were a loss in collections of excise taxes that loss would be negligible, and there is a good possibility that collections from those taxes would increase.

A definite surge of public sentiment against excise taxes has arisen throughout the country, and it is high time that our men in Congress pay attention to the wishes of their constituents and disregard the administration's attitude toward tax reductions.

I am very happy to say that our Senators O'CONOR and TYDINGS and Congressmen FALLON, GARMATZ, MILLER, and BOLTON are definitely in favor of excise-tax relief. I do not know the attitude of the other Maryland Representatives.

I must take sincere exception to a sentence in the latter part of your editorial: "Until they [appropriations] have been brought into line with revenue, it is premature to talk about the excises." The time is not premature; 2 years ago corrective legislation should have been passed to reduce excises at least to prewar level.

The wartime rate was imposed not to raise revenue but to discourage business in those particular industries so that material, money, and manpower would not be diverted from the war effort. The Government's obligation was to remove that additional rate 6 months after the official termination of the war—and Truman declared the war officially ended in December 1947. Has Washington no sense of obligation to the people of this country?

I do hope that the voters of Maryland will express themselves in letters and telegrams to the men in Washington. We stand an excellent chance of gaining some relief during this session of Congress, but it can only be obtained if every interested person makes his voice heard in the Capitol.

LEON J. ENGEL,
Chairman, Jewelry Industry Tax Committee.
BALTIMORE, *July 12.*

Arming of Europe

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Tuesday, July 26 (legislative day of Thursday, June 2), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles regarding the arming of Europe, from the Evening Star of today, the first by David Lawrence, the second by Gould Lincoln.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CONGRESS TO EXPLORE WHOLE QUESTION OF STRATEGY IN PACT—QUIZ WON'T BE LIMITED TO QUANTITY OF ARMS TO BE SENT TO EUROPE

(By David Lawrence)

More than the mere question of quantity of arms to aid Europe is now to be debated by Congress. In fact, the whole question of what the strategy of the North Atlantic nations is to be toward the only potential enemy now in sight—Russia—is about to be explored.

For several months now the American people have been sold a bill of goods on armament. They have been told that the next war can be won in a blitz of about 30 days, that strategic bombing is the first line of offense, that land armies are virtually obsolete, that carrier aviation is really superfluous, and that unification means that hundreds of millions of dollars can be saved by putting most of the armament money into the United States Air Force.

But the American people now are going to begin asking questions. If the United States Air Force is right in the argument it has been propagandizing for several months, then why is it necessary to send $1,500,000,000 to European nations for armament, as President Truman now recommends? If the next war is to be a short war, why isn't the amount that has already been appropriated for armament by the United States quite sufficient?

BOMBER CLAIMS RECALLED

The intercontinental bomber has been exhibited as a plane that can fly from the United States to Europe and back and that can bring the enemy to its knees by carrying the atom bomb to 70 targets inside Russia.

So the problem of what the over-all strategy of America is to be in the next war comes into question.

If, indeed, land armies are really after all, of some use, then the argument in favor of building up several divisions among the members of the North Atlantic Pact on the Continent of Europe becomes pertinent. If, also, the intercontinental bomber is not what has been heralded and overseas bases are necessary on the Continent, then the United States needs to build airfields abroad and to arrange with the European members of the North Atlantic Pact to police and garrison such bases and to provide ground crews for their operation.

The moment the United States starts a flow of money for arms aid to Europe, that moment America becomes dependent on the whims of political governments abroad. At any time, if the Communist infiltration becomes effective, all the material and armament supplied to such nations could fall into the hands of the potential enemy. That's why the Navy proposed supercarriers as floating bases, independent of foreign politics.

INCONSISTENCIES SEEN

Speeches by W. Stuart Symington, Secretary of Air, and General Vandenberg, chief of the Air Force, have indicated that the Air Force can do the job by strategic bombing. Certainly under this line of reasoning, not a dollar of aid should be given to European nations for strategic bombing or for air power, inasmuch as the United States Air Force is ready to do everything that has to be done.

Surely it would be inconsistent to spend a lot of money to build up air power in European nations when at the same time the United States Navy and the Ground Forces of the United States Army are being denied money for air protection.

There is no way out of the dilemma except to reexamine the whole war plan to which $16,000,000,000 is being allocated. Sooner or later the question of how much armament expenditure the American economic system can stand will have to be decided.

If the European nations need armament aid in order to boost their morale, then a cut in the appropriation for armament for the United States alone would seem to be in order as some money is transferred to Europe. The whole job can be done for much less than $16,000,000,000 if what the Air Force enthusiasts say is true—namely, that all that is needed in the next war is air power, that land armies are obsolete, and that navies are important only as a cargo-carrying service across the Atlantic and perhaps to take care of the menace of submarines.

THE POLITICAL MILL—TRUMAN'S CALL FOR PACT AID PUTS CART BEFORE THE HORSE—TREATY ARTICLE PROVIDES FOR COUNCIL TO MAKE RECOMMENDATIONS FIRST

(By Gould Lincoln)

President Truman very properly recommended to Congress the implementation of the North Atlantic Security Treaty. But in the bill which he sent to Congress the President puts the cart before the horse. The treaty itself provides in article 9 for a council whose duty shall be the preparation of a long-range program for military defense against aggression. Instead of waiting for the creation of this council and for its recommendations, the President asks Congress for $1,450,000,000 to extend aid in building up the armed forces of other signatories to the pact—and asks carte blanche for the expenditure of the money. His word would be the last word in the distribution of arms, etc.

There is no use blinking the fact that ratification of the treaty by the United States meant that this country would begin arming the nations of western Europe. The ratification, too, was definite warning to Russia that if she moved against any of the signatories of the treaty, the United States would fight. Having won an impressive victory in the treaty vote, President Truman now runs the danger of minimizing that victory, of diluting it, by submitting a program which he must have known in advance would be seriously attacked and perhaps defeated.

IGNORED WARNINGS

During the Senate debate of the North Atlantic Treaty, again and again Senator VANDENBERG, of Michigan, the ranking Republican member of the Foreign Relations Committee, who strongly supported the treaty—and other proponents of the treaty—said definitely they were not committed to the program which the President has now transmitted to the Congress. The President and the State Department apparently ignored these warnings. They did not take Mr. VANDENBERG into their confidence, although he has been their chief ally in the bipartisan foreign policy, so successfully maintained up to now.

Almost in the twinkling of an eye, when the President's message and the accompanying bill, drafted by the State Department, were received at the Capitol, the opposition lowered the boom. Statement after statement was issued by Senators who had stood stanchly in support of the North Atlantic Treaty, including VANDENBERG; DULLES, of New York; SALTONSTALL and LODGE, of Massachusetts; GEORGE, of Georgia, indicating their opposition to the present program of arms assistance—at this time. One and all demanded that either all appropriations be delayed until after the still-to-be-created council, under the treaty, submits its recommendations or that what Senator VANDENBERG has referred to as an "interim" appropriation—presumably much smaller than the sum asked by the President—be made immediately.

The Vandenberg proposal for an interim appropriation—to be available before the council formulates a program—was made publicly Saturday. The administration was not ignorant of his stand. But the administration gave no heed to the warning. Almost it looks as though Mr. Truman was intent upon tossing the bipartisan foreign policy into the ocean.

WON'T GIVE "BLANK CHECK"

It is becoming more apparent that Congress does not intend, either, to give the President a blank check, with which he may do anything under the sun he desires. The issue of the atomic bomb and its secret is involved. Senator VANDENBERG, it is known, believes that a long-range program may give to various nations signatory to the pact various asignments. For example, Britain, with its seapower may be assigned the protection of much of the territory involved from attack by water. France eventually may become the main reliance for land forces. What would be more natural than to assign to the United States the atomic bomb for defense? And why should billions of dollars be expended to set up atomic bomb factories in European countries?

The President's message and the proposed legislation were disappointments to friends of the pact on Capitol Hill. If the administration sticks to these demands, not only will there be a long drawn-out fight but the administration stands in danger of a disastrous defeat. Such a defeat would not merely be a blow to the prestige of the President in this country, but it would be a set-back for the whole North Atlantic defense against Communist Russia's aggressive tactics.

Prompt readjustment of the program, with the President asquiescing, can improve the situation immensely.

Canadian Aid to Great Britain

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26 (legislative day of Thursday, June 2), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Finance Minister Says Canada Plans No More Loans to Britain; Sterling Area Problems Are Called Internal," published in the Wall Street Journal of July 23, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FINANCE MINISTER SAYS CANADA PLANS NO MORE LOANS TO BRITAIN; STERLING AREA PROBLEMS ARE CALLED INTERNAL

OTTAWA.—Canada does not intend to make any further loans to Britain, Finance Minister Douglas Abbott said yesterday on his return from international financial discussions in London.

"The problems of the sterling area are internal problems," said Mr. Abbott, "and temporary expedients such as loans are not the real answer to the problem.

"I think as far as Canada is concerned we have gone about as far as we can in the way of loans."

He said, however, that no further loan had been asked for. The essence of the British problem, said the Minister, is to get costs of production down and to raise productivity. The eventual solution must come from action of the British Government itself.

DECLINES COMMENT ON ACTION NEEDED

What action he felt the sterling area should take Mr. Abbott declined to say. He refused to discuss sterling devaluation, wages and hours standards in Britain, or the effect of increasing British expenditures on social services.

As to the accomplishments of the London meetings, Mr. Abbott said "I didn't expect too much from this conference. Situations of this kind cannot be settled by conferences."

"The real solution," he said, "lies in the expansion of trade rather than the imposition of restrictions." He said he had expressed regret that Britain had found it necessary to continue its policy of bilateral deals.

These, he said, resulted in Britain buying from nondollar countries at higher than world prices and they made more difficult the eventual return to normal multilateral trading.

"These bilateral deals increase the inflationary forces inside the restricted group," he declared, "and because they don't buy from dollar countries, they increase the deflationary forces outside the restricted group."

BRITISH PLANS WOULD AFFECT CANADA

As to the expressed determination of Sir Stafford Cripps, British chancellor of the exchequer, to cut imports of the sterling area by $700,000,000 next year, Mr. Abbott said the British Government might succeed in cutting United Kingdom imports by $400,000,000 as planned, but there might be more difficulty in getting other members of the group to cut their imports by the state figure of $300,000,000.

He said that Canada would certainly be affected by the British intention to curtail imports of lumber, nonferrous metals, and pulp products.

He was asked whether, as a consequence, Canada would gear its economy more with United States and less with Britain.

"Canada has to look to every source where she can look advantageously for markets and where we can get paid for our exports," he answered.

Conquest of Czechoslovakia by Russia

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26 (legislative day of Thursday, June 2), 1949

Mr. O'CONOR. Mr. President, the column by Marquis Childs in today's Washington Post, entitled "Czech Warning," is most timely and pertinent to the ECA debate now current in the Senate.

As Mr. Childs so well remarks "the West will ignore the object lesson of Czechoslovakia at its peril."

I ask unanimous consent that the column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON CALLING

(By Marquis Childs)

CZECH WARNING

The greatest single victory of Russian communism since the end of World War II was the conquest of Czechoslovakia. The de-

struction of the Roman Catholic Church now being systematically carried out is the final move in a campaign planned step by step in Moscow.

The West will ignore the object lesson of Czechoslovakia at its peril. Perhaps the best analysis of the downfall of the once democratic Czech republic has just been published and it is "must" reading for everyone, but especially for those who take the complacent view that the cold war is subsiding.

The author is Ivo Duchacek, now in this country, who was formerly in the Czech diplomatic service. After the liberation in 1945, he was chairman of the foreign relations committee of the Czech Parliament. His memorandum, called "The Strategy of Communist Infiltration: The Case of Czechoslovakia," is being circulated among top-policy planners here. It was put out by the Yale Institute of International Studies.

Czech democrats trying to resist Communist infiltration had a feeling of being abandoned by the West, Duchacek says. After the war ended, Great Britain and the United States seemed to have no positive policy. American forces in Europe were reduced so rapidly that American power appeared negligible.

Just across Czechoslovakia's border was the might of the Soviet Union, which seemed to be expanding without any restraints imposed on it. Czechs schooled in the Communist underground during the war and in Moscow were taking over key positions in the country in accord with a detailed plan worked out long in advance.

This came on top of the tragic blunders made by the western allies as the war was drawing to an end; conspicuously, the command to stop the victorious western armies short of Prague, leaving the capital to be liberated by the Russians. And always in the background was the bitter memory of Britain's appeasement of Nazi Germany at Munich.

"It was Soviet power on the one hand and the lack of an active western policy and of cohesion among western European nations on the other," Duchacek writes, "that were mainly responsible for the self-assurance of the Communist minority and for the feeling of helpless isolation on the democratic side. The sharp contrast between the active influence of the east and the hesitant policy of the west in Europe was not only the background, but the chief cause of Communist success in Czechoslovakia, of the number of opportunist fellow-travelers and of the democratic defeats. The checkmating of Soviet power thus seems the first condition of an awakening of democratic courage and resistance in Europe."

This, of course, has a direct bearing on what Congress does or does not do about President Truman's request for arms for western Europe. If, as some Senators insisted in the debate on ratification, the Atlantic Pact must not mean even a moral obligation, then in both western and eastern Europe they will take it as a sign that while America's intentions are good, there is no real determination to back up those intentions.

Those who believe in western democracy fail to realize, Duchacek points out, that communism is a revolutionary conspiracy employing every kind of stratagem, legal and illegal, to overthrow democracy. Communists in Czechoslovakia's coalition government after the war used their control of the Ministries of Interior and Agriculture to consolidate their power. The author emphasizes that in no European country was the Communist Party able to gain a majority in free elections.

Peasants who did not vote for the Communists out of fear of the Ministry of Interior, voted for them because of the Ministry of Agriculture's promises. These promises doubled and tripled those of the Agrarian Party. As one democratic leader bitterly expressed it:

"We have asked our peasants to vote for the philosophical heritage of Thomas Masaryk. They have voted for fertilizers instead."

Duchacek closes with a final note of warning to the West: "It is up to the Western World to develop a courageous political and economic program, a daring program of social reform. * * * It must be borne in mind that Communist seduction operates at its best when obvious social injustice or lack of respect for basic human rights is met by a negative or faltering attitude."

The Eighty-first Congress has ignored or sidetracked a long list of reforms called for by the party in power. Here, too, the world is watching to see whether good intentions have any relation to practical performance.

Steel Strike Must Be Averted

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1949

Mr. MADDEN. Mr. Speaker, H. B. Snyder, editor of Gary Post-Tribune, Gary, Ind., reflects the sentiment of the American Public when he expresses the hope that a settlement of the threatened steel strike can be brought about by the facts assembled by President Truman's fact-finding board.

LET'S HOPE FOR STEEL ACCORD AT CONFERENCE TABLE

Calling off of the proposed steel strike is exceptionally good news for Gary because a cessation in the production of steel would mean that the entire productive income of the city had been completely stopped. A stoppage of a few days would not have been of particular moment, but no one could have been assured that the strike would not have lasted for weeks.

Certainly a stoppage of that sort could not be contemplated with any high hopes by anyone in Gary. The history of long strikes is that no one is benefited. Even when a wage increase is won, the loss of weekly wages over a considerable period often is not made up by the increase for months or years. At the same time the business of the concern which pays the wages is lessened and the employer thereby becomes less able to pay wages.

It therefore should be the serious endeavor to settle the controversy at the council table rather than on the picket line. We realize that this is easier said than done for a settlement usually calls for a compromise. Yet when one speaks of a compromise in a labor dispute it means the employer grants some part of the demands while the workers merely compromise what they have asked. It is possible some companies cannot always give something more.

It would, of course, be highly desirable for Gary workers to receive a wage increase. What helps them helps the community. Higher wages, if they do not raise prices to the point where production declines, bring about a higher standard of living and that is part of the American system. Nevertheless, it is conceivable that the employer might be right and that he cannot afford to pay more.

In this case the CIO hired the services of a former New Deal economist, Robert Nathan, who reported that his studies indicated the companies could pay 20 cents more an hour with the retention of June's prices, as long as operations remained at 90 percent of capacity, and still have profits equal to the first quarter's. Nathan's report also said the corporation's profits are so large that it should not only increase wages but also cut prices. It is Nathan's contention that the cost of raw materials has fallen enough to make possible the wage increase.

Not being economists, we have no way of agreeing or disagreeing with these conclusions, but we have no doubt that other economists will be heard from and they won't all agree with Nathan. That is one way economists and statisticians have, so we can't get too excited over the Nathan findings.

But assuming that Nathan is right in his facts, it does not necessarily follow that the profits of steel companies will remain where they are. For even steel is now in a buyer's market. The day of production of anything for any price is over and steel is feeling the effects of the new day.

Thus what Nathan says about the future is supposition. His facts are from the recent past, but the steel industry must deal with developing conditions day by day in its search for markets. And so even if its raw materials are cheaper, there is no basis for assuming that profits will be what they have been. What a lot of people fail to understand about business, any kind, is that the conditions under which it operates may show vast change within 24 hours.

However, now that the controversy is to be presented to the President's board, the facts should be made evident in the near future. Let us hope a settlement can be made on those facts and the threat of a Nation-wide steel strike eliminated at a time when the country faces all the other uncertainties that it ought to be bothered with for the present.

Constitution of the Chinese Communist Party

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 21, 1949

Mr. JACKSON of California. Mr. Speaker, for many years past there has been a widespread ignorance of the Chinese Communist. The Communists of other nations, together with their fellow travelers and professional apologists have aided and abetted a world-wide campaign to picture the Chinese Marxist as something different than the real thing. So it was that many people considered the Chinese Red nothing more than a simple agrarian reformer, quite unlike his revolutionary brethren in other countries.

In his translation of the constitution of the Chinese Communist Party, Prof. H. Arthur Steiner, of the University of California at Los Angeles, has rendered a great service to a public understanding of the goals and the aspirations of the Communists in China.

Marxists are as alike as peas in a pod, whether they go about their party-disciplined tasks within the shadow of the Great Wall or the shadow of Judge Medina's court in New York City. The words are the same, the phrases are the same, the deeds are the same, the goal is the same.

The Chinese Communist is a Marxist Communist. His leaders are and have for many years past been advocates of world revolution under the leadership of Moscow. Mr. Steiner's translation should serve once and for all time to lay the ghost of the simple agrarian reformer concept, and to paint the Chinese Communist in his proper color, Russian Red.

CONSTITUTION OF THE CHINESE COMMUNIST PARTY, ADOPTED BY THE SEVENTH NATIONAL PARTY CONGRESS, YENAN, JUNE 11, 1945

(Translated under the supervision of, and edited by H. Arthur Steiner, professor of political science, University of California, at Los Angeles)

INTRODUCTORY NOTE

This translation of the constitution of the Chinese Communist Party, in the revised form in which it was adopted by the seventh national congress of the party in Yenan (Shensi Province) on June 11, 1949, is based on the Chinese text given in Liu Shao-ch'i, Report on the Revision of the Party Constitution [in Chinese], third edition, Hong Kong, 1948. Liu Shao-ch'i, a leading member of the central committee of the Chinese Communist Party, and vice chairman of its central political bureau, was the party official chiefly responsible for preparing and justifying the revision.

Most of the geographic terms employed are those used in customary Chinese public practice, except for region, that is, regional area, a term which relates to the structure of the so-called liberated areas, which may be constituted in such a way as to have jurisdiction over portions of two or more adjoining provinces: for example, the Shensi-Kansu-Ninghsia border area, or the Hunan-Shensi-Hupeh liberated area. The boundaries of these regions constantly shift, particularly in proximity to combat areas; they are frequently redivided or amalgamated according to the situation. In party practice, the region is the analog of the province.

No objection is raised to the reproduction of this translation, in whole or in part, and without special permission, if the source is indicated.

H. A. S.

LOS ANGELES, CALIF.,
June 27, 1949.

GENERAL INTRODUCTION

The Chinese Communist Party is the organized vanguard of the Chinese working class, the highest form of its class organization. Standing for the interests of the Chinese nation and people, its task in the present stage is to struggle for the realization of new democracy in China. Its ultimate aim is the realization of communism in China.

The Chinese Communist Party is based on the principles of Marxism-Leninism and the combined principles derived from the practical experience of the Chinese revolution—the ideas of Mao Tse-tung—as the guiding principles of all its work; it denounces any tendencies toward formalism and empiricism. The Chinese Communist Party is based on the dialectical and historical materialism of Marx, accepting with a critical attitude its historical heritage both in China and in other countries, and denouncing any idealistically or mechanistic materialistic conception of the world.

Because present Chinese society, except in the new democratic liberated areas, remains semicolonial and semifeudal; because the dynamic forces of the Chinese revolution are the working class, the peasant class, the petty bourgeoisie and other democratic elements; because a powerful Chinese Communist Party is already in existence; and because of present international conditions, the Chinese revolution in the present stage must take the form of a new bourgeois-democratic revolutiton—that is, an anti-imperialist, antifeudal, new democratic revolution of the masses under the leadership of the proletariat. This revolution has extensive allies at home and abroad. Therefore, the tasks of the Chinese Communist Party in the present stage are: Internally, to organize and unify Chinese workers, peasants, petty bourgeoisie, intelligentsia, and all anti-imperialist and antifeudal elements and national minorities on its side; and, externally, to unite with the world proletariat, with all oppressed peoples, and with all those nations which treat us with equality—to emancipate the Chinese nation from foreign imperialist aggression, to liquidate the feudal oppression of the masses, to establish an independent, free, democratic, united, and prosperous and strong new democratic federated republic based on the union of all revolutionary classes and national liberal allies, and to struggle for the realization of world peace and progress.

In the future stage of the Chinese revolution, after the complete victory of the national democratic revolution, the task of the Chinese Communist Party will be to struggle, by necessary steps according to the requirements of China's social and economic development and the will of her people, for the realization of socialism and communism.

In China, a semicolonial and semifeudal country, with a vast area and a huge population, but not yet a unified country, there is on the one hand, a heroic and bold revolutionary tradition among the masses of the people, particularly the workers and the peasants; but, on the other hand, there are formidable obstacles along the revolutionary road. Because of these conditions, the Chinese revolution is unbalanced, its duration is prolonged, and the character of the revolutionary struggle, which must, for a very long time, find primary expression in armed struggle, is complicated. Before the victory of the revolution in the large cities, it will be preeminently important to consolidate the villages as a revolutionary base and it will also be necessary for the party to undergo a long period of work among the popular masses. In view of all the characteristics of the Chinese revolution, the Chinese Communist Party must therefore be very bold, well experienced and always alert to mobilize and organize the great masses to overcome all difficulties and avoid all dangers in its path so it may march toward its goal while continually developing its own strength.

In its revolutionary struggle, the Chinese Communist Party must endeavor to establish itself as the core of all revolutionary mass organizations and of the revolutionary organizations of the nation. It must proceed to carry on a solemn struggle against everything of internal or external origin which threatens to undermine the unity of the working class, the alliance of all revolutionary classes, and other revolutionary tasks.

The Chinese Communist Party cannot tolerate the existence within its ranks of right or left opportunism. It must wage an effective unhesistant struggle within the party to liquidate opportunists, surrenderists and adventurists, and must expel from party membership all those who are obstinate in their errors in order to maintain unity among the rank and file.

The Chinese Communist Party should not conceal its own mistakes or the errors committed in its work. It should use the methods of criticism and self-criticism constantly to rectify its own mistakes and errors, and should educate its own party members and staff to correct their own mistakes speedily. It objects to false pride, to being afraid to acknowledge its own mistakes, and to fear of criticism and self-criticism.

Chinese Communist Party members must, with wholehearted spirit and will, serve the Chinese people in close cooperation with the masses of workers, peasants and other revolutionary elements, and must constantly enlarge and intensify this cooperation. Every party member must realize the harmony of interests between the masses and the party and the necessity of being responsible to the party and the people, must listen carefully to the voice of the people to understand their pressing demands, and must help them become organized to struggle for their attainment. With revolutionary spirit, every party member must be determined to learn from the masses, while at the same time tirelessly educating them and developing their mass consciousness. The Chinese Communist Party must constantly guard against the danger of being separated from the masses and must prevent and liquidate within its rank and file such incorrect tendencies as "tailism," dictation, isolationism, bureaucracy, militarism and any other cause of its separation from the masses.

The Chinese Communist Party is a unified, combat organization, built on the principle of democratic centralism, and based on the self-consciousness of its members. All party members must observe its discipline. The strength of the Chinese Communist Party rests on its solid organization, unified will, and integral action. The party cannot tolerate any internal action which deviates from its program and constitution or is detrimental to discipline; it cannot tolerate any demand for autonomy within the party, factionalism, or equivocal lip service which pretends to obey the party while opposing it in practice. The Chinese Communist Party must constantly purge from its ranks those who violate the program, constitution, and discipline of party membership, if they are incorrigible in their mistakes.

The Chinese Communist Party demands that every party member carry on his work positively, in the spirit of self-sacrifice, so that its program and measures for the complete liberation of the Chinese nation and the Chinese people will be realized.

CHAPTER I. MEMBERSHIP

ARTICLE 1. Those who accept the program and constitution of the Chinese Communist Party, participate in the activities of its organizations, comply with its regulations, and pay membership fees may become members of the Chinese Communist Party.

ART. 2. Members of the party shall perform the following duties:

(a) Endeavor to raise the degree of their consciousness and study Marxism-Leninism and the basic ideas of Mao Tse-tung.

(b) Observe party discipline strictly, participate positively in the political life of the party and in domestic revolutionary movements, carry out resolutely the party's policies and the decisions of party organs, and struggle to overcome all internal and external obstacles detrimental to the interests of the party.

(c) Serve the masses, attain unity between the party and the masses, respond speedily to the needs of the masses, and explain the policies of the party to the people.

(d) Observe exemplarily the disciplines of the revolutionary government and revolutionary organizations, be proficient in their own affairs, and set examples for the people in all revolutionary undertakings.

ART. 3. Members of the party shall enjoy the following rights and privileges:

(e) Participation in free and practical discussions on the enforcement of the policies of the party, either in party meetings or in party publications.

(b) The right to vote and hold office within the party.

(c) Submission of suggestions or proposals to any organ of the party, from the lowest to the highest.

(d) Criticism of the work of any member at party meetings.

ART. 4. Persons below 18 are not eligible for party membership.

All persons seeking admission into the party shall comply with the admission procedure set forth in the following sections:

(a) Applications for membership by workers, coolies, farm laborers, poor peasants, urban paupers and revolutionary soldiers shall require the recommendation of two regular party members. The application shall be discussed and decided upon at a meeting of the party cell and be referred to the district party committee, or corresponding committee, for approval. New members shall undergo a probationary period of 6 months before they become regular members.

(b) Applications for membership by middle peasants, salaried employees, intellectual elements and free professionals shall require the recommendation of two regular party members, one of whom must be a regular member of one year's standing. After the decision of the party cell meeting, the application shall be referred to the district party committee, or corresponding committee, for approval. The probationary period for such new members shall be 1 year.

In areas where the revolution has only recently been developed, the Central Committee or its representative organ, or the provincial party organization or regional party committee, may establish temporary regulations with regard to the qualifications of sponsors and the probationary period of new members as provided in this and the preceding section.

(c) Applications for membership by persons who have any other social background than provided for in the two preceding sections shall require the recommendation of two regular party members, one of whom must be a regular member of three years' standing. The application shall be discussed and decided upon at a party cell meeting and approved by the county party committee, municipal party committee, or other committee corresponding to the county party committee. The probationary period for such members shall be 2 years.

(d) Applications for membership by persons who have withdrawn from another party in which they were ordinary members shall require the recommendation of two regular party members, one of whom must be a member of 3 years' standing. The application shall be discussed and decided upon at a party cell meeting and approved by the county party committee, or its equivalent. If the applicant was a responsible officer of his former party, his application shall require the recommendation of two regular party members, one of whom must be a member of 5 years' standing. The application shall be discussed and decided upon at a party cell meeting and be approved by the provincial party committee, or its equivalent. (If the applicant was an important responsible officer of his former political party, his application requires the approval of the Central Committee.) The probationary period for such new members shall be 2 years.

ART. 5. Under special circumstances, committees of the county or higher level, or their corresponding organizations, shall have authority to decide directly on the membership of individual applicants.

ART. 6. The sponsors shall be responsible for representing faithfully to the party the ideology, character, and background of the applicant; and before making their recommendation they shall carefully explain to the applicant the constitution, program, and policies of the party.

Before deciding upon the membership application, the party committee shall designate a working party member to interview the applicant carefully, and no decision shall be made without appropriate investigation.

ART. 7. The purpose of the probationary period is to provide preliminary instruction for probationary members and, for the security of the party organization, to observe the political character of such members in the light of their activities.

The duties and rights and provileges of probationary members are similar to those of regular members, except for the right to vote and hold office.

ART. 8. The promotion of probationary members to the status of regular members at the termination of the probationary period shall be decided upon at the party cell meeting and approved by the party committee with which the original application was filed, or by the higher party committee, or their corresponding organizations.

The probationary period may be lengthened or shortened by the appropriate party committee.

If observation of the probationary member indicates that he is not qualified to join the party, he may be dismissed.

ART. 9. The seniority of a member is determined by the date on which he acquires the status of a regular member.

ART. 10. If a regular or probationary member is transferred from one party organization to another, he shall be considered a regular or probationary member of the new organization.

ART. 11. Regular or probationary members who wish to withdraw from membership shall make formal application to the party cell, which will be acted upon at a cell meeting and reported to the higher party committee for its records.

ART. 12. A regular or probationary member of the party who, without justifiable reason, has failed to participate in the work of the party continuously for a period of 6 months, or to carry out the work assigned him, or to pay membership fees, shall be considered to have voluntarily withdrawn from party membership; the revocation of his membership shall be decided upon at a meeting of the party cell and reported to the higher party committee.

ART. 13. The expulsion of regular or probationary members shall take effect after the question has been carefully discussed and decided upon at the party cell meeting and approved by the higher party committee.

Under special circumstances, party committees higher than the cell may decide upon the expulsion of regular or probationary members, subject to the approval of the next higher committee.

CHAPTER II. THE STRUCTURE OF PARTY ORGANIZATION

ART. 14. The party structure is organized on the principle of democratic centralism. The principle of democratic centralism is centralism based upon democracy. Such democracy is expressed through centralized leadership in accordance with the following principles:

(a) The directing organs of all levels of the party shall be established through elections.

(b) The directing organs of all levels of the party shall submit periodic reports to the organizations by which they are elected.

(c) Individual members shall obey the organization of the party; the minority shall obey the majority; lower organizations shall obey higher organizations; all organizations shall uniformly obey the central organization.

(d) Party discipline shall be strictly observed and party decisions shall be enforced unconditionally.

ART. 15. Organizations of the party shall be established on the basis of the localities or branches of production to which the members belong.

The organizations which take over-all charge of party activities in certain localities shall be deemed higher than the individual party organizations within the locality.

ART. 16. The system of party organization shall be as follows:

(a) On the Chinese national level, there shall be a national congress of party delegates, a central committee, and a national conference on party representatives.

(b) On the provincial, regional, and local levels, respectively, there shall be: Provincial congresses of party delegates, provincial party committees, and provincial conferences of party representatives; regional congresses of party delegates, regional party committees, and regional conferences of party represenatives; and local congresses of party delegates, local party committees, and local conferences of party representatives.

(c) On the county level, there shall be county congresses of party delegates, county party committees, and county conferences of party representatives.

(d) On the municipal level, there shall be municipal congresses of party delegates, municipal party committees, and municipal conferences of party representatives.

(e) On the urban or rural district level, there shall be district congresses of party delegates (or district general party meetings), district party committees, and district conferences of party representatives.

(f) In each factory, mine, village, enterprise, street, military unit, public organization, or school, there shall be a general party meeting, a party cell committee, and a conference of party cell representatives.

ART. 17. The supreme authority at the various levels of party organization shall be: In the party cell, the general meeting; in districts, counties, municipalities, localities, regions, and provinces, the congress of party delegates; for the whole party, the national congress of party delegates. When these are not in session, the committees elected by them are the supreme authorities at the various levels of party organization.

ART. 18. The directing organs at the various levels of the party organization shall be established through election, where possible. If it is impossible, because of environmental or other restrictive conditions, to hold general meetings for direct elections, the directing organs may be elected by the conferences of party representatives, or be appointed by the higher authorities.

ART. 19. The election of party committees at the various levels shall be conducted according to nomination lists by secret ballot or open vote. The right of electors to criticize or challenge any of the nominees is guaranteed.

ART. 20. Party committees at the various levels may call staff meetings or meetings of active members to transmit and discuss important decisions of higher party organs or to study or prepare for their own work.

ART. 21. All members of the party may participate in proceedings and discussions and may freely express their own ideas on any party policy or problem at meetings within the structure of the party organization, but after decisions have been adopted they shall be obeyed and enforced unconditionally.

ART. 22. The directing organs at the various levels or party organizations shall conduct their activities in accordance with the principle of intraparty democracy so that the revolutionary positiveness and constructiveness of its members may be developed and party discipline strengthened. Party discipline shall be enforced self-consciously rather than mechanistically, so that the directing organs may perform their functions effectively and the system of centralism may be solidly constructed on a democratic basis. But the directing organs of the various levels of party organization, in performing their functions, shall not violate the principle of centralism within the party. Democratic criticism within the party which is legitimate and beneficial for centralized action, shall not be misconstrued as anarchistic deviation (such as autonomy and extreme democracy).

ART. 23. To insure that the principle of intraparty democracy shall be enforced in a manner helpful to the undertakings of the party; that there will be no danger of weakening combat morale or solidarity of the party in case of emergency; that there will be no possibility for any conspirator, renegade, or factionalist to utilize the principle of democracy to injure or divide the activities of the party; and that no small minority will be able to take advantage of the unawareness in thinking of the overwhelming

majority to attain its private ends, the broad and general consideration, discussion and examination of party policies on the national or local scale shall be conducted only under the following conditions:

(a) They shall be conducted with sufficient notice and under such objective conditions that there is no sense of strain;

(b) They shall be based on the decisions of the central committee or of local directing organs of the party; and

(c) They shall be conducted only on the proposal of more than one-half of the lower organizations, or on the proposal of the higher authority.

ART. 24. Party organizations at the various levels shall insure that all publications under their direction propagate the resolutions and policy decisions of the central or higher organizations.

ART. 25. Prior to their determination by the national authorities, local and other party organizations, or their responsible officers, shall discuss questions of a national character only among themselves, or submit their proposals respecting such questions to the central authority. In no case shall they make a public announcement of their views or actions. Local party organizations shall have the right to make decisions concerning questions of a local character, so long as they are not inconsistent with the decisions of the central or higher organizations.

ART. 26. The establishment of any new party organization must be approved by its immediately higher authority.

ART. 27. To facilitiate the operations of local party organizations, the central committee may, according to the requirements of the situation, establish a central bureau or central branch bureau with jurisdiction over several provinces or regions. Such central bureau or central branch bureau is the representative organ of the central committee; it shall be appointed by, and be responsible to, the central committee. These representative organs of the central committee may be dissolved or amalgamated whenever they are found to be no longer necessary.

ART. 28. To facilitate the conduct of their routine work, party committees of the various levels may, according to the requirements of the situation, establish different departments or committees for the administration of party affairs, propaganda and education, military and economic matters, or mass movements. Such departments or committees shall perform their respective functions under the direction of the party committees of the various levels.

To perform certain temporary or special functions, party committees of the various levels may establish appropriate temporary working committees or departments.

CHAPTER III. THE CENTRAL ORGANIZATION OF THE PARTY

ART. 29. The National Congress of Party Delegates shall be convened by the central committee. Ordinarily, it shall meet every 3 years; but under special circumstances the central committee may either postpone it or call it in advance.

The central committee shall call the National Congress of Party Delegates at the request of local party organizations representing one-half of the membership of the party.

The National Congress of Party Delegates, to be constitutional, must be attended by delegates representing one-half of the membership of the party.

The number of delegates to the congress, and the procedure for their election, shall be determined by the central authorities.

ART. 30. The national congress of party delegates shall have the following functions:

(a) To hear, deliberate upon, and approve the reports of the central committee or other organs of the central organization;

(b) To adopt or amend the program and constitution of the party;

(c) To determine the basic guiding principles and policies of the party; and

(d) To elect the central committee.

ART. 31. The number of members of the central committee shall be determined, and they shall be elected by, the national congress of party delegates. Vacancies in the central committee shall be filled by reserve members in order of seniority.

ART. 32. The central committee shall represent the party in maintaining relations with other political parties or groups, and shall be responsible for establishing all of the organizations of the party, directing their activities, and allocating financial and human resources.

ART. 33. Plenary sessions of the central committee shall be convened by the Central Political Bureau every 6 months. The Central Political Bureau may either postpone or call them in advance, as the situation warrants. Reserve members of the central committee shall have the right to speak at plenary sessions.

ART. 34. The Central Political Bureau, the central secretariat, and the chairman of the central committee shall be elected at the plenary sessions of the central committee.

Between plenary sessions of the central committee, the Central Political Bureau shall be the directing organ of the party and shall direct all its work.

The central secretariat shall perform the routine functions of the central authorities under the Central Political Bureau.

The chairman of the central committee shall serve concurrently as the chairman of the Central Political Bureau and the central secretariat.

The central committee, according to the requirements of the party work, shall establish departments of organization, propaganda, and other departments; the military affairs committee, the party publication committee, and other committees; and other working organs to administer the different functions of the central authorities under the direction and supervision of the Central Political Bureau, the central secretariat, and the chairman of the central committee.

ART. 35. In the intervals between party congresses, the central committee may call national conferences of party representatives from various area party committees for the consideration and determination of current questions of party policy.

ART. 36. Members of the national conference of party representatives shall be elected at a meeting of the national committee, which shall consist of the provincial, regional, and other party committees immediately subordinate to the central committee. The number of representatives to the conferences shall be determined by the central authorities.

The quorum of the national conference of party representatives shall consist of representatives of more than one-half of the area party committees.

ART. 37. The national conference of party representatives shall have the power to remove regular or reserve members of the central committee who are found to be incapable of performing their duties, and to elect part of the reserve members of the central committee. But the regular or reserve members removed from, and the new reserve members elected to, the central committee by such conference shall not exceed one-fifth the total number of regular and reserve members of the central committee at one time.

ART. 38. The resolutions adopted by the national conference of party representatives, and the removal or election of regular or reserve members of the central committee by it, shall require the approval of the central committee.

After approval by the central committee, the resolutions adopted by the national conference of party representatives shall be enforced by all party organs.

CHAPTER IV. PARTY ORGANIZATIONS IN PROVINCES AND REGIONS

ART. 39. Provincial or regional congresses of party delegates and provincial or regional party committees shall be under the direction of the central authorities or their representative organs.

ART. 40. Provincial and regional congresses of party delegates shall be called every 2 years by the provincial or regional party committees. Under special circumstances, the provincial or regional party committees may either postpone or call them in advance. But they must be convened by the provincial or regional party committees if more than one-half of the lower party organizations request, or on the proposal of the central committee or its representative organ.

The number of members of the provincial or regional congresses of party delegates, and the procedure for their election, shall be determined by the provincial or regional party committees, with the approval of the central authorities or their representative organs.

ART. 41. Provincial or regional congresses of party delegates shall hear, deliberate upon and approve the reports of the provincial or regional party committees or other party organs of the province or region; they shall deliberate upon and determine the problems and activities of the provincial or regional organizations, and shall elect the provincial or regional party committees and the delegates to the national congress of party delegates.

ART. 42. The standing committee, secretary, and deputy-secretary of the provincial or regional party committee shall be elected at the plenary session of the provincial or regional party committee and shall administer its routine affairs. Secretaries and members of the standing committees of provincial and regional party committees must be party members of 5 years' standing and must be approved by the central authorities.

Plenary sessions of the provincial or regional party committees shall be held at least every 6 months.

ART. 43. Provincial or regional party committees shall enforce within their jurisdiction the resolutions adopted by the congress of party delegates and the central authorities, and shall establish all party organs, allocate the human and financial resources of the party, and direct the activities of party nuclei in nonparty organizations outside the party.

ART. 44. In the intervals between congresses, the provincial or regional party committees may summon the representatives of local, county, or other party committees directly under them to provincial or regional conferences of party representatives to deliberate upon and determine various questions affecting the work within their jurisdiction.

Provincial or regional conferences of party representatives shall have the power to remove and elect a part of the members of the provincial or regional party committees, but such number shall in no case exceed one-fourth of the total.

ART. 45. Resolutions adopted by provincial or regional conferences of party representatives, and the removal or election of members provincial or regional party committees by them, shall require the approval of the provincial or regional party committee.

CHAPTER V. PARTY ORGANIZATIONS IN LOCALITIES, COUNTIES, MUNICIPALITIES, AND DISTRICTS

ART. 46. Party organizations and their working methods in localities, counties, municipalities, and districts are similar to the organization and working methods of party organizations in the provinces and regions as set out in the preceding chapter. They shall be subject to the direction of their respective higher authorities.

ART. 47. Congresses of the party delegates in localities, counties, municipalities, and districts shall be held every 2 years. In in-

tervals between congresses, conferences of party representatives may be held.

ART. 48. Local and county party committees shall hold plenary sessions at least four times yearly. Municipal and district party committees shall hold plenary sessions at least monthly.

Members and secretaries and deputy secretaries of local, county, municipal, and district party committees shall be approved by the higher party organization. Secretaries of local, county, and municipal party committees shall be elected from party members of more than 3 years' standing. Secretaries of district party committees shall be party members of more than 1 year's standing. In areas where the revolution has only recently developed, the regulations concerning the seniority of members to hold office may be modified with the approval of the provincial or regional party committee.

CHAPTER VI. THE BASIC ORGANIZATIONS OF THE PARTY

ART. 49. Party cells are the basic organs of the party.

A party cell shall be established in a factory, mine, village, enterprise, street, military unit, public organization, school, etc., where there are three or more party members. Where the party members thereof are less than three, they shall join the nearest adjoining party cell.

The establishment of party cells shall be approved by the county or municipal party committee.

ART. 50. Where a party cell has a relatively large membership, the members shall be organized into sections based on a natural residential or vocational basis. Each section shall elect a leader; a deputy leader shall be elected where necessary.

Where there are more than 50 regular and probationary members in a village, or more than 100 regular or probationary members in a factory, public organization, or school, a principal party cell may be established, under which members shall be organized into a number of branch party cells according to their residence, vocational affiliation, branch, or shift. Branch party cells shall enjoy the same privileges as ordinary party cells.

ART. 51. In large villages, factories, public organizations, and schools where there are more than 500 regular and probationary members, there may be established, through election, with the approval of the provincial or regional party committee, a village committee, factory committee, public organization committee, or school committee, under which members shall be organized into different party cells according to residence, vocational affiliation, branch, or shift.

ART. 52. Party cells shall unite the masses closely with the party.

Party cells have the following functions:

(a) To carry on propaganda and organizational work among the masses with a view to enforcing party principles and the decisions of higher party organs.

(b) To reflect constantly to the higher party authority the aspirations and demands of the masses, to pay close attention to the political, economic, and cultural life of the masses, and to organize them for the solution of their problems.

(c) To instruct new members, to collect party membership fees, to examine and decide upon admissions to membership, and to enforce party discipline among the party members.

(d) To educate the party membership and organize members for learning.

ART. 53. At its general membership meeting, the party cell shall elect the cell committee, which shall administer its routine functions. The tenure of the party cell committee shall range from 6 months to 1 year. The number of members of the party cell committee shall be determined by the size of the party cell membership, with a minimum of 3 and a maximum of 11. A secretary shall be elected by the committee; a deputy-secretary may be elected in case of necessity. The distribution of functions among other members of the committee shall be determined according to practical needs.

Where a party cell has no more than 7 members, there shall be elected only a secretary, or a secretary and deputy-secretary, and there shall be no party cell committee.

CHAPTER VII. UNDERGROUND ORGANIZATIONS OF THE PARTY

ART. 54. In areas where it is impossible for the party to maintain legal existence or conduct open activities, the structural forms and working methods of the underground organizations shall be especially prescribed by the central authorities in directives based on the party constitution. Where the provisions of this constitution cannot be applied literally to the structural forms and working methods of underground organizations, they shall be liberally applied.

ART. 55. Underground organizations of the party shall be very careful in considering the admission of new members. New members shall be required to comply only with those admission procedures which are practicable under secret conditions.

CHAPTER VIII. CONTROL ORGANS OF THE PARTY

ART. 56. A central control committee and local control committees may be established whenever the central committee deems it necessary.

ART. 57. The central control committee shall be elected by the plenary session of the central committee. All local control committees shall be elected at the plenary sessions of the local party committees with the approval of the higher authority.

ART. 58. The duties and powers of the central and local control committees shall be to decide upon or review punishments and conduct prosecutions against party members.

ART. 59. The control committees of the various levels of party organization shall perform their functions under the direction of the various party committees.

CHAPTER IX. PARTY ORGANIZATIONS OUTSIDE THE PARTY

ART. 60. In Government organizations, labor unions, peasant's unions, cooperatives and other mass organizations in which three or more party members hold responsible positions, there shall be established a party nucleus. The duty of the party nucleus shall be to direct the work of the members in the leading organ for the purpose of strengthening the party's influence and carrying out the party's program and work.

ART. 61. There shall be a secretary in each party nucleus. Where the party nucleus has 10 or more members, a party nucleus staff section may be established to conduct the routine work. The party nucleus staff section and secretary are designated by the party committee to which the nucleus belongs.

ART. 62. Party nuclei in nonparty organizations at the various levels shall be under the direction of the corresponding party organizations, and shall enforce their decisions. Leading elements of the party nuclei may be permitted to participate in the party conferences of the various levels.

CHAPTER X. REWARDS AND PUNISHMENTS

ART. 63. Party members and party organizations which in the performance of their tasks, display their complete loyalty to the interests of the party and the people, set themselves as models in maintaining the discipline of the party and of the revolutionary governments, manifest distinguished and constructive resourcefulness in executing the party program and the policies and decisions of the central and higher authorities in the course of party work, and win over the sincere support of the popular masses, shall be rewarded.

ART. 64. Those which fail to execute the resolutions of the central and higher authorities, or violate the constitution and discipline of the party organizations of the various levels, may be punished, according to the concrete situation, in the following ways:

(a) The punishments to be imposed on party organizations shall be: Censure; partial reorganization of the directing organ; dissolution of the directing organ and appointment of a temporary directing organ; and dissolution of the whole organization and the reregistration of its members.

(b) The punishments to be imposed on individual party members shall be: personal advice or warning; public advice or warning; cancellation of assigned duties; subjection to party surveillance; and expulsion from party membership.

ART. 65. If a regular or reserve member of the central committee commits any act which seriously offends against party discipline, the central committee shall have the power to deprive him of his regular or reserve membership; but the expulson of regular members shall require a two-thirds vote of the central committee.

ART. 66. When punishment is imposed on a party organization or an individual party member, the party organization or member shall be informed of the reasons for the punishment. If the party organization or member so punished has any objection to the punishment, proceedings may be instituted and petition may be filed for reconsideration and appeal to the higher authority. The party committees of the various levels shall transmit such petitions without delay, and in no case shall they be withheld.

ART. 67. Expulsion from party membership is the most severe punishment within the party. In deciding upon and approving such punishment, party organizations of the various levels shall maintain a punctilious position in hearing the case of the appellant and in analyzing the offense in the light of the circumstances under which it was committed.

ART. 68. The positive aim of reward and punishment for party members is to educate them and the masses, including the members rewarded or punished. It is by no means intended to encourage exhibitionism or to enforce any principle of mere punitivism within the party. To reward party members who have distinguished records is to create good practices within the party and to set up models among the members. To criticize or impose punishment upon members who commit offenses is a method of correcting past errors and guarding against future errors, of curing malfeasance and saving regenerate individuals.

CHAPTER XI. FINANCES

ART. 69. The revenues of the party are derived from membership fees, profits from all kinds of production and enterprises operated by the party, and outside contributions.

ART. 70. Membership fees for regular and probationary members shall be determined and enforced by the provincial or regional party committees, or other corresponding organs.

United States and State Water Policies

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend by remarks, I wish

to include the following letter to the editor appearing in the Los Angeles Times, Monday, June 6, 1949:

UNITED STATES AND STATE WATER POLICIES

Re "Great Issue in Water Policy" editorial, May 25.

Indeed it is, as you say, "imperative that the public become aware of the vital issues involved."

The experience gained by Los Angeles in supplying its needs with water from Owens Valley and the Colorado River and the principles invoked by law to collect the cost of such public improvements provide a valuable record. Most of this public work was accomplished without any State or Federal subsidy.

Until about 1935, all important irrigation improvements in California were built by local governments, irrigation districts formed by local initiative, to which the State delegated power to collect the cost of dams, canals and other improvements from the holders of land benefited by the irrigation systems by way of an annual direct tax or assessment levied on the land and which tax must be paid irrespective of how much water is used.

The Imperial irrigation district is one of the more than 100 irrigation districts authorized under this venerable State law (Stat. 1897, p. 254, as amended).

These districts are in no respect private companies, the Supreme Court having ruled that all of their water rights or other propery is property "owned by the State," and that all land within their boundaries, together with its rents, issues and profits, is a public trust, dedicated to the uses and purposes of the law. (See Cal. 2d 365/389; 131 Fed. (2d) 513.)

Your editorial refers to the contract between the Imperial district and the Bureau of Reclamation to pay the cost of building the All-American Canal advanced by the Federal Government. But when this district wanted to flout the applicable State laws, governing its powers, duties and responsibilities, it sought refuge under a Federal law (11 USCA 401-403), which it now says governs its fiscal affairs, regardless of applicable State law and decisions.

In short, when State governmental agencies want to violate applicable State laws, they now contend that Congress, by simple statute, can allow them to flout State law and that the Federal power governs, but only when influential economic interests want the Federal power to be paramount. The fact that where the Federal power exists no State can increase or diminish the exercise of the power is settled. Where Federal power exists, it is paramount.

But when money collected from taxpayers in all the States is put into a Federal project, such as the Central Valley project, no interest is charged and Congress is not allowed to collect the cost of the project from the holders of the benefited land, like our irrigation districts have traditionally done in California.

This interest-free Federal financing reduces the cost of water to landholders. To prevent monopolization of this subsidized water, Congress in 1902 prohibited its use on more than 160 acres in one ownership. At least a dozen drives have since been launched to repeal this water limitation provision, which have been defeated in both Republican and Democratic-controlled Congresses. It was not Secretaries Ickes or Krug, but President Theodore Roosevelt and his contemporaries who fought for this so-called 160-acre law. Secretary Krug and Reclamation Commissioner Straus are protecting the law, as all public officials are customarily supposed to do.

The Kings River project, if the Army engineers are allowed to build it, will cost the holders of the land benefited nothing at all as landowners. Congress allows the Army engineers to construct costly public improvement works and use money extracted from all the people, in all the States, as taxes to provide irrigation water and to protect land from floodwater, all without making any direct charge against the benefited land.

The May 14 Saturday Evening Post carried an article on the Army engineers and Bureau of Reclamation policies in this field.

Manifestly it is discriminatory to allow the holders of land to be benefited by the Kings River project to appropriate the unearned increment in land values, created by the expenditure of Federal funds, when the holders of neighboring land are being charged the cost of similar public works built by the Bureau of Reclamation.

The traditional principle, long ago adopted and applied in this State, is that the cost of land reclamation improvements be paid by the holders of land benefited by the public improvement works. (See Water Code, State. 1943, ch. 368, div. 10, 11; 164 U. S. 112.)

This principle has served as a curb on land speculation by making it unprofitable for big absentee landholders to withhold land from its appropriate use. It has exerted economic pressure on many big holders within the Central Valley. Its effect is clearly visible in the oldest irrigation districts, such as Modesto and Turlock, where the one-time big holdings are now the scene of thousands of small orchard and farm and vineyard holdings, averaging about 30 acres in size.

Under this law the industrious farmer who erects fine buildings and makes other improvements is taxed no more by the irrigation district than if the same land had been left idle and waste.

The State legislature has authorized these districts to make contracts with the Bureau of Reclamation to pay back the Federal money invested in the Central Valley project by assessing the cost on the land benefited, irrespective of improvements. Several districts have executed such contracts already. The big absentee landholders fought this State law as implacably as the so-called 160-acre Federal law is now being resisted.

In fact, the California irrigation district law was attacked as communism and confiscation under guise of law in 1895, as can be proven by referring to the argument of Counsel George Maxwell preceding the decision by the United States Supreme Court in *Fallbrook ID* v. *Bradley* (164 U. S. 112). Of course the United States Supreme Court approved this law and ruled that no right protected by the Constitution is infringed by its operation.

Contrary principles were used in Italy. See "Land Reclamation in Fascist Italy," Political Science Quarterly, September 1937.

Let us hope that our people, rich and poor, escape some of the mistakes Italy made. A new civilization is arising in California. We all hope to escape totalitarianism whether from extreme left or extreme right.

The economic and political principles necessary to protect our basic equal rights need careful study and general discussion.

J. RUPERT MASON.

PASADENA.

What Do the Wounded Say?

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. MANSFIELD. Mr. Speaker, I am inserting an article by Mr. Richard Neuberger which appeared in the August 1949 issue of Foreign Service, the official publication of the VFW.

Dick Neuberger, so well known for his articles on the Northwest and Alaska, has undertaken to write in another field in which he is extremely well qualified. A veteran himself, he knows whereof he speaks. The article is enlightening and is well worth the attention of the Congress in its consideration of the welfare of our veterans.

WHAT DO THE WOUNDED SAY?

(By Richard L. Neuberger)

What do they think of our tortured old planet, these men who lost health and limb to carry the colors to victory? Are they satisfied with their treatment and lot in the postwar world? What are the specific complaints from the men who have the most right to complain?

From the perspective of white-runged beds in hospitals of the Veterans' Administration, 54,387 Americans look out on the society which they sacrificed legs and lungs and nervous systems to keep secure. This may not seem a large number in a national population of nearly 150,000,000, but for each of these men every waking hour is crowded with a desperate impulse to get well, to overcome the wound or illness that dooms him to a counterpane.

Some will take their normal place in the community again. Others never will leave their beds alive. Yet most of these hospitalized veterans have a cheerfulness and buoyancy which should shame the rest of us. Certainly they voice their gripes. No pollyanna optimism tints their view of the world. But, basically, they do not moan about their fate. They lost in the great raffle, and that is all.

These wounded and ailing men concede it was the luck of the draw that a bullet stopped them in Normandy, or amoebic dysentery ulcerated a colon on Guadalcanal.

"If not me it would have been the next fellow," volunteered a black-haired young man of Italian descent, whose chest had been shattered. The doctor outside the bedroom door said the veteran never would go back to weighing bananas at his father's fruit stand in San Francisco. He would cough out his life in the hospital.

Yet this veteran's complaints were few. He had received fine care. Doctors, nurses, attendants—all had been wonderful to him. The doomed man mentioned General Bradley. Hadn't General Bradley seen to it that the veterans' hospitals gave such marvelous attention? It was too bad General Bradley couldn't shake up Congress. Why didn't Congress move faster to protect housing, resources, and the people's health?

This thread ran through many of the bedside comments. The quality of medical care has made a profound impression on the men who are still on their backs 4 years after Japan's surrender. Of dozens of patients interviewed in veterans' hospitals spread over a wide geographic area, none complained of the care he was receiving. In fact, the experience has made most of the men favor some kind of national health plan.

"I'd like to see every sick person get the kind of attention I've had," said a 35-year-old infantryman whose arm was shot off in the Aleutians.

"What would I have done without this care?" echoed a captain who has had chronic malaria ever since the Philippine campaign of 1942.

Few of these men with disabilities that originated directly in combat would close the veterans' hospitals to ex-GI's whose ailments are not service-connected. A lanky former Arizona storekeeper, with scar tissue on his lungs from pneumonia contracted overseas, gestured down the long, scrubbed corridor.

"There's a chap a door or so away with cancer of a vital organ," he confided. "He's going to die of it, but I don't think he or his wife has been told. He's had every possible surgery and help. The poor fellow is an ex-sergeant in the field artillery, but I guess he didn't get the cancer in service. Why shouldn't he be taken care of in a veterans' hospital? I don't know a man on this floor who wouldn't share some of his own attention with that fellow down the hall who's going to die."

Men who have lost a limb or lain on an operating table half a day are close to realities. This may be why they criticized the Republican Eightieth Congress and the Democratic Eighty-first Congress with equal impartiality. "Why doesn't Congress do something?" they asked. Many of the sick men said that, on recovery, they might go into politics themselves. Others said they intend to lobby for worthwhile bills. A veterans' bonus was on this list.

Jack Frost, age 22, has constrictive pericarditis. This is a rare disease characterized by calcium formations around the heart. Chest specialists operated in relays on Jack for 12 hours. He is expected to recover. What are his hopes for the future?

Jack's work must be light. No longer can he plow a furrow on a farm. He would like to repair small instruments such as radio sets and toy electric trains. He also is interested in poetry. He reads constantly from the hospital library. His ambitions are very modest. Perhaps a disability pension will enable him to support himself with only a morning-to-noon stint at a soldering bench. Then he can write the rest of the time. He is not too concerned about selling his poems. Mainly, he wants to express his feelings in lyrical words.

Security is a dominant ambition with these men whom the war has invalided. They hope to emerge into a world where they can provide for themselves and their families. To add financial worries to sickness and disability would be too much. all of them admit that. A solvent exchequer is of great importance.

Harold Foreman, 26, sold sporting goods in a little fishing town on the Washington seacoast. He was on a 20 percent pension from a war injury when he came down with peritonitis of the bowel. It will be a year, the doctor advises, before Harold can go back to work. His wife has a job as a housekeeper to be near him in the city where the veterans' hospital is located.

Harold is grateful that he had group insurance at his place of employment. It paid him $25 a week for 13 weeks. Now his goal is to learn skilled cabinet work. He was restless after the war. For a long time he could not settle down. His illness has given him perspective. He knows what he wants to do. Perhaps the hospital can arrange for him to take on-the-job training.

Harold is cheerful. Suppose he had not been a veteran or that such good hospitals had not been provided. Where would he have received such thorough care?

This is a prevailing theme. Few of the bedded veterans, particularly after receiving a doctor's gruff but kindly reassurance or the pat of a nurse's cool hand, can resist voicing impulsively a genuine gratitude for the attention provided by the Veterans' Administration.

Misfortune brings flexibility. Practically all the men in beds or wheel chairs have had to adjust their ambitions. The entire pattern of their lives has been changed. Yet they grumble far less than would the average healthy person on the street. "I guess we're just glad to be alive with a prospect of recovery," one of the veterans explained.

Twenty-six-year-old Jack Pickett was in the grocery business in Phoenix until the Navy sent him to Iwo Jima. He has had surgery on one lung and is awaiting an operation on the other. Doctors say his malady is definitely service-connected. Jack will get a disability pension. This is fortunate, for the grocery required him to enter the cold-storage room getting meats and fruits. The doctors forbid this in the future. Jack's lungs cannot stand it.

Jack Pickett must undertake sedentary work. He will study business administration at Phoenix Junior College. Although he must enter a wholly different field of employment, Jack is optimistic. He hopes eventually to get a university degree so his new task can be at the executive level. He also intends to be active in veteran organizations, which he thinks are essential to assure the ex-GI a decent break in competition with those who had the war years to accumulate a grubstake.

"I've no complaints," said Pickett. "I didn't realize this fine hospital was available until I needed it. I've also had veterans' rehabilitation and I've drawn pay since my first operation. The country has been good to me and I hope to be a useful, healthy citizen again very soon."

Jack has a radio and listens to the news flashes. He heard a prominent national political figure claim the veterans' hospitals should be denied to men whose disabilities were not incurred while in service.

"That was the wrong thing for that politician to say," observed Jack. "The patients in this ward decided that after closing the hospitals to one group of veterans, he might then shut out another group and so on, until the whole system of veterans' hospitals could be destroyed."

A bullet struck Leo Fanning's spine in Africa. Leo, 30, was from Colorado. He lay on the battlefield 24 hours before the medics got to him. He does not like to recall that agony. But Leo was in good spirits in the veterans' installation, even though his right leg had been amputated a year ago. He described his hospital care with satisfaction.

Leo listens to the radio, reads books and magazines, and works innumerable crossword puzzles. He lies on a special narrow cot in one position, but can be moved upright. The Government has provided him with an automobile. It has hand controls, so Leo can leave the veterans' hospital for drives in the green countryside. He is not envious when he sees other men engaged in strenuous physical tasks. He is grateful to be as well off as he is.

Indeed, gratitude is Leo's dominant emotion. Before the war ended he was in Army hospitals. He didn't think too much of his care. But he insists no one could ask for more than he has received from the Veterans' Administration. He receives 100-percent disability. Leo has no high regard for politicians as a class, but tears come into his eyes when he speaks of the governor of a western State who had him transferred to his present place of convalescence.

This characterizes many of the wounded and sick men who fought in the service of the Nation. They are critical of politicians in general, but often extremely fond of some individual in politics who has taken a personal interest in their own cases. A surprising proportion of the hospitalized veterans plan to take a hand in public life themselves after they are well. This does not necessarily mean running for office. It frequently refers to activity in veteran organizations.

"I'm going to teach," said a man from a tank destroyer unit, who had lost an arm. "My disability won't prevent me from doing that, and I think I can urge the next generation to do something about making our country happier and more secure."

A pretty nurse, with a trim figure, said her patients were surprisingly industrious. This is applicable to most of the hospitalized veterans. Edwin Warren, 27, ex-captain of Infantry, lay on his back recovering from polio. This was aggravated by malaria contracted in South Pacific fighting. To restore use of his hands and arms, he was doing weaving, sewing, stenciling, and leather tooling. He also was taking correspondence courses in English and business law from the University of Wisconsin.

"I wish I could type my papers," said Edwin, "but I haven't quite enough use of my hands back to do that. I'll do it pretty soon, though."

Warren's wife works at the hospital to be near him. She was a nurse when they were married. His sister takes care of their 3-year-old daughter. This is typical of the improvisations made by the families of many stricken men.

Even on days that the creamed chicken is pasty, or the floor interne is late in changing dressings, the gripes of the patients are directed not at the hospital, but at so-called phonies far beyond the hospital grounds. Most of the complaints are reserved for men who exaggerate their contributions during the war. A veteran, sallow with jaundice and malaria, put down his home-town paper angrily and pointed with indignation.

"See that guy's name?" he asked. "He made a speech at a big bond rally, calling on his fellow veterans to make sacrifices. He was in service less than 100 days. Then he got a discharge because of some sort of ankle injury and went into the real-estate business at home. Now he rents shacks to real combat veterans for $30 a week. To hear him talk about his war experiences, you'd think he took Iwo single-handed."

The angry veteran slumped back on his pillow, but from all over the ward came similar tales. Every man, it seemed, knew of someone in his particular community who posed as a war hero yet had spent only a few casual months in training camp. A story such as this always was good for a long round of indignation. A chunky man with one leg told of a lawyer with political aspirations at home who posed as a paratrooper.

"I was a paratrooper," said the man with one leg. "It cost me a perfectly good right leg at Sicily. I don't think I ever resented it, however, until I read about that four-flusher back home pretending he was in the paratroops. He never got closer to a 'chute than I got to the South Pole."

Few other episodes cause anger in a veterans' hospital ward. Nearly all other things, no matter how crushing, are accepted phlegmatically. A tall, 28-year-old corporal of Norwegian ancestry had just been told he would have to give up his lucrative job as a traveling salesman for a millinery firm. He had a wife and two small children to support. He had picked up a rare blood disease in the tropics which would leave him a semi-invalid. No more 350-mile days in the sedan with a lot of suitcase-rustling at the end of it. He might be able to do light work at a desk—perhaps keeping books or making out bills.

His career in pieces, the slender Norwegian nevertheless managed to smile. "Who am I to kick?" he said. "I'll live, the doctors say, and I'll get a pension. I guess we will make out. My family won't be so bad off by the the time I put all the income dribbles together." He grinned wanly as he lay against the pillow.

In the gloom of the unlighted hospital room the tufted blond hair of the ex-soldier suddenly appeared like a knight's plume.

Mr. Farley on Advertising

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Geneseo (N. Y.) Leader of June 16, 1949, entitled "Mr. Farley on Advertising."

The Honorable James A. Farley, who is now chairman of the board of the Coca-Cola Export Corp., has served the Democratic Party ably and with distinction for many years. He was Democratic State chairman for New York State and later served as Democratic national chairman when he guided two Presidential campaigns to successful victories. He served faithfully in the Cabinet as Postmaster General and established a splendid record in the postal service. He has always maintained a deep personal interest in Democratic politics and it is a pleasure for me to bring to the attention of the House Members Mr. Farley's views on advertising:

MR. FARLEY ON ADVERTISING

Hon. James A. Farley says advertising speeds the sale of goods and is no different from a machine tool that cuts man-hours from a manufacturing operation. It is, in fact, the same thing in a different form. The final justification for advertising is not that it is customary, or that you do it because a competitor does it, but that it cuts cost. You advertise simply because it costs less to send a message to a customer through the printed word than it does to send a salesman to call on everybody door to door.

Advertising, says Mr. Farley, is thus part of a complex system—a routine, a know-how—that includes inventiveness, organization, machine tools, and skilled labor and workmanship, and that has resulted in the more universal distribution of more goods at lower cost than the world has ever known.

Peace in Palestine

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. MULTER. Mr. Speaker, the following editorial, which appeared in the New York Times of July 22, 1949, entitled "Peace in Palestine," together with the article which appeared in that paper the same day written by Gene Currivan, are further indications of the need for the immediate enactment of the House joint resolution cosponsored by about 60 Members of this House for the appointment of a Near East Survey Commission.

PEACE IN PALESTINE

Conclusion of an armistice between Israel and Syria is good news in itself and good news because it is a considerable triumph for the United Nations. Reports from Tel Aviv, Washington, and Lake Success all agree that great credit for the settlement is due to Ralph J. Bunche, the acting UN mediator, and his assistants. Their untiring work and persistent efforts to find a solution, despite the difficulties, have been crowned with success, for armistice agreements have now been reached between Israel and all her neighbors.

The scene now shifts to Lausanne, where another UN body, the Conciliation Commission, can take heart in renewing its efforts to establish a permanent political settlement between Israel and the Arabs. There are large and serious problems—notably the problem of the Arab refugees and the problem of Jerusalem—but with good will and a spirit of compromise that has sometimes been lacking in the past it should not be impossible to reach agreement. Now that the military questions are out of the way, we can hope that through the good offices of the Conciliation Commission, composed of representatives of the United States, France, and Turkey, a new era may really be about to dawn throughout the Middle East.

DOUGLAS FORESEES ARAB RENAISSANCE—JUSTICE ENVISAGES TEACHING ROLE FOR ISRAEL AS MIDDLE EAST ENDS FEUDALISM

(By Gene Currivan)

HAIFA, ISRAEL, July 21.—After touring the Middle Eastern countries Justice William O. Douglas, of the United States Supreme Court, said today he had observed what he believed to be an awakening in the form of a political and economic renaissance that, if allowed to prosper, would give new meaning to this entire area.

He said he felt Israel, with her advanced civilization and scientific progress, could well be the nucleus of this potential movement.

Speaking before the Hebrew Institute of Technology, Justice Douglas said he foresaw Israel as the teacher of the Middle East.

"Here in Israel great and stirring experiments are going on," he declared. "New and different projects in economic and social organization are going forward. They have great diversity. And in their diversity lies their great strength."

SEES SOCIAL REVOLUTION

He said that in Israel "there is rejection of the feudal system that has long held the people of the Middle East in its grip," and "in Israel is a force that can give both direction and content to the social revolution that is on its way."

Justice Douglas had observed rumblings of discontent, prophecies of tumultuous times to come, and beginnings of vast social revolutions, in the Middle East. He felt that these forces of unrest had reached the point where they could not be turned back.

"Rulers will attempt to abolish them by decree," he continued. "Cabinets may offer palliative measures but the voice of these people will not long be stilled."

He declared that these conditions offer special opportunities under point four of the program which the United States has offered to underdeveloped nations; but they also have a special challenge to educational institutions, especially those such as Hebrew Institute of Technology. "You of Israel know what a people who have desire for an ideal can accomplish," he declared.

PLANS FOR RECLAMATION

"There are now plans to reclaim great areas of land in this region," Justice Douglas continued. "Everywhere one goes in the Middle East he hears of these plans—flood control, drainage of swamps and sour lands, and vast irrigation projects that will put unused land into cultivation. These projects are greatly needed. They must go forward if the standard of living is to be raised.

"But they present only a partial picture of problem. If they are used to fasten the hold of a few landlords on the economy, they will bring new misery in their wake. If they are to be used to raise the standard of living of the farming class they must be accompanied by land-distribution programs which will insure that benefits go to the workers. They must not be allowed to strengthen the hold of a few economic barons over the people."

National Housing Act

EXTENSION OF REMARKS

OF

HON. JOHN C. KUNKEL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. KUNKEL. Mr. Speaker, under permission to extend my remarks in the RECORD, I include a radio speech made over Station WHP in Harrisburg and Station WLBR in Lebanon on July 3, 1949. The subject covered is the National Housing Act recently passed by the Congress.

FEDERAL HOUSING BILL

My chief personal objection to the housing bill is: it is a hoax. It will not increase the net amount of housing in the Nation. Indeed, it will decrease it.

It will not take care of the lowest income groups. Many kindly, well-meaning people have been led to believe that those without funds and in dire straits will be taken into these projects. They claim it is a welfare measure, but it really is not at all. Practically no one who does not have an assured, steady income can obtain admittance. The bill itself places no limit whatever on incomes; the net income being determined purely by regulations. A large percentage of those now in present housing projects do have substantial net incomes. No one denies this. Amendments offered to limit the occupancy to those with incomes below a certain level were defeated by advocates of this idea.

It does not clear slums. Indeed, the requirement for slum clearance in the 1937 Act has been carefully removed. Why, even the wording of the title on slum clearance has been changed. It is no longer just plain slum clearance. It is now slum clearance and urban development and redevelopment. The local authorities can take an obsolete subdivision with no houses at all on it and use that for a housing project, while allowing all of the existing slums to remain. The bill even prohibits the clearing of slums until June 30, 1951, unless the local authorities determine that removing them will not adversely affect housing conditions. If removing existing substandard dwellings does not adversely affect housing conditions, then there would be no need for the Government to go into the housing field.

We found that in actual operation the slum clearance section is clearly an adjunct of public housing. In practice, the housing authorities will generally go to the outskirts of towns and cities to get the sites to sell to local public-housing authorities instead of using the Federal money to clear existing slums.

There is no requirement whatever making the local communities enforce health, building and sanitary codes in parts of the town outside the area limits of the housing authorities. If this is not done, new slums will be created faster than old ones will be ended. Mayor d'Alesandro, of Baltimore, an ardent advocate of this bill, frankly and definitely stated to me while he was on the witness stand during hearings, that unless you insist upon good standards and enforcement of health and sanitary provisions, you can never eliminate slums. To quote him, he said: "That is your starting point, no matter what you do from there." Since the bill does nothing on this, the legislation does not even touch the root of the slum evil at all. It perpetuates the condition which it is alleged to remedy.

If time permitted, I would like to discuss the farm section at length. It is so ridiculous. The Department of Agriculture is trying to get marginal farms out of production in this era of agricultural surpluses. This section loans or gives money to farmers of nonproductive farms which cannot support themselves, thereby keeping them in use, and gives the Secretary of Agriculture the broad power to cancel the interest and principal on many of the loans he makes. This is simply fantastic. It was included in the bill as a log-rolling device in order to give people from the farm sections some excuse for going along with the proposal. No farmer in the East or the Middle West would use this and probably few in the South, because in order to obtain the money they would have to put their farm under the direct control of the Secretary of Agriculture, who would tell them what to plant and how to farm.

The compelling argument against the bill —one which should appeal to everyone irrespective of his or her political philosophy —is this: We simply cannot afford it today. Appropriations for the regular Government departments have been running way over those made for the corresponding departments and agencies in the Republican Congress in 1948. Many new authorizations, some not budgeted for fiscal 1950, have been approved and will require more money. They total $1,500,000,000 already this session. Revenues have been dropping, due to the business recession. If we are ever going to economize at all, the first essential step is to refuse to take on new, expensive spending programs at this time. If you do take them on, and if you still attempt to hold a balanced budget, then you must do that at the expense of the legitimate, previously recognized constitutional functions of the Government. Can we afford deficit financing in a period of relative prosperity, when national income and revenue is near its all-time peak?

I have good reasons for my conviction that this bill will cause fewer houses to be built in the United States than would otherwise be the case. I supported the Veterans' Emergency Housing program in 1945, when Wilson Wyatt promised Government controls and Government operations would produce 2,700,000 houses in 2 years. I wanted to take the chance in the hope that such legislation would produce houses. And I remember all too well what a failure that was. Construction of housing was cut down to a minimum—around 450,000. After that bill was repealed, after the mistake was discovered, but only after much damage was done, residential-housing construction in the United States soared to over 800,000 dwelling units in 1947 and to 935,000 dwelling units in 1948. The threat of Government competition and of the Government stepping in and taking over and accumulating and hoarding building materials, and all that is a definite threat to private industry, causing private industry to be reluctant to enter the field of residential construction. After the election last November when it became fairly evident that this bill would pass, the drop in the amount of private construction of dwelling units was much greater in proportion than the recession in other lines of industry.

Since this bill has passed, from this point on, there is no question but that the maximum amount of housing and slum clearance in this country will be the top limit for which Federal funds are provided. No State or community is going to do anything on its own when they see the "pie in the sky" of Federal funds. Naturally, the State and communities will wait for the pie to drop in their laps. The agitation for this bill during the past years has had this effect. There is no question about that. Now that it is about to become law, you will see every State waiting for Federal funds before doing anything.

Under section 506, the Central Housing Authorities in Washington can assume all obligations of all projects built since January 1, 1946, by the States or communities. If that is done, and if the Federal Government takes them over and agrees to use these annual contributions for the purpose of paying subsidies to these houses already constructed, then clearly those funds will not and cannot be available to the Federal Government to use in the construction of new houses. If so, there will not be 810,000 houses built. And this is another of the hoaxes in the bill.

This is no ordinary authorization bill regarding which the Appropriations Committee can later study and decide what appropriation should later be made. The full faith and credit of the United States is pledged in the bill itself. This contractual obligation becomes binding the moment the contract between the local housing authority and the central authority is signed here in Washington. From that point on the United States has no choice about what to do. It must pay $308,000,000 per year over a 40-year period. The United States Government is just as much obligated to pay the money as it is to supply the funds needed to pay the interest and to provide for the retirement of the Government bonds of the United States. There is no retreat except by repudiation and that would mean national ruin and bankruptcy.

Who amongst us is a good enough judge or prophet to foretell what the financial condition of the United States will be 2 to 5 years from now, let along 25 or 35 years from now? If the program is broadened as advertised, and if a total of 6,500,000 units is eventually provided for, then by that time the United States will have undertaken obligations forcing future Congresses to appropriate $2,500,000,000 each year, over a 40-year period. That would total $100,000,000,000. In my judgment, it is suicidal national policy to undertake such long-range commitments in any field. Any housing program we might adopt should be based on annual appropriations whereby the Federal Government appropriates what it can afford in that year, pays the money, and then is free to do in the future what fiscal conditions warrant.

These houses are neither low cost nor are they low rent. A few weeks ago we held hearings on another bill. Government witnesses testified then that 17 percent more had to be paid by the Government for its construction than was paid for the same type of construction work done by private industries. The only question is: Who is going to pay the rent? The occupant of the dwelling or the Government? The Government means you, the taxpayer.

The annual subsidy by the Federal Government can be $381 per year for each unit. Then you must add the local subsidy to this. This is brought about by the tax exemption of all local taxes, including State realty taxes and more particularly all school taxes. All of you know how high-school taxes necessarily are. These exemptions are written into all the contracts and are binding on the State and community for the 40-year period of the contract. Payments in lieu of taxes can be made, but they are limited to about 25 percent of what the project would have to pay to the localities if taxed on the same bases as other property in the community. Hence, this burden is thrown upon the other residents living in the communities, so, in the long run, there will have to be either an increase in your local taxes or else more Federal control by shifting more of the burden to the Federal Government in Washington.

There is a grave danger in political control of human shelter. We have some experience with political control over some jobs. Where there is a selection of some from among many, then you must choose. I am not saying whether this selection will be good, bad, or indifferent. The point is, somebody somewhere will have the power to say to Mr. A "You can come in," and to Mr. B "You cannot." Therefore, this problem of discrimination is inherent in public housing. There is discrimination between States, between towns and cities in the State, and then finally among individuals in each of the towns and cities in which a housing project is placed.

Invention of First Practical Typewriter

EXTENSION OF REMARKS

OF

HON. ALBERT RAINS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. RAINS. Mr. Speaker, Mr. John Jonathan Pratt, of Centre, Ala., invented the first practical typewriter. Official records show that the machine was completed in 1864, and in 1866 was granted a patent in London, England. Too little is known about this great and outstanding American. For that reason, I include herewith an article which appeared in the Montgomery Advertiser on Sunday, July 10, by Joe Azbell:

PRACTICAL TYPEWRITER INVENTED BY CENTRE, ALA., MAN

(By Joe Azbell)

If John Jonathan Pratt, of Centre, Ala., had not suffered from writer's cramp, it would require three times as long to put this story down on paper.

Pratt invented the first practical typewriter.

There are some people who dispute this claim.

However, official records in patent offices of London, England, and Washington, D. C., seems to prove that Pratt is entitled to the honor, although the fact is not generally known.

RESTLESS NATURE

Pratt, born April 14, 1831, in Union, S. C., came to Alabama with his family while still a young man. A man of unsettled and restless temperament, he jumped from law practice to a reporter's job; from an editor's desk to teaching school, and then to inventing typewriters before he had reached 30.

He prized his law studies because it was while studying under Judge Porter at Greenville, Ala., that he met, fell in love with, and subsequently married, the judge's pretty daughter, Miss Julia Porter.

After he was admitted to the bar, he practiced his profession, and edited a newspaper, called the National Democrat, at Centre.

WRITER'S CRAMP

In the early fifties, he was register in chancery at Centre and did so much writing that his fingers became cramped, often rendering them useless for short periods.

One night, he jokingly told some friends, "I am going to invent a writing machine, so my fingers won't ache so much, when I am writing."

After he spouted the idea, it stuck in his mind, "Why not?" he asked himself, "other things have been invented. A writing machine shouldn't be impossible to develop."

He was a part owner and editor of the National Democrat, had a sizable law practice and some property—which afforded him a comfortable livelihood—and could without too much strain fool with "silly ideas."

NEELY HELPS HIM

As the idea grew into a practical plan, he sought the aid of his employee, John Neely, a practical printer and mechanical thinker.

Neely scoffed at the "writing machine idea," but after the plan was explained and he was instructed to fashion type for it, he took a "fancy to the machine."

Platt's idea was no longer a joke. Soon he was fashioning a drawing for the complicated little machine, called the "Pterotype." Simultaneously his friends were spreading the rumors that the invention was a "silly idea" to start with and that the newfangled machine would be impractical.

Nevertheless, while many viewed the machine with pessimism, several encouraged and helped Pratt, for his confidence in the machine proved that he was determined to make it a success.

BUYS KNITTING NEEDLES

One hot afternoon, Pratt rushed into John Coker's store and asked to buy all the knitting needles he had.

A bit puzzled, Coker said he did not have any needles on hand, but would send to Rome, Ga., for two gross—"if you really want them."

A few days later, the shipment arrived and Pratt carefully tucked the boxes of needles under his arm and walked toward his home where he worked secretly on the machine.

"I've got the first parts for my machine," he told questioners who asked about his package. "I'll have a writing machine built in a few more weeks."

The needles were used in experimenting and building the typewriter. Wooden blocks were placed at one end of the needles. To these were fastened the type which Neely had made or selected from newspaper printing fonts. He now worked on the machine at every opportunity.

MODEL COMPLETED

Finally on a proud day in 1860 the model—complicated and crude in appearance—was completed. Pratt was ready for the difficult end of his venture—securing proper manufacturing facilities and financial backing.

But the wiry little attorney-editor-inventor failed to get the financial backing in this country. A War Between the States was around the corner and money was as tight as wet shoes.

Pratt sold his slaves, property, and business interests, and sailed for England, where he was to exhibit his model for British scientists. After proving he had a practical machine he was given a British patent on December 1, 1866.

A short while later Pratt was demonstrating his machine for skeptical merchants and sold a few at $15 each. But he found the buying market flimsy.

Magazine editors, however, recognized in the odd-looking contraption something that their readers could whet their curious minds upon and exclaim, "What are they going to invent next?"

In 1867 a London magazine, "Engineering," published a story and illustration of the original machine. "Scientific American" in a July 1867 issue also bugled the "wonders of man's mind" with an article describing the invention, complete with etched illustrations.

MACHINE PATENTED

The following year Pratt filed papers with the United States Patent Office for his typewriting machine.

His machine, according to the United States Patent Office, had 36 types, mounted in three rows on a type wheel, the rotation of which brought the required character opposite the printing point. Paper with a carbon sheet intervening was pressed against it by a hammer worked by the keys.

In 1868 an American patent also was taken out on a typewriting machine by C. L. Sholes and C. Glidden, and in 1875, after effecting various improvements, they finally placed the manufacture of the machine with a Ilion, N. Y., gun maker firm called Remington & Son. At first the Remington machine worked on the type bar principle. Each of the 44 bars had only a single character so that the writing was in capitals only. But in 1878 type bars with two characters were introduced so that a machine with 40 keys, two being change keys, could print 76 characters, with both capital and small letters.

MONUMENT SOUGHT

For many years Tol Shropshire, who with his brother, Charles, operated the Coosa River News at Centre, published claims that Pratt was inventor of the first practical typewriter. He was ably supported by John Williams, editor of the Talladega Home, in an effort to induct court reporters to erect a monument for the inventor.

The Alabama Business and Professional Women's Clubs took up the fight to prove Pratt invented the first practical typing machine. At an annual convention in 1921, Miss E. Grace Jemison of Talladega, made a report of investigation on the typewriter invention.

In her extensive collections, she produced copies of patent illustrations, descriptive matter, and magazine articles, filed by Pratt in official places.

She also showed three copies of the Journal of Society of Arts, containing Pratt's speech, discussing the machine and giving specifications and full description of it, more than a year before Sholes' invention was patented.

PRAISED BY JENKINS

Miss Jemison also quoted Henry Charles Jenkins' speech before the Royal Society for Encouragement of Arts, Manufacturers, and Commerce, in which he said of Pratt's machine, "This machine was a portable and practical typewriter, and with it, the experimental stage of typewriting machine as a class may be said to end."

Models of Pratt's typewriters are on display at Kensington Museum, London, (now known as Victoria and Albert Museum) and the National Museum in Washington. The Alabama Department of Archives and History has on file pictures of the machine, samples of its writing and other personal properties of Pratt's.

After devoting years to the typewriter invention, Pratt became editor of the Gadsden Times, during the great depression of 1873, but held the position for only a short period. He returned to the job in 1883, and stayed for several years.

Some authorities believe Pratt wrote some of his editorials on the first typewriters and that the Times printed the first typewritten editorials in history.

Pratt's home in Centre was a colonial mansion, known as "Pine Knoll." It has since been torn down.

If Pratt had lived "up north," many say, he might have benefited more fully from his invention.

Sholes—whose Remington typewriters became, and still are, successful—did pay Pratt a small pension, it is said, for taking over the great invention.

True, Pratt did not get much money or honor out of his invention, but he had achieved what he set out to do.

He had invented a writing machine, that ridded the world of writer's cramp—for those who learned to use his invention.

Pratt's first typewriter later became known as the Hammond Brand typewriter.

The inventor died in 1905 and is buried at Centre, Ala.—near where he first got the idea for his typewriter.

Time for Compromise

EXTENSION OF REMARKS
OF
HON. LLOYD M. BENTSEN, JR.
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. BENTSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

TIME FOR COMPROMISE

Barring a miraculous return from its congressional grave, the Truman administration's 1949 labor law is a dead duck.

It was a measure that would have repealed the Taft-Hartley Act. It would have brought back into force some of the features of the old Wagner Act. But the Senate took little time to show that it was not in favor of such legislation, and Democratic Party leaders were among the first to admit the administration's defeat.

That left open the door for a series of amendments to the Taft-Hartley Act. These the Senate approved but they have little or no hope of getting through the House. The net result of labor legislation in the Eighty-first Congress, therefore, is exactly what even union labor leaders have admitted: Two more years of Taft-Hartley.

Labor's leaders as a result of this defeat have proclaimed a fight against reelection of the Senators who scuttled the Truman program. That is their right. But they leave many wondering whether spite or statesmanship is guiding their intended political-action program.

Neither labor nor business in this country in recent years has exhibited any generous amount of statesmanship. Each has utilized more selfishness than foresight or understanding in dealing with the labor-management problems that have arisen. In the middle has been the American public, bearing its suffering with considerable patience.

That public has long realized that excesses were the rule rather than the exception in attempts to settle the labor-management squabble. It saw the pendulum swing far to labor's side under the Wagner Act, then veer far in the opposite direction under Taft-Hartley.

The American public also knows that no strong prolabor or promanagement law is the long-range solution. It knows that a reasonable compromise between the two will be the ultimate answer.

The Eighty-first Congress has been in no mood to return to Wagner Act provisions. In spite of the great political upset in the 1948 presidential election with its choice of a leader devoted to Taft-Hartley repeal, the prospects for that repeal have never been bright. Now they are indeed gloomy.

That fact alone underlines the need for compromise. A violent campaign by organized labor against those who opposed it in Congress will not produce any such accord, nor will radical action by management. Both need to relax and strive to serve the public good with reasonable legislation.

Please Sign Petition No. 6

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. MULTER. Mr. Speaker, I have said on many occasions that enactment

of my bill H. R. 2324 for the repeal of wartime excise taxes on retail sales will not result in any net loss to the Government. The items covered by my bill are the only items subject to retail excise taxes. Removal of these excise taxes will be a stimulus to trade in those industries, resulting in increased income taxes to the Government. The following article which appeared in the New York Times of July 25, 1949, fully bears out all that I contended in that respect. I again urge the Members to sign my petition No. 6 to bring that bill before the House for consideration.

NO TAX LOSS SEEN IN EXCISE REPEAL—INCREASE IN FUR SALES VOLUME WOULD OUTWEIGH ANY DECLINE, MERCHANTS GROUP ASSERTS—GOVERNMENT MIGHT GAIN—TRADE SINCE 1943 UNDER LEVY CUT ONE-THIRD WHILE OTHER RETAIL FIGURES DOUBLED

To prove its assertion that the Federal Government will derive little difference in income whether the excise tax is repealed or retained, the American Fur Merchants Association has submitted an analysis of the financial operating structure of the entire fur industry, from farmer-trapper to retailer.

The study, to be filed today with appropriate authorities in Washington was prepared for the association by the American Management Counsel, a staff of economists who perform independent research in the marketing, economics, and statistical fields for leading industries and special tax studies for Government offices.

According to David R. Hochberg, president of the Fur Merchants Association, it was agreed that its files were to be open to the management counsel, that its investigators would be free to speak to any members of the trade, and to check any estimates given by the association against published statistics of the Government, "with the understanding that we would accept the results of their analysis regardless of whether they were favorable to the industry's argument for relief."

ESTIMATE EFFECT OF TAX

The method of the economic investigation was to estimate the net effect of the 20-percent excise tax upon: (1) the profit structure of the industry; (2) the profits of those industries whose revenues depend in part upon the activity of the fur industry, and (3) the volume of employment in the fur industry.

Knowledge of how the 20-percent excise tax would affect sales, costs, profits, and employment, in turn, would enable the economists to objectively estimate how much taxes the Federal Government would receive if the excise tax on furs would be removed.

"It was also a part of the program to investigate by an off-the-street poll of consumers, the precise extent to which the tax acts as a deterrent to sales," Mr. Hochberg said. "This last was done, in part, to support our responses to those Congressmen who have asserted that the fur trade is merely experiencing a recession similar to other industries."

Highlights developed by the study are:

1. As compared to last year's return of $73,000,000, and $99,000,000 in 1946, it is probable that the Government will receive $63,000,000 this year by retaining the 20-percent excise tax, but would receive $65,000,000 with the tax removed.

2. If only 10 percent of the tax is removed the Government may receive roughly $89,000,000.

3. Regardless of the reason given as to why the 20-percent excise tax on furs may have deferred the purchase of a fur coat, the fact remains that the excise tax was considered by the fur-consuming population in the past few years to have been a sales deterrent by 41 percent of those interviewed.

4. Ever since the Revenue Act of 1943 increased the excise tax from 10 to 20 percent, sales of the fur industry have declined. Retail sales soared from 100 in 1943 to 204.1 for 1948, whereas fur sales dropped, in the safe years, from 100 to 66.6.

5. Most startling development of the study was that the index of retail fur sales by unit volume has decreased each year from 100, in 1943, to 42 in 1948. This conclusion does not except the boom years of the war or the postwar inflation years.

6. A pretest market analysis of the fur-consuming population conducted in June 1949, indicates that if the 20 percent excise tax were removed, the dollar volume retail sales of fur garments would be increased by 46 percent. A subsequent industry estimate of the effect of 10 percent reduction in the tax revealed that the trade would benefit approximately by 75 percent of this figure (75 percent of 46 percent).

"The tax study presented fairly establishes more than we had heretofore argued: That the Government will lose very little by giving relief," Mr. Hochberg said. "It seems to me that we have a right to expect that, with Congressmen almost unanimously agreeing on the merit of our case, an industry as old as ours, giving income to several million farmer-trappers and employment to some 50,000 persons in the marketing operation, should not be permitted to expire because of the specious excuses of complicated parliamentary procedure or the venality of party politics."

Copies of the analysis will be filed today with the Senate Finance Committee, the House Ways and Means Committee, the Joint Committee of the Senate and House on Taxation, and Treasury officials. It is also made available for use by the National Fur Tax Committee.

Navy Rockets Fired 65 Miles Up in Cosmic Ray Test in Pacific

EXTENSION OF REMARKS

OF

HON. JAMES B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. HARE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ansel E. Talbert, from the New York Herald Tribune of July 25, 1949:

NAVY ROCKETS FIRED 65 MILES UP IN COSMIC RAY TEST IN PACIFIC—AEROBEE MISSILES LAUNCHED FROM TENDER'S DECK AT EARTH'S GEOMAGNETIC EQUATOR

(By Ansel E. Talbert)

Rockets fired from the deck of a United States Navy surface ship cruising 700 miles off the west coast of South America have roared aloft to altitudes of more than 65 miles, headquarters of the third naval district announced last night at 90 Church Street.

The announcement was the first official word from the Navy about actual firings of rockets and guided missiles at sea since the disclosure almost 2 years ago that a captured German V-2 had been launched successfully from the flight deck of the 45,000-ton carrier *Midway*. On that occasion the German-built rocket rose erratically only 6 miles and exploded in the air.

Admiral Louis E. Denfeld later made known his opinion, however, that the rocket-powered guided missile is the basic naval weapon of the future. Although all existing missiles are relatively short-ranged, Admiral Denfeld said that they would become transoceanic when launched from the deck of a ship off an enemy coast.

Last night's announcement stated that the 65-mile high firings took place aboard the U. S. S. *Norton Sound*, a tender fitted out specifically to study the launching of guided missiles at sea. This ship has been cruising about in the Pacific and according to official Navy sources is scheduled to visit the Arctic as well as the tropics in gathering data about phenomena recorded at high altitudes by telemetering equipment carried in the rockets fired from its decks.

NAVY-BUILT MISSILES

These rockets used by the Navy tender's crew were not captured German missiles but pencil-shaped Aerobees, a rocket-missile type developed for the Navy Bureau of Ordnance by the Aerojet Corp., of Azusa, Calif. The development work on the Aerobee was under the technical supervision of the Applied Physics Laboratory of Johns Hopkins University, center of Navy guided-missile research, and the actual construction was done by the Douglas Aircraft Corp., of Santa Monica, Calif.

The firings mentioned specifically in the Navy announcement were stated to have taken place in March and to have obtained data about cosmic-ray intensity.

Dr. James A. Van Allen of the Johns Hopkins Applied Physics Laboratory, a scientist who has predicted future construction of satellite space platforms circling the earth continuously, was said to have made a preliminary study of the information recorded by two rockets fired at sea during that month.

From other sources, however, it was learned that later rocket firings from decks of submarines as well as surface ships have taken place, although no details will be revealed until an evaluation of the incidents can be made by Navy scientists.

COSMIC-RAY DATA FOUND

Dr. Van Allen's preliminary examination of the telemetering records obtained by the *Norton Sound* firings indicates that the cosmic-ray intensity above the atmosphere at the geomagnetic equator where the firings took place is about one-third that found above White Sands Proving Ground near Las Cruces, N. Mex. At White Sands considerable cosmic-ray data was obtained through firings of both German- and American-built rockets since the war.

The intensity found, however, is twice as great as had been estimated, according to the Navy announcement, for previous experiments with balloons and airplanes indicated that the cosmic-ray intensity at the geomagnetic equator was between one-sixth and one-eighth that found at White Sands.

Each rocket fired from the *Norton Sound* carried 150 pounds of scientific instruments for recording data at high altitudes.

Address by Hon. Robert A. Taft, of Ohio, on Drew Pearson Hour

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26 (legislative day of Thursday, June 2), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by the senior Senator from Ohio [Mr. TAFT] on the Drew Pearson hour on July 24, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

All week I have been asked two questions. Why are you talking on Drew Pearson's hour? Why did you vote against the Atlantic Pact? Well, I am talking on this hour because Mr. Pearson invited me and I knew he had one of the best listening audiences in the United States, better than any of us Republican Senators can get on our own time; and of course, I do have an election contest in 1950 and I don't want to miss a good listening audience. I suspect he invited me because he wanted to go on a nice cool vacation, and knew that we Senators had to be here working whether the weather was cool or hot—and it is hot. At any rate, he still gets the fee for the commercials. I thank him for the opportunity and appreciate his being willing to give time to one with whom he so frequently differs. That is the American way—to recognize that those who differ with you have a right to be heard.

Why did I vote against the Atlantic Pact? I wanted to vote for it—at least I wanted to vote to let Russia know that if she attacked western Europe, the United States would be in the war. I believe that would be a deterrent to war. The Kaiser might not have started the First World War or Hitler the Second if they had known they would encounter the great economic and human power of the United States. We issued just this warning in the Monroe Doctrine, and though we were a much less powerful Nation, it prevented aggression against Central and South America. That was only a President's message to Congress, and there were no treaty obligations, and no arms for other nations. But it was one of the most effective peace measures in the history of the world. I would favor a Monroe Doctrine for western Europe.

But the Atlantic Pact goes much further. It obligates us to go to war if at any time during the next 20 years anyone makes an armed attack on any of the 12 nations. Under the Monroe Doctrine we could change our policy at any time. We could judge whether perhaps one of the countries had given cause for the attack. Only Congress could declare a war in pursuance of the doctrine. Under the new pact the President can take us into war without Congress. But, above all the treaty is a part of a much larger program by which we undertake to arm all these nations against Russia. The President is sending up the first installment of this arms program tomorrow to add a billion and a half dollars to his budget already showing a large deficit. To my mind this turns the whole project into something completely different from the Monroe Doctrine. I found that at least some of the European nations were induced to sign the pact by the promise of arms. A joint military program has already been made. The State Department says arms are a necessary corollary of the pact. No person can be a realist and not know that it is one united project. It thus becomes an offensive and defensive military alliance against Russia. I believe our foreign policy should be aimed primarily at security and peace, and I believe such an alliance is more likely to produce war than peace. A third world war would be the greatest tragedy the world has ever suffered—even if we won the war, we this time would probably suffer tremendous destruction, our economic system would be crippled, and we would lose our liberties and free system just as the Second World War destroyed the free systems of Europe. It might easily destroy civilization on this earth.

We cannot build up the armaments of western Europe without stimulating the Russians to increase still further their development of war forces. Every armament race in history has finally ended in war. I was delighted this morning to see Senator VANDENBERG's suggestion to the President that he postpone this program until a new effort was made to reach an agreement with Russia to reduce arms and strength on the United Nations.

There is another consideration. If we undertake to arm all the nations around Russia from Norway on the north to Turkey on the south, and Russia sees itself ringed about gradually by so-called defensive arms from Norway and Denmark to Turkey and Greece, it may form a different opinion. It may decide that the arming of western Europe, regardless of its present purpose, looks to an attack upon Russia. Its view may be unreasonable, and I think it is. But from the Russian standpoint it may not seem unreasonable. They may well decide that if war is the certain result, that war might better occur now rather than after the arming of Europe is completed.

The arming of western Europe cannot be achieved overnight; in fact, it will be years before the European nations could resist an all-out Russian attack. During that period, I feel that the arms policy is more likely to incite war than to deter it. The distinguished junior Senator from New York [Mr. DULLES], who has had so much experience in foreign affairs, said on March 8:

"While the Soviet Government has no present intention of resorting to war as an instrument of national policy, nevertheless, it can be assumed that the Soviet state should use the Red Army if its leaders felt that their homeland was imminently and seriously threatened.

And he warned particularly against the bringing of United States military might directly to Russia's Scandinavian border.

How would we feel if Russia undertook to arm a country on our border, Mexico, for instance?

Furthermore, can we afford this new project of foreign assistance? I think I am as much against Communist aggression as anyone, both at home and abroad; certainly more than a State Department which has let the Communists overrun all of China. But, like Mr. Dulles, I think they contemplate more headway through infiltration and propaganda than through military might. But we can't let them scare us into bankruptcy and the surrender of all liberty, or let them determine our foreign policies. We are already spending $15,000,000,000 on our armed forces and have the most powerful Air Force in the world and the only atomic bomb. That, and our determination to go to war if Europe is attacked, ought to be sufficient to deter an attack by armed force. We are spending $7,000,000,000 a year on economic aid to build up those countries to a condition of prosperity where communism cannot make internal progress. Shall we start another project whose cost is incalculable, at the very time when we have a deficit of $1,800,000,000 dollars and a prospective deficit of three to five billions? The one essential defense against communism is to keep this country financially and economically sound. If the President is unwilling to recommend more taxes for fear of creating a depression, then we must have reached the limit of our tax-paying ability and we ought not to start a new and unnecessary spending project. It is said that western Europe must have a minimum of 60 divisions to be safe against Russia. That would cost $24,000,000,000. We are deluged here in Washington with those who want us to economize. This new project would cost more each year than the housing, education, and limited health plans combined.

The justification for the arms aid rests on the necessity of defense against Russia, but remember that once these arms are provided they are completely within the control of the nation receiving them. They are subject to the orders of those who, at the time, control the government of the country. Those governors may be Communists or Fascists, they may be peace-loving, or they may be aggressors. In future years these arms may be used against us instead of on our side. If Russia should choose to go to war within the next year or two, they might easily be captured by the Russians and turned against us. We would be playing à dangerous game if we encouraged every country in Europe to arm itself to the teeth. Modern arms are not toys.

Some years ago our Army officials were obsessed with the idea that we ought to arm the South American nations and send American military missions to each. Since that time, there has been a revolution in South America every 2 months, on the average. The arms which we might have supplied would have been used in civil war and would have fomented civil war. I have the highest regard for our Army officials, but they regard everything in the light of some particular war for which they are preparing, and fail to consider the political changes and the political problems which may arise long before that war occurs, if it ever does.

But, finally, I believe there is only one real hope of peace in the world to come—an association of nations binding itself to abide by a law governing nations and administered by a court of legal justice. Such a judicial finding must not be subject to veto by any nation and there must be an international force to enforce the court's decree. Such a plan can only succeed if the public opinion of the world is educated to insist on the enforcement of justice.

The United Nations looks in this direction but it can be improved and should be. This pact might have set up such a system between the nations of western Europe. It unfortunately did not do so. We should undertake to make it a model to which the United Nations may later conform. But as set up, it is a step backward. A military alliance of the old type where we have to come to each others' assistance no matter who is to blame, and with ourselves the judges of the law.

And now for a few predictions—if the proposal comes up as a new lend-lease program with wide-open power in the President to give away all American surplus material including perhaps atomic bombs, Congress will reject it. If a more modest request is made, Congress may approve an abbreviated form of aid. I wouldn't mind helping a country if it can be shown that that country is really threatened by Communist military aggression, like Greece or China. But, I don't want to give the President (and that means the State Department) unlimited power to go out and arm the world in time of peace. Congress will go on helping Greece and Turkey, but there won't be any great amount of military aid for anyone else at this session of Congress.

Garrison Dam, N. Dak.

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. LEMKE. Mr. Speaker, there have been several conflicting statements in the dispute over the pool level of the Garrison Dam in North Dakota. The Army engineers are still fighting for a pool of 1,850 feet above sea level while North Dakota's Senators and Representatives are unanimous in their support of the lower pool of 1,830 feet.

Mr. Speaker, under unanimous consent to have my remarks printed in the Appendix, I include a news story printed

in the July 21 issue of the Williston Daily Herald:

WASHINGTON, D. C.—Congressman USHER L. BURDICK, Republican of North Dakota, today introduced a new word—aggradation—into the dispute over the water level of Garrison Dam in North Dakota.

BURDICK told newsmen that aggradation, defined by the dictionary as "modification of the earth's surface by deposition, as in a river bed," will cause damage and hardship if the Army engineers are allowed to go through with their plan for an 1,850-foot Garrison pool level.

BURDICK criticized engineers who he said have promised to dike the threatened city of Williston and nearby irrigation projects. He charged that the artificial lake to be formed by a high pool would be forced over the tops of the dikes by aggradation of silt carried into the Missouri River by the turbulent Yellowstone, a tributary.

"It is inevitable," BURDICK continued, "that no matter how high the dikes are built the displaced water will eventually overflow.

"We would then," stated BURDICK, "see the countryside near Williston flooded, and the damage would be wholesale."

BURDICK said it is not generally known, but 40,000 acre-feet of silt in the Missouri River pass Williston every year.

"That means," said BURDICK, "40,000 acres to the depth of 1 foot could be covered annually by this silt deposit." When the river is active and flowing, this silt cannot settle, and much of it is carried down into the Mississippi.

"But," he warned, "should the Army engineers finally have their own way and build a dam to hold back 23,000,000 acre-feet of water, the west end of the lake so formed would be close to Fort Buford, 12 miles west of Williston."

From that point east would be a dead lake and BURDICK said the mucky waters from the surging Yellowstone, stopped by this dead body, would start to drop the silt, depositing the greater part of it at the upper end of the lake.

BURDICK said should the west end of the lake be located about 12 miles east of Williston, as would be the case with the 1,830-foot pool level, silt deposits could cause only a fraction of the damage in dollars and cents that Williston would otherwise suffer.

The North Dakota Congressman said the Bureau of Reclamation has opposed the 1,850-foot pool on the basis of aggradation theory. "Army engineers will not be turned loose to do this unnecessary damage until the Congress and the courts say," BURDICK declared.

"The lobby they have built up in Congress through favoring certain projects, and transporting Members of Congress in Army planes may be strong enough to give them their way in Congress. But I don't think they'll get through the courts."

China Reds—Officially—Give Russia Credit for Victories

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting an article by Clyde Farnsworth, Scripps-Howard staff writer, which appears in the Washington Daily News of Tuesday, July 26.

This article seems to substantiate what some of us have for some time known; to wit, that the stresses, strains, and conflicts created by the Soviet Union in Europe and particularly in Germany were designed as a diversionary operation in order to make possible the Communist victories in China. I think it important to underscore these sad and dangerous events as they flow past us in the stream of history, for if we do not take effective action soon the momentum which they will gather may eventually encompass our own destruction.

The article follows:

CHINA REDS—OFFICIALLY—GIVE RUSSIA CREDIT FOR VICTORIES

(By Clyde Farnsworth)

CANTON, July 26.—Chinese Communists are now giving full credit to the Soviet Union for Red successes in China.

The new refrain has something to recommend it—truth. It goes like this:

After the defeat of Japan, the Soviet Union and the eastern European satellites have pinned down the United States in Europe, while international communism went to town in Asia.

OFFICIAL SOURCE

Anti-Communists have long said the same in pressing for a stronger stand in China by the western democracies. But now it's official in statements of the Chinese Communists' leaders recently broadcast by the New China News Agency.

Chou En-lai and Chu Teh, No. 2 and No. 3 in the hierarchy of Chinese communism, hailed the birth of the Chinese-Soviet Friendship Association at Peiping. Madame Sun Yat-sen was identified as chairman and Chou as one vice chairman. The New China News Agency quoted Chou as saying:

"The present great victory of the Chinese people's liberation army is inseparable from the sympathy and assistance rendered by the broad masses of the Soviet Union and other countries. Because the Soviet Union, the eastern European new democratic countries, and the broad masses in Europe pinned down the main forces of imperialism in the west, the Chinese people were able to win victory in the east where the imperialist forces were weaker."

And Chu Teh said:

"It is clear that the victory of the democratic revolution of the Chinese people is inseparable from the friendly aid of the Soviet Union. Without the Soviet Union, without the victory of the anti-Fascist Second World War led by the Soviet Union, and without the unprecedented growth of a world democratic peace camp headed by the Soviet Union during the past 4 years, the Chinese revolution wouldn't have won its present speedy and great victory, and the consolidation of victory wouldn't be possible even when won."

With remarkable similarity and phrasing, the All China Writers and Artists Federation, one of many mushrooming organizations with which the Communists are trying to clinch their victories, said:

WORD TO STALIN

"If the British and American imperialist forces in the west had not been pinned down by the Soviet Union and the European new democracies, defeat in the east for American imperialism and its running dog, the Chiang Kai-shek reactionary clique, wouldn't have been possible."

The Chinese Friendship Association telegraphed Stalin:

"Your instruction will be a powerful weapon in the hands of the people in safeguarding the fruits of the revolutionary victory and in carrying out peaceful reconstruction."

The declared purpose of the association is to "introduce the experience of the Soviet Union in the national reconstruction and Soviet science and technology, and to strengthen the friendship of the two countries in the struggle for lasting peace."

In Communist propaganda you can read "Communist world revolution" for such phrases as "lasting peace."

Chou En-lai, who once impressed Gen. George C. Marshall with his sincerity by crying real tears—when General Marshall was in China trying for a Kuomintang-Communist coalition—told the founders of the new association that the Chinese-Soviet treaty (under which Russia gained predominant position in Manchuria) was "wholly in accord with the revolutionary interests of the Chinese people."

Chou anticipated no friendly relations with non-Communist countries. He said the Chinese people "must be prepared for a blockade of 8 to 10 years."

Youth and Talent Wasted

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. MULTER. Mr. Speaker, I am pleased to direct to the attention of the House the following article entitled "Youth and Talent Wasted" by Harold L. Ickes, which appeared in the New Republic of July 25, 1949:

YOUTH AND TALENT WASTED

(By Harold L. Ickes)

The American people have much to think about now that a jury has found Judith Coplon guilty of taking Government documents to be turned over to an agent of Russia, and another jury has heard Henry Julian Wadleigh admit that, for a period in his life, he was engaged in supplying the American Communist Party with classified information to which he had access as a trusted Government employee.

These two instances of disloyalty have tended to obscure the trial before Federal Judge Harold R. Medina in New York of 11 Communists on a charge of conspiracy to overthrow the Government by force and violence. In that case, New York City Councilman Benjamin J. Davis, Jr., testified that, in defending Angelo Herndon in Atlanta in 1933, he had to familiarize himself with many of the Communist books and they made sense to him.

Davis holds a bachelor of arts degree from Amherst College, where he played on the football team for 3 years and where his tuition fees were reduced because of high grades. He also has a Harvard law school degree. Miss Coplon was an honor student at Barnard College, and Julian Wadleigh was educated at Oxford, the London School of Economics, the University of Kiel (Germany) and the University of Chicago. His father, an Episcopalian minister, was rector of the American church in Florence during much of Wadleigh's youth. All three—Davis, Wadleigh, Coplon—held high scholastic rank. All three enjoyed an economic status that was satisfactory considering all of the circumstances. All three, making due allowances for the racial prejudice that undoubtedly was felt by Davis, and perhaps by Miss Coplon, had an assured position in their country; all three, as educated Americans, must have known how favorably American institutions compared with those of Russia. And yet all three have been charged with betraying their loyalty to these institutions.

American laws and mores are not perfect. We realize that Americans, to a greater degree than many other peoples who claim to be civilized, are inclined to be scornful and impatient of any strange custom, social development, or racial difference. However, it is beyond my comprehension how any American citizen, nothwithstanding the occasional imperfections that still abide in our system, can tolerate, even for a second, the notion that life would be happier and more satisfying if there were imposed upon us such an oppressive dictatorship as exists in Russia.

It might be that if I were a Negro, as are Davis and Paul Robeson, who has boldly declared his admiration of the Soviet system, I might react to Ku Kluxism and the brutality of segregation as they have. And yet both men might well consider whether, under communism, they could have reached the heights that they have scaled in America which, after all, is giving Negroes an increasing measure of respect, along with the legal rights that are theirs. I believe that in time both of these men will see in better perspective what communism has to offer in comparison with the ever-growing acceptance by the American people generally of a man on the basis of his worth, regardless of race, color, creed, or origin. If such men as these would make a careful appraisal of the position of the Negro in this country today, as compared with 25 years ago, they would have to admit that the recognition of the Negro as a human being has made enormous strides.

There undoubtedly has been a lamentable backsliding into anti-Semitism in the United States. Nevertheless, the Jewish strain has come to be not only accepted but appreciated in America. Our arts and sciences, as well as our literature, owe to the Jew an immeasurable debt. The liberal political aspirations that have pushed America constantly forward would greatly lag, and perhaps even stop altogether, if it were not for far-seeing and devoted American Jews.

Wadleigh, a white Protestant, belongs to the dominant group in American life, the group that has always governed the country and reaped its richest rewards. Yet he finds himself today in the position of attempting to explain, through the facilities of a metropolitan newspaper, how he came to engage in Communist activities to the damage of a nation which has provided him with a climate in which he might develop politically, economically, and spiritually to a degree that would not be possible under Communist institutions that are just as oppressive as those of a Hitler or a Franco.

The jury in the Coplon case, consisting of six whites and six Negroes, and comprising women as well as men, has vindicated our system of justice. If guilty, Judith Coplon deserves the sentence that the court imposed upon her. Coplon and Davis and Wadleigh—what a shameful waste their histories reveal of youth and talent and ability. Fortunately, the heart of America, despite transient hysterical fears, is sound.

Hon. August N. Hand

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. KEOGH. Mr. Speaker, for a man to live beyond the biblical span is one thing—for him to have lived a life of great service to his community is another. It is fitting, therefore, that the New York Times in the following editorial which appeared today pauses to pay tribute to a great judge and a distinguished American—the Honorable August N. Hand, judge of the Court of Appeals of the Second Circuit. The editorial is as follows:

AUGUST HAND AT 80

"Four things," said Socrates, "belong to a judge: to hear courteously, to answer wisely, to consider soberly, and to decide impartially." In the thirty-five years he has graced the Federal bench, August Noble Hand has more than met this ideal. No appointment to a United States district court has ever been happier than Judge Hand's appointment by President Wilson; none to the circuit court of appeals more fitting than his promotion by President Coolidge. To courts already distinguished Judge Hand has added great distinction. His lucidity, and thoroughness, his breadth of view and his liberalism have earned for him universal respect.

A colleague and disciple has written of him: "What will always count most in the drama of his life will not be the story of his actions but the impact on others of his character—of his selfless equanimity." His clarity of mind and keenness of judgment have not been dimmed by the passage of time; and today, on his eightieth birthday, we join with the host of his friends and admirers in wishing him much happiness and many more years of fruitful service.

Resolutions of Georgia Federation of Women's Clubs

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. DAVIS of Georgia. Mr. Speaker, Mrs. Gertrude Harris, the distinguished president of the Georgia Federation of Women's Clubs, of Atlanta, Ga., has forwarded to me resolutions recently adopted by the executive board of the Georgia Federation of Women's Clubs. One of these resolutions opposes the enactment of compulsory health insurance legislation, and another endorses legislation to provide sufficient foresters to educate, assist, and advise Georgia's 162,000 small timber owners in practicing forest conservation.

These resolutions are worthy of the serious consideration of the Members of this body, and pursuant to leave previously granted I insert them herewith:

Whereas it is proposed that the Congress of the United States enact a compulsory health-insurance bill to be financed through pay-roll deductions; and

Whereas under our system of private operation of business with an independent medical system, the practice of medicine in the United States and the advancement of medical science are without equal in the world; and

Whereas the term "free medical service" is a misnomer and a lure for the uninformed because any such service must be paid for, and under a compulsory health-insurance plan operated by the Government the person who only works half time would be entitled to as much free medical service and sickness benefits as he who works full time, thus penalizing the industrious, the clean living, and the thrifty in favor of the lazy, the shiftless, and the immoral; and

Whereas we believe that under socialized medical care the average citizen would find himself getting a lower grade of medical care and paying more for it: Therefore be it

Resolved, That the executive board of Georgia Federation of Women's Clubs go on record as opposing any plan of compulsory health insurance where the Government is given power, control, and direction of what should be an intimate and personal relation between the physician and the patient; be it further

Resolved, That a copy of this resolution be sent to all Members from Georgia of the House and Senate of the United States Congress this 28th day of June 1949.

Mrs. Z. V. PETERSON,
Chairman of Department of Legislation.
Mrs. GERTRUDE HARRIS,
President.

Resolution on conservation of small timber land tracts

Whereas the bulk of Georgia-grown timber that goes into the manufacture of pulp and paper, lumber, poles, piling, furniture and many other wood products comes from the lands of the small timber owner; and

Whereas there are 162,000 of these small timber owners in the State of Georgia with holdings averaging less than 99 acres each; and

Whereas better than 70 percent of the timber cut on the lands of the small timber owner is not harvested under good forestry practices, resulting in destructively cut timberlands; and

Whereas much of the damage to the Georgia timberlands could be avoided through an expansion of the cooperative State-Federal program to provide technical assistance to small-timberland owners, and adequate education and demonstration of good forestry; and

Whereas there are sufficient funds for the employment of only one extension forester for educational work throughout the State and two farm foresters in the State forestry department for furnishing on-the-ground assistance; and

Whereas many more farm foresters and extension assistants are needed in the State of Georgia to help stop the destructive cutting of small timberland ownership within a reasonable time: Therefore be it

Resolved, That the executive board of the Georgia Federation of Women's Clubs does urge our congressional and State representatives to support legislation that will furnish the State of Georgia with sufficient foresters to educate, assist, and advise Georgia's 162,000 small timber owners in practicing forest conservation; be it further

Resolved, That copies of these resolutions be sent to the Governor of the State, the Georgia Forestry Commission, and the legislators in each congressional district, and the United States Forest Service.

Mrs. GERTRUDE HARRIS,
President.
Mrs. E. L. BARNES,
Chairman, Conservation of Natural Resources Committee.

Texas to New York

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I set forth the following timely editorial which appeared in today's New York Times. It is interesting to note the contents of this editorial in view of the fact that the House will shortly con-

sider the bill, H. R. 1758, to amend the Natural Gas Act of 1938. The editorial well points out the importance of natural gas as a fuel. It is as follows:

TEXAS TO NEW YORK

The use of natural gas in New York City will soon begin with the conversion, starting August 1, of household appliances in Staten Island homes. This development culminates years of study and research on ways to distribute this natural resource economically from the oil and gas fields in the West to the country's metropolitan areas. The lack of satisfactory pipe to withstand the high pressures needed to move the gas overland was a major obstacle for a long time, but with the development of welded steel pipe in the twenties this was overcome. Since then, the use of natural gas has been widely extended, and now pipe lines are stretching long fingers in all directions from the Texas and other fields.

Before that, and even since then, incalculable quantities of gas had to be burned at the wells because it couldn't be delivered to the places where it was wanted. Its value, however, had long been recognized, and more than 2,000 years ago the Chinese used the gas to evaporate brine for making salt. In this country, its first use in buildings was in the little western New York State town of Fredonia, where in 1824 some enterprising citizens laid a wooden pipe from a gas well about 10 miles away and thus brought the gas into the community. But by that time, manufactured gas was coming into wide usage and it soon displaced the natural product.

The pendulum now has already swung in the other direction, but how far it will go is still a matter of speculation. Experts believe that vast quantities of natural gas will be available for a long time, but they point out that if and when it runs out we can always depend on our huge coal deposits to supply gas to cook the family meals, as is now the case. Meanwhile, the lower cost and higher heat value of natural gas compared with the manufactured product justifies its extensive and ever-widening use.

Housing Construction in Alameda County, Calif.

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1949

Mr. MILLER of California. Mr. Speaker, I am happy to report to the House of Representatives that the president of the Oakland (Calif.) Real Estate Board, Mr. Ray D. Nichols, realtor and builder and an honored and respected citizen, has written the President of the United States a letter, offering his fullest cooperation in securing the needed homes in rapidly growing Alameda County.

Because Mr. Nichols' letter sets the pace for others to follow I am including it in these remarks:

OAKLAND, CALIF., *July 11, 1949.*

Hon. HARRY S. TRUMAN,
President, United State. of America,
Washington, D. C.

DEAR MR. PRESIDENT: Now that your administration housing legislation has become the law of our land, it would seem time for realtors, builders, and Government to bury the hatchet and to take up the hammer and work together to secure much needed homes.

Only by complete confidence in each other, and with full cooperation, can Government, realtors, home builders, labor, and financing institutions make this program work.

I know that you will find builders and realtors in every precinct, and I know they realize that part of our people must rent and part must own homes. It is the duty of the home builder and realtor to know this local situation and to secure these rentals and this home building. With the housing law now passed, we are ready to go ahead.

I offer you my help in this community. I will read the law and will see how it can work here. I will secure the cooperation of local groups, and local agencies, to give to our community the housing that is needed in the places that it is needed. I know that in every community in our land there are other realtors ready to work with you.

Our code of ethics says: "Under all is the land. Upon its wise utilization and widely allocated ownership depend the survival and growth of free institutions and of our civilization. The realtor is the instrumentality through which the land resources of the Nation reaches its highest use and through which land ownersip attains its widest distribution. He is a creator of homes, a builder of cities, a developer of industries and productive farms."

Let us, as realtors and builders, accept this creed and, united with Government and labor, meet the challenge of a decent place to live for every American family within a price that they can afford to pay.

United we can reach this goal.

Respectfully yours,

RAY D. NICHOLS,
Realtor and Builder,
1948 President, Oakland Real Estate Board.

I for one thank Mr. Nichols for his wholesome letter.

Ray D. Nichols represents the type of men who have made democracy work.

Brannan Frying Pan

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1949

Mr. GOODWIN. Mr. Speaker, I was one of the small minority of 24 who voted in the House last week against the passage of the farm subsidy bill as amended. With the history of the legislation already on the books, I could not vote for a continuation of rigid farm supports. Under leave to extend my remarks in the RECORD, I am including, in support of my position, the following editorial from the Boston Herald of July 25, 1949:

BRANNAN FRYING PAN

The House last week jumped out of the Brannan plan. It refused to consent even to a trial run of the scheme to let prices of three farm products drop to natural levels while providing the farmers a subsidized income at 100 percent of parity. But having escaped this frying pan, the House promptly jumped into the fire of rigid support prices. It voted to cancel the section in the present Hope-Aiken bill providing for flexible supports after January 1, 1950, and to continue a 90 percent of parity system.

Thus the House returned to the one feature in the Brannan plan that is most unsound. Will the House never learn that rigid farm supports are bad?

The general idea of subsidizing farm income may not be too tough, in this increasingly controlled economy. Take potatoes. We now support prices by having the Government buy the surplus for alcohol, animal feed, flour, etc. It's expensive business. If instead we let the price fall to world market levels, and used the same Government money to make up to the farmer directly his loss of income by the price drop, we might have both happy farmers and happy consumers, even if we didn't have happy taxpayers.

If we replaced some of the income subsidy to the farmer with useful soil-conservation aid, we might even come out better than we do now. At least no one knows how it would work.

The bug in the thing is that Secretary Brannan proposed to make 100 percent of parity the measure of the income subsidy. In fact, a farmer who raised no more than he raised during the war was to be assured a wartime income. If he raised more, he got more.

In the case of cotton, a grower would receive $84 per acre if the yield was 300 pounds per acre, in contrast to $56 on a 200-pound yield. Naturally, the growers would sweat out the biggest production possible year after year, no matter what the carry-over or condition of the market. As fast as prices fell, the income subsidy would rise.

Now, in the ordinary market, an average 300-pound yield brings less per acre than a 200-pound yield. This has tended to curb excessive expansion.

A Brannan plan that promised a parity income only on a reasonable total crop might succeed. At least it isn't quite as absurd as the scheme the House rejected.

Now, however, the House has voted to maintain a rigid support-price plan, by which the basic crops would be held, so far as possible, at 90 percent of parity. This would give up the present arrangement, sponsored by Senator AIKEN, by which after this year prices will be supported at 60 to 90 percent of parity, depending on the size of the crop. So the House simply jumped from the uncontrolled expansiveness of one plan to the only slightly less uncontrolled expansiveness of the other.

The Aiken idea doesn't sit well with the farm bloc, however. They shudder at the possibility of getting only 60 percent of parity. There is, however, a modification of the Aiken plan, suggested by the able Harvard economist, John D. Black, which might meet both objections.

This is the adoption of a variable price arrangement under which big crop yields would sell at the most for only enough more per acre to cover the extra costs of harvesting. This might assure in effect a parity return on the normal portion of the crop, but much less on any production above that. The farmers would get their safeguard against catastrophic price collapse, and yet would be restrained from excessive production. This plan could be adapted equally well to the income scheme.

The solution the House chose is simply the retention of the one bad feature of both schemes. We can hope the Senate has more sense.

Reduction of Federal Expenditures and Tax Relief

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1949

Mr. TOLLEFSON. Mr. Speaker, the Hoover Commission recommendations

have created a great deal of public interest in the subject of reducing Federal expenditures and in the corollary subject of tax relief. Letters from constituents indicate some dissatisfaction with the progress Congress has made in this direction. I am in receipt of a parody on a current popular song hit which may describe in musical terms the present situation in Congress. I include it herewith:

BOILING DOWN THE BUDGET

(Tune: Cruising Down the River)

Boiling down the budget
On these sunny afternoons
Mid spending spree and gifts for free's
Like reaching for the moon.

The old piano player
Sings us the same old tune.
He asks as much in August
As he asked of us in June.

The folks at home with weary groans,
All plead for tax relief.
But music round here makes a sound
That taxes their belief.

We'll all go broke together,
And this may happen soon
If we don't boil down the budget
On these sunny afternoons.

1952 is Now

EXTENSION OF REMARKS
OF
HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. KUNKEL. Mr. Speaker, in 1947, I was the chairman of a subcommittee of the House Select Committee on Foreign Aid which studied and reported upon conditions in the United Kingdom and the British Dominion. The gentleman from Pennsylvania [Mr. WALTER] was my valued associate. In the report, which we filed and signed jointly, we called attention to the crisis which would occur in the United Kingdom when the existing buyers' market had ended. We urged that steps be taken to prevent that expected condition from arising. I quote from our subcommittee report on that subject:

11. The United Kingdom has been forced to concentrate on production. This has been done with a relative disregard of the cost of production. Exports had to be secured. There was a seller's market. In general, anything produced could be sold. The United Kingdom's problem was to produce. At some time in the future this seller's market will end. The United Kingdom will then be faced with another crisis, this one requiring it to meet cost of production standards in a competitive world market. In the planning and administration of any program, this future situation should be foreseen. Preparations should be made to meet it. It is as certain as is any future condition. We cannot stress its importance too strongly.

Unfortunately, the present situation in the United Kingdom is exactly as predicted and for the reasons pointed out above. In that connection, the comment contained in the London Economist of July 2, 1949, is of great interest and value to all Americans interested in the welfare of the United Kingdom and in the economic and political relations between the United Kingdom and the United States. The article follows:

1952 IS NOW

The much advertised difference of opinion between the governments of western Europe which has been creating an atmosphere of crisis in Paris and Brussels and London this week is, on the surface, concerned with the technicalities of the intra-European payments scheme. These technical difficulties can undoubtedly be removed—they may indeed have been settled by the time these lines appear—and a compromise can be worked out by which the strict bilateralism of the present arrangements can be relaxed without costing Britain any gold. But the technical details of the dispute are not at the real root of the crisis. The conflict over drawing rights and transferability is a symptom, not a cause, of Britain's present difficulties. Sir Stafford Cripps' insistence that no scheme should threaten Britain's reserves springs from his knowledge that once again those reserves are draining away. The figures for the 3 months from March to June, to be published next week, will show a sharp fall, and it is this knowledge of a steadily diminishing reserve which accounts both for the Chancelor's rigidity in the discussions on the payments scheme and for the violent attack of nerves that has overtaken the London money market.

The truth is that the crisis which the British did not expect until 1952—and hoped to be prepared for by then—is already upon them. It has always been recognized that by 1952 the stream of external assistance—whether by loans or Marshall aid—which has gone on uninterruptedly since 1945, would have come to an end and the British by then would have to live on what they earned in a competitive world. In the long run, nobody owes the British people a living and the point must come when they enjoy only that standard of living for which they are prepared to work. What had not been expected was that Britain's difficulties in paying its way would remain so dire that even with Marshall aid the books would not be balanced and the eating up of the reserve would continue unchecked, or might even be accelerated. As in the phony war of 1939, the belief that time is on our side has again proved a myth. Time, now as then, is on our side only if we use it. And, now as then, time has not been used to sufficient effect. The crisis, staved off 2 years ago, is returning in a more acute form.

Such is the present prospect. The biggest cause of the sudden transformation has been the change, in the past 6 months, in the economic climate of the world. Britain's present trading methods do not equip it well for trade in a buyer's market. A large part of its commerce is regulated by tightly drawn payments agreements in which the sterling earned by sales to Britain may be spent only within the sterling area. British producers thus tend to feel themselves insulated from price changes in the rest of the world economy. The incentive to lower costs is slight. But in a world which will no longer buy anything that is available and in which the price at which goods are offered is again becoming a decisive factor, sterling which can only be spent in the increasingly high-cost sterling area loses its attraction. For every export placed through bilateral dealing, some other export is lost through the growing unwillingness to hold sterling.

This unwillingness has been accentuated by the belief that a currency which traders are increasingly unwilling to hold must of necessity be overvalued. And the suspicion that the pound will have to be devalued has in turn discouraged countries from holding sterling which might at any time begin to fall. Thus the method of trading based upon strict bilateralism and upon discriminatory trade, which is designed and only defended as an attempt to secure Britain's final reserves, is beginning to fail in its acknowledged task. In the seller's market that has prevailed in the last few years these methods of trading have been technically effective; they have protected Britain's slender gold and dollar reserves. But in the new circumstances, where traders increasingly have choice of supplies and a choice of markets, these methods will no longer work. In spite of all that can be done by bilateral deals, the reserves are again running out. If the policy continues unchanged, the British economy threatens to settle by the stern long before 1952.

What can be done about it? There seem in fact to be only three courses before the British people. The first, the easiest to slip into and the most dangerous would be to attempt to make no change at all and to continue the policy of strictly controlled, strictly discriminatory, high-cost trade within an insulated sterling area. Such a policy is economically impossible and politically disastrous. Other countries can be made, by bilateral deals, to take high-cost British goods only to the extent that they feel themselves compelled to do so, and the degree of compulsion is falling every day. To continue with such a policy now, twisting into ever new Schachtian ingenuities, would simply mean that the volume of imports that could be paid for by British exports would steadily fall. It might perhaps be a feasible policy for a self-contained country that did not have to import a certain minimum quantity of food and raw materials to live. But for Britain it would be disastrous at home and ruinous abroad. The partners in the sterling area would hardly support an association designed to maintain an overvalued currency denuded of all financial backing. At home, the end of the reserve could only mean huge cuts in imports, and the resulting dislocation and unemployment would create precisely the type of crisis which the maintenance of the present controls is suppoosed to prevent. Politically, an insulated sterling area pushed to the limit would cut Britain off from the United States and from its trading partners in Europe and thus undermine all hope of achieving through cooperation an expanding world economy and freer world trade.

A second course would lie in seeking further subsidies, but the proposal has only to be named for its impossibility to be clear. There is no likelihood whatsoever of the American Congress—the only source of such a subsidy—providing still more dollars for a Britain which gives much less promise of moving toward solvency. And if by some wild chance such a policy were conceivable, it would at this stage do a disservice to the British people. The principle of the Marshall plan is that dollars will be provided as a free gift for Britain while policies are pursued that will restore the financial independence of the British community. For a brief period last winter it looked as if it might be working. But it is now apparent that this was an illusion. There has not been nearly enough progress toward self-support. Indeed, if the American critics of the Marshall plan say that the dollars have merely removed from the British people the harsh pressure of circumstances that would otherwise have compelled them to make the necessary adjustments, it is very hard at this moment to quarrel with them. At some point, the readjustment must come. The community cannot perpetually consume more than it earns and now that the aftermath of the war has been overcome in Europe, any increase in subsidies or extension of them beyond 1952 would only reinforce the British illusion that by controls at home and bounty from others, a gallon of living standards can be got from a pint pot of production.

There remains a third course, the most difficult, perhaps, but certainly the most realistic and in the long run the only one by

which economic salvation can be achieved. It is in simple terms a policy designed to compel the country to pay its way, to produce enough goods cheaply enough to pay for its imports and to increase the competitive efficiency of the British community to such an extent that the desired standards of living can be achieved without subsidies from neighbors and without brandishing the dangerous weapons of trade by compulsion. It would be good to believe that this concentration upon productivity and efficiency—which has been on Ministers' lips often enough in the last 9 months—could be achieved by exhortation alone. If explanatory and encouraging speeches could bring management and labor to new efforts, the tide would surely have turned already. The unhappy fact is that neither side feels the compulsion to cut costs. Business concerns selling all they care to produce at fancy prices, workers going slow or seeking a shorter week in return for higher pay are still protected against the cold wind of competitive economic reality. Now, however, there is no choice. One way or the other, in a period that has to be reckoned in months rather than in years, the reserves will run out. Can the change in economic climate be linked to a genuine change in policy or will it simply bring on the helpless bankruptcy of what has gone before?

There is nothing impossible about a policy of adjustment. The inherent advantages that have made Britain a great trading nation are still there. This island still stands at the crossroads of the world; raw materials and food can be brought to it from the ends of the earth more cheaply than they can be moved internally in continental countries; there is a large supply—now the second largest in the world—of skilled and experienced craftsmen; there is a well-articulated structure of industrial capital that, for all the neglect it has suffered, is still one of the largest and most varied in the world; there is a homogeneous population and an efficient—an all too efficient—machinery of government. These are formidable advantages. They mean that the British people should find it much easier than most to give what the world accounts value for money. But value for money they must give. The adjustments that are necessary before Britain is again giving value for money are not very large. It may be necessary to reduce the standard rate of real wages, but probably not by very much. It will certainly be necessary to increase the standard of effort and effectiveness, but not above what is already often achieved in this country. But, large or small, the adjustments must be made, and since it is now manifest that the prevailing mixture of good intentions and restrictive actions—what passes by the name of planning—is only making the situation worse, some other policy must be tried.

Nor is it necessary to assume a change in political direction. What has been at fault in these years has not been the deliberate policy of one party, but the illusions and the wishful blindness of a whole people. What will put matters right is not a switch from something called socialism to something called conservatism, but a switch from policies (to which both sides of industry have contributed) making for steadily rising costs of production to policies that concentrate on pulling them down. This cannot be done without at least the collaboration of political labor. But if Socialists really believe that their policies can make the British economy more efficient, now is the time for them to prove it.

The years that have been wasted mean that there is now very little room for maneuver or choice left to the British economy. Within a very short time from now, it must be competitive. That time will come not in 1952 but this summer and autumn. Having failed to plan and exhort themselves into competitive efficiency when the world was ready to buy them time to do it in, the British people must now, willy-nilly, submit themselves to the harsh compulsions that will force them into self-support.

There is, however, one choice left—to face the crisis with new policies and a new spirit, or to drift into it crippled by clinging to the rigidities of the last 4 years. The choice is admittedly difficult, since to abandon the defense mechanisms of today involves changes in habit and effort and outlook which a democratic community rarely makes except in time of war. But the gains may be correspondingly great. It is clear that an isolationist, self-insulating Britain is rapidly exhausting not only its monetary reserves but the stocks of constructive good will available among its friends and trading partners. But a resurgent, creative, risk-taking Britain would arouse new responses and create new possibilities of international cooperation. Few people knew in the lonely defiance of 1940 that cash and carry would soon make way way for lend-lease, but the decision was taken all the same to use the last pitifully inadequate reserves as a base for action, not to try to husband them by playing safe. The challence today, if less sensational, is no less testing. It is not a trick of rhetoric but solid truth to say that Britain needs the same effort, the same audacity, and the same greatness of spirit to survive.

Home Rule in the District of Columbia

EXTENSION OF REMARKS
OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. AUCHINCLOSS. Mr. Speaker, as a number of my colleagues know, I have been interested and active in promoting legislation to give as much home rule to the residents of the District of Columbia as is possible under the Constitution, and I am very pleased to learn of the letter which the President of the United States has written to the Speaker urging that the House take prompt action on the legislation pertaining to this subject, which is now being considered by the Committee on the District of Columbia.

I hope that the majority leadership in the House will take the President's request seriously and implement it to the fullest degree.

At the present the Subcommittee on the Judiciary of the House District Committee is holding hearings on the different measures providing for home rule and has heard a number of witnesses. Recently the chairman of the District Committee inserted in the Appendix of the RECORD a statement made by the representatives of the Washington Board of Trade and I have asked permission to include in my remarks the statement made by the Washington Home Rule Committee before the Judiciary Committee. The Washington Board of Trade has been consistently opposed to allowing the residents of the District of Columbia to vote for a local council to manage their affairs and their attitude is difficult to understand. Any people in this great free country who are taxed for the expenses of their Government should have the fundamental right of electing their own government. This is the basic right of American democracy.

The Washington Home Rule Committee is made up of a group of residents in the District who are businessmen, professional men, Federal employees, and housewives. Many of them own their own homes and a number of them were born in the District. They are taxpayers and they want to have a say in how their municipal government is run. This committee was of great help to the subcommittee which studied this great question in the Eighteenth Congress, and of which I had the honor to be chairman.

I hope the Members of the House will read this statement carefully because I believe the arguments presented are unassailable, sound, and merit thoughtful consideration.

STATEMENT OF THE WASHINGTON HOME RULE COMMITTEE BEFORE THE JUDICIARY SUBCOMMITTEE OF THE HOUSE COMMITTEE ON THE DISTRICT OF COLUMBIA, IN SUPPORT OF S. 1527, JULY 15, 1949

The Washington Home Rule Committee supports and urges immediate passage of a bill patterned along the lines of the Kefauver bill, S. 1527, as a realistic and workable means of presently providing a measure of home rule for the District of Columbia.

Our committee was organized solely because of our desire for home rule. We are not presenting the views of any particular business or social group or of any special interest. Our members include people in the legal and medical professions, businessmen, Federal employees, and housewives. We have representation on the board of trade and the District Bar Association. Most of us own our homes. A number of us were born here. We pay taxes here. We would like to have a say in how our municipal government is run.

We believe that the right of local self-government is a basic right of our American democracy which must be open to all citizens. We do not see why we who live in the District should be denied that right.

We have previously expressed our views in testimony before this committee on the Auchincloss bill last year and before the Senate District Committee on the Kefauver bill this year. We believe that we have been helpful in both cases. We hope that our appearance here will be constructive. We would like to help the committee reach a decision recommending that the House of Representatives join the Senate in providing a sound structure for local self-government. Technical difficulties or minor necessary changes in the bill must not stand in the way of its early passage.

There is no point in arguing about the details of the various bills unless the basic merits of home rule are first accepted. This subcommittee has indicated that it still has some doubts as to the merits of home rule as such. We would first like to address ourselves to the general objections which have been voiced by the members of this committee in the hearings to date.

ARGUMENT THAT THE KEFAUVER BILL DOES NOT PROVIDE TRUE "HOME RULE"

Some of the committee members have suggested that the various home-rule bills are misleading because they do not provide true "home rule." Some witnesses have suggested that true "home rule" could be obtained only by an amendment to the Constitution to permit District of Columbia participation in national elections and district representation in Congress. We have nothing against such a constitutional amendment, but we would like to have a measure of self-government now. If we cannot achieve the status

of a self-governing State we would at least like to achieve the status of a self-governing city. That would be a start on home rule, at least. It would put us roughly in the position of Hawaii, Alaska, or Puerto Rico. These Territories have been told that they must prove that they can govern themselves before they are granted the right to participate in national elections as States. That is all we are asking for now.

ARGUMENT THAT WASHINGTON SHOULD NOT HAVE LOCAL SELF-GOVERNMENT BECAUSE IT IS THE "FEDERAL CITY"

It has been argued that because Washington is the seat of the Federal Government it would be improper to permit local citizens to participate in local government by the electoral process.

Of course Washington is the Federal city. Washington's Federal buildings and monuments and parks and its Federal functions belong to the people of the United States as a whole. Obviously the people of Washington should have no more control over these Federal properties and functions than any other group of people living in any one part of the country should have.

On the other hand there are thousands of private homes, privately owned stores and businesses in the District, which are no more the property of the inhabitants of California or Texas or Minnesota than the homes and stores in these States are the property of the residents of the District.

Similarly there are governmental functions here of a strictly local nature which are of no interest to the inhabitants of the 48 States. These have always been recognized by the Congress as District matters, as distinguished from Federal matters. This distinction between District and Federal affairs is the basis for the present division of responsibilities between the District government and Federal authority. There is nothing in the Kefauver bill that would change this basic principle. If it is proper for the Congress to grant some strictly local powers to the appointed Commissioners of the District, as Congress has already done, it is equally proper for the Congress to grant to an elected council slightly broader powers of a strictly local nature. In both cases the local government is absolutely answerable to the Congress. In neither case is any measure of control over Federal matters vested in local governing body. We agree with the committee that essential Federal interests in Washington must remain under the direct control of Congress. The Kefauver bill is designed with these basic principles in mind.

ARGUMENT THAT THE KEFAUVER BILL DOES NOT RELIEVE THE CONGRESSIONAL BURDEN

It is of course true that the Kefauver bill would leave the congressional Committees on the District of Columbia with some continuing burden of work and responsibility. This of course is necessary and proper, since the Congress continues to be constitutionally charged with over-all supervision of District matters. The Kefauver bill affirms the continuing responsibilities of the committees, but lightens their burden of detailed work, by shifting the bulk of it to the locally elected city council. The bill relieves the full Congress of the cumbersome burden of spending 2 days of each valuable month on District details.

The shift of work to the council is exactly like the delegation of duties which the top management of any well-run large organization, whether public or private, must make today to its operating organization down the line. Today most large organizations are too complex, and the number of decisions too great to permit the top management to spend its time on daily details. Decisions must be made down the line, though over-all responsibility remains at the top. Occasionally, of course, a decision made down the line is reversed by top management upon review, but these are rare.

In the same way under the Kefauver bill, it is recognized that a decision of the city council may occasionally be reversed by the Congress. It is our firm belief that this will happen only rarely. The near presence of Congress' continuing power to investigate and overrule will bring ready conformity of District legislation to congressional policy.

The Kefauver bill will relieve the District Committee of such details as starling and weed control, but will preserve its continuing control over the policies of the District government.

ARGUMENT THAT THE KEFAUVER BILL IS UNCONSTITUTIONAL

The subcommittee naturally desires such assurance at it can obtain that the Kefauver bill is constitutional.

This question divides itself in two parts, whether home rule itself is constitutional, and whether particular features of particular home-rule bills are constitutional.

On the first question, there is hardly any room for argument. The Federalist Papers were written by Madison and other drafters of the Constitution, for the specific purpose of explaining the recently drafted Constitution and urging its ratification by the States. In one of these papers (No. 43) Madison said of the residents of the proposed Federal district that:

"A municipal legislature for local purposes, derived from their own suffrages, will of course be allowed them."

The constitutionality of the particular bills is equally clear. A large number of eminent constitutional lawyers in private practice have rendered exhaustive opions on the constitutionality of the Auchincloss bill, both in its original and in its final form in the Eightieth Congress. In addition, the legislative counsel of the House of Representatives has rendered an opinion on the subject. Most of these opinions appear in the hearings on the Auchincloss bill; all are available to the subcommittee. In addition, the Kefauver subcommittee of the Senate received further legal opinions during its consideration of S. 1527 and other bills in this session.

Without reviewing these opinions in detail in the short space of this letter, it is sufficient to say here that they overwhelmingly support the constitutionality of a delegation of legislative authority to an elected city council of the district. These conclusions were based on the Supreme Court cases which have consistently upheld the constitutionality of delegations of legislative authority to the legislatures of the Territories, and on the decisions of the courts holding that the power of the Congress over the District is analogous to its power over the Territories—an absolute, plenary power. A major feature of the Kefauver bill is the provision for a concurrent resolution to override legislative proposals of the district council. The constitutionality of such a procedure has recently been sustained by the Attorney General in an opinion rendered in connection with its proposed use in the Presidential Reorganization Act of 1949. (S. Rept. 232, 81st Cong., 1st sess., pp. 18–20.)

We believe that these many favorable opinions should convince the committee that at the very most there is so little doubt as to the constitutionality of the Kefauver bill that the Congress should pass it, since only by court test after enactment can the matter ever be resolved. It is our considered opinion, after lengthy study of the authorities, that there is no doubt as to the general validity of the Kefauver bill.

ARGUMENT THAT THE SO-CALLED "DUAL-VOTING" PART OF THE KEFAUVER BILL IS ILLEGAL OR IMPROPER

At the outset it should be emphasized that the term "dual voting" is a misnomer. No one under the Kefauver bill could vote in two places for the same official. The vote in the District would be for District officials only. The vote in the home State would be for President, Senators, and Congressmen, State officials and possibly minor local officials of political subdivisions of the State.

Despite the fact that there is no overlapping vote permitted by the bill, some witnesses have attacked the voting provisions of the bill as being fundamentally wrong or improper.

It is true that the voting arrangements in the bill are unusual; however, they are not unique. It is an unusual arrangement designed to take care of an unusual situation. That does not make it illegal or improper. On the contrary, it is unquestionably desirable to give the local vote to the many Federal employees who are resident here during their entire adult lives but who must maintain legal domicile elsewhere in order to maintain their civil-service position. Similar arrangements have been allowed in some of the outlying towns in Maryland for the same reason that they are included in the Kefauver bill—in order to allow the large number of resident, taxpaying Federal employees to vote. Accordingly, unless there is a clear legal ground for condemning the arrangement, it should be permitted to remain in the bill.

A question has been raised as to whether the so-called dual voting provisions would cause difficulties in determining the domicile of a person who voted both in local elections in the District and in national elections in one of the States. The place of voting is of course only one of the indicia which enter into the determinations of questions of domicile. We believe that any difficulties in this regard can be effectively cured by striking the period at the end of section 1206 (a) of the Kefauver bill, and by adding the following: "nor shall the registration for or the casting of a vote in any election provided for herein be construed as evidence of his domicile in the District."

In this way it will become clear that it is the intention of the Congress that the question of the person's domicile shall not be governed by the fact that he happens to vote in the District.

Apart from the domicile question above discussed, a further objection to the so-called dual voting provision has been raised because of the fact that, during the hearings on the Auchincloss bill, 8 of the 48 States indicated that voting in District elections by registered voters in those States might disqualify them for the time being for further voting under the laws of such States. Two other States expressed no opinion as to whether such voting in District elections would affect home voting rights. Thirty-six States expressed the opinion that there would be no objection to the proposed arrangement.

The temporary difficulties with respect to voting in these States should of course be straightened out. The remedy lies with the States, however, and not with the Congress. If the dual voting provisions are retained and the bill is enacted there will be an incentive on these States to amend their election laws so as to take care of their voters who live and wish to vote in the District. There would be no incentive to pass such amendatory legislation until and unless the Kefauver bill is passed. Until such legislation is passed, the voters of those States who live here could simply refrain from voting here.

It may be of some interest to note that the population of the eight States in question constitutes less than 10 percent of the country's population (1940 census). Assuming that the Federal employees in the District come from those States in the same proportion as the population of their States bear to the total population of the country it is evident that 90 percent of the Federal employees

in the District would benefit from the dual voting arrangements, while only 10 percent might have the problem of whether to forbear from voting in one place or the other until their home State election laws were amended.

We believe that the above arguments demonstrate conclusively the need for and practicality of the dual-voting provisions of the bill. If after consideration of these arguments, however, the subcommittee for any reason considers the provisions to be undesirable, we would urge it to eliminate them from the bill. The main goal is to enact a realistic bill for local self-government. The dual-voting provisions, if determined to be unworkable, should not stand in the way of enactment of the bill as a whole. Perhaps after a period of practical operation under the bill, the out-of-State voting matter will appear to be less troublesome, and can be handled by a simple curative amendment to the charter.

ARGUMENT THAT WASHINGTONIANS DON'T WANT LOCAL SUFFRAGE

There is only one way to determine whether a majority of Washingtonians favor the Kefauver bill. That is to have the referendum which the bill itself provides. Straw votes within small special-interest groups are notoriously inaccurate indications of the will of the majority of citizens. In the largest straw vote held to date, and the only one which was open to all citizens of the District without regard to group, the vote was three to one in favor of local suffrage. Outstanding men of business and civic leaders during the past 2 years have indicated to the House District Committee their support of home rule. These include such leaders as Frank Jelleff, John Lord O'Brian, Chauncey G. Parker, William J. Flather, Jr., Mrs. J. Borden Harriman, and E. R. Finkenstaedt. Citizens' associations, church groups, and labor groups have added their endorsement. The number of organizations and individuals who have requested time to testify in support of the home-rule bill and the number and variety of people who have written to the committee to endorse it are too many to disregard. It is clear that a large number of people in all walks of life in Washington want this bill; whether a majority want it can be determined only by the referendum which the bill provides. We are bold to believe, however, that the city would decide in favor of the new charter.

It must always be borne in mind that this bill does not in and of itself provide local suffrage—it merely makes it possible for the people here to decide authoritatively for themselves whether they want it.

THE SEGREGATION ISSUE

One of the most widely spread reasons for opposition to the bill, both expressed and unexpressed, is the large Negro population of Washington. There is fear that under home rule segregation might be abolished, there is fear that the Negro vote might be the deciding factor in elections, and there is fear that unscrupulous political groups might gain control of the Negro vote for their own purposes. In reply to these fears, the Washington Home Rule Committee calls attention to other cities with large Negro populations. Baltimore and Richmond, whose Negro populations are approximately proportional to that of Washington, have local suffrage without being subject to the calamities which have been predicted should Washington be given similar local rights. Richmond has substantially the same city-council system.

Our committee was formed to urge home rule, not to solve the problem of segregation. The segregation issue has nothing to do with home rule. We do not see any reason why segregation should be handled any differently in the District than elsewhere in the Nation. If it is regarded as a national problem for the Congress, the District should be treated the same way as the whole country, by comprehensive national legislation, not by withholding home rule. If it is regarded as a local problem, the District should have the same right as any other community to decide the issue in its own polls and in its own way.

THE KEFAUVER BILL IS A GOOD BILL AND SHOULD BE ENACTED IN SUBSTANTIALLY ITS PRESENT FORM

The Kefauver bill is the product of much careful work by many people over a long period of time. Our committee endorses it only after long and careful study. Perhaps it is not a perfect bill. No bill of such a comprehensive nature can please everyone, but the bill as a whole is a good one. Any defects in detail can be changed by subsequent amendment if practical working operation under it shows that to be necessary. The fact that it may at some future time have to be amended here and there is no reason to hold up its enactment now.

We all must recognize that the success of the local suffrage government which the Kefauver bill will provide will depend upon constant and intelligent teamwork—teamwork by the citizens of the District with the members of your committee. We are confident that this teamwork will be developed and maintained effectively under the Kefauver bill.

As we see it, the basic task of this committee is to provide a workable self-government for the District of Columbia. Everyone agree that the self-governing process at the local level is the basis of our American way of life. In the consideration of the comprehensive provisions of the Kefauver bill we must now allow differences over minor details to obscure that basic and uncontrovertible fact.

We are under no delusion that the bill will make Washington into a Utopia or solve all its problems in the years ahead. We believe firmly, however, that the bill in general provides a workable structure of local government within constitutional limitations, that its enactment will be of real assistance to the Congress and to this committee, and that under it the government of the city will be effective, efficient, and responsive to the will of the electorate. Most important of all, perhaps, it will provide the citizens of Washington, who are proud of their city, with a real opportunity to participate actively, effectively, and democratically in making the government of this community a credit to the Nation.

Respectfully yours,

WASHINGTON HOME RULE COMMITTEE,
By LLOYD N. CUTLER.

Communism Is Antichrist

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1949

Mr. RODINO. Mr. Speaker, Nutley, N. J., is but a small part of America. It is one of the thousands of towns that make up the American scene. It is just a town—typically American, and its townspeople are typically American, too. They are proud of their little town and they are proud of their community spirit. They are a God-loving and God-fearing people. They worship in their own way—and according to their own faith.

In an editorial which appeared in the July 22 issue of the Nutley Sun, the editor points with pride to what he terms democracy in action in the town of Nutley in contrast to the horrible machinations, the false philosophy of communism.

Under leave to extend my remarks in the RECORD, I am happy to be able to include the editor's thoughts herein:

COMMUNISM IS ANTICHRIST

Right here in Nutley, today, there is evidence that there is more democracy in Christianity than there is in communism.

Msgr. James J. Owen took occasion to state today that, building prices having decreased, a new half-million-dollar church will be built for St. Mary's. It is intended to provide even greater facilities for worship and for an expansion of the vital work the priests and the sisters of St. Mary's are doing for a big segment of the youth of Nutley.

Today, in contrast, in Czechoslovakia the nonelected Communist government of a predominantly Catholic people defied Pope Pius' threat of excommunication by proceeding with plans for the confiscation of all property owned by the church in that unhappy land. Priests will be put on the pay roll of the Red government and all Catholic activities passes under the control of the Minister of Religious Affairs.

Communist leaders in Italy and France are attempting to persuade their followers that communism and Catholicism can exist side by side despite the Vatican's recent excommunication decree.

Pope Pius XII has told German Catholics, and through them Catholics everywhere, that no government that denies God can survive.

Palmiro Togliatti, Italy's leading Communist, told 2,500 of his followers in Rome last Sunday that they could be Communists and good Catholics at the same time.

The Vatican says not. An edict issued Wednesday by the Vatican informed Catholics throughout the world that they subject themselves to excommunication by supporting communism and thus deprive themselves of the church's sacraments and association with the faithful. Defiantly denying that excommunication can ever destroy communism, Togliatti called the Vatican's action "tactics dragged from the darkest ages of humanity's history."

Here in Nutley, today, the contrast must convince all that in Christian action there is true democracy. A congregation which includes the rich and the poor will shoulder a burden of a half-million dollars to erect, not a monument to destruction but an edifice of Christian action, a church where all may enter to share that basic freedom of President Roosevelt's pronounced four freedoms of democracy—the freedom to worship God as you wish.

A Fighting Faith in America

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1949

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Charles Luckman, from the Christian Science Monitor of July 24, 1949:

A FIGHTING FAITH IN AMERICA—A BUSINESSMAN DEBUNKS RECESSION THREAT

(By Charles Luckman)

Fear has won a beachhead in America, and the people of this country, although victorious in history's most devastating wars, are

retreating before the shadows of an uneasy peace. Fear, unknown in war, is producing an astonishing paradox in the richest and strongest nation in the world—it is persuading the American people to talk themselves into a depression.

A defeatist attitude is encountered on all sides—from board rooms to barrooms. Whether it's a group of clerks in a cafeteria, or a group of corporation big shots at a banquet, the main dish is likely to be despondency, seasoned with dire rumors, and garnished with gloomy statistics.

These dim views of America's economic health have apparently gained wide acceptance, although the facts of America's economic strength are known to everyone. On the radio, in magazines, in our newspapers, the basic soundness of America's economic position has been clearly pointed out. Because they do not fit into the melancholy fashions of the hour, such statements fail to register on the public mind. But they are startling facts and should be repeated again and again. Here they are:

1. Fifty-nine million workers on the job.
2. Two hundred billion dollars in liquid savings.
3. Two hundred and fifteen billion dollars personal income for 1949.
4. High purchasing power—53 percent greater than prewar.

AMERICA FACES GRAVE PROBLEMS

No one can deny that America faces many grave problems today, both at home and abroad. No one can deny that American business has an ample share of these problems which it must solve itself, if it is to continue its robust tradition of individual competitive enterprise. But I do deny, and most emphatically, that these problems present any logical reason for doubt. I deny that challenge is a cause for fear.

There is all the difference in the world between being aware of complex problems and being afraid of them. This moment demands a clear-eyed appraisal of the facts—not an emotional concern with shadows. * * *

Not as a politician; not as a historian; not as an economist; but as a businessman, I call for a renewal of faith in the vitality of our American way of life.

By faith in America, I do not mean a listless reverence for the past or a mere submission to the present. By faith, I mean a certainty based on the principles for which America stands; by which it has progressed, and through which it will realize its full potential of greatness in the future. Faith in America is not blind acceptance of things as they are—it is the belief that we, in America, can make them better. * * *

Now, of course, nothing in this world is perfect—and the American economy is no exception. * * *

This may surprise those of us who believe that simply because we have the highest living standard in the world, we have everything we need. Some of us have become complacent through reading statistics about the number of bathtubs and telephones, motorcars, and radios, owned by Americans as compared with Russians.

Such comparisons are significant—yes. But they are phenomenal only by the Communist standard. By American standards they are not nearly good enough.

LET'S FACE THE COLD FACTS

Twenty-seven million Americans have no kitchen sink.

Eighteen million Americans lack washing machines.

Twenty-five million Americans lack vacuum cleaners.

One million American families need new homes this year.

Forty million Americans have neither bathtub nor shower.

So, let's not talk about what we've got. Let's be more concerned with what we haven't got. We must be concerned for two reasons: First, because these are human needs that should be met; and, second, because these needs provide dramatic illustration of the fact that we haven't finished anything—we're only beginning.

There is enough urgent work on hand for every business now in existence—and for industries yet unborn—to keep busy for generations to come. In common sense, we have no excuse for a recession, let alone depression.

So much for the domestic picture. Now, what about the situation abroad?

Solid progress in the rehabilitation of war-wrecked countries is being made through the Marshall plan—one of the most far-seeing and generous enterprises in human history. The member nations of the plan have already returned to a prewar level of industrial output. This has taken 4 years, but a return to a prewar level of production after World War I took almost 7 years.

SALVAGING CIVILIZATION

Our investment in this superb job of salvaging civilization is also beginning to pay dividends in trade. History shows that industrial nations are the best customers for American products. Before the war, for instance, the ERP nations took 38 percent, or the largest share, of our exports. Thus, only by increasing the living standards of other areas can we expect to find a wider market for American goods.

And through its economic achievements to date, the Marshall plan has already paid off politically. The tide of Communist chaos that threatened to engulf all Europe has been turned back.

Sound progress abroad, and the stability of our own economic strength are, therefore, among the cold, practical reasons for having a vigorous faith in the future. These are the only reasons that have any substance, and only by such realistic appraisal can we prevent frustration.

It is at this point that we must face the fact that customers are not as eager to buy as they used to be. They tend to shop around and to hold back for lower prices. They are in a mood to make the salesman really sell. What we are witnessing today is the transformation of a sellers' market into a buyers' market. And that is as it should be. For in the free economy to which we all give lip service, a sellers' market is a reversal of the natural order of things. And in the long run it is an abomination to business itself.

INCREASED PRODUCTION URGED

If business is to do its share in revitalizing America's faith in the vigor of our economy, there is the corollary necessity for reducing costs through careful study of production and distribution methods and procedures. The first objective of such a study should be to increase the output of the plants we now have—in other words, to increase productivity. The second, to eliminate procedures which do not contribute to the quality of the product, or to its efficient distribution, salability, and use.

Greater productivity necessarily depends upon the mutual and ungrudging participation of both labor and management. Management and labor must progress together, and, as they advance to new standards of mutual achievement, so the Nation will go forward with them. And America must go forward.

The great and inspiring fact about America is that its citizens can plan and work together for the common good, their horizons of hope unlimited by the cold ambitions of the state. It is within their power to build the future of their choice and, if they build on faith in themselves and in their country, neither the hazards of postwar change nor Communist greed can stay them from their goals.

OPPORTUNITY BELONGS TO ALL

The opportunity we enjoy in America today belongs to us all—it is not the exclusive property of any class or segment of society. This opportunity is ours in trust. There is only one way by which we can discharge this trusteeship with the honor and integrity that will make it proof against the tides of change now sweeping the world. That way is through the sincere cooperation of Government, labor, business, and agriculture to sustain our way of life and to develop its magnificent promise for the future.

This is a four-way partnership in which each one has a vital role to play. As I see it, the role of business is:

1. To lower prices wherever possible.
2. To continue sound wage policies.
3. To increase productivity in cooperation with labor.
4. To develop new products, new methods, new services.
5. To have an eagerness for enterprise, a willingness to expand, and a revitalized initiative.

This is the platform on which we can build, if we abandon our foxholes of fear and regain the faith that made America—faith in ourselves, faith in our ability, and faith in our future.

(This is the partial text of an address prepared for delivery before the Los Angeles Chamber of Commerce by Charles Luckman, president of Lever Bros. Co., Cambridge, Mass., on the day that his company broke ground for its new $55,000,000 plant in Los Angeles County.)

The Proposed Federal Anti-Poll-Tax Statute

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by William J. Bryson:

THE PROPOSED FEDERAL ANTI-POLL-TAX STATUTE

(By William J. Bryson)

In 1938, the Southern Conference on Human Welfare began agitation for the enactment of a Federal statute to abolish poll-tax payment as a suffrage requirement. The following year, a bill for that purpose was introduced in the Seventy-sixth Congress, but failed to pass the House Judiciary Committee. That bill was reintroduced in the Seventy-seventh Congress and passed the lower House, but was defeated in the Senate by a group of southern Members. In each Congress that has followed, a similar measure has been introduced, passed by the House of Representatives, and defeated in the Senate by filibuster.[1] Despite the disposition of it in the past, however, since the measure is advocated in the platforms of the Democratic, Republican, and Progressive Parties, there is little doubt but that the next Congress will be faced with this measure and that it will reach its highest mark toward passing.

Regardless of the economic, social, or political desirability of the removal of poll-tax payment as a suffrage requirement, it should not be attempted in this manner, that is, by Federal legislation. For, although the point has been disregarded by the majority of Congress, such a statute would have no

[1] 45 Mich. Law Rev. 717–732.

constitutional basis.[2] The lack of that necessary foundation is obvious from an examination of the depositories of congressional and State authority as to Federal suffrage.

Article I, section 2, of the United States Constitution provides that, "The House of Representatives shall be composed of Members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for the electors of the most numerous branch of the State legislature."

That the States and not Congress should determine the qualifications of Federal electors is the plain intent of this section. Hence, poll-tax payment, being of the qualifications determined by the States, cannot be abolished by the Congress. Nor is there any semblance of congressional authority to do so under the companion section 4 of article I, which provides that, "The times, places, and manner of holding elections for Senators and Representatives, shall be prescribed in each State by the legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators." Congressional authority to regulate under this section is limited to times, places, and manner and has no connection with qualifications. To assume that the makers of the Constitution would include in one section that which it had included in a companion section, which is necessary to find the requisite authority under section 4, would be, to say the least, an injustice to their intelligence.

Not even the all-inclusive clause 18 of article I, section 8, can furnish the necessary authority to Congress for the enactment of the proposed anti-poll-tax statute. That clause provides that, "The Congress shall have power * * * to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all powers vested by this Constitution in the Government of the United States or in any department or officer thereof." The powers which Congress would require, in order to enact necessary and proper executory laws for this purpose, would have to include power over qualifications, which power, as has been demonstrated, is of the States.

That it was the intention of the makers of the Constitution that the above sections would reserve to the States the control of Federal suffrage, and likewise, the positive intention to exclude such control from the Federal Congress, is demonstrated by the history of those sections as found in the recorded debates of the constitutional and ratifying conventions.

At the Constitutional Convention, three methods for controlling Federal suffrage were considered, to wit, (1) to provide a uniform rule for fixing qualifications, (2) to provide that Congress have the power for fixing qualifications, and (3) to provide that the States have the power to fix qualifications. Many delegates to the convention favored the uniform rule. Madison, for example, personally preferred a definite statement of qualifications in the Constitution, and expressed the opinion that the "freeholders of the country would be the safest depositories of the republican liberty."[3] However, since at that time, every State had suffrage qualifications based on tax payment or property ownership, or both, and since the adoption of a uniform rule would have required changes in every State's suffrage requirements, which would have lessened the chances of ratification, the uniform rule was rejected by the committee on detail.

None of the delegates spoke in favor of the second proposal, that the power to control suffrage should vest in the Congress. In fact, the over-all sentiment seemed to be strongly against such a power. For example, Col. George Mason of Virginia said, "A power to alter the qualifications would be a dangerous power in the hands of the legislature (Congress)."[3] Madison was of the same opinion. He said, "The right of suffrage is certainly one of the fundamental articles of republican government, and ought not to be regulated by the legislature (Congress)."[4]

The third proposal, which provided for State control of suffrage, was the only one generally acceptable to the Convention and which seemed possible of adoption by the States. Hence, on August 6, 1787, the committee on detail reported the State rule, and despite a long debate led by Gouverneur Morris of Pennsylvania in favor of the uniform rule, it was passed by the Convention without dissent.[5]

Further evidence that it was the intention of the Convention to reserve to the States the power to control Federal suffrage and to deny that power to the Congress, is found in the Federalist Papers. In No. 52, one of those ascribed to both Madison and Hamilton, the author says, "The definition of the right of suffrage is very justly regarded as a fundamental article of republican government. It was incumbent on the Convention, therefore, to define and establish the right in the Constitution. To have left this open to the occasional regulation of the Congress would have been improper for the reason just mentioned. To have submitted it to the legislative discretion of the States would have been improper for the same reason; and for the additional reason that it would have rendered too dependent on the State governments that branch of the Federal Government which ought to be dependent on the people alone. * * *

"The provision made by the Convention appears, therefore, to be the best that lay within their option. It must be satisfactory to every State, because it is conformable to the standard already established, or which may be established, by the State itself. It will be safe to the United States because, being fixed by the State constitutions, it is not alterable by the State governments, and it cannot be feared that the people of the States will alter this part of their constitutions in such a manner as to abridge the rights secured to them by the Federal Constitution."

In No. 60 of the Federalist Papers Hamilton, in speaking of the danger that the wealthy or well-born would be favored by regulations of Congress, said, "The truth is, that there is no method of securing to the rich the preference apprehended, but by prescribing qualifications of property either for those who may elect or be elected. But this forms no part of the power to be conferred upon the National Government. Its authority would be expressly restricted to the regulations of the times, places, the manner of elections. The qualifications of the persons who may choose or be chosen, as has been remarked on other occasions, are defined and fixed in the Constitution, and are unalterable by the legislature (Congress)."

The intention of the makers of the Constitution as to suffrage control is also shown in the recorded debates of the adopting conventions in the several States. In Massachusetts Mr. Rufus King, who was a delegate to the Constitutional Convention from that State, in answer to an inquiry as to whether or not Congress could prescribe a property qualification of £100, said: "The idea of the honorable gentleman from Douglass transcends my understanding; for the power of control given by this section extends to the manner of election, not the qualifications of the electors." In North Carolina another Constitutional Convention delegate, John Steel, said: "Who are to vote for them (representatives)? Every man who has a right to vote for a representative to our legislature will ever have a right to vote for a representative to the General Government. Does it not expressly provide that the electors in each State shall have the qualifications requisite for the most numerous branch of the State legislature? Can they, without a most manifest violation of the Constitution, alter the qualifications of the electors? The power over the manner of elections does not include that of saying who shall vote. The Constitution expressly says that the qualifications which entitle a man to vote for a State representative. It is then indubitably fixed and determined who shall be the electors; and the power over the manner only enables them to determine how these electors shall elect—whether by ballot, or by vote, or by any other way."[6]

The assertion that a Federal anti-poll-tax statute would be unconstitutional, since the power to determine qualifications vests in the States, need not rest on statements made by the makers of the Constitution. The United States courts have repeatedly held that the power vests in the States subject only to the limitations found in the fifteenth and nineteenth amendments and in section 2 of the fourteenth amendment. That such has been the holding of the courts, and that poll-tax requirements do not violate the limitations of those amendments is illustrated by the following cases:

Minor v. *Happersett* ((1874) 21 Wall. 162): "Certainly, if the courts can consider any question settled, this is one. For nearly 90 years the people have acted upon the idea that the Constitution, when it conferred citizenship, did not necessarily confer the rights of suffrage. If uniform practice long continued can settle the construction of so important an instrument as the Constitution of the United States confessedly is, most certainly it has been done here. Our province is to decide what the law is, not to declare what it should be" (pp. 177–178).

United States v. *Reese* (92 U. S. 214): "The fifteenth amendment does not confer the right of suffrage upon anyone. It prevents the States or the United States, however, from giving preference, in this particular to one citizen of the United States over another, on account of race, color, or previous condition of servitude. Before its adoption, this could be done. It was as much within the power of a State to exclude citizens of the United States from voting on account of race, etc., as it was on account of age, property, or education. Now it is not. If citizens of one race having certain qualifications are permitted by law to vote, those of another having the same qualifications must be. Previous to this amendment there was no constitutional guaranty against this discrimination; now there is."

Ex parte Yarborough ((1884) 110 U. S. 651): "The States, in prescribing the qualifications of voters for the most numerous branch of their own legislatures, do not do this with reference to the election of Members of Congress. Nor can they prescribe the qualifications for those eo nomine. They define who are to vote for the popular branch of their own legislature, and the Constitution of the United States says the same persons shall vote for Members of Congress in that State. It adopts the qualifications thus furnished as the qualification of its own electors for Members of Congress" (p. 663).

McPherson v. *Blacker* (146 U. S. 1): "The right to vote intended to be protected (by the fourteenth amendment) refers to the right to vote as established by the laws and constitution of the State. There is no color for the contention that under the amendments every male inhabitant of the State,

[2] Rept. No. 947, 80th Cong., 1st sess., House of Representatives.

[3] 5 Elliot's Debates 386, et seq.

[4] Id. 387.

[5] Id. 389.

[6] 4 Elliot's Debates 71.

being a citizen of the United States, has, from the time of his majority, a right to vote for Presidential electors."

Pope v. *Williams* ((1904) 193 U. S. 621): "A State, so far as the Federal Constitution is concerned, might provide by its own constitution and laws that none but native-born citizens should be permitted to vote, as the Federal Constitution does not confer the right of suffrage on anyone, and the conditions under which that right is to be exercised are matters for the States alone to prescribe, subject to the conditions of the Federal Constitution, already stated; although it may be observed that the right to vote for a Member of Congress is not derived exclusively from the State law. The questions whether the conditions prescribed by the State might be regarded by others as reasonable or unreasonable is not a Federal one" (p. 663).

Guinn v. *United States* ((1915) 238 U. S. 347): "It says State power to provide for suffrage is not disputed, although, of course, the authority of the fifteenth amendment and the limit on that power which it imposes is insisted upon. Hence, no assertion denying the right of a State to exert judgment and discretion in fixing the qualifications for suffrage is advanced and no right to question the motive of the State in establishing a standard as to such subjects under such circumstances or to review or supervise the same is relied upon, and no power to destroy an otherwise valid exertion of authority upon the mere ultimate operation of the power exercised is asserted" (p. 359).

Breedlove v. *Suttles* (302 U. S. 277: "To make payment of poll taxes a prerequisite of voting is not to deny any privilege or immunity protected by the fourteenth amendment. Privilege of voting is not derived from the United States, but is conferred by the State, and save as restrained by the fifteenth and nineteenth amendments and other provisions of the Federal Constitution, the State may condition suffrage as it deems appropriate" (p. 283).

Every source of constitutional interpretation, then, supports the conclusion that a Federal anti-poll-tax statute would be unconstitutional. Nor is this deduction weakened by the fact that the Servicemen's Ballot Act contained such a provision. That statute was assented to by the States in a time of war. There is no doubt but that that statute would have been declared void, except for the acquiescence of the States.

"Lay of the Land" in Germany

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely editorial, entitled "Lay of the Land in Germany," which appeared in the July 16, 1949, issue of America. The editorial follows:

LAY OF THE LAND IN GERMANY

John J. McCloy, American zone High Commissioner-designate and currently military governor, has been touring western Germany "to look over the lay of the land." There is much for Mr. McCloy to see and ponder—much that is good and not a little that is bad about our occupation of Germany to date.

There is, for example, the excellent new extension farm program at the University of Geisen, where German farmers are being taught much-needed modern agricultural methods. Already functioning in Bad Schwellbach is the first training school for community leaders, while in Felbach and Schorndorf German citizens are learning the practices and procedures of democracy in community councils.

Although Mr. McCloy has not mentioned it among the objectives of United States policy, we presume that democratization remains one of our major aims for Germany. Hence we hope that projects like those named above will be encouraged and multiplied. For the same reason, we hope Mr. McCloy will put an end to practices that bring democracy into disrepute.

He would be well advised, for instance, to look into the records of United States "liaison and security officers" in each Kreise (county). The success of our occupation depends largely on the conduct of these officials. Ex-army officers for the most part, they know little of community administration.

What is worse, it is reported that too many of these proconsuls are not trying to sell democracy at all. They are, in fact, selling it short by conduct that scandalizes and often infuriates the Germans.

Mr. McCloy has received proposals for the improvement of our occupation practices from the division chiefs of OMGUS. One suggests that a training school be set up for 50 married "liasion and security officers."

Mr. McCloy should give serious consideration to that proposal. The representatives of the United States and of Mr. McCloy should not only be above reproach, they should, in the circumstances, be trained community educators, dedicated to the permanent democratization of Germany.

Central Arizona Project

EXTENSION OF REMARKS

OF

HON. HAROLD A. PATTEN

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. PATTEN. Mr. Speaker, under leave to extend my remarks, I am inserting in the CONGRESSIONAL RECORD an excerpt published in the Daily Sun, Flagstaff, Ariz., by W. W. Midgley.

I think it is pertinent in that it reveals some of the ways in which California is disseminating propaganda adverse to the central Arizona project.

MIDGLEY REVEALS SLICK CALIFORNIA "PRESSURE" METHODS OVER WATER

(By W. W. Midgley)

Has southern California slipped into the category of bootlegging Colorado River propaganda? Has Los Angeles forgotten the Owen's Valley troubled days, when, it is truly claimed, the hoggish brain itch was born to southern California? Do you think St. Peter will ever whittle his initials on any footwear endorsing such activities? Where does your fist go, when you open your hand? Same place your lap goes, when you stand up. Where does 2,000,000 acre-feet of Colorado River water evaporation go; page southern California.

Here it is, old-timers, read it all, circular letter received in Cornville, Ariz., by Mr. Grant W. Asher on June 17, 1949, signed by Karl F. Geiser, president of the State University of Iowa, Southern California Alumni Association, mailed in Pasadena, Calif.:

"DEAR FELLOW HAWKEYE: The local water supply situation is critical and we are writing to you to ask for your help in meeting this emergency.

"This is the third year of subnormal rainfall in southern California and, combined with the steadily increasing population, our dependence upon outside water supplies such as the Colorado River is more important than ever before. In the face of this fact, we are confronted with the possibility of losing all or a substantial part of the share of Colorado River water that has been granted to us by Federal contracts.

"The help of every California citizen is needed immediately. This is what you can do to help protect your water supply:

"Write a letter today to your friends, family members, or business contacts back East. Ask them, in turn, to write to their Representatives and Senators in Washington, D. C., in your behalf. The kind of letters to be sent by you and by your friends are shown in the attached samples. These may be signed and mailed if desired, but it would be better if you and your friends would write original letters on your own stationery. As you can see, the threat to the water supply, that is intended to serve 28 of our neighboring cities and a total population of more than 5,000,000 people, comes from the attempts of Arizona to put through Congress bills calling for an irrigation project that would cost $738,000,000 and more. In self-defense we are obliged to oppose that measure with every resource at our command. At the same time our only hope for settling finally and fairly this 26-year water controversy with Arizona is through the United States Supreme Court.

"Your cooperation in sending at least one letter today to someone back East will be a major contribution in the community fight that is now under way to protect our indispensable Colorado River water supply.

"Thanks for your help.

"Sincerely,

"KARL F. GEISER, *President.*"

Could it be that Mr. Geiser has never heard of the all-gravity flow, common-sense, Marble Gorge, Verde Tunnel, river route?

There was also one headed, "Dear Fellow Alumnus," pleading for help to defeat Arizona's just share for her (should not be disputed) Colorado River water and copy for open letter to our Senators and Representatives in Congress and a list of all the names from States in Eighty-first Congress for mailing same.

This reminds one of a California camp meeting and a man who had a wife, son, and daughter-in-law, who got religion.

He was reminded next morning at breakfast to say grace, a little red in the face and shaky, said, "O Lord, bless me and my wife, my son, George, and his wife and to hell with everybody else—Amen."

Oh, brother, here is where Mr. Grant W. Asher replies to Karl F. Geiser, president.

Read on, good people, it's tops.

(Mr. Asher's letter:)

CORNVILLE, ARIZ., *May 23, 1949.*

Mr. KARL F. GEISER, *President,*
Southern California Alumni Association,
Pasadena, Calif.

DEAR MR. GEISER. I was today surprised to receive your undated circular letter and accompanying material relating to the Arizona-California problem concerning the use of the Colorado River water. I was even more surprised that this letter and material emanated under the apparent authority of the Southern California Alumni Association of the State University of Iowa. In my experience, I do not know of any alumni associations,

and not excepting that of the State University of Iowa, which led themselves to any kind of action on controversial issues. On the contrary, I have found that these associations are principally social in nature and function, having originated through common educational bonds of their members. As it happens, I have been a resident of California for 19 of the past 22 years. At present, I am a resident of Arizona. In the whole of the Southwest our water problem has reached proportions of extreme urgency. It is a regional problem which I have followed both in California and in Arizona. Vast Federal aid has come in the past with California being the principal beneficiary in the use of Colorado River water and power. Even greater Federal aid must come in the future in order fully to utilize the Colorado River water and power for the benefit of the whole of the Southwest, directly, and of the Nation, indirectly. No one State can by any stretch of the imagination assume a kind of divine right of priority to the exclusive use of the Colorado River water and power.

Mr. Geiser, consider this an unequivocal protest against the letter and accompanying material sent out by the Southern California Alumni Association of the State University of Iowa over your signature as president. I regret, too, the hysterical and garrulous nature of the letter and material which is hardly in keeping with the dignity expected of the alumni of any college or university. It is to my sorrow that in this instance the university must be identified as the State University of Iowa.

It is requested that copies of this letter be sent to all persons on the mailing list to whom your letter and material were sent. Under the circumstances, I feel that this request is entirely fair and reasonable. I reserve the right, also, to publish my criticism of this act in California, Arizona, or elsewhere, as I may deem necessary.

Yours truly,

GRANT W. ASHER.

Israel—Security and Reconstruction

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. JAVITS. Mr. Speaker, an editorial and a news story of the same day from the New York Herald Tribune demonstrate Israel's emergence from war into territorial security, her vast internal reconstruction program, and her mission in the Near East. They are appended hereto:

THE LAST ARAB ARMY

At Mahanayim in Galilee, where Jacob once met the angels of God on his way to make peace with Esau, Israel and Syria have signed the last armistice in the war in Palestine. Except that it will bring about demilitarization of a once bitterly disputed border zone, the agreement perhaps is of no great intrinsic significance. The war has been over for months; the new state established firmly in the world scheme; the Middle East temporarily as stable as it seems capable of becoming. Now the last Arab army, which has lain immobile on the edge of Israel, will retire into its own territory and the end of hostilities will become formalized.

Moshe Sharett, Israeli Foreign Minister, says the armistice agreement means the end of an era in Israeli-Arab relations and he hopes, a step toward peace. Both sides made concessions: Syria gave up the last strip of territory allocated to Israel by the United Nations, and Israel relinquished some of its sovereign rights in the area. The significance of the agreement is that it finally transfers the dispute from the battlefield to the conference table and opens the way for a permanent agreement. The United Nations, which righted itself after a shaky course in the Palestine affair, offers an opportunity for settlement through the Palestine Conciliation Commission now meeting in Lausanne, where both sides can thrash out the questions of boundaries and refugees.

Perhaps it is possible to exaggerate the symbolism of this latest armistice, but few world problems have seemed as insuperable as the differences that separated Arabs and Jews, with the subtle interests of outside nations providing additional and almost overwhelming complications. Much wrangling is to be expected in Palestine, as elsewhere, before peace can be achieved, but the contestants may yet echo the words of Jacob, struggling with the angel: "I will not let thee go, except thou bless me."

JUSTICE DOUGLAS SEES ISRAEL AS LEADER IN EAST—SPEAKING AT HAIFA HE SAYS NEW STATE CAN DIRECT SOCIAL REVOLUTION THERE

(By Kenneth Bilby)

HAIFA, ISRAEL, July 21.—Supreme Court Justice O. Douglas foresaw today the beginning of tumultuous times and of vast social revolutions in the Middle East.

To Israel he assigned the future role of the great teacher in this dominantly Moslem region. He described the new state as a testing ground for vital projects and new ideas, and a force that can give both direction and content to the social revolution that is on its way.

In an address this afternoon at the Hebrew Institute of Technology, Justice Douglas gave his first public report on conditions as he has just observed them in a tour of the Moslem states and Israel. He criticized feudal conditions in the Arab world, and he suggested the application there of the Truman program to aid backward areas.

One of the first American public figures to visit both the Arab states and Israel since the war ended, Mr. Douglas found Israel to be on a path far more to his liking. In effect, he warned the Arab governments they had better begin to heed the social stirrings among their common people or face serious trouble.

He spoke of the oppressed people's movement toward destruction of age-old feudal encumberances, and added: "These are active movements, though they have not become political as yet. They have no ideological slant. * * * They are the rumblings of discontent, prophecies of tumultuous times to come, the beginnings of vast social revolutions. These forces will not, I think, be turned back."

He described the devastated and eroded lands to the east and north of Israel, lands getting poorer and poorer through overgrazing and reckless cutting of timber. Then he related his impressions on driving from Jerusalem to Tel Aviv.

"I saw a beginning of a reversal of the cycle," he said. "I saw forests of newly planted pine. These were young trees only a few years old, but they were building reservoirs of water through millions upon millions of tiny roots. Erosion would now end." He added that Israel's revegetation program might well change weather conditions in the whole region.

Atlantic Union

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, the gentleman from Minnesota [Mr. JUDD], the gentleman from New York [Mr. WADSWORTH], the gentleman from Florida [Mr. SMATHERS], the gentleman from Tennessee [Mr. DAVIS], and myself have joined today in introducing an Atlantic union resolution. The same resolution has been introduced in the other body by Senator GEORGE, Senator KEFAUVER, Senator HENDRICKSON, and Senator ECTON.

The purpose of the resolution is to permit timely, fruitful investigation of the possibilities of overcoming, through a federal union of the Atlantic democracies, the international difficulties we face. It aims also to give the United States and the cause of freedom and peace the maximum psychological advantages of leadership, without our writing any blank check or incurring any dangerous commitment.

It calls on the President to invite the other six sponsors of the pact to meet with American delegates "in a federal convention to explore how far their peoples, and other democracies whom the convention may invite to send delegates, can apply between them, within the framework of the United Nations, the principles of free federal union."

We face in the Atlantic area, and particularly with Canada, Britain, France, and Benelux, a complex of problems—political, military, economic, monetary—which we are now trying to solve separately, piecemeal, by the ECA, the pact, rearmament, and so forth. We are also trying to solve them only on a diplomatic or government-to-government basis.

Calling the proposed convention would not prevent continued efforts along these lines, but it would permit us, in company with the other pact sponsors, to try also to solve this complex of problems by tackling them as a whole, and on the man-to-man basis of our own American Federal union system. It would commit us to nothing more than an earnest exploration of this way out.

So great has been the success of the Federal system wherever it has been tried that for us to decide even to explore its possibilities in the Atlantic community would rouse great hope. It would seem wiser to begin this exploration now while we have time to do it carefully, rather than risk waiting until events force hasty, ill-considered action.

The proposed resolution has the support of many eminent citizens, led by former Justice Owen J. Roberts, president of the Atlantic Union Committee, and its vice presidents, Robert Patterson, former Secretary of War, and Will Clayton, former Under Secretary for Economic Affairs.

Remote Control by Definition

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely editorial, entitled "Remote Control by Definition," which appeared in the July 16, 1949, issue of the magazine, America.

The editorial follows:

REMOTE CONTROL BY DEFINITION

Last week, America suggested that the Communist leaders on trial in New York City suffer from an occupational disease, which might be called the case of the encysted mind. Self-indoctrination has encrusted them with a hard, impenetrable shell of Stalinist ideology, from which they cannot emerge to live as normal human beings. Currently this occupational disease manifests itself in their desire to get on the witness stand in their own defense. Unless Judge Medina prevents it, all eleven of them, together with scores of other progressive witnesses, plan to give endless explanations of the Party line to unenlightened Americans. As defendants in a criminal trial, they have no obligation to take the stand, for once they do so, they expose themselves to the sharp cross-examination of United States District Attorney McGohey. Since they voluntarily put themselves in jeopardy, the question arises: what motives drive them to such conduct?

It won't do to say that they are stupid, and let it go at that. Theirs is not a case of stupidity in the usual sense of the term. These men have the mental capacity to execute the routine tasks of party leaders, to make propaganda speeches, etc. Yet they deliberately take the stand, knowing full well that cross-examination will prove them to have lied many times under oath. For example, John Gates, editor of the Daily Worker, quietly admitted that he had sworn falsely in order to get to Spain during the Civil War. He gave as justifying reason that the good of the United States required his services to Loyalist Spain. In his turn, Gilbert Green, head of the Illinois branch of the Communist Party, confessed that he had perjured himself in order to obtain a Federal position and also to travel abroad. Such admissions under cross-examination voluntarily sought are hard enough to explain.

What amazes the ordinary American even more is the fact that the Communist leaders presented evidence on direct examination which helped to strengthen the Government's case. On June 28, Green disclosed under questioning of his own counsel that the Party teaches its members to answer lies about the advocacy of force and violence and about its allegiance to the Soviet Union. More than once, Judge Medina has intervened to explain to the defendants and their counsel that they are under no obligation to prove the Government's case.

Another observation by Judge Medina goes a long way toward explaining why the Communist witnesses act the way they do. Several times he has remarked: "You Communists seem to think that if you say a thing, that makes it true." For years the Communist leaders have isolated their minds from normal ways of thinking. In place of critical thought, they have disciplined themselves into accepting the interpretation of their leader unquestioningly and absolutely A thing is true if Stalin says it is. No need to check on the fulfillment of the 5-year plan, when Stalin says it has been attained. Recently, the leader of the Commnist Party of France, Maurice Thorez, declared that the Red Army is by definition nonaggressive. Stalin defines, and the issue is closed.

Because the Communist leaders in this country accept Stalin's definitions as making reality instead of describing it, they find no objection to admitting acts of perjury. Stalin has approved Lenin's definition, and recommends Lenin's use of Aesopian language, or downright misrepresentation of Communist intentions, about force and violence. On the one hand, their lies are truth, because they did just what their Soviet leaders wanted them to do. But on the other hand, they may use mild, evasive language which will deceive stupid non-Communist minds. Gates and Green admit to lies and perjury, and Foster in a statement discussed elsewhere in this issue tries his hand at evasive slave language. What the befuddled Communist leaders desperately need are more definitions by Stalin. If he were only to "define" the situation more thoroughly, there would be no problem as to whether they should go on admitting openly to what the bourgeoisie call lying, or should try to deceive with Aesopian fables. The Communist leaders have conditioned themselves to accept Stalin's "definitions" as making reality. But when his definitions conflict, or prove to be inadequate, where are they to turn?

Thus, the really stupid one on trial in New York City is Stalin himself, since he has neglected to define which tactics are true for this objective situation. If he will only tell the Communist leaders what to think, they will do so exactly as he orders it. But being busy with many other countries at the present time, he lacks the leisure to define the American situation in detail, with the result that the American party leaders are finding remote control by definition inadequate.

The Arms Program—Its Aims and Problems

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 21, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, there follows a most interesting and provocative article by Mr. Hanson W. Baldwin, the military analyst for the New York Times. I believe that a reading of this article will prove helpful in connection with the forthcoming military assistance pact.

THE ARMS-AID PROGRAM: ITS AIMS AND PROBLEMS—IT RECOGNIZES FIRST OF ALL EUROPE'S RIGHT TO BE DEFENDED, NOT LIBERATED

(By Hanson W. Baldwin)

A new chapter in the history of the United States of America opened last week when the Nation decided that in the atomic age security could not be found within the national borders.

The overwhelming approval of the Atlantic Pact by the Senate, which can properly be interpreted as emphatic repudiation of the political doctrine of isolationism, was, however, merely a prelude to even more intensive debate on the arms-aid program.

Debate on the arms-aid plan—or military-assistance program, as it is officially called—which waxed and waned throughout the Senate's discussion of the Atlantic Pact, will come to a head this week when the President submits to Congress, probably tomorrow, his program for putting teeth into what is essentially a defensive alliance.

UNITED STATES COMMITMENT

The Atlantic Pact commits the United States to resist aggression in Europe; the arms-aid program implements that commitment with power, and, in effect, binds us to a strategy of defending western Europe, not merely to its liberation after invasion.

The distinction—defense rather than liberation—is highly important in the minds of Europeans already somewhat fatalistic about the overwhelming Russian strength near their frontiers. They fear that the Continent will again be made a battleground and they are worried by the continued emphasis in the United States upon the strategic concept of victory through air power and the atomic bomb.

To the European citizen, it would be small comfort to know that Russian cities and industries were being devastated by atomic bombs dropped from American bombers if his own country were occupied by Russian ground troops. European generals, the French particularly, have been troubled by the often-publicized assertions in this country that western Europe could not possibly be held and that our strategy, in the event of war with Russia, should be to bombard Russia with atomic bombs from bases outside Europe.

BASIC IMPORTANCE

In other words, the basic importance of MAP, at least in the European mind, is strategic and psychological; it commits the United States to defense of western Europe rather than to its liberation. The Atlantic Pact commits us to resist aggression; MAP to the European mind, would give assurance that the frontier to be defended is along the Rhine or the Elbe and the Alps, not along the English Channel.

The underlying problem of the whole MAP program, therefore is the interpretation and the implementation of the Atlantic Pact.

But there are innumerable lesser problems. In addition to the assurance that the European signatories of the Pact want and that MAP would give them they want long lists of items of arms and equipment to rebuild their military strength.

The total aid asked is tremendous—and probably unreasonable and unnecessary—but the individual requests have, in some instances, already passed through the screening process set up by the western European Union, and our own State-Defense-ECA-Budget sieve in Washington. Turkey, at one time, for instance, wanted heavy bombers; Greece wished to put most of her naval effort into a single cruiser (formerly Italian). Both were persuaded with the use of tact that fighters, fighter-bombers and light bombers, and minesweepers, and light patrol craft would better meet their needs.

No final assessment of the amounts equipment required, or the costs, to give the European members of the Atlantic Pact (with United States backing) a reasonable degree of relative security, has been totted up. The program that will be presented next week calling for $1,450,000,000 (including aid to Greece, Turkey, and other nonsignatories) is for the first year only; it will mark only a beginning, and will be chiefly useful in the rehabilitation of existing military units, not in the creation of new ones. The eventual goal of the whole program, which may extend over a period of 5 years or longer, it has not yet been possible to calculate, but will probably involve the creation of a well-equipped, well-trained European force of

perhaps 40 to 60 divisions, supported by more than 100 squadrons of jet fighters, fighter-bombers and light bombers, and backed up by perhaps 100 to 200 light war vessels, exclusive of strategic bomber forces, United States forces and main battle fleets.

NO GOAL FORMULATED

This eventual goal is, however, at best, an educated guess; the military-assistance program suffers today from the fact that no final goal has been formulated and Congress is being asked to start a program whose end it cannot see. The first job, then, is the formulation of a complete, rather than a 1-year program.

The general objective, however, is clear; western Europe wants to build up a mobile ground force—with considerable numbers of tanks and mechanized equipment, backed up by short-range tactical air power—which could defend its frontiers against the great massed ground armies of Russia until the United States could rush reinforcements.

The military-assistance program raises many fundamental questions for us, which will doubtless be aired in the forthcoming debate. First and foremost is the added commitment—strategic and economic—which it means. There is no doubt that it would help to strengthen and secure our allies, and to bind them to us. The price, however, will be not only in dollars but, in one sense, in a less flexible strategy than otherwise. We must henceforth plan and prepare to defend western Europe.

In order to do this, we must focus greater attention upon a land force and short-range tactical air power to support it. This would have to be done, in any case, as the years pass, since the long-range bomber and the atomic bomb will have less influence as a deterrent to aggression when Russia has an atomic stock pile.

The economic commitment promises, also, to be a difficult one—though not in terms of our financial capacity to support it, for the first year's program is clearly well within our means.

CONTROLLING VOICE

Administration of the program is another problem. This will be done, in part, by a special organization set up in Washington in which the State Department will have the controlling voice, and through special missions in each country, with military advisory groups attached to each embassy. However, these administrative groups must utilize or work with the military and logistical machinery, with Field Marshal Viscount Montgomery as one focal point, already established by the western European union, and with whatever additional military organization—its exact nature undecided—may be established as the command and staff apparatus of the Atlantic Pact.

Proper coordination will be difficult at best, not only because of personalities, but because of the multiplicity of agencies that must be coordinated.

Moreover, there is almost certainly bound to be some conflict between two basic requirements—the requirement for as much military integration as possible and the requirement (imposed by us) for as much United States control over the program as possible.

Another conflict that will develop may be between own rearmament and that of western Europe. Today, and for the next year or so, the European rearmament program, which is just starting, cannot be expected to reduce materially our own military budget, but later on, as Europe gains strength, our own budget ought to be susceptible of safe reduction, or else MAP has no meaning. But any such reduction is almost certain to be opposed by our own military men and economic isolationists.

There will be innumerable minor problems. How are we going to insure that the arms do not fall into the hands of politically dissident armed forces? The French and Italians, for instance, are known to have numbers of Communists in their armies. What will we do about requests from Britain for B–29 bombers? If we equip western Europe with United States-designed weapons, how will we prevent them from being constantly dependent upon us for spare parts? How much standardization of arms and equipment is possible, or desirable?

OTHER IMPORTANT QUESTIONS

What about atomic weapons, or help in the development of atomic energy? Is any change in the restrictive Atomic Energy Act, now strictly limiting such information, desirable? What about common use of islands like the Azores? How many European officers will be trained in this country? How will communications and administrative and tactical procedure be standardized?

There are, in other words, innumerable technical and administrative problems, as well as problems of broad policy, to be solved if MAP is passed. The mere act of passing it will not make it work; the hardest part of the task will just begin. Above all, as the background of all the problems will be the problem of balance: To make Europe strong defensively, but not provocative or aggressive, to make it strong militarily but not so strong as to imperil its economic health, to keep the Atlantic Pact a defensive alliance, not to transform it into an offensive alliance.

DISILLUSIONED ALLIES

The debate, beginning this week, on these and other points, will be lengthy. It is likely to be complicated by demands for arms aid to China. All in all the outcome is uncertain.

Yet as Gen. Omar N. Bradley has said, "It must be perfectly apparent to the people of the United States that we cannot count on friends in western Europe if our strategy in the event of war dictates that we shall first abandon them to the enemy with a promise of later liberation. Yet that is the only strategy that can prevail if the military balance of power in Europe is to be carried on the wings of our bombers and deposited in reserves this side of the ocean. It is a strategy that would produce nothing better than impotent and disillusioned allies in the event of a war."

Anti-Poll-Tax Bill

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. BRYSON. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD the following editorial from the Washington Post of March 29, 1948:

ANTI-POLL-TAX BILL

It is not necessary to accept all the excited statements made by opponents of the anti-poll-tax bill to see that it is a bad piece of legislation. The bill owes its popularity to the fact that it seeks to bring about an overdue reform. We heartily agree with its sponsors that all taxes as prerequisites as to voting should be abolished. The preferable method is action by the States. Since a few States are stubbornly holding out against abolition of this undemocratic requirement upon voters, however, we should be delighted to see Congress propose and the States ratify an anti-poll-tax amendment to the Constitution. At least two resolutions for this purpose are before the House. But these are not the proposals that are being advanced by vote-hungry Members of Congress. The bill accepted by the House and now under study by the Senate Rules Committee is an attempt to amend the constitutional requirement as to the qualifications of voters by act of Congress.

The Constitution says in unmistakable terms that the voters entitled to choose Congressmen "in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature." This does not give the States power to prescribe the qualifications of voters for Members of Congress as such. It simply makes use of the various yardsticks laid down by the States to serve a Federal purpose. Since that requirement of the Constitution no longer meets with public approval, it can be changed, but surely a constitutional amendment is the proper way to effect the change.

The anti-poll-tax bill attempts to effect the desired reform by changing the meaning of words in the Constitution—an underhanded and undemocratic process. It says that the requirement of paying a poll tax before voting "shall not be deemed a qualification of voters or electors voting or registering to vote at primaries or other elections for said officers, within the meaning of the Constitution, but is and shall be deemed an interference with the manner of holding primaries and other elections for said national officers and a tax upon the right or privilege of voting. * * *" If this bill were law, citizens in the poll-tax States could vote for Congressmen without payment of a poll tax. But the same citizens could not vote for members of the most numerous branch of the State legislature. The requirement of the Constitution as to who shall vote for Congressmen would thus be clearly defeated.

We recognize that it is more difficult to pass a constitutional amendment than a simple act of Congress. But expediency has seldom been recognized in the United States as a valid substitute for principle. At a time when we are engaged in a world-wide struggle against short cuts to power it seems especially deplorable that the Congress should be advancing so devious a scheme to accomplish a desirable reform.

How Politicians Are Made

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. KENNEDY. Mr. Speaker, it is a great personal pleasure for me to place in the RECORD an editorial from the Bangor Daily News of July 8, 1949, on a speech by the Honorable James A. Farley:

HOW POLITICIANS ARE MADE

We have sometimes wondered just what rules a human had to follow to become a good politician.

Though the 10 ingredients may in some instances appear debatable, they come from an authoritative source—none other than James A. Farley, presently a businessman, but formerly Postmaster General and the guiding hand most responsible for the ascension of the Roosevelt star in the political heavens.

Mr. Farley lists the 10 requirements—some altogether obvious—as personality, native ability, faculty of recognizing ability in others, aggressiveness without being offensive, being able to sense a situation, ability to make decisions, understanding of the word "compromise"—not compromise of principles, but occasionally accepting less than one had in mind, then going ahead from that point.

Then come additional qualities rarely thought to be a part of the average politician's make-up. One is character, or which Mr. Farley translates into being a substantial human being.

"Only a man who can impress his constituents with his character can continue to build up confidence," said Mr. Farley, "and he can sometimes do this even when certain other qualities are lacking."

These qualities were showmanship and color, both of which made Franklin D. Roosevelt, Jimmy Walker, and Al Smith great politicians. But he cited Senator ROBERT A. TAFT as a great politician despite his complete lack of showmanship and color.

Then, too, the former Postmaster General places truth high among the qualities necessary for success in politics.

"The politician who says one thing to one man, and an opposite thing to another, the office holder whose word cannot be relied on, the political leader who tries to gain his ends by other than honest means—these types create resentments which fester long and rarely heal."

Another prime qualification is the ability to secure teamwork, or the ability to get other people to work as one and with him.

"The best politicians build up corps of aides who will go through hell for them. Governor Dewey's team has stuck with him since he first entered government, and so strong is its loyalty that not even successive defeats have alienated its members from him. Politicians who haven't this particular quality may go a certain distance, but rarely very far."

Mr. Farley prefaced his recipe with the definition of politics written more than 150 years ago by Andrew Oliver in Boston:

"Politics is the most hazardous of all professions. There is not another in which a man can hope to do so much good to his fellow creatures—neither is there any in which by a mere loss of nerve he may do widespread harm—nor is there another in which he may so easily lose his own soul—nor is there another in which a positive and strict veracity is so difficult. But danger is the inseparable companion of honor. With all the temptations and degradations that beset it, politics is still the noblest career any man can choose."

Some may conclude, however, that politics has changed over the last century and a half.

British Dollar Stringency and Near East Politics

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. JAVITS. Mr. Speaker, the following editorial in the July 15 issue of Aufbau, American weekly in German and English, portrays what may seem to the British mind a dilemma, but to the American mind seems hard to understand. In a time of dollar stringency all resources should be employed. Britain's influence in the Arab world is great enough so that a Near East peace, so urgent to her own economic position, should be the prime objective of her policy. Britain found that her obstinacy in maintaining a large force in Palestine finally had to yield before her financial necessities and she will inevitably come to the same conclusion with regard to the Arab economic blockade of Israel.

In its issue of July 15, 1949, Aufbau, American weekly in German and English, carries the following:

WHY ARE THE HAIFA REFINERIES KEPT SHUT?

OPEN LETTER TO THE BRITISH FOREIGN OFFICE

DEAR SIRS: The American public, friends of Britain, have learned with great regret that your country, our ally in war and peace, is in dire financial straits. We admire the efforts of the Labour Government to overcome the consequences of the devastating war which has ravaged your country; it is with friendship and sympathy that we follow the valiant struggle of the British people against so many overwhelming odds. But in all sincerity and modesty we would like to ask a question.

You do your utmost to cut down all dollar expenditures, and the recent years show that the citizens of Britain have willingly followed the lead of their government. You will probably agree with us that one of the most important items of your dollar budget is oil. Therefore, we are wondering why it should not be possible to increase the production of sterling oil and sterling petrol very considerably by reopening the Haifa refineries. According to statistics, the Haifa refinery is able to process 4,000,000 tons of crude oil per month. Yet, for 13 months deadly silence has hovered over this part of the Haifa harbor.

Do you really think that the Iraqi Government would resist a strong-worded note requesting permission to reopen the flow of oil through the Mossul pipeline? We realize that British ships had certain trouble in the Suez Canal recently; but do you really think that Egypt would go so far as to prohibit British tankers from shipping oil from the Persian Gulf to Haifa? We have never heard about His Majesty's Government taking any steps in this direction.

You ask the American people—and you have a right to do so—to sympathize with your needs. We belong to those who feel that the fullest possible cooperation with, and help to, Britain is in the best interests of the United States. Nevertheless, we fail to understand why the British Foreign Office ignores the possibility of turning near eastern oil into dollars, just because the old prejudice against Israel still clouds the minds of certain representatives of your Government.

George Peabody

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. LANE. Mr. Speaker, it has been brought to my attention by Mr. William F. Carlin, of Silver Spring, Md., that application was made with the Post Office Department some time ago for the issuance of a stamp commemorating the deeds and accomplishments of the late George Peabody.

Mr. Peabody, although born in Massachusetts, removed at an early age to Baltimore, Md., where he became very successful as a merchant businessman. He was noted throughout his entire life for his charity and benevolence and for his philanthropic deeds. Gifts in his memory have been made, such as the Peabody Institute and Library in Peabody, Mass.; the Peabody Conservatory and Library, Baltimore, Md.; and museums of natural history, archaeology and ethnology have been established at Yale and Harvard Universities, but the principal beneficiary from his endowment was the George Peabody College for Teachers at Nashville, Tenn.

I am advised that many of the Members of Congress from Massachusetts, Maryland, and Tennessee, and countless others recommend the adoption of such a commemorative stamp. I am submitting for your consideration the condensed biography by Mr. Carlin which will enlighten the Members of Congress as to the history and life of George Peabody:

George Peabody was born in Danvers (now Peabody) in Essex County in Massachusetts, February 18, 1795. At an early age he moved with his family to Baltimore, Md., where he engaged in business, and attained success as a merchant. Later in life he made an immense fortune as a railroad builder and financier, and his business interests brought him finally to London, where he died November 4, 1869.

Ten feet or so from the tomb of the Unknown Soldier in Westminster Abbey is a slab on the floor bearing the name of Mr. Peabody, the only American who was ever interred, even temporarily, in that shrine sacred to England's great dead. Later his remains were taken up and placed aboard a British warship, H. M. S. *Monarch*, which, escorted by a French and an American naval vessel, bore them across the Atlantic to their final resting place in the town of Peabody (the name having been recently changed to Peabody in honor of that great citizen), the burial taking place February 8, 1870. The *Monarch* landed at Portland, Maine, and the body was escorted from that city to Peabody by a company of English soldiers, part of the trip being made in a blinding snowstorm.

Such extraordinary honors were bestowed upon a man who was really worthy of the honor, for it can be argued with great plausibility that George Peabody was in a sense the founder of modern philanthropy. It is recorded that he strongly influenced both Johns Hopkins and Enoch Pratt, and his benefactions to education and music throughout the United States are many and far-reaching. His benefactions to Hopkins and Pratt certainly stimulated others. He made gifts to the Peabody Conservatory and Library at Baltimore; to Yale and Harvard Universities for the establishment of museums of natural history, archaeology and ethnology, and his gift to Peabody, Mass., his place of birth was the Peabody Institute and Library. Many other institutions of education in and around his birthplace were the recipients of the benefits of his endowments.

Probably the most important of all of his gifts in the United States was the establishment of the Peabody Education Fund for the promotion of education in the South, the amount of this gift being in excess of $3,500,000 which prior to the sixties was a fabulous bounty. The principal beneficiary from this endowment was the George Peabody College for Teachers at Nashville, Tenn., which has grown to be one of the leading institutes of

learning in the United States, and which has played an important part in the educational advancement of several of the Southern States.

His success in the financial world led him to London, and while there he made a gift to the city of London of $2,500,000 for the establishment of what was probably the first large-scale slum-clearance project in the world. He also paid for the American exhibition at Crystal Palace in London in 1851, and sent a ship in search of Sir John Franklin, the missing Arctic explorer, at his own expense.

One of his most curious deeds, which stands out as a striking example of his sterling character as a citizen, was in 1835, when the State of Maryland was bankrupt, Mr. Peabody, on his own credit, borrowed $8,000,000 for the State and refused to accept a penny of commission.

Queen Victoria, ruler of the British Empire at the time of Peabody, offered to bestow upon him a baronetcy, but he refused the honor, choosing to remain a plain American citizen, so she had her portrait painted by the celebrated Peal, set in a beautiful frame with gold ornaments and presented it to Mr. Peabody. This painting together with a gold box containing the tender of the freedom of the city of London, a gold box from the Fishmongers' Society of London, and a gold medal and memorial from the United States Congress in recognition of the Southern Educational Fund are on exhibition at the Peabody Institute and Library, in Peabody, Mass. Contained in a letter which accompanied his first gift to his birthplace was the expression of his sentiment toward education: "Education—a debt due from present to future generations." This sentiment has been perpetuated as the motto of every graduation class of Peabody, Mass.

To preserve the memory of this generous and honorable citizen a movement has been started in Baltimore to raise $125,000.

Human Rights and International Law

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a highly interesting and pertinent address by Mr. Carl B. Rix, former president of the American Bar Association. The address was delivered at the annual meeting of the American Society of International Law held in Washington on April 29, 1949. It is very appropriate that we should consider the subject matter of this remarkable address in view of the fact that there is now before the Senate the Genocide Convention agreement, which, in my opinion, should be defeated.

The address follows:

Human rights and international law as a composite until recently was a nonexistent problem. In an International Bill of the Rights of Man, page 5, Prof. H. Lauterpacht says:

"In fact, the individual became only to an imperfect degree the object of the law of nations. Treaties of a humanitarian character were concluded for protecting the individual in some specific spheres, but the fundamental claims of human personality to equality, liberty, and freedom against the arbitrary will of the state remained outside the orbit of international law save for the precarious and controversial principle of humanitarian intervention."

In the April 1949 issue of the American Bar Association Journal, page 358, Mr. Moses Moskowitz says:

"There is no such thing as recognized human rights in international common law. The idea of affording international protection of certain human rights and freedoms can be realized only within the framework of treaty provisions establishing the rights to be placed under international protection, defining their content, limitations, and prohibitions."

International law, by treaty or otherwise, is not made in the twinkling of an eye or by the demands and ideas of the few. Sufficient time for seasoning and practice has always been a fundamental of international law. Aspirations and alleged necessities for social changes, no matter how meritorious, do not justify tremendous revolutionary changes in a slowly developing structure like that of international law. A heavy burden of proof rests on proponents of those changes, admittedly not to be secured by an evolutionary process of building customary law but by the summary process of contract or treaty law, the purpose of which is to create a code of conduct of individuals and nations for more than a billion of the people of the world of diverse languages, concepts of government, and standards of living.

In this country we had a significant experience with a noble experiment which ended in ignoble failure due to impossibility of enforcement and change of public sentiment. Emotional actions and resulting propaganda must be analyzed and weighed. What changes in existing structures will be effected? It isn't enough to say that there must be a law and then all will be well. Who says it and why, on what authority and experience? Who is to administer this new body of treaty law, what methods of enforcement will be available, what trials for offenders, individual or State? Dr. Jessup, in his book "A Modern Law of Nations," page 186, discusses intervention in civil wars and internal matters and cautions "that international interference in such matters may lead to undesirable domination of the internal situation in a state and be productive of more international friction than it eliminates."

There is a surge throughout the world for freedom of men as individuals, for assurances of such freedom from their governments, of assurances of minorities that great programs of destruction shall not be repeated anywhere in the world, that common action hereafter shall not be wanting in prevention and stopping such things in their tracks. The peoples of many countries, through the treaty of mutual assistance and now the Atlantic Pact, are united in common defense of the gains in self-government they have made. They unite in defense against a system of government which is determined to spread its tentacles of enslavement of freedom of thought and action, against the machinations of 13 men running a government of tyranny and deceit to spread their power over the world. The way of the aggressor will be hard. When the question was asked of American lawyers if they were ready to proscribe aggression in the world, the answer was not expected so soon.

At the same time, in firm belief that the freedom of man cannot be destroyed, many nations of the world move forward on a tremendous campaign for peace in an harassed world, for things of the spirit, for supremacy of the mind of man, for the right of the individual to live his own life. They move forward in a desire of those who have been favored to help those who have not, to exchange of ways and means to higher and better standards of living everywhere. It is always hard to understand altruism but, there it is, creating problems of accommodation with the practical. We come to you as representatives of a great association of men devoting their lives to problems of government and justice, of individual rights, in a spirit of accommodation, if possible, of the conflicts of action to be solved, and solved they must be. As a great leader in the slow, imperfect task of human freedom, this country, as the possessor of a constitutional bill of rights, is asked and looked to for assumption of leadership.

In cooperating with this task, problems arise for the people of this country. How can their constitutional structure, their bill of rights, be fitted into the developing international picture of human rights without destruction of a cherished system of our division of powers of government, of our ideals and practical necessities? This is the task to which the American Bar Association has set itself and is the reason why we, the common garden variety of American lawyers, come to you—experts in international law.

Among many other questions, we present these for discussion:

1. What will be the probable result of the induction into international law of the general principles of individual responsibility for international law?

2. What is the effect of treaty law as domestic law of the land, as supreme law under the Constitution?

3. Is there no limit to the power of Congress acting under a treaty except that of prohibition in the Constitution?

4. Shall the treaty-making power be used as the basis for enactment of domestic legislation in the United States?

5. What is the effect of provisions in the Charter of the United Nations as to human rights, as a surrender of the provision of article 2 (7), the reservation of jurisdiction as to domestic questions? What will be the effect as to surrender of domestic questions if the Genocide Treaty and a Human Rights Treaty are ratified?

6. Shall the American people, with their guaranties of protection in the trials of individuals not present in other countries, agree to extradition and trials of Americans before foreign or international tribunals for violations of international law?

7. What means are available to fit our structure into the international picture without destruction of our basic principles?

We are not now ready to supply the answers to these questions. We believe that the American people should be fully advised on these matters; that if you, with your knowledge of international and constitutional law, cannot supply the answers, all of us shall devote unremitting time and toil to their solution. We are gratified that the campaign of the American Bar Association to this end, through Judge Ransom and President Holman, is bearing fruit and that sufficient time will be available for full and complete discussion and study.

In the meantime, these questions and others are taken to the lawyers of this country and Canada in a series of conferences of which 12 out of 20 projected in this country have been held. Much of value has been learned, much study by individuals and groups is now under way.

We have before us one signed treaty, that of Genocide, to be submitted for ratification. A great treaty on human rights is in process of drafting and we have for study the preliminary drafts of the commission on human rights.

Now, in the limited time available to me, for a quick look at the problems.

I

What will be the probable result of the induction into international law of the general principles of individual responsibility for international law?

Traditional international law is the law of States and their relations to each other, with

all enforcement and negotiations in the States alone. Hamilton put it, "The law of sovereign and sovereign." Now there is another concept of individual liability in international law which already appears in four fields:

1. Offenses against the laws of war and other war crimes.
2. The Genocide Treaty.
3. The human rights covenant.
4. The Habana Charter.

Brig. Gen. Telford Taylor has said, in An Outline of the Research and Publication Possibilities of the War Crimes Trials, on page 2:

"International penal law—a mere embryo a few decades ago—has developed with phenomenal rapidity. * * * Almost overnight, international penal law has become a living reality."

Again he says, on page 11:

"The war crimes trials, at least in western Europe, have been held on the basis that the law applied and enforced in these trials is international law of general application which everyone in the world is legally bound to observe. On no other basis can the trials be regarded as judicial proceedings, as distinguished from political inquisitions. On any other basis, the trials will become a sorry reproach to those who sponsored them, and will surely have a damaging rather than a beneficent effect in Germany. No task which confronts international lawyers and statesmen today is more important than that of solving the numerous and difficult problems which surround the project of making international law a hard reality throughout the world."

Article IV of the Genocide Treaty provides:

"Persons committing genocide or any of the other acts enumerated in article III shall be punished, whether they are constitutionally responsible rulers, public officials, or private individuals."

The human-rights covenant is predicated on individual responsibility and will present acute problems in a much wider form. The matter of individual right of petition and responsibility under the covenant has already had lively discussion in the Commission. The problem was sidetracked until the declaration was approved. It will break forth with renewed vigor. The United States, China, and other states propose references of disputes to a committee for opinion and conciliation at the request of states only, thus approving the traditional practice. India asked instantly for the right of petition and inclusion of liability and rights of individuals. France did the same in the memorandum of Dr. Cassin. In that is a suggestion of an attorney general for the United Nations for investigation and prosecution of complaints. Australia presented a plan and a charter of a World Court of Human Rights.

The United States, it will be noted, is for individual liability in genocide and for the traditional state liability and rights in human rights. Where do we go from here?

We speak of individual liabilities only—are there correlative individual rights? Again I quote Dr. Jessup, page 137, who has definite views:

"With the acknowledgment of the individual as a person of international law, it will no longer be necessary to speak solely in terms of rights of states when dealing with privileges and rights conferred by commercial treaties and other treaties dealing with economic and social rights. States may still conclude treaties on behalf of their nationals; they may be, so to speak, convenient instruments for collective bargaining. The state may retain its own right to proceed against another state in case of a treaty breach, but the individual citizen may likewise have his own procedures for vindication of his own rights. Thus the infringement of a trademark or patent under the protection of an international convention may be the basis for a cause of action in an appropriate forum by the individual possessor of the right, which he would derive immediately from the convention and not mediately through some national law passed for the implementation of the treaty. Procedurally speaking, it may prove advantageous to have suits instituted first in national courts, but there might be subsequent review by an international tribunal, as already discussed in claims cases. Likewise the individual, black or white, would have a cause of action in case he or she were the victim of a breach of an international slavery convention. More prosaically, the individual businessman, air line, or steamship company, would not have to wait on the slow wheels of diplomacy to secure damages for a violation of rights under a bipartite treaty of commerce or a multipartite convention concerning commerce and navigation."

In a Progress Report on Human Rights, Department of State Bulletin, August 8, 1948, by James Pomeroy Hendrick, legal adviser to the chairman of the Commission on Human Rights, we find:

"If the covenant is to attain widespread adherence, it is essential that its provisions should not interfere unduly with the domestic jurisdiction of member states. The theory of the covenant in itself is revolutionary; an undertaking by international treaty to insure certain rights which have traditionally been regarded as being solely of national concern. * * * To allow an individual to appeal from a decision of his country's last resort is a serious step; yet this might be the consequence of recognizing the right of individual petition."

My own study convinces me that the foregoing statements are substantially correct. I cannot believe that individual responsibilities and liabilities do not create correlative rights and privileges—in the instant matter to an utterly unknown degree and extent.

II

The full impact of the proposed treaties of genocide and human rights in the United States is revealed in the next question: What is the effect of treaty law as domestic law of the land, as supreme law under the Constitution?

In your discussions at the meeting last year of the effect of customary international law as domestic law, Dr. Hyde referred several times to the question of treaties as domestic law under the Constitution of the United States, but the subject was not pursued. It took an English lawyer, Professor Lauterpacht, to make clear to us anew our constitutional position in these words (p. 179):

"The distinction between 'domestic law' and 'constitution' is deliberate. As to the first, it is clear that in the absence of a special enactment or declaration by the National Legislature, the Bill of Rights, even when ratified, would not, in most countries, necessarily become part of the municipal law of states ratifying it. In the United States, article VI (2) of the Constitution provides that all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land, and the judges in every State shall be bound thereby, anything in the constitution or laws of any State to the contrary notwithstanding.

"To that article the courts of the United States have given a generous interpretation, amounting occasionally to an attribution to a treaty of an effect dangerously approaching that of a constitutional amendment. But in other countries a duly ratified treaty is not part of municipal law until it has been made so by an express act of the national legislature. In Great Britain treaties affecting private rights—and these include practically all treaties—do not become the law of the land unless they have been made so by a special act of Parliament."

Since the above was written in 1944, to a limited degree the same effect is had in France. Involved herein is the difficult question of a treaty which is self-executing in whole or in part. The mere fact of the necessity of implementation by legislation, such as the definition of crimes under international law and fixing penalities, does not make a treaty non-self-executing. It seems to be plain that the essential portions of the genocide treaty and the proposed human rights treaty are self-executing, in spite of the note of the drafters of the latter to the contrary. Only clear intent in the treaty itself can prevent the automatic operation of the Constitution of the United States. Thus there may be created, as law, a third body of treaty law in this country with no constitutional basis whatsoever, of equal dignity with our Constitution, as supreme law of the land, superseding all State constitutions, decisions, and laws of the States covering the same subjects, and probably superior to all prior enacted laws of Congress on the subject. Of course, it is no answer that subsequently enacted laws by Congress may abrogate or terminate a treaty. This country is not in the habit of ratifying treaties with the intention of repudiation. The effect in this country of a ratified treaty of human rights and, in a limited degree, the genocide treaty, in a field which has been almost exclusive in the States, is so far-reaching in its consequence that the word revolutionary is not fully descriptive. Again, it is no answer to say that the treaty is non-self-executing. Under international law the duty to implement a treaty fully and completely is of the same high moral order as the obligation of the treaty itself. It is asserted that Congress has never failed to so implement a treaty.

The case cited by Professor Lauterpacht is the famous migratory bird case, *Missouri* v. *Holland* (252 U. S. 416), in which Leviathan, with deep concern for the food supply of wild duck for a suffering people, blithely asserted that there is no limit in the United States to the treaty-making power and legislation enacted thereon unless it is prohibited by the Constitution.

The problem is aggravated by the recent series of cases in the Supreme Court which deal with the power of Congress to appropriate entire fields of legislation to the exclusion of the States. I leave to your imagination as to what would happen in the field of administration of municipal law if subversive elements should teach minorities that the field of civil rights and laws had been removed to the field of international law, with the consequences outlined by Dr. Jessup, as quoted herein.

The paucity of discussion of these constitutional features is difficult to understand. Is it possible that discussion would not comport with propaganda?

III

Is there no limit to the power of Congress acting under a treaty except that of prohibition in the Constitution?

This subject was discussed fully at the annual meeting of the society in 1929. In spite of the sweeping statements in *Missouri* v. *Holland*, there is highly respectable authority that there are sharply defined limits.

Illustrative are these cases: *U. S.* v. *Pink* (315 U. S. 203); *Asakura* v. *Seattle* (265 U. S. 332); *Holden* v. *Joy* (84 U. S. 211); *Geogroy* v. *Riggs* (133 U. S. 258); *U. S.* v. *Belmont* (301 U. S. 324).

No treaty has ever been held unconstitutional in any court, Federal or State, in the United States.

In the 1929 meeting Chief Justice Hughes, in closing the discussion, said in part:

"So I come back to the suggestion I made at the start, that this is a sovereign nation;

from my point of view the Nation has the power to make any agreement whatever in a constitutional manner that relates to the conduct of our international relations, unless there can be found some express prohibition in the Constitution, and I am not aware of any which would in any way detract from the power as I have defined it in connection with our relations with other governments. But if we attempted to use the treaty-making power to deal with matters which did not pertain to our external relations but to control matters which normally and appropriately were within the local jurisdictions of the States, then I again say there might be ground for implying a limitation upon the treaty-making power that it is intended for the purpose of having treaties made relating to foreign affairs and not to make laws for the people of the United States in their internal concerns through the exercise of the asserted treaty-making power."

IV

Shall the treaty-making power be used as the basis for enactment of domestic legislation in the United States?

It would seem that the wise words of Chief Justice Hughes just given would be sufficient answer to this question.

From part 10 of the report of the Committee on Civil Rights, appointed by the President, comes this sinister and cynical suggestion following a full discussion of the restricted limits of Federal power of legislation in the field of civil rights:

"10. Power derived from the treaty clause in article II, section 2 of the Constitution, to protect civil rights which acquire a treaty status.

"In its decision in *Missouri* v. *Holland* in 1920, the Supreme Court ruled that Congress may enact statutes to carry out treaty obligations, even where, in the absence of a treaty, it has no other power to pass such a statute. This doctrine has an obvious importance as a possible basis for civil rights legislation."

This is the report the President advised us to read as a bedtime story. The road to Federal absolutism is being made very, very easy.

V

What is the effect of provisions in the Charter of the United Nations as to human rights, as a surrender of the provisions of article 2 (7), the reservation of jurisdiction as to domestic questions? What will be the effect as to surrender of domestic questions if the genocide treaty and a human rights treaty are ratified?

The necessity for extreme care and skill in drafting a treaty is shown by the construction and interpretation of the language used in the Charter of the United Nations as to human rights.

It will be assumed that you are entirely familiar with articles 1–3, 55, 56, and 62 of the Charter, which refer to human rights.

Note how carefully those provisions call for promoting, assisting, encouraging, recommending, the cause of human rights, without the creation of any contractual liability for recognition of human rights by any state.

But, as we have been reminded by high judicial authority, plain words do not always mean what they say. The reservation of domestic questions, known as article 2 (7), is perfectly plain and concise. Certain it is that when the Charter was ratified by the United States and other countries, full force and effect was given to that reservation of domestic questions. Full assurances on that point were given to the Senate of the United States and the people of this country by the Secretary of State and the President.

It may be of interest to know that in the 1947 meeting of the International Law Association, at Prague, a resolution was adopted to set up committees for studying and reporting to the next conference on the legal effects of the Charter in relation to article 2 (7). A distinguished committee, headed by Lord Porter, was set up with Professor Lauterpacht as rapporteur. The report to the human rights committee of the International Law Association at the Brussels (1948) conference is now available for study and to a layman in this field it is of startling import. Distinguished scholars from all parts of the world sent their comments and observations. A substantial majority of the members of the committee who sent in their comments and observations expressed general agreement with the preliminary report. Comment is made that Dr. Jessup sent a personal note showing on which points the preliminary report differs from the official attitude of the United States. Professor Eagleton expressed a view different from that propounded in the report with regard to the nature of the provisions of the Charter of the United Nations in the matter of human rights and fundamental freedoms. In his view the relevant provisions of the Charter do not impose upon the members of the United Nations the legal obligation to respect human rights and fundamental freedoms.

Now for some of the surprising conclusions.

"The provisions of the Charter in the matter of human rights and fundamental freedoms express legal obligations binding upon the individual members of the United Nations." (P. 9.)

"As a matter of wider principle, it is probably legitimate to assert that the duty of the State to promote the observance of and respect for human rights extends to the obligation to prevent such denial, from whomsoever emanating, of human rights and fundamental freedoms." (P. 21.)

The report then passes to the position of the individual under the Charter:

"Finally, one of the results of the provisions of the Charter in the matter of human rights and fundamental freedoms is to effect a far-reaching change in the position of the individual in international law. * * * They transfer the inalienable and natural rights of the individual from the venerable but controversial orbit of the law of nature to the province of positive law, of international law." (P. 22.)

Having reached these conclusions as to the binding effect of the provisions as to human rights in the Charter and the position of the individual under it, the report at length argues against the declaration and a covenant as retrogressive steps because the favorable situation under the Charter will be greatly weakened.

As to the difficulties of draftsmanship this is said:

"Any attempt to draft them in the hurried atmosphere of conferences, through a procedure of voting and rapid adoption or elimination of proposals made there, must result in instruments the clauses of which will be often prolix, deficient in form and substance, and lacking in organic unity. * * * The task of drafting an international bill of rights is confronted with all the difficulties which beset the formulation of the most intricate clauses of the constitution of a State, namely, those in the sphere of determining the fundamental rights and duties of the individual and his relation to the State. On the international plane these difficulties are considerably greater." (Pp. 40 and 41.)

Then follows this discussion:

"Undoubtedly after months of arduous work, such as the Commission on Human Rights has devoted to the subject, there is a tendency, natural in the circumstances, to adopt an instrument showing some results of the prolonged effort. Any such tendency, which may be the product not of conviction but of fatigue, must be resisted. * * * To attempt, in the political and psychological atmosphere of international relations following upon the Second World War, to give final shape to a fundamental and historic instrument the essence of which must be some distinct measure of surrender of exclusive rights of sovereignity, may mean serious and irreparable injury to the cause of human rights. This is a case in which delay may be preferable to fostering the illusion of achievement." (P. 55.)

If these comments are compared with the demands for immediate action expressed by Mr. Moskowitz in the American Bar Association Journal, and the reply of President Holman, it must be apparent that repeated demand of the House of Delegates, on the advice of President Holman and Judge Ransom for sufficient time in the preparation of the convenant and its study by the citizens of this country, are completely justified.

Then follows a still more remarkable position:

"The United States was to a large extent responsible for the idea of a declaration which is neither binding nor enforceable and which is to be accompanied or followed by a binding convention—provided there is a sufficient number of States ready to accept it. The United States has opposed what must be regarded as an indispensable feature of an effective protection of human rights, namely, the recognition of the right of petition by private individuals and groups. * * * The historic part which the United States, since the Declaration of Independence and its own Bill of Rights, has played in promoting human freedoms, as well as its rapidly increasing part in international cooperation, permit the expectation that that country may yet make a decisive contribution to an effective international protection of the rights of man. In the meantime it is preferable to leave to the forces of democracy in that country the opportunity to vindicate fully through the slower processes of education and persuasion the idealistic and libertarian tradition of its people in relation to human rights." (P. 56.)

In an editorial in the Journal of the Association, Judge Hudson paid his respects to the contention that positive law as to human rights was created by the Charter in spite of article 2 (7):

"It is difficult to conceive of the possibility of making substantial progress in the development of international law unless a scrupulous respect obtains for the integrity of international instruments. Yet a tendency now seems to prevail in some quarters to undermine that respect by torturing the meaning of great international instruments and by forcing them to serve purposes for which they were never designed, purposes at variance with the desires entertained by Governments when the instruments were brought into force.

"The usefulness of the Charter of the United Nations should not be misconceived. The Organization will endure only if its provisions are respected. A frame for a picture must not be mistaken for the picture itself, and the United Nations may need to be protected against some of its more ardent friends.

"When reforms cannot be achieved through agencies of local government, it is often a temptation to seek to have them ordained from above and afar. Problems take on an illusory guise of simplicity if the forum of their consideration can be shifted to a distant state or national capital. And a failure there easily begets a further temptation to seek their solution by international action. Perhaps such progression is not to be condemned, but it should not be permitted to place strains on existing international legislation.

"If governments cannot have confidence that the instruments by which they bind themselves will not be made to serve unintended purposes, if respect is not paid to

the terms and tenor of the obligations imposed by such instruments, the result may be a reluctance to assume further commitments and the progressive development of international law may be seriously retarded. An important function of the United Nations might thus be frustrated. (The American Journal of International Law, vol. 42, No. 1, pp. 105, 107, 108.)

VI

Shall the American people, with their guaranties of protection in the trials of individuals not present in other countries, agree to extradition and trials of Americans before foreign or international tribunals for violations of international law?

With the possible exception of divided opinion as to prosecution and trial for war crimes, our experience in the 12 conferences with lawyers in various States furnishes an emphatic "no" to this question. It is said by lawyers participating in the war trials that there were many privileges of the accused in criminal trials under our system which were not present in those trials. Add to that the problems of extradition, language, procedure, and cost of defense, and it is easy to see why American lawyers should be of decided opinions on the subject. The difficulty in securing approval of the United States for the World Court may point the way for our representatives in the United Nations on considering proposals for other international tribunals.

Judge Orie L. Phillips phrased this question in connection with the Genocide Treaty thus:

"With respect to article VI, in the event we ratify the convention, should we, by reservation, expressly provide that citizens of the United States and persons within the territorial jurisdiction of the United States, charged with genocide, will be subject to trial and sentence only by a competent judicial tribunal of and sitting within the United States, vested with jurisdiction over such offense by Federal legislation; that a citizen or other person so charged shall be presumed to be innocent until his guilt has been established by lawful evidence beyond a reasonable doubt; that a citizen or other person so charged shall be protected by all the safeguards embraced within the Constitution of the United States, including the rights guaranteed by the fourth, fifth, sixth, and eighth amendments to the Constitution of the United States, to an accused charged with a domestic crime; and that such citizen or other person shall not be subject to be charged, tried, or sentenced by any international penal tribunal?"

VII

What means are available to fit our structure into the international picture without destruction of our basic principles?

Must we have a constitutional amendment to put the United States on a parity with other nations on the effect of treaties as domestic law? If, from the many fields of effort of the United Nations more treaties covering domestic questions are offered, such action may become absolutely necessary. If not, the Senate of the United States may be obliged to refuse ratification.

The reservation route did not work in the case of the League of Nations. The subject must be explored and it must be understood by the people that reservations may be necessary in order to secure adjustment of the covenant of human rights and other treaties to our Constitution.

Sympathetic advice and counsel, based on careful continuing study of the subject and the work of the Commission on Human Rights, is called for. The American Bar Association will continue to function in this way, broadening its work as more citizens become familiar with international law. Education and more education is the order of the day.

By trial and error the United Nations will find its way and gradually its successes will be greater than its inevitable failures.

If it is thought that the difficulties have been overemphasized in this address, let me remind you that only if the tremendous size of the job is understood can any progress be made. It is no time for orations and emotions on human rights, for propaganda and recitals of wrongs and hardships. Professor Lauterpacht, one of the greatest scholars of the subject of human rights, devotes four pages of his book to a recital of the difficulties and the problems to be faced. He then makes these statements:

"Yet, when all has been said, the fact remains that any attempt to translate the idea of an international bill of the rights of man into a working rule of law is fraught with difficulties which disturb orthodox thought to the point of utter discouragement." (P. 9.)

This, from his book, may be the lesson for all of us:

"In view of all these difficulties, it may be felt that indulgence in the idea of an international bill of the rights of man is a regrettable dispersion of effort, of the futility and utter impracticability of which the student of law and politics ought to warn both governments and public opinion at large. It may be his business to do so. At the same time, however, it is his duty to assist in uncovering the hidden springs and the enduring core of the matter—a matter which is the abiding theme of political and legal thought throughout the ages. It is possible that in the contemplation of the continuity of ideas and aspirations on the subject we may find assistance in approaching the solution of that persistent problem of law and government." (P. 15.)

"Aviation Constitutes the Dominant Arm in Warfare, in Any Kind of Warfare—To Deny This Painfully Self-Evident Fact of World War II Is To Forfeit the Respect of a Public Which Is, on This Point at Least, Admirably Well-Informed"

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. JACKSON of Washington. Mr. Speaker, the words which I have quoted are taken from one of the most unbiased, thought-provoking, and challenging articles on air power I have ever read. Written by Mr. Stuart B. Barber, it is entitled "What Do We Want From Air Power," and was published in the July 25 issue of the Washington Post.

Mr. Barber emphasizes the fact that ascertainment should be made and determination reached with respect to the specific objectives which this country should seek—in order to subdue and vanquish the enemy if and when we might be called to mobilize in defense of our country.

The editor of the Washington Post, in discussing this article, poses these questions:

Is the objective to spread mass destruction, obliterate cities, and leave an enemy prostrate; or is it to concentrate on knocking out communications or a few key industries on which the enemy's war potential depends without inviting the creation of the same kind of millstone which was caused by the indiscriminate devastation in Germany? These are political decisions which must precede an effective military war plan, for, without them, the military cannot know in other than a general way what may be expected of it.

Mr. Barber emphasizes the fact that "considering war as a whole," the air arm is and must be dominant. He points out that this does not mean "that the Air Force must dominate. American air power," he states, "consists of all planes which would contribute to the control of the air over land and sea."

Mr. Barber challenged the idea of constructing a military plan for the conduct of war without a clear and lucid understanding of the objectives of the United States in case of war. "That," he states, "is something which neither the armed services nor the Joint Chiefs of Staff can write." He makes that decision the sole responsibility of the National Security Council for "There and not in the Joint Chiefs of Staff is the responsibility for writing the basic war policy of the United States."

The article is so altogether reasonable, unbiased, and free from service prejudice and looks so completely to the best interests of our own national security—that I am placing it in the RECORD in full.

I am doing so in order that it might be brought to the attention not alone of my colleagues in this Congress and others charged with the economical and effective defense of the country but to all the people of our country.

The article is as follows:

WHAT DO WE WANT FROM AIR POWER?

(By Stuart B. Barber)

Admiral Yarnell's letter in your issue of July 15 serves to focus attention on why the national defense of the United States is the subject of incredible and dangerous confusion and bickering.

To begin at the end of the admiral's letter, he states: "There is no dominant arm in warfare. All are equally essential." With all due respect to the distinguished former commander in chief of the fleet, I submit that this statement is nonsense, and that its constant reiteration by Navy spokesmen has done the Navy—and our national security—more harm than all the machinations in the Air Force.

Aviation constitutes the dominant arm in warfare—in any kind of warfare. To deny this is not only to deny the painfully self-evident facts of World War II, but to forfeit the respect of a public which is, on this point at least, admirably well-informed. For as the Strategic Bombing Survey so succinctly stated, control of the air was essential to the success of every military operation, air, land, and sea.

To say that aviation is the dominant arm is not to say that ground surface and subsurface forces are not essential. They are. Nor is it to say that they must be mere auxiliaries to the air arm. They must not be. On appropriate occasion they must contribute to the national objective as primary combat forces in their own right, to which, on such occasions, the air arm will be the auxiliary. But let there be no lack of repetition; considering war as a whole, the air arm is and must be dominant.

To say that aviation is dominant is not to say that the Air Force must dominate. For

American air power consists of all planes which can contribute to the primary purpose of controlling the air and to using that control, over land or sea, be they Air Force, Navy, or Marine. The Air Force would have us make the simple identification: Air power equals Air Force. Our obsolescent cruiser admirals amiably assist them by insisting that naval aviation is merely a part of sea power, and not air power at all.

Naval aviation, to be sure, does help to control the sea, but its airmen can tell you that their job, first and foremost, like that of any other airmen, is to defeat the enemy air force—or be driven from both air and sea. One can be sure that enemy air leaders in calculating their opposition, do not fail to include the planes of the Navy and Marines. Let us be as wise as they and think of our air power as a whole, however for convenience of operation it may be divided.

To say that aviation is dominant is not to say that we must build our military strength around the B–36, or around any other single weapon or single narrow concept of air warfare. Air power is far broader and more versatile a force than its multiple boards of specialists know, or would have us believe. It is not unreasonable to say that its greatest enemies are those bomber fanatics, or fighter enthusiasts, who, with all too little understanding of air power as a whole or faith in its broad potentials, would limit its development to the narrow sphere which they do understand.

For air power is not bombing alone, nor destruction alone. It comprises that total array of military missions proven and potential, constructive as well as destructive, which can be accomplished through control of the air power to do, as the essential preliminary to determining what our air power shall be, and with it what our total power shall be.

It is impossible to comprehend the means of American victory in war against a major power except through major reliance on strategic air attack. It is possible, however, to inquire into the means, the objectives, the timing, and the byproducts of such attack. It is essential to inquire what else we must do besides strategic air attack, and to support that attack and to follow through to inquire whether our present total air power is properly balanced and properly developed to do those things which we must do at the start of a war, if we are to accomplish maximum results with minimum expense, waste and danger.

In making such inquiries we should forget for the time the old arguments of which service shall have what roles and missions, and what weapons to carry them out. If we can determine the necessary shape of our national air power considered as a whole, for all the tasks which American interests require to be done, it will become relatively simple to dispose the pieces of this air power among the services in accordance with standards of combat as well as dollar efficiency.

As Admiral Yarnell so correctly points out, it is not possible to determine what the shape of our air power, or our military power as a whole shall be, until there is agreement on the war plan and its objective. On this he says, the three services must agree.

Here, I believe, we come to the heart of the controversy. We cannot decide the nature of our military forces without a war plan. But we cannot construct a war plan for the military without first having a statement of the objectives of the United States in case of war, and of the political and economic war plans with which the military war plan must be meshed, which it must support, and by which its nature and objectives must be limited.

This latter statement neither the armed services nor the Joint Chiefs of Staff can write. The day has passed when the armed forces unilaterally determined objective and plan of war. Admiral Yarnell has missed the point; the services cannot write a sound war plan until they are given an objective and a framework from above. There is ample public evidence that the military plan of today is built around terror bombing and bears little relation to our political plans and objectives. The fault for this must be hung squarely on the members of the National Security Council, individually and collectively. For there, and not in the JCS, is the responsibility for writing the basic war policy of the United States.

In war we shall oppose a power capable of gaining control of the vast areas and populations of Europe and Asia. These areas and populations contain resources which we need, and which we must at any event keep from being productively used by the enemy power. That power is a political power operating in the realm of ideas as well as a military power.

Immediately we come to questions which the military cannot answer. To what extent shall we combat those ideas by bombs, and to what extent by political means? To what extent shall we hold or occupy those areas and populations with our own troops, and to what extent by political means?

How shall we conclude a war and restore peace? By destruction and indefinite occupation, or by somehow encouraging the formation of nonhostile governments from the populations of each area, which can maintain order and restore productivity with minimum cost to us? To what extent, to accomplish these things, must we limit the potential destructiveness of our weapons, and guide them into channels of greatest political advantage?

These questions have neither been answered nor faced. Because they have not been, the Joint Chiefs argue interminably about what, in the end analysis, are opposing views of political objectives rather than military methods of attaining a prescribed set of objectives. Each service tries to keep alive a full set of weapons adequate for all possible tasks because the exact tasks to be accomplished have not been defined.

Meanwhile, impatient advocates of economy and efficiency bellow and cast their weight about, demanding the abolition of this, that, or the other force, or its merger and disappearance into something else. If they succeed, they will narrow the range of what we could do in war, and inevitably limit our eventual choice of objectives and strategy. But they will be doing this through the back door, and not on the basis of a well-constructed, positive plan for using the total resources, political as well as military, of the United States to accomplish its basic objectives in war.

There is more than a little suspicion that those who clamor so loudly for unification on the service level do so to cover their inability to face and solve the problem of unification at the level of policy and strategy on the national plane.

For this vacuum of national strategic planning few members of the National Security Council can be held blameless. Ultimate responsibility is, of course, the President's as its head. But the Secretary of Defense should certainly be somewhat curious as to what objectives his Department must prepare to accomplish unless he intends to decide these himself. And should not the Secretary of State be somewhat apprehensive of whether certain professed military objectives might make political and psychological warfare and the reestablishment of peace impossible?

The Air Force, of course, finds the policy vacuum most pleasant; its quasi-official minions can continue to sell the panacea of city bombing without regard to its effect on political warfare. Why then has not the Navy raised the question of our objectives and over-all strategy in war and insisted that the Security Council bring it to decision?

Here, I think, we complete the circle. Aside from any question of their leadership and courage, the Navy's surface-minded leaders cannot propose to the National Security Council an alternative basic concept for fully accomplishing the national objectives in war. They cannot do this because they do not understand, or are unwilling to admit, that the dominant force in war must be aviation.

They continue to talk of "occupying the enemy nation." They appear to have no conception of the potentialities of strategic air warfare in its broadest sense, as distinguished from the narrow one-way street of city bombing. They talk of strategic and tactical aviation—just as do the heavy bomber fanatics—although they were two different things instead of merely two different ways of applying the same weapons and forces.

They will not let the Navy's aviators—who are airmen first and seamen second—discuss what American air power should be, as the balance whole needed to carry out specific national policies, and apart from any squabbles over the roles and missions of specific services. The Navy thus serves to perpetuate, instead of to initiate, the reform of an American defensive system swollen at both ends and weak in the middle.

Now is the time for military statesmen. They need not be airmen, but they must understand the dominance of air, the great potential variety and flexibility of air weapons—and their dependence upon surface as well. They must understand also the relations between military and political force in opposing a power which has both. They will not be found among the bomber, fighter, or submarine fanatics, but wherever they may be found it is time the services let them come to the top, to lead our thinking for a while until these issues can be clarified.

Meanwhile, astute political thinking, and courage, and some willingness to admit previous error, are also required if we are to survive. The Washington Post might lead this parade by admitting that its insistence on putting the form of service unification ahead of the substance of unification of national policy, is putting the cart before the horse.

It might also withdraw its proposal that the three service representatives be removed from the National Security Council. Now, if ever, we need the fullest, broadest presentation to the council of the varying alternatives which we could adopt, rather than a determination by one man whose breadth of vision and capacity for sober reflection are, shall we say, as yet unproved. Beyond this, it is up to the vision and courage of the members of the council, if they would truly serve their country.

ARLINGTON, VA.

Public Works To Restore Employment

EXTENSION OF REMARKS

OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks, I include the following article from the Washington Evening Star of July 23, indicating the need for congressional action to provide a public-works program to restore employment:

An official report of soaring Government payments to jobless workers gave a push today to congressional antidepression campaigns.

The Bureau of Employment Security announced that unemployment insurance payments hit a record monthly level of $154,696,000 in June.

Robert C. Goodwin, director of the Bureau, said the largest previous total for any one month in the history of the law was $152,096,345 in March this year.

Nearly 100,000 more jobless workers received unemployment benefits each week in June than in May, he said.

Already moving to check this trend, the Senate Public Works Committee yesterday approved unanimously its so-called antidepression bill authorizing the Government to advance $100,000,000 to States and communities for planning a public-works program.

VETERANS' AID EXTENDED

The Senate Labor Committee approved, also unanimously, a year's extension, with some modifications, of the 52–20 jobless veterans' law which is due to expire Monday. This law authorizes Federal payments up to $20 a week for 52 weeks to jobless veterans.

President Truman, who already has launched his own program of directing Government buying and spending in areas hardest hit by unemployment, had urged extension of the law.

The employment security agency said that total unemployment benefit payments during the first 6 months of this year were about $800,000,000. This was almost twice the amount paid out during the same period last year.

The average weekly number of claimants in June was 1,814,000, compared with 1,716,000 in May.

NEW CLAIMANTS INCREASE

Initial claims, representing new unemployment, rose from 337,400 to 341,600 during the week ending July 16, latest on record, the Bureau said.

Continued claims, representing weeks of unemployment among covered workers rose from 1,962,000 to 2,182,600—a new weekly high.

All but five States reported increases during the July 16 week.

"The largest increases in continued claims—46,200 in Pennsylvania, 29,300 in New York, and 16,000 in Alabama—were primarily due to postponed claims (from the July 4 holiday)," Mr. Goodwin said.

He said there were scattered reports of recalls of workers, but they were not extensive enough to be significant.

Alaska Should Have Received Forest Highway Funds

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1949

Mr. BARTLETT. Mr. Speaker, the attention of the House was called the other day to a letter which Mr. Felix S. Cohen wrote to the Washington Post and which was printed in that newspaper commending the House Appropriations Committee for refusing to approve budget estimates of $9,000,000 for highway construction in the national forests of Alaska. In his letter Mr. Cohen made reference to a communication which had previously appeared in the Post from Mr. William L. Baker, editor and publisher of the Ketchikan (Alaska) Chronicle, urging that the appropriation be made. Mr. Cohen described the effort to obtain the appropriation as one which sought "pulp mill access roads in Alaska which would have been spent to consummate a scheme which competent critics have called the most outlandish land grab since Teapot Dome." Further, Mr. Cohen goes on to say:

> This scheme * * * contemplates relieving the Alaskan Indians of valuable timberlands and turning their timber over for a song to favored companies. * * * Several responsible firms have decided not to deal in hot timber. Mr. Baker and some of his associates have therefore undertaken to secure substantial Federal subsidies for less squeamish investors. Scruple-swallowing timber companies were informally promised $9,000,000 of public funds for private timber roads which they would otherwise have had to pay for themselves. Such roads would serve no public purpose, they would lie within a private lumber company empire.

Mr. Speaker, there is no doubt whatsoever that Mr. Cohen is a great expert on Indian law. There is no doubt whatsoever that he has ever at heart the interests of the Indian people. I acknowledge those facts freely; likewise I want to say that I hold Mr. Cohen in high personal esteem. Nevertheless, I cannot permit to go unanswered the charges he has made in his letter.

Undoubtedly the "land grab" referred to is in connection with Public Law 385 of the Eightieth Congress. What was the occasion for the passage of that legislation? Briefly, it was passed by the Congress and signed by the President in order that there might be reasonably early utilization of some of the vast timber resources in Tongass National Forest in southeastern Alaska. There was general agreement that Indian land claims—whatever their validity—provided a complicating factor which made venture capital hesitate to enter the area and make the heavy investment necessary in construction of pulp mills and pertinent works. One such installation, Mr. Speaker, will cost anywhere from twenty to thirty million dollars. This is not a case of big business freezing out small business. It is a case of big business or no business at all and to date in Alaska it has been nothing. This is true although there are truly magnificent stands of hemlock and spruce timber to be found there. About the time that House Joint Resolution 205—which became Public Law 385—was introduced there was a change in the economic outlook which made it seem highly probable that investment capital could be induced to enter Alaska and construct pulp mills. It was equally obvious that unless the companies interested could obtain a clear and undisputed right to the timber which they needed they would not make any investment at all. The Indian claims had been pending for years and in 1947, when House Joint Resolution 205 was considered and acted upon, they seemed no nearer determination than when they were first initiated. The same statement could be made in July 1949.

So, the Congress, through the medium of the joint resolution, gave the Forest Service authority to enter into contracts with timber companies, notwithstanding any claims made or to be made by the Indian people. Provision was incorporated so that the money which would accrue from the sale of the timber would be placed in a separate account in the United States Treasury. In the event the land claimed was found to be owned by the Federal Government the money would be retained in the Treasury; if it were found to be the property of the Indians then it would be turned over to them.

The law specifically states that "nothing in this resolution shall be construed as recognizing or denying the validity of any claims of possessory rights to lands or timber within the exterior boundaries of the Tongass National Forest."

This is what is now being referred to as the greatest land grab since Teapot Dome. I fail to see that it was any such thing or that there was any "land grab" at all. Those who joined in the effort to have House Joint Resolution 205 enacted are by implication in the letter referred to above accused of having joined in a plot so nefarious that the Teapot Dome scandal is the only one which truly compares with it. That is arrant nonsense.

If the accusation is correct it must lie against the House Committee on Agriculture. It must lie against the Senate Committee on Agriculture. Both committees reported out the bill. It must lie against the House of Representatives and the Senate of the United States. Both Houses passed the bill. It must lie against the Secretary of the Interior. He, who, above all other officials in this Government, is charged with responsibility for the welfare of the Indians, gave personal time and personal attention to House Joint Resolution 205 and endorsed it. The accusation must lie against the distinguished junior Senator from New Mexico, then Secretary of Agriculture. He likewise endorsed the resolution. It must lie against the President of the United States for signing it. It must lie against the Chief of the Forest Service and Mr. B. Frank Heintzleman, regional forester for Alaska. They were for the resolution. In equal degree the accusation is lodged against Hon. Ernest Gruening, Governor of Alaska. He supported House Joint Resolution 205. In just the same manner the charge must be placed against the Delegate in Congress from Alaska. He was for the joint resolution, and to this day has no guilty conscience on account of the position he took.

This alleged grab was not carried out in stealth or secrecy. Complete hearings were held before the House Committee on Agriculture. Both sides were heard.

The timber at stake is found in Tongass National Forest. It is now the property of all the people of the United States. Its extent is such that from it 25 percent of the newsprint needs of the United States could be met. Its utilization, on sound principles of conservation, would be of material benefit to Alaska. It would provide a year-round industry for southeastern Alaska and if all the timber which could be taken each year under conservation practices were moving toward the pulp mills it is estimated that the population of that area would be doubled. It is obvious what that would

mean to the business of that region. It is obvious likewise that the Indians there would benefit along with their white neighbors in that there would be additional employment and the whole economy would be bettered.

The reference made in Mr. Cohen's letter to turning timber over for a song to favored companies is wide of the mark and grossly inaccurate. The Forest Service called for bids on one block of timber following enactment of House Joint Resolution 205. A successful bid was entered. Anyone could have made an offer. Advertising in media of general circulation preceded the sale which has been made. Parenthetically, it might be said that the very fact that no other timber has been sold is proof positive that the Forest Service has no intention of allowing private companies to secure timber rights until it is made clear that those companies are adequately financed and prepared to start local industries. Had the Forest Service been inclined to divest the southeastern Alaskan Indians of opportunity to make claims to lands, then by now it would have been possible to have transferred all the valuable stands to private companies under long-term contracts. No such thing has been done. That offers an eloquent answer, I should think, to those who believe as Mr. Cohen apparently does.

I can say of personal knowledge that the statement that "scruple-swallowing timber companies were informally promised $9,000,000 of public funds for private timber roads which otherwise they would have to pay for themselves" has absolutely no basis in fact. The decision to ask Congress for a specific appropriation for the forest highways of Alaska was not made until late summer of 1948. The roads sought would not have been roads for private companies. They would have been community roads. One reason why it was felt necessary to ask for a special appropriation was pointed out by Governor Gruening, of Alaska, when he testified before the Senate Appropriations Committee. Governor Gruening said:

> Now, in the forest areas where we are included, it is rather striking that under the formula we are entitled to certain amounts, but the actual appropriations are very different.
>
> I have here the figures for the last 17 or 18 years and during these years we have received something less than $6,000,000 than we were supposed to receive under the formula.
>
> In 1933 under the formula, we were supposed to receive $945,000 for the construction of highways in the forest areas. We received $350,000.
>
> There was a special appropriation that year, and under the formula we were supposed to receive $497,000. We got nothing.
>
> The next year, 1934, under the formula, Alaska was to receive for forest highways, $1,400,000. We got $350,000.
>
> And so it goes on. With the exception of 3 years, we never got what we were entitled to. In most cases we got a relatively small amount of the proportion we were entitled to.

When Mr. Heintzleman, regional forester of Alaska, testified before the Senate Appropriations Committee, he was specific in stating that if appropriated the road money would not go for private roads. He said:

> If we are to get these plants in southeastern Alaska, it is going to be necessary to have better community facilities. We want these plants in existing towns. * * * But one of the things especially needed is roads and the Government is looked to to build the roads to serve these communities. The Tongass National Forest, which is Government-owned land, covers most of southeast Alaska and extends practically to the limits of the towns. Therefore, the roads of this entire region are logically national forest roads and are built and maintained by the Government.

I for one am not going to lose any sleep over being accused of having gone before the Appropriations Committee to ask for $9,000,000 for roads for private companies. I did no such thing. I asked for proper Federal attention to road construction on Federal land in an area of 35,000 square miles which has now about 175 miles of highways. And I do not believe that Governor Gruening and Senator Magnuson, who also urged the appropriation be made, will agree any more readily than I that they made their arguments for this money in other than the public interest. Mr. Baker, to whom Mr. Cohen pays his respects, is labeled as being out of order in asking Congress to do something constructive after all this time so that roads might be built over federally owned lands. Mr. Baker has demonstrated himself time and time again to be a friend of the Indian people of Alaska. It is most unfair to attack him if he desires some roads to be built in southeastern Alaska and some pulp mills to be established there.

Ever since I have been Delegate in Congress I have maintained that the Indian people of southeastern Alaska—and I want to say here they are a superior group of citizens—should have every last opportunity to make their claims to land and to have those claims fairly investigated and adjudicated. In fact, I introduced a bill whch met with the hearty approval of the Alaska Native Brotherhood to bring about a final and definitive conclusion to this long-standing and irritating problem, one which has troubled both the Indian and white people. I have always said that I would resist to the utmost any move to extinguish arbitrarily any rights which they asserted. I do not consider Public Law 385 to be such an extinguishment.

One difficulty in all of this is that too many of those who aline themselves with the Indian cause—and who do not happen to live in Alaska—state categorically but altogether improperly that the lands which the Indians claim are theirs without any doubt whatsoever. Of course, this is simply not so. That is what we must find out. To date there has been more talk than action, and the time has come when something ought to be done. It ought to be done in all fairness to the Indians. If they are found to own land in southeastern Alaska or in any other section of Alaska they should receive it as their right. Their claims if proved would override the Government's claims insofar as they are contained in the Executive order creating Tongass National Forest because that order expressly stated that the lands included within the boundaries of the forest were subject to existing rights.

I have made this rather lengthy explanation because I do not believe it is right to let go unnoticed the kind of attack which has been made in this case. It has no basis in fact, it is founded on a set of misstatements and it does a grave disservice to the cause of Alaska and Alaskans—Indians as well as whites.

Soviet Union Committing Genocide

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, "genocide" is the newest legal term in international law. In brief "genocide" means "race murder" or "nation murder." It was defined by the Convention of Genocide as an act which is committed "with intent to destroy in whole or in part a national, ethnical, racial, or religious, group as such." The General Assembly of the United Nations which met in Paris last December and accepted the Convention on Genocide, said that it was the intent of the Convention that persons committing any of these acts of genocide are to be published not only if they are public officials but even if they are state rulers.

Mr. Speaker, I submit that if the information which is contained in news articles today is correct, then Joe Stalin and his official family should be charged and tried for violation of the acts of genocide as approved by the United States at the Genocide Convention at Paris last December. The report, Mr. Speaker, charges that the Soviet is uprooting 400,000 Jews from the Ukraine and White Russia and deporting them to Archangel and Siberia. Here is a challenge to the United Nations to ferret out the facts and to report if these news stories are correct. If they are, the United States should promptly repudiate the Convention of Genocide, which is now pending before the Senate for ratification.

Mr. Speaker, under leave to extend my remarks, I am including a news article which appeared in the New York Times on Monday, July 25, 1949:

> SOVIET IS ACCUSED OF UPROOTING JEWS—ANTI-COMMUNIST LEAGUE SAYS BORDER AREAS ARE CLEARED FOR POSSIBLE WAR
>
> LAKE SUCCESS, July 24.—The Soviet Union was accused today of uprooting thousands of Russian Jews from the Ukraine and White Russia in brutal and sudden deportations to clear its border zones for possible war.
>
> In a letter sent to Trygve Lie, Secretary General of the United Nations, the American Jewish League Against Communism, Inc., charged that the Moscow government had been dispatching secret police squads into the two Republics to round up the anti-totalitarian Jews, cram them into railroad

cars and ship them to forced-labor camps in Archangel and Siberia.

The charge was made by the executive director of the league, Rabbi Benjamin Schultz, who told the House Committee on Un-American Activities 2 weeks ago that there was a deliberate Communist conspiracy to inflame religious and racial minorities against this country. Rabbi Schultz said he was appealing to Mr. Lie in the name of humanity to use United Nations facilities to end the infraction of human rights.

Estimating that the total Jewish population affected by the alleged deportation program had reached 400,000 in the two Republics, Rabbi Schultz said that Premier Stalin, like the Czar in 1914, was shifting the Jewish families because he did not trust their loyalty to his tyrannical regime, and as suspected recalcitrants they must be kept safely in the interior and not left at the borders when war threatens.

NOTES AREAS AT BORDER

Specifically, on the issues of war preparations, the executive director of the League noted that "White Russia and the Ukraine are at the borders of the Soviet Union" and said that Stalin was "preparing for an international conflict."

There is a second motivation for the anti-Jewish program, Rabbi Schultz contended, and that is the desire of the Kremlin authorities to appease the anti-Semites in an area where "anti-Semitism has always been strong." With the Soviet regime "currying favor" at the expense of the Jews, Rabbi Schultz continued, the Jewish masses are for the first time feeling the effect of Moscow's "new anti-Semitic policy, heretofore confined to the intellectual classes."

According to Rabbi Schultz, Russia's secret police arrive suddenly with patrol wagons "and in a few hours Jews are prisoners on trains, bound for forced labor in the frozen wastes around Archangel or in Siberia."

"In towns that the NKVD has not yet reached," according to Rabbi Schultz' letter, "the bazaars are filled with Jews selling all their possessions to the peasants for a song in anticipation of being deported."

"This latest enormity came to light when Jews in Poland tried to maintain their regular correspondence with relatives in the Ukraine and White Russia," the league official said. "For some weeks all letters have come back marked "Vozvratit adressat vibil,' meaning 'returned to sender—addressee has left'."

The league charged also that a purge of intellectual Jews was under way, and it was specifically charged that Itzik Pfeffer, described as a leading Jewish writer, has been missing for months.

Rabbi Schultz said that he was appealing for United Nations action and for cancellation of the deportation orders. Also, he said, he is asking for the return of the Jews to their homes and for the insuring of their civil rights, when and if they are returned.

Officials of the organization were not available tonight for comment. A spokesman for the league said that the appeal was being made on moral grounds rather than legal grounds.

OTHER DEPORTATIONS REPORTED

WASHINGTON, July 24—Russia, seeking to suppress any internal dangers along her frontiers, is reported to have removed perhaps as many as a quarter million persons in mass deportations. This appeared to be one explanation today for obscure references in the Russian publication Komsomolskoya Pravda.

A Moscow dispatch by Associated Press Reporter Eddy Gilmore, discussing the general economic and political situation, referred to the article. It mentioned that the function of military suppression inside the country now had been removed but said the function of military defense against attacks from outside still remained. This suggested that the Soviet Government now was confident about its own internal areas.

Information current in Europe and now reaching official Government observers here includes reports of mass deportations of peoples of non-Russian birth or descent from the perimeter zones of the Caucasus and Baltic regions, it was learned.

These reports say that in the Caucasus, particularly along the Iranian border, Soviet security forces have removed an estimated 50,000 persons. This is a sizable number for such a sparsely inhabited region. They include peoples of Greek, Turkish, and Iranian birth or parentage, with a higher percentage of Turkish peoples involved.

To the north, deportations in the Baltic area may have reached as many as 200,000 in Lithuania, Latvia, and Estonia, it is reported.

Income-Bearing Property Ought To Pay Tax

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. MASON. Mr. Speaker, as further proof that this tax-dodging racket is becoming so common as to become a serious menace to Government Treasury receipts, I include an editorial from the Courier-Journal, of Louisville, Ky., which cites another plan by which the University of Louisville can profit through another tax-dodging scheme.

Mr. Speaker, twice on the floor of the House I have called attention to the fact that the University of Louisville, Louisville, Ky., is to benefit from the receipts of the famous race track known as Churchill Downs because the race track is to be taken over by a tax-free foundation, and a large part of the profits from the tax-free admission tickets, tax-free paddocks, and tax-free parimutuel percentages is to be turned over to the university. I have received a protest from the university concerning my statement with an explanation of the situation regarding the proposed future relationship that will exist between the university and the foundation—an explanation that did not explain. That letter of explanation was inserted in the RECORD by the gentleman from Kentucky [Mr. MORTON].

The editorial from the Courier-Journal of Tuesday, July 19, 1949, follows:

INCOME-BEARING PROPERTY OUGHT TO PAY TAXES

The University of Louisville is the object of local pride and interest, one of the city's great social assets. It is easy, therefore, to plead such a case as that which is presently being discussed. This is the idea that the university buy part of Lincoln Park, build on it and rent the property. From the operation, it is calculated, there will be enough to pay off the investment in 33 years and leave a balance, about $25,000 a year, for the university budget.

The result would be obtained by invoking the principle of tax exemption for property of educational institutions. However, tax exemption in this case would be an abuse of the principle. The Courier-Journal has long felt, and many times has expressed an opinion to this effect, that it is unfair and dangerous to exempt from taxation the income-bearing property of schools, charitable institutions, or churches.

Supporting this thought, in recent years there has been a trend of courts to look critically at historic exemptions under section 170 of the Kentucky Constitution. Three years ago, in an opinion that a church-owned property rented to a private business should be taxed, Judge Lawrence Speckman said: "The courts must stand firm against any abuse of the exemption allowed under the constitution and the laws of the Commonwealth so that the burden of carrying on the government may be borne equally by all its citizens."

What the judge seemed to say was that exemptions of the sort are unfair because they force all other property owners who do pay taxes to contribute to the tax-free church or institution.

But these are worthy causes, you may say. To be sure. However, everything else that a government supports through its tax revenue is a worthy cause, or else it has no place in the budget. City taxes on a development such as proposed at Fourth and Guthrie are calculated at $63,360 a year. This would be lost if the exemption were allowed to the university as owner. By extension of the principle, more and more valuable property might be acquired by churches, schools and eleemosynary institutions until larger and larger chunks of the public tax assets would be gone. There would be less and less public money for services.

The problem of tax exemptions is very real to Louisville. The title of much valuable downtown property rests with institutions claiming immunity—the Kenyon Building, the Greyhound Bus Station, the Steiden and Kaufman-Straus stores on Fourth Street, for example. The title holders include Union College of Barbourville, the Baptist and Presbyterian seminaries, the Free Public Library, the Home of the Innocents, the Children's Free Hospital and many others. While the court of appeals in 1946 began upsetting old concepts of exemption rights, there is still need of definitions.

The Lincoln Park proposal is the third of the sort heard in the last year in behalf of the University of Louisville. There were also suggestions, however vague, involving the street-railway system and Churchill Downs. Motives in every case have been mixed and hazy. It is greatly to be feared whether the cause of the university, its place in the public regard, has been enhanced by natural human suspicions (whether or not justified) that stockholders, brokers, or promoters had their eyes on the results; that the university could just possibly be a convenient worthy cause.

And we find it doubtful that the University of Louisville or any other institution would profit in the long run by the additional revenue from such investments. The addition might very well turn out to be fictitious. For it is obvious that public budget makers, aware of the institution's commercial revenue, would be influenced by the natural thought to cut off their appropriations.

The arrangement, then, leads to a temptation to evade responsibility all around. The budget makers would feel their responsibility lessened. The institution—a church, a school, a charity service—would find it natural to resort (and it has happened here) to the plan of long-time leases to commercial establishments. In the case of a 99-year lease, for example, who might be said actually to own either land or buildings?

Federal Taxes and Small Business

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1949

Mr. ANDERSON of California. Mr. Speaker, the following newspaper article from the Redwood City Tribune in California is a graphic example of what the present Federal tax system is doing to small-business enterprises throughout the country.

The failure of Congress to repeal the wartime excise taxes is working a definite hardship on producers and consumers alike. It is high time that the Congress took steps to remove these unjustified taxes at the earliest possible date.

The editorial from the Cincinnati Enquirer further emphasizes the existing situation and should be of interest to every Member of the House.

[From the Redwood City (Calif.) Tribune of July 21, 1949]

JAY-DEE LEATHER CO. TO HALT OPERATIONS

The Jay-Dee Leather Products Co., 803 Shasta Street, will close operations of its Redwood City plant this week, Charles Weeks, president of the plant, announced today.

Weeks said that the failure of the Government to remove the wartime excise taxes, amounting to a 20-percent tax on the company's products, was the factor that resulted in the closing of the factory.

The president said that the disastrous long-range effect of the excess-profits taxes, renegotiation of contracts, and continuing heavy taxes of all kinds had stripped the company of its operating funds.

Since the end of the war, Weeks stated, other factors beyond the control of the factory have prevented profitable operations of the company. He cited sharply increased freight rates which he claimed excluded the company from doing business in eastern markets. Weeks also said that the transportation and warehouse strikes in San Francisco and elsewhere prevented the company from continuing its operation here.

The Jay-Dee Co., which manufactured leather goods, started in operation in San Carlos in 1938.

J. D. Lynch created the business originally in 1935 as a "bedside" enterprise. Lynch had been ordered to bed by his doctors because of ill health and opened the business at his San Carlos home. The business grew and developed, and in 1940 the manufacturing company moved to Redwood City. At peak operation, Jay-Dee provided employment to 185 persons and had an annual pay roll in excess of $500,000.

During the war years the firm manufactured articles for the Navy.

The firm experienced its first production cut in 1947 and Weeks announced that the active pay roll had shrunk from 185 to 50.

The company had experienced a previous set-back in business after the refusal of meat packers to sell hides at OPA prices in August of 1946 had practically shut down operations at the plant.

Weeks said today that the directors of the corporation had taken action to close the business and wind up the affairs of the company at once.

He did not indicate whether there was any possibility that the Jay-Dee Co. would open again or what would happen to the company's Shasta Street building.

[From the Cincinnati (Ohio) Enquirer of April 28, 1949]

SOME OUT-OF-DATE TAXES

During the war, and for a time thereafter, there was justification for special taxes on so-called luxury items. Under this program some things which were not strictly classifiable as luxuries also were taxed—quite frankly, to discourage public use.

This was the case particularly with travel fares, telephones, and telegraph. These facilities already were jammed to capacity, and the function of the tax upon them was to make them as unpopular as possible, as well as to raise some additional revenue for wartime needs.

The justification for the special taxes upon such items now has disappeared completely. The National Federation of Independent Businessmen, an organization which represents the grass roots of American business, announced the results of a poll of its membership the other day, and 86 percent favored elimination of the so-called luxury taxes on such items as women's handbags, theater and sports tickets, telephones, and travel fares.

A woman's handbag is hardly a luxury (ask any woman who tries to do without one). Sports and theater tickets hardly can be classified as luxuries in peacetime, when almost every family budget makes some allowance for entertainment or recreation, however slight.

Canada has removed the wartime luxury taxes, and as a result a very incongruous situation has arisen. Travel tickets intended for use in the United States can be purchased through a Canadian ticket agent for 15 percent less than in the United States. In the case of a round-trip transcontinental air-line ticket, the tax differential amounts to $44.96.

We do not think that Congress intended for the wartime luxury taxes to remain as a perpetual burden on goods and services which certainly are not in the luxury class in peacetime.

Straw Man for 1950

EXTENSION OF REMARKS
OF
HON. JOHN C. KUNKEL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 26, 1949

Mr. KUNKEL. Mr. Speaker, the Christian Science Monitor has long enjoyed the reputation of being fair and impartial in its views and opinions on controversial current issues; consequently, when the Christian Science Monitor states its views, its analyses carry added weight. I strongly feel that their editorial on July 22, called Straw Man for 1950, should be read by everyone. It is directly in line with my own views concerning the tactics used and I also include an extract from a radio speech of my own delivered over Station WHP in Harrisburg and Station WLBR in Lebanon on July 10, 1949. This is something the general public is beginning to realize more and more with each passing day.

For their own protection, everyone should know it. Otherwise we will never secure the fair and impartial kind of labor-management law which the vast majority of the American people demand.

[From the Christian Science Monitor of July 22, 1949]

STRAW MAN FOR 1950

Washington observers are saying that there is no chance of any kind of labor legislation this year. One labor expert believes the Taft-Hartley Act will stand unchanged at least until after the 1950 elections, and that union leadership would have it so.

If these opinions be correct, here is a situation which should not go unchallenged. Purposefully maneuvering to keep the very law on the statute books that they so manifestly want repealed, because a more lenient law would be harder to attack, may be smart politics for the unions. But it is also bad politics in the eyes of those who are interested in bettering labor-management relations.

We believe most Americans care neither about a victory for industry nor a victory for labor. They care very much about better teamwork between the two, and they are interested in a legislative framework which promises to further it.

It would still be wiser, in our view, to have improvements on the Taft-Hartley Act bear the names of such Congressmen as Senators IVES, MORSE, and DOUGLAS. For one thing, the sooner labor relations becomes a nonpartisan issue the better for the country. For another, the unions have made the name TAFT into a shibboleth. Regardless of the gross injustice to Senator TAFT, it is a needless handicap to labor legislation.

Nevertheless, the Taft amendments would appear to improve the Taft-Hartley law greatly. Strangely enough, in the light of the unions' attack, these are largely improvements which would meet many of labor's most vigorous and valid objections to the 1947 law. If the amendments offer the most expedient answer for opposition to this do-nothing stratagem, we would support them.

If Taft-Hartley is not to be preserved as a straw man for labor to point to and knock down in 1950, then it is up to probusiness conservatives as well as to middle-of-the-roaders to do something about it. Energies hitherto devoted to defending every jot and tittle of the current law, and even to adding tougher syllables, might now be directed toward more promising goals.

TAFT-HARTLEY LAW TACTICS

(Radio speech by Hon. JOHN C. KUNKEL, Member of Congress, of Pennsylvania, over Station WHP, July 10, 1949)

The Senate has now passed a labor-management relations bill revising the Taft-Hartley law. In substance, it is much like the Wood bill which was recommitted several months ago in the House. It knocks out those provisions which experience has shown were unworkable and also those which were unfair to labor. No one ever contended that the Taft-Hartley law was the final answer to the labor-management problem, but I believe the great majority of the American people find that it was a necessary step in the right direction—laying a foundation upon which an intelligent policy to secure the maximum of industrial peace could be built. There are 28 changes in the new bill. These changes are based on experience and recognize all the just complaints of labor against the Taft-Hartley bill. They are all in line with the Republican pledges to correct any errors in that law while preserving the good features of it. It is the kind of a law the American people want because what the great majority in this country do want is a law fair to management, fair to labor, and which protects the interest of the general public. It preserves the injunction in the form used in the Taft-Hartley law, only by petition of the Attorney General and only if the strike or threatened strike would interfere greatly

with the national welfare. Plant seizure is also authorized as another means of preventing such strikes.

No one knows what will now happen in the House. President Truman still insists on complete repeal of the Taft-Hartley law. The Wood bill, which the administration succeeded in having recommitted by a three-vote margin, was substantially the same as the new Senate bill. President Truman considered it a great victory to have this law, which cured nearly all of the sound objections of labor to the Taft-Hartley law, recommitted to the House Committee on Labor. I disagree thoroughly with Mr. Truman about this. There is a strong feeling on Capitol Hill that the President wants to keep the Taft-Hartley law on the books intact, particularly to keep its bad features on the statute books, because he and his political advisers feel that an unrevised act is worth more politically than a revised one. In other words, he wants to keep all the objectionable features of the Taft-Hartley law in operation because he expects in that way to increase the opposition to the Taft-Hartley law. Then he will try to capitalize on the opposition to the Taft-Hartley law in the 1950 and 1952 elections. I don't believe that he will be able to put this one over. The American people realize that the Republicans have made a sincere effort to work out this law to be fair to everyone—to labor, to management, and above all to the public. If the President insists on using his influence to choke off the efforts to write a better and more sound labor-management relations law, workers—nonunion and union—and the public will be aware of the tactics used and the reason for them.

Bob Taft, a Great Statesman

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. MASON. Mr. Speaker, who in the Congress today might be considered the "greatest Roman of them all"? Senator ROBERT A. TAFT. His leadership in the Eightieth Congress and his masterly handling of the attempt to repeal the Taft-Hartley Act in the Eighty-first Congress have placed him head and shoulders above anyone else.

BOB TAFT may have neither mass appeal nor political color, but he does have what it takes, brains, guts, and integrity—qualities altogether too scarce today in legislative halls. Taft is not a dodger; he meets issues head on. In the Eightieth Congress the labor issue was a red-hot one. He accepted the chairmanship of the Senate Labor Committee and assumed the responsibility of drafting legislation to straighten out the labor troubles that were threatening to strangle our national economy. This brought upon him all the abuse and the dead cats that the labor bosses could throw at him, but he kept right on. Almost single-handed he won a clear-cut showdown fight to retain the main features of the Taft-Hartley Act.

Another red-hot issue that BOB TAFT refused to dodge is the proposed Atlantic Pact and the obligation under the pact to rearm Europe. TAFT met that proposal head-on and pointed out just what it means. In this matter he took issue with both Senator VANDENBERG and Senator DULLES.

Mr. Speaker, labor bosses, New Dealers, internationalists, and others have already made plans to defeat BOB TAFT for reelection to the United States Senate in 1950. I predict that more money and effort will be expended in Ohio against TAFT than will be expended against all other senatorial and congressional candidates combined. Why? Because the labor bosses would rather defeat TAFT than all the other Members of Congress who voted to override President Truman's veto of the Taft-Hartley bill.

BOB TAFT is the foremost figure in American public life today. If he comes through his senatorial battle in 1950, nothing can stop him from becoming the Republican presidential candidate in 1952. That means Bob and Martha would occupy the rebuilt White House.

Excise Taxes Can and Should Be Cut

EXTENSION OF REMARKS

OF

HON. WILLIAM L. PFEIFFER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under permission to extend my remarks, I include the following editorial which appeared on July 13, 1949, in the Union Sun and Journal of Lockport, N. Y.:

EXCISE TAXES CAN AND SHOULD BE CUT

The deficit of nearly $2,000,000,000 in the Federal budget operations in the year ending June 30 may seem to give some color to the administration argument that taxes cannot be cut. However, if the $2,500,000,000 or $3,000,000,000 of savings the Hoover Commission reports say are possible should be put into effect, taxes could be cut.

A new demand came along with the budget deficit announcement that the excise levies at least be cut, if not repealed. These are those high sales taxes which you pay on railroad tickets, telephone service, luggage, cosmetics, baby powders, and so on. They definitely add to the price, by as much as 25 percent in some instances. They are an unfair form of levy, particularly upon parents of babies, and business concerns which have much wire and trave' operations connected with them.

We don't mind definite luxury taxes, such as on alcoholic drinks, tobacco, and other nonessentials. But when they hit hard at your car, your gasoline bill, and other necessities, they form a drag on living on accustomed standards.

In some instances, these excise taxes could be cut in half and the Government would be no worse off. The additional sales possible under a 10-percent tax would bring in revenue to make up what is now taken with a 20-percent levy.

In other cases, there might be revenue losses. Highest estimates of possible decrease if these levies were halved run from $550,000,000 to $750,000,000 in taxes. But that's not an insuperable loss if the Government would put some of the Hoover economies into use.

The fault with the excise tax is that it is politically easier to place. The buyer often confuses tax with price—as you do if you say gasoline costs 25 cents a gallon—and blames the seller. The latter, of course, is helpless. At his own expense he has to collect a quarter or more or less of his price for Uncle Sam. This artificial price-booster system should be beaten down.

A Word to the Wise Should Be Sufficient—Are We Wise Enough To Learn Anything From the Failure of Socialist Britain?

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. McDONOUGH. Mr. Speaker, the socialist experiment in Great Britain has given us an opportunity to examine its effects upon the freedom of the individual and upon individual initiative and enterprise. And the reports that we are receiving on this experiment bear grave warning of what we must expect if we continue to follow the British into socialism.

The following article is a reprint from the Sunday Post, a Glasgow, Scotland, newspaper, and it contains a preview of what we can expect in the United States unless we wake up to the rapid encroachment of socialism which is going on and is being promoted in the United States every day:

THEY DON'T LIKE IT OVER THERE

One of our subscribers in Socialist Britain sends us this clipping from the Sunday Post—a Glasgow, Scotland, newspaper:

"The Midland Electricity Board is to operate a sales and repairs service for radio and television.

"It will do this from more than 90 centers, covering 966,000 customers.

"This is the first time the Government has come into the open in their policy of competing with the small-shop keeper.

"But the policy has been going on insidiously during the last few years. More and more different goods and services are coming within its scope.

"Did you know, for instance, that the Coal Board retails coal as well as producing it? The board has 840 retail businesses.

"This means they are supplying direct to industrial and domestic consumers 35 percent of our home consumption of coal.

"The board also runs 83 brick works. These produce 10 percent of the output of bricks in this country. These are sold direct to builders' merchants.

"The state already owns 211 pubs; 178 are in the Carlisle area, 15 in Gretna district, and 18 in the Cromarty Firth area.

"With the coming of state towns, the Government has power to set up more pubs. Forty new towns with an average population of 60,000 are planned. This means roughly 1,600 new pubs owned by the state.

"Moreover, Mr. Ede has made it clear the state has powers, which it will not hesitate to use, to run its own breweries.

"There are 678 British restaurants. The Ministry of Food can refuse licenses to small men who wish to start restaurants. At the same time, they can grant licenses for state-run restaurants.

"The state also has power to provide whatever entertainment it thinks fit in its restaurants. So it isn't far-fetched to envisage the government even going into the dance band business.

"If the Steel bill goes through, the state can take over 107 firms and 250 subsidiaries dealing in such varied products as umbrellas, hairpins, tennis rackets, bedstead parts, fertilizers, and insecticides.

"A growing practice of late has been to steer new tenants in housing schemes into buying furniture from cooperative stores and big combines.

"On taking over a new house, some tenants have actually been handed a chit telling them where they can get furniture on favorable terms. You can be sure it's not the small man who benefits from this.

"Recently a new housing estate on the outskirts of London was found to be so badly sited that tenants' furniture was ruined by dampness. The local authority admitted responsibility. It offered to replace the furniture, but tenants were allowed to get replacements at a big store nominated by the authorities.

"Under the new housing bill, published last week, powers are sought for local authorities to sell furniture, or supply it on hire purchase, to tenants of housing schemes.

"The running of laundries and restaurants by local authorities at these schemes is also provided for.

"If the small man could compete on equal terms with the State, it wouldn't be quite so bad. But in these days of short supplies and controls, the odds are heavily against him getting a square deal.

"For example, in selling electrical equipment, from lamps to cookers, the electricity board gives customers 3 months' credit. How many small shopkeepers can compete with that?

"But the most significant feature of municipal trading is that there's no need for the authorities to produce a balance sheet. If they trade at a loss, they do so at the ratepayers' expense.

"The ratepayer doesn't know how his money is being squandered.

"There's nothing to stop local authorities subsidizing their trading from the rates. It's suspected this is happening in some cases.

"What's the retail trade's answer to all this?

"They defy the Government or town councils to compete with them on equal terms.

"As it is, more and more small shopkeepers are being forced out of business. Since the war 3,000 have gone bankrupt or given up because they know they don't stand a fair chance against State or municipal trading."

Harry Truman, the CIO, and millions of bemused voters in the United States: Please note.

The Problem of Fats and Oils

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by Carl H. Wilken before the Committee on Agriculture today in support of legislation which would establish an average parity price for fats and oils and aid in maintaining such parity price to producers. Mr. Wilken's statement is most informative and should be brought to the attention of all Members of Congress and the country.

STATEMENT OF CARL H. WILKIN, ECONOMIC ANALYST, RAW MATERIALS NATIONAL COUNCIL, SIOUX CITY, IOWA, BEFORE THE HOUSE COMMITTEE ON AGRICULTURE

Mr. Chairman and members of the committee, I am appearing in behalf of the Raw Materials National Council of Sioux City, Iowa, and the Tung Council of America. The first organization is a research organization and the second is an organization of tung growers and producers of tung oil, a strategic material both in peace and war.

First of all, I would like to point out that the Granger bill, providing for an equalization fee on all principal fats and oils, is similar in purpose and wording to the Colmer bill. The Colmer bill specifically names the fats and oils which are to be considered as principal fats and oils.

Knowing as I do the consumer complex within the Department of Agriculture, I feel that it is necessary to specifically name the fats and oils which are to be affected by the bill in order that an arbitrary ruling by some official will not rule out tung oil, corn oil, and some of the other important oils because of their relative volume.

In my opinion, the type of legislation incorporated in the Granger bill is long overdue and the most important legislation to come before the session of Congress. In fact, I don't give it second place to the funds provided for European relief, the European pact, or funds for our national defense.

Why do I consider this legislation so important? On May 18 I testified before the Pace committee on farm legislation and pointed out that each $1 of gross farm production creates $7 of national income. Many of the members of this committee will recall that I have continuously pointed out this simple fact for the past 10 years.

The experts in the various departments of Government have never refuted this factual ratio but on the other hand they have failed to use it in pointing out to the public that we cannot maintain full employment in the United States and create a national income which will permit our economy to operate solvently unless the farmer is paid an average of 100 percent parity at the market place by the rest of society. Further that in supporting farm prices at parity we automatically support the wage income and income of every other segment of our economy.

In spite of the reluctance of the so-called experts to recognize this seven times turn of gross farm income, it is gradually receiving recognition. I was rather interested on June 13 this year to hear Governor Turner of Oklahoma use it in a short talk to an audience in Des Moines, Iowa. A few minutes later I heard Vice President BARKLEY use it in his discussion.

In 1947 I prepared our research material in book form and sent a copy to all Members of Congress, under the title "Prosperity Unlimited—The American Way." I was therefore much interested when I heard the Honorable Vice President use the almost exact tabulation which I set out in the book to point out to his audience that gross farm income and factory pay rolls rise and fall together.

Knowing these facts, I also know that unless we can maintain an average of 100 percent of parity for agricultural production, that the United States cannot operate at a solvent level, that we cannot fulfill our promises to the rest of the world and we will ultimately land in a depression which will be of more aid to communism than all the armies that they may be able to put in the field.

PRICE SUPPORTS

Congress for 20 years has been actively considering farm legislation that will sustain the income. Most of it has been of a temporary nature, thus adding to the continuous confusion within our own economy and that of the entire world.

At the present time conferences are being held in London and in our own capital because we suddenly find ourselves and the rest of the world in a state of depression. In our own country, instead of having full employment as we did in 1948 and a surplus in the Treasury of approximately $8,000,000,000, we now find ourselves with approximately 10,000,000 workers either unemployed or working on a part-time basis and a deficit in the Treasury as of July 1 of approximately $2,000,000,000.

What caused this change? The seven times turn of gross farm income. In the year 1948 35 leading commodities averaged approximately 186 percent of the 1926 price level (Associated Press commodity index). During the month of September last year the average was 186. At the present time it is approximately 151. This change represents a drop of approximately 19 percent.

In 1948 our national income was approximately $225,000,000,000. Assuming that we maintain the same physical production, the 19-percent drop in our price structure represents a potential drop of approximately $42,000,000,000, if prices of these commodities stay at their present level and finished-goods prices adjust themselves downward to conform to the base price of our new wealth production.

The depression has been somewhat confused and alleviated by wage payments to those who are unemployed and other Federal spending from current tax receipts. The change from an $8,000,000,000 surplus to a $2,000,000,000 deficit in 12 months reveals this fact.

WHAT CAUSED THE PRICE DROP?

The drop in commodity prices was precipitated by the administrators of the fats and oils control program voted by Congress. Senator MAYBANK in a hearing before the Senate Banking and Currency Committee said they handled the program miserably and Senator GILLETTE in a hearing on fats and oils before a subcommittee in the Senate of which he is chairman, said they handled it ineptly.

Anyway as a result of their failure to make proper allocations for exports of fats and oils and permitted unlimited imports, we had a net import of 840,000,000 pounds of fats and oils in 1947 and 1948. This destroyed the price level for all our fats and oils—the price of lard dropping from 28 cents a pound to approximately 11 cents and all other fats and oils in proportion.

In the case of tung oil which had a price ceiling under the OPA of 38–28 cents per pound the current price is 19 cents. Our total production of fats and oils is approximately 10,000,000,000 pounds. The price drop was approximately 15 cents per pound or a total drop of $1,500,000,000. Applying the 7 times turn of gross farm income into national income this represented a potential drop of $10,500,000,000 of national income.

At various times I have made the statement that if I had the power to control the prices of fats and oils, I could control the income of the world. Fats and oils are nature's concentrated food product with each pound having approximately 4,080 calories as compared to approximately 1,680 in a pound of dry-wheat flour. Fats and oils are the end result of much of our agricultural economy.

The drop in the price of fats and oils pulled down the price of hogs because of lard production. It pulled down the price of corn because of the drop in the price of corn oil a byproduct of the corn-refining industry. It pulled down the income of our dairy industry through lower butter prices. It curtailed the income of our cotton producers through lower prices for cottonseed oil. In fact it started the endless chain of lower

prices and loss of national income which has brought us face to face with a serious situation in our own economy and that of the entire world.

Lower prices for the 35 leading commodities many of which are produced in the British Empire, particularly in the areas dominated by pound sterling, has destroyed the income and in turn the market for British goods and she faces bankruptcy.

WHAT CAN WE DO ABOUT IT?

First, the Congress of the United States ought to make the frank declaration to our own people and the rest of the world that we must maintain our farm price structure with at least minimum price floors at 90 percent of parity and protect them with any and every means at our disposal.

Second, that we cannot support our farm prices at parity without an import or equalization fee at the parity level for all commodities.

Third, from that as a foundation, we stand ready to help the rest of the world reorganize its foreign exchange and price level in line with the value of the American dollar and the American price level which in terms of gold should be 69 percent above the 1925–29 price level in order that we have a parity between the price of gold and commodities, the production of which through price determine our income or ability to consume.

In the past 6 months there has been a slow realization among Members of Congress that the reciprocal trade agreement policy of tariff reduction is jeopardizing our price structure.

For example, on June 30, the Senate extended the controls over imports of fats and oils because we might find it necessary to keep out fats and oils in order to protect our price structure.

Senator DOUGLAS, of Illinois, on page 8731 of the CONGRESSIONAL RECORD of June 30, pointed out that without these controls, the imports of linseed oil would completely undermine our price supports for flaxseed and force us to support the price of all the flaxseed in the world. Senator PEPPER on the same page asked whether the controls could be used to protect the tung-oil industry which is facing bankruptcy because of the importations from China.

I might add that in the next 12 months unless we have legislation of the type incorporated in the Granger bill, our oil wells in Texas, Oklahoma, and other States will be operating on a quota basis while imports from the Far East supply our market. Iron ore will be coming in from Africa and Brazil to supply our blast furnaces in the Pittsburgh area and also in the steel production area in Alabama. I could give you many other illustrations. This displacement will increase our unemployment and further reduce our national income.

In the case of fats and oils, they will continue to flow toward the United States while the rest of the world starves for the lack of fats and oils. In this connection I want to point out that the 10,000,000,000 pounds of fats and oils produced in the United States represents approximately 25 percent of the world's production. We have 6 percent of the world's population and are consuming 25 percent of the world's supply. I challenge any economist to bring forth an economic law that indicates that we should increase our consumption above 25 percent at the expense of the rest of the world and the destruction of our own income and economic welfare.

In my own opinion the so-called reciprocal trade policy of tariff reduction is, and has been the greatest economic misconception in the history of the world. It has made liars and cheats out of every nation that has signed them, including our own.

Hundreds of direct violations of the entire program have been forced upon other nations because of realities rather than the theories which foisted the program upon them. Of recent date are the bilateral agreements of England with Argentina and Russia.

I don't blame England for taking the course she has been forced to take. I blame the theorists and the manipulators of the program for forcing England and other nations into a position of having to accept the program to obtain our aid, with the full knowledge in my opinion on their part that they would be forced to evade their agreement at a later date.

In the same way if we are to operate our economy on a sound basis we are going to be forced to evade the provisions of the treaties which we forced others to accept. If we have the courage to do so we can simplify our whole farm price-support program. With an equalization fee or a tariff at the parity level we can indirectly support the price of 85 percent of American production without any further legislation and what is more important on a permanent basis.

For example we produce about 20 percent of our needs of tung oil. This type of legislation would assure them an American price without question. Then we have wool, legislation of this type would support the price of wool. It would support the price of all our fats and oils, and in turn our feed grains, and livestock prices. It would support the price of petroleum, copper, lead, zinc, manganese, etc.

It would give us the greatest possible amount of foreign trade by protecting the national income and purchasing power for foreign goods.

In my testimony before this committee on May 18, I incorporated as a part of my testimony a tabulation of imports for the past 20 years. The average import during that period was approximately 3.1 percent of our national income.

Therein lies the fallacy of the reciprocal-trade policy as now administered. The United States requires approximately 3 percent of imports to supplement its economy while the European nations approximate a need of 50 percent. To attempt to level off this fundamental difference in natural resources and needs by free trade is the height of economic stupidity. We are merely giving aid and comfort to communism.

In fact Karl Marx in a speech in Brussels in outlining the communistic doctrine said that he was for free trade "because it was destructive and would hasten the day of the revolution."

Our present economic situation is proof of the accuracy of his conclusion. If we persist in trying to support the price structure of the entire world without any protection against the chaotic condition of foreign exchange and political ideologies, we will eventually find ourselves in a state of bankruptcy and Karl Marx's conclusion will be a proved fact. With a bankrupt United States as the result of a low price level forced upon us by free trade, the world will be in a state of economic confusion and chaos, the ideal soil upon which communism thrives.

In conclusion, I would like to point out that an import fee at the parity level is not a barrier to trade but merely an adjustment between price differentials resulting from currency values and wage levels in other nations. It is merely an extenison of the fair trade practice act in our own economy which prevents the deliberate destruction of competitors by large combinations of capital that dominate the markets within the United States. The bill if passed would permit the maximum imports of fats and oils which we may require to supplement our own needs. It merely protects our price level against the importations of fats and oils that we do not require and that the rest of the world so badly needs.

Without such protection the price of fats and oils will destroy our entire economy. We cannot create the national income required for full employment and prosperity with fats and oils selling at 1939 price levels.

The Granger bill recognizes the real fundamentals of the tariff problem as set forth in the Constitution of the United States. I have been unable to find anyone, even among the theorists who is willing to do away with all tariff protection.

Therefore tariffs at the parity level on our agricultural products are merely a matter of equity—equal protection for all groups at a level that will protect our national income and prosperity.

Tribute to Former Congressman Claudius U. Stone

EXTENSION OF REMARKS

OF

HON. HAROLD H. VELDE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. VELDE. Mr. Speaker, I should like at this time to pay tribute to an outstanding American citizen, a native son of Illinois, former Congressman, lawyer, educator, and outspoken newspaperman, Claudius Ulysses Stone.

Claude Stone was born on May 11, 1879, and was reared in Greenview, Ill., a small town in Menard County. After completing his education, he taught in rural village grade and high schools, and spent a short time as a college instructor. During the Spanish-American War he served as a private and corporal in Company K, Fourth Illinois Volunteer Infantry.

At the early age of 23, he was elected to his first term as county superintendent of schools for Peoria County. During his second term, he was elected president of the Illinois Association of County Superintendent of Schools. In 1911, he was elected to the Sixty-second Congress as a Democrat from the Sixteenth District of Illinois. Subsequently he was reelected to the Sixty-third and Sixty-fourth Congresses and in 1924 was a delegate to the Democratic National Convention which nominated Davis and Bryan in New York City.

It may seem strange that I, as a Republican, should extol the life and works of one who was once so ardent a member of and spokesman for the Democratic Party—but I mention it for a purpose.

The brilliance of Claude Stone's career, his shrewdness, clear thinking, and sound policies could not be reconciled with the New Deal philosophy of the early thirties. He recognized the fallacies of New Dealism and foresaw it as an incurable plague of the Democratic Party. He knew there could be no return to the principles upon which the Democratic Party stood, up to the advent of Roosevelt New Dealism; so he switched his allegiance and political affiliation to the Republican Party.

As editor and publisher of the Peoria Star, Claude Stone has worked diligently and untiringly to further the cause of

good government through Republican administration. He has been an outspoken foe of corrupt machine politics. His service as postmaster of Peoria from 1917 to 1920 and master in chancery of the circuit court of Peoria from 1928 to 1945 will long be remembered by the grateful citizens of central Illinois.

His contribution to education, devotion to duty, record of public service, courageous newspaper work, and unending string of personal accomplishments is seldom, if ever excelled. There are many men who reach the age of threescore and ten, but few there are whose lives have been as fruitful as that of Claudius Ulysses Stone.

Rules of Procedure for Congressional Committees

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 26 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, a subcommittee of which I am chairman of the Senate Committee on Rules and Administration has recently been conducting hearings on Senate Concurrent Resolution 2 introduced by the distinguished majority leader, Senator LUCAS. The hearings, I believe, have been most valuable in demonstrating the need for a simple code of ethics for congressional committees so as to protect individuals from unfair and defamatory treatment, instances of which have occurred not often, it is true, but too often in that they should not occur at all.

Senate Concurrent Resolution 2 is not intended to prevent committees from exercising their utmost zeal in uncovering abuses and scandals, and in getting the facts. Its intent is to provide persons who believe their reputations have been defamed by actions of committees or by witnesses appearing before committees an opportunity, under our rules, for a fair defense.

Some decidedly relevant questions have been raised about specific provisions or language of the resolution but on the whole the idea of a fair opportunity for self-defense by individuals against arbitrary committee conduct is generally endorsed. We intend to continue our study into this resolution and hearings will be resumed shortly.

Meanwhile, I think the comments of two outstanding Pennsylvania newspapers, the Philadelphia Bulletin and the Pittsburgh Post-Gazette, on this matter, are of sufficient interest to warrant their insertion in the CONGRESSIONAL RECORD and I ask unanimous consent that they be inserted.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Philadelphia (Pa.) Evening Bulletin of July 22, 1949]

A SHOCKING STORY

The story Dr. Edward U. Condon, Director of the Bureau of Standards, told Senator MYERS' subcommittee about his treatment at the hands of the House Un-American Activities Committee is nothing short of shocking.

The subcommittee is holding hearings on the Lucas resolution which would establish definite procedure for all congressional investigating committees, to protect the public from unfair and unwarranted attacks.

Dr. Condon was branded publicly as one of the weakest links in our atomic security, and then was hounded for 2 years by periodic committee "leaks" which kept the scientist under a cloud. But he never was called before the Un-American Committee, never was questioned and never given a chance to speak for himself. To this day the committee has not even said what the shooting was all about.

It is a blot on the country that this could happen under the dome of the Capitol; and Senator MYERS' subcommittee can hardly find better proof of the need for passing the Lucas resolution before Congress adjourns. It is just as urgent as some of the other matters crowding the calendar.

[From the Pittsburgh (Pa.) Post-Gazette]

CONGRESSIONAL REFORM

A reform of congressional investigative procedures, such as is now being undertaken by a Senate committee, has long been overdue. But the problem is by no means easy. For what is involved here is not just one important right—that of the individual to be free of irresponsible smearing—but two.

No one will deny that a grave danger to the liberties of private citizens exists as long as lawmakers or congressional witnesses may hurl accusations without regard for judicial fair play. At the same time, no one who has studied the history of congressional investigations can deny that the right of free inquiry by the Legislature is essential to the proper conduct of our form of government. And, to be truly effective, that inquiry cannot always be circumscribed by the same code which governs the procedure of a court.

A good start toward reconciling Congress' right of inquiry with the citizen's right of just defense has been made in a resolution sponsored by SCOTT W. LUCAS, the Senate majority leader. In general, Senator LUCAS' proposal would permit any person who believes he has been defamed by testimony before Congress to file a sworn statement in rebuttal to be entered into the record of the hearing. It would give congressional witnesses the right to be accompanied by counsel, and would allow an accused person to testify in his own behalf. These, we believe, are sensible reforms.

A further provision of the proposal, however, is more controversial. Under this, the accused could have the committee call four witnesses in his behalf and cross-examine accusing witnesses for a period up to 1 hour each. Some observers, notably the Washington Post, point out that this procedure could obstruct a congressional committee's work—that, indeed, it might be used for the very purpose of obstructing and wasting time by, for example, Communists.

Though the Post-Gazette does not concur in this particular criticism, we do think it emphasizes a sound principle. Congressional probes have accomplished great good in our history, even though certain lawmakers participating in them have abused their prerogatives. It is important that when taking steps to curb some of the more flagrant of those abuses, Congress does not unnecessarily diminish the prerogatives.

Political Parade

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles by George Rothwell Brown, from the Washington Times-Herald:

POLITICAL PARADE

(By George Rothwell Brown)

The $24,000,000,000 gold hoard at Fort Knox—which British political leaders of both parties are hoping to share—has been accumulated as the result of some of the most fantastic maneuvers in the whole history of money.

The return of some billions of it to Great Britain, to prevent the downfall of the Socialist-Labor government by replenishing its fast-dwindling supply of dollars, would be no more cockeyed than was the manner of its acquisition.

For this scheme to give away the gold bought by Uncle Sam on the world market at a fabulous premium was Roosevelt New Deal in its origin.

To this fact the British statesmen who will attend the three-power economic conference in Washington in September will be able to point to bolster the claim which it is now apparent they are going to make.

On February 20, 1940, Representative AUGUST H. ANDRESEN, of Minnesota, who had been appointed by the House Republican leadership to follow every step in Roosevelt's devaluation policy, told the House of Representatives that the New Deal proposed to "get rid" of "this King Midas hoard" in two ways. He said:

"In the first place Mr. Morgenthau and Mr. Hull suggest that we lower our duties on farm and manufactured products and that we permit the foreigners to produce more competitive manufactured and farm products for shipment into the United States, and that these imports shall be in excess of our exports. Then we are to pay the difference back to the foreigners in gold.

"That is part of this reciprocal trade program; and so they are lowering the duties and want this law continued for additional reductions."

This is precisely what the Truman administration is undertaking to do today, precisely the reason why it is negotiating lower tariff schedules at Annecy, France, and why the President is demanding Senate action to restore the expired trade-agreements law.

"But we have a much more clever suggestion," continued Mr. ANDRESEN, "coming from Mr. Adolph Berle, Jr., who is the Assistant Secretary of State. On January 3, in a speech made at New Haven, I understand he suggested that we give this gold back to the people who sold it to us and let them sell it back to us again at $35 an ounce. That was his proposal. It just seems to be that we are continuing to be the prize Santa Claus of the world.

"You will hear more of this suggestion as time goes on."

Well, we are hearing it now.

Mr. ANDRESEN then showed that up to January 1, 1940, the United States Treasury had paid to Great Britain for gold at $35 an ounce, which Roosevelt had increased from $20.67 per ounce, or a premium of $14.33 an ounce, or 69 percent, the sum of $4,916,352,000.

This represented an outright gift by the United States Treasury, to the foreign gold dealers of the United Kingdom, of $1,966,540,000.

As the result of Roosevelt's gold purchases from Japan we made that country a clean gift through the year 1939 of $232,325,000, which she invested in war materials.

We got it all back--at Pearl Harbor.

Our gold policy helped to finance Hitler.

We helped to finance Russian communism—which we are now seeking to checkmate at a cost of many billions of our wealth—by paying $35 an ounce for Russian gold produced by slave labor at from $7 to $10 an ounce.

Now as the result of Roosevelt's act of political treachery in taking the United States off the gold standard, and making it a penitentiary offense for any American to refuse to surrender his gold to the Government at $20.67 an ounce, we have $24,000,000,000 of gold at Fort Knox, toward which all the itching palms of Europe are now being turned.

The way to save the American economy is to undo Roosevelt's crime of 1934, and return the United States once more to the honest gold standard.

For 23 weeks the DAN REED bill to do just that has been pigeonholed in ways and means, while that House committee has wrestled fruitlessly with a bill to extend Roosevelt-Truman social security farther into the welfare state.

The Republican Party today hasn't even got brains enough to make the gold standard question a winning paramount issue of the campaigns of 1950 and 1952.

POLITICAL PARADE

(By George R. Brown)

It may be merely a coincidence that when, come next September, the heads of the British Socialist Labor Government make formal application in Washington for some billions of the $24,000,000,000 gold stock at Fort Knox, American economists at Now York will be proposing the one sensible thing to do with that inert hoard—its use toward a return to international monetary stabilization.

If a coincidence, it is a most timely one.

The New York conference, called for September 8, has been arranged by the Economists' National Committee on Monetary Policy.

Dr. Walter E. Spahr, executive vice president of the committee, and a leading advocate of a return to the historic gold standard and hard-money policy of the United States, has announced a program covering the whole field of gold-standard philosophy, including the facilitation of international trade, the stimulation of private investments abroad, and a proposal that immediate steps should be taken in the direction of international monetary stabilization.

An interesting debate in the British Commons has just revealed how one of Franklin D. Roosevelt's amateurish offhand remarks, demanding the unconditional surrender of Germany, resulted in a large part of the mess with which we are grappling in Europe today, 4 years after the defeat of Hitler.

It prolonged the war. It stiffened German determination to a bitter-end struggle. It cost thousands of precious lives that might have been spared.

So also did Roosevelt's amateurish dabbling in economics and his political dishonesty in taking the United States off the gold standard prolong the depression, and thoroughly dislocate the American economy for 16 years.

These twin errors by an underestimated politician and an overestimated statesman, have cost American taxpayers billions of dollars, and will cost them billions more.

Mr. J. M. Keynes started the explosive political year 1932 off with a prophecy that in that year many countries would follow Britain off the gold standard.

During the fateful Presidential campaign the suspicion grew that the Democratic Party then controlling fiscal policies in Congress would force the United States off the gold standard.

President Hoover made the charge, and was contradicted on October 8, in the closing days of the campaign by Senator Carter Glass, spokesman for the New Deal, then casting its fateful shadow before.

In July the World Bank had declared that the gold standard was the best and it urged countries which had abandoned it to return to it. This was endorsed by the French bankers.

British economists demanded return to the gold standard as a means to end the depression.

Earlier, in January, amid increasing rumors of a retreat from gold, a Guaranty Trust Co. survey reported on the solidity of the gold standard.

There was persistent propaganda in favor of abandonment of the gold standard by the United States, which President Hoover resisted.

Early in 1934 at the Capitol, Senators Glass, McAdoo, and Gore led in opposition to Roosevelt's taking over of gold held by the Federal Reserve banks.

The British financial juggler, Keynes, rallied to the support of Roosevelt's dishonest gold policy.

And on February 1 F. D. R. issued a proclamation revaluing the dollar at 59.06 cents and raising the price of gold to $35 an ounce. At the same time he took title to the Federal Reserve gold.

Every advocate of continuing economic demoralization and inflation in this country will resist a return to the gold standard.

It is to be hoped that the proposed New York conference will convince the people that only by a return to sound money and the abandonment of the printing-press dollar can full employment and prosperity be restored.

Maybe it is too much to hope that this conference can open the eyes of the Republican Party to an honest American political issue.

Near East Survey Commission

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. MULTER. Mr. Speaker, the following two articles which appeared in the New York Times of July 25, 1949, show the necessity for immediate adoption of the joint resolution which I introduced on May 18, 1949, House Joint Resolution 257, calling for the appointment of a Near East Survey Commission. The one article, entitled "Syrian-Turkish Plans to Strengthen Middle East Said to Ask United States Aid," written by Albion Ross, and the second, entitled "Israeli Outlines Negeb Farm Plans," written by George Barrett, are both extremely interesting.

SYRIAN-TURKISH PLANS TO STRENGTHEN MIDDLE EAST SAID TO ASK UNITED STATES AID

(By Albion Ross)

DAMASCUS, SYRIA, July 24.—The capacity of the Middle East to resist pressure from the north may be increased by Syrian and Turkish plans to develop the great curve along the Mediterranean coast, thus joining Asia Minor to the Levant coast as a gateway to the Middle East, according to sources here.

This development accounts for the argument in certain quarters here that Syria is vitally related to the issues involved in continued aid to Turkey and Iran now before the United States Senate. Washington's suggestions for dealing with the Palestine refugee problem are related to this situation, it is stated, as are the efforts of Turkey and the United States to bring about a Palestine peace settlement.

The suggestion has been made recently in some quarters that the situation calls eventually for some form of concrete United States aid to Syria.

The projected plans, when completed, would add to the map of the threatened Middle East an area of modern railway lines, roads, and a developed economy about 200 miles wide from a new trade and traffic center on the Mediterranean coast to the northern Iraqi oil basin and linked to the key pressure area of southeastern Turkey and northwestern Iran at the gates of Mesopotamia.

The Syrian calendar of priorities, as explained here today, is intended to avoid any grandiose effort beyond the capacity of the country. At the top of the list is the draining of the extensive marsh area of El Ghab, in the Orontes Valley just behind Latakia, and the regulation of the river for extensive irrigation. This gives more than 20,000 hectares (a hectare is 2.471 acres) of land by drainage and an additional 40,000 hectares by irrigation.

The area is in the center of the most thickly populated region of Syria, which is in the northwestern corner of the country, the highly overpopulated Alouites Mountain district lies to the west, between the valley and Latakia. Ministry of Public Works estimates indicate that the entire development would cost about £45,000,000, Syrian, the equivalent of about $15,000,000.

Plans for the new port of Latakia call for a first stage in which the port would be equipped to handle about the same tonnage as Beirut, now the chief port on the Levant coast. The progressive development of the broad area stretching to northern Iraq would call for expansion of the port.

The next step would be a railroad to Aleppo, the principal commercial and industrial city of Syria and strategic crossroads of the entire region.

From Aleppo a new trans-Syrian railway, according to plans of the Ministry of Public Works, will go down the Euphrates Valley, cut over the vicinity of Deir ez-Zor to the valley of the big Euphrates tributary, the Khabur River, on through the now sparsely populated Jezira grain country to link with the historic Berlin-Baghdad railway near Iraq. This line, running along the Turkish-Syrian frontier, is hopelessly inadequate. It dips down to Aleppo in a great detour before it reaches the Mediterranean through a line to Alexandretta.

The Turkish Government plan calls for rerouting the line north of the Syrian-Turkish frontier to make a direct connection into Alexandretta, considered with its immense bay to be the best natural harbor in the eastern Mediterranean.

Two major irrigation projects in the Euphrates and Khabur Valleys would bridge the gap between Aleppo and Latakia, the Syrian gateway region, and the wide rain-watered plains of Jezira, on the frontiers of northern Iraq.

Hydroelectric development of the Euphrates will provide cheap power for both irrigation pumping and Aleppo industry. The existing asphalt highway to Deir ez-Zor will be extended eastward with other roads to link with the isolated highway network just beginning at Jezira and linked in turn with roads of northern Iraq. Such economic de-

velopment of the entire region, it is believed, justify an additional linking of the railway line and paved highway down the Euphrates from Deir ez-Zor to Baghdad.

ISRAELI OUTLINES NEGEB FARM PLANS—RECLAMATION OF DESERT AREA IS SUBJECT OF REPORT PREPARED FOR UN RESOURCES PARLEY

(By George Barrett)

LAKE SUCCESS, July 24.—Plans for harnessing water resources on a vast scale to transform much of the parched wastes of Israel's Negeb Desert into a livable, crop-bearing region are outlined in detail in a report submitted here for study during the first United Nations Scientific Conference on the Conservation and Utilization of Resources.

Writing for the conference, which is opening here on August 17 to provide world-wide exchange of views on how to enrich living standards through improved means of exploiting resources, S. Irmay, of the hydraulics laboratory at Haifa's Hebrew Institute of Technology, predicts that an all-out technical attack on the 3,000,000-acre desert can reclaim almost 600,000 acres for farming. It is to the Negeb that Israeli officials are looking to help solve their immigration problem and to strengthen the new state's agricultural and industrial potentialities.

The main obstacles hindering conversion of the sandy stretches into croplands are lack of water and organic matter, Mr. Irmay notes, but by employing a sprinkling irrigation system the Jordan Valley Authority alone can increase its present goal of 60,000 acres to 87,500 acres, enough to support an agricultural population of at least 60,000.

In addition to the proposed enlargement of the valley authority program, the Hebrew Institute expert suggests, another 500,000 acres of land in the Negeb could be enriched again by dry-farming methods, which involve underground water storage, soil conservation, and terracing, and contour plowing to reduce run-off and soil erosion.

Numerous small-sized and medium-sized reservoirs are necessary to store imported water, the sparse rainfalls and the heavy night dews to supply sudden demand during hot spells, to conserve week-end surpluses and to regulate supply to meet local demands, Mr. Irmay declares.

The Israel expert, who has traveled widely in the United States to study various conservation and irrigation systems that might be used in the new state, lists three possible approaches to answering the Negeb problem—establishment of the dry-farming system, development of a pipe-line system to pump water from the coastal plains to reservoirs built on high places in the parched desert, and creation of the Jordan Valley Authority, which envisages the building of 12 dams or reservoirs with an annual storage capacity of almost 300,000,000 cubic meters.

In another paper on middle-eastern resources to be presented to the conference, Y. M. Simaika, deputy inspector general of Egypt's Nile Control Department, gives details of plans to harness the Nile for a multiple program to aid in irrigating farm lands, developing fertilizer and steel industries and combating the menace of floods.

Mr. Simaika emphasizes that accurate predictions of the Nile's water levels are vital to avert flood disasters. He reveals that the search for safe advance "polling" has produced one unique system based upon a connection between such distant phenomena as the Nile flood, the temperature at Dutch Harbor in Alaska on the borders of the Arctic Circle, the temperature in Samoa in the Pacific Ocean, and the pressure at Port Darwin in northern Australia. However, the Cairo expert adds that the unorthodox approach to forecasting has "not up to the present attained sufficient accuracy to be of practical use."

Arms and the Pact

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Tuesday, July 26 (legislative day of Thursday, June 2), 1949

Mr. MYERS. Mr. President, throughout the debate on the North Atlantic Pact, I was struck by the historic difference in attitude of the United States as it is now constituted when compared with the attitude of the Senate 30 years ago when President Wilson, after conceiving of the League of Nations as a means of keeping the peace, came home from Europe with a treaty of alliance—of defense—with Great Britain and France. That treaty, as we all know, was thrown into the ashcan. It had sought to pledge each of the Big Three nations of that era to a common program of aid in defense against aggression.

Fortified with such assurances, neither Great Britain nor France, I am convinced, would have felt it necessary in the thirties to yield and appease and retreat to the point where further retreat was impossible, where war was inevitable, and where their defeat was imminent and—in the case of France—actual.

The North Atlantic Pact is a belated recognition by free nations that their safety is indivisible, and that aggression is a threat to all.

Immediately after the Senate approved the historic pact, the Pittsburgh Post-Gazette declared editorially that, since the United States is committed to the mutual defense of free Europe, and that since it is now largely a strategic problem, in the military sense, of how that defense might best be strengthened, "even the most cursory examination of the problem, we believe, dictates that Congress should follow up the pact at this session with an arms-aid program of the sort the administration has proposed." I ask unanimous consent that the editorial be printed in the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOW VOTE THE ARMS AID

The overwhelming majority by which the Senate ratified the Atlantic Pact is proof to our friends and foes abroad that the American people firmly support this historic turn in United States foreign policy .

The pact was adopted without any of the crippling reservations which certain Senators sought to have inserted. In this regard, it is important to note that the real opposition was not directed at the pledge to go to war, if necessary, in the event one of the 11 treaty associates were attacked; but rather at article 3, which commits the signatories to mutual military aid.

Thus, the voting on one of the proposed amendments to the treaty showed that almost all the lawmakers agree that an attack against free Europe is in effect an attack against the United States—a dramatic reminder of how much this country has outgrown its isolationism of the past. There is, however, an evident difference of opinion over whether the United States should now provide some measure of arms aid for its European allies.

From the beginning, it has seemed obvious to us that unless the pact is followed up by a lend-lease undertaking it will be little more than, as Senator MORSE has said, "a museum piece for Stalin's repository of diplomatic scalps." Unfortunately, the efforts of bipartisan sponsors to win approval for the treaty led them to soft-pedal, if not belittle, this fact. That may have been good legislative tactics; but, as the Post-Gazette held throughout the debate, it was hardly good, clear logic.

Now, at any rate, the fog has been lifted. The United States is committed to the mutual defense of free Europe, and hereafter it is largely a strategic problem, in the military sense, of how that defense might best be strengthened. Even the most cursory examination of the problem, we believe, dictates that Congress should follow up the pact at this session with an arms aid program of the sort the administration has proposed.

Such a program, of course, will be costly. But the cost can and should be squeezed out of the whopping budget which has been drafted for our own armed services.

The Military Aid Program

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. VORYS. Mr. Speaker, I am for a military aid program, but the President is asking for Europe too much, too soon, and this can be as bad as too little, too late. On economic aid we had at least the report from the 16-nation Committee on European Economic Cooperation before Congress acted. We came through, but they have fallen down badly on carrying out mutual aid agreements between themselves. If we do not demand a plan and promise on mutual defense from those countries before Congress acts, they will never get together. We ought to put through quickly a small program with conditions to show we mean business and then wait for their over-all proposals. We could authorize communications equipment, which will require cooperation for efficient use, spare parts for present American equipment over there, and possibly a few other emergency items. That should be enough for this session.

We ought to get a policy statement on China that safeguards our security in Asia before we pass any military aid program, for this is one world, as far as American military security is concerned. Now that this bill has been referred to our committee, I suggest that the Foreign Affairs Committee invite representatives of the Armed Services Committee to sit with us in the hearings on MAP, to interrogate witnesses, participate in discussions and, if permissible under the rules, to vote on amendments and on the bill. I suggest a subcommittee of five, consisting of the chairman and two ranking members of each party.

While this bill is clearly within the jurisdiction of our committee, it deals

so much with military phases of our foreign policy that the Armed Services Committee and staff could be very helpful in its consideration. If this is to be arranged, it should be settled before the hearings start.

Therefore, I urge prompt consideration of this suggestion.

America at the Crossroads

EXTENSION OF REMARKS
OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, July 27 (legislative day of Thursday, June 2), 1949

Mr. FULBRIGHT. Mr. President, on September 8, 1941, 3 months before Pearl Harbor, Col. Louis Johnson then, but presently the Secretary of National Defense, delivered a very fine address in Atlantic City. Like so many good speeches, it probably was not appreciated at that time, but passing events have demonstrated its good sense and farsightedness. I believe the Members of this body will enjoy reading it, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA AT THE CROSSROADS

H. G. Wells said that ours is a generation which has an appointment with destiny. Few will doubt that statement—only the foolish will contend that we can avoid that destiny.

In one of Somerset Maugham's books is the story of Sammara. A merchant from Bagdad sent his servant to the market place to purchase the day's supplies. In a little while the servant returned, white and trembling. He said: "Master, may I borrow your horse that I may ride away?"

The master replied: "What has happened?"

The servant said: "I went to the market place as you ordered, and there I saw an old woman, and she was Death, and she made a threatening gesture at me. Now I want to borrow your horse and ride away to Sammara that I may avoid my destiny."

The merchant gave the servant his horse, and the servant rode away as fast as he could to Sammara. A little later the merchant, curious as to what had happened, went down to the market, and there he saw the old woman who was Death. He approached her and said: "Why did you threaten my servant?" The old woman answered: "I did not threaten your servant. When I saw him I made a gesture—it was a gesture of surprise, because I had an appointment with him in Sammara tonight, and I wondered what he was doing in Bagdad."

I firmly believe that our Nation has been established and honored not alone for its own sake, but for the sake of the world. It has been made powerful, and rich, and free, and exalted—powerful, not to make subject, but to serve; rich, not to make greater gains, but to be the more efficient; free, not simply to exult in freedom, but to make free; exalted, not to look, but to lift up.

This, I believe, is our destiny. To achieve it we must begin to understand that the wave of the future is the wave of destruction that must be curbed if the world of freemen is to survive. Despite the discordant voices that lack understanding, the men of the legal profession must carry to the Nation the reasons why America cannot sit idly by and see freedom pass from the rest of the world. Even if we are quite selfish, we must do that, for if freedom passes from the rest of the world, then it would surely pass from this, its last and greatest stronghold, and if freedom passes, so would pass the civilization which our fathers and forefathers have known and for which they fought.

We do not know when man first came into the world, but when the curtain first rises on history we find in the more favorite spots nations already venerable with age. These tribal people, as historians point out, had one code for their own government; a code of justice and fairness that recognized that "before man made us citizens, great nature made us men." But in addition to this tribal code of fairness they had another—an intertribal code. It governed their relations with other tribes and in it there was nothing but hatred, unfairness, and contempt. Down through the ages has come this distinction between tribal and intertribal justice, and even in Europe of the seventeenth century we find deception and falsehood the usual weapons in diplomacy.

But with the coming of the American nation a new era was ushered in. We established a new government because we felt that we had been unjustly treated; we instituted a democracy because we believed that thus could the greatest impartiality to the individual be obtained. We became the most equitable of all nations because our sense of fairness was not based entirely on that of any one. It is rather a blended, purified justice that is not alone Anglo-Saxon. Intermingled with it is the justice of Brutus, of Martin Luther, and of Charlemagne. We took from them their purest and best, and far removed from the turmoil that shook Europe, slowly and calmly we constructed our tower of justice with its beacon light for all nations.

Around it we have builded our institutions; by its light Washington and Jefferson formed our policies; and under its protecting shadow we have perfected our theories of government.

While historians and philosophers have disagreed as to how the state originated, we of America from the foundation of our Government have subscribed to the theory that the family is the source and prototype of the state. As men multiplied they gave way to groups of families. Gradually, villages grouped themselves into cities, and the city, according to Aristotle, most famous exponent of the family theory, was "first founded that we might live but continued that we may live happily."

The other school of thought maintains that the state originated in a contract among individuals. If we trace the evolution of this theory, we again find the basis for the modern state in the same yearning for law and order. As far back as Protagoras, the Greek philosopher of the fifth century before Christ and a contemporary of Pericles, the idea of a social contract creeps into the teachings of the western philosophers.

Whether the state is the "City of God" that St. Augustine beheld, a member of a world society of law-abiding nations that Grotius pictured, an absolute monarchy which Hobbes in his Leviathan urged, a constitutional form of government which guided Locke and inspired the Declaration of Independence, or even the extremely individualistic system advocated by Rousseau, it owes its origin, according to all of these philosophers, to a social contract resulting from the desire of man to escape from the dangers of constant warfare and to find greater security in an organized state. Even the social contract theory ended (until the advent of Hitler) the rule that might makes right and provided for a system of mutual rights and obligations.

Whichever of these two principal theories may be accepted as the true origin of the state the result is the same, but I repeat that we of the United States throughout our history have tried to carry through our various governmental organizations the idea of justice inherent in the family theory, and, indeed, we have tried to consistently apply it in the creation of a family of nations in which we might survive as freemen. Justice—family justice, if you please—as it is applied in the broader phase, must be the end of our Government. It must be the end of our civil system, or we shall have arisen to greatness only to fall. We shall, if we depart therefrom, be but another nation in the sad procession of world tragedies, for "it is written by the finger of the Almighty God on the tablets of the universe that no nation or state can endure unto whose life justice does not enter and enter to stay."

The Axis Powers do not believe in family justice, tribal justice, or, indeed, in the family of nations. They seek world domination for themselves and their theories of government. In fact, Hitler has abolished the very family foundation from within which justice inherently must spring. Camps for young girls have been established beside camps for young men. Illegitimate children are encouraged—indeed, children born out of wedlock are subsidized by the Fascist government. We must make the American people understand that with the passing of the family and the sanctity of the home the concept of government of the nation subscribing thereto must never touch these shores.

I would have you remember that even if Britain is successfully defended, we will still have a huge military machine on the Continent of Europe, and directed by a country gone berserk which has departed from the fundamentals of justice, and which has threatened the safety of every nation and every family in the world.

Rapidly the world is dividing into two camps—perhaps it is already divided into two camps—the countries which are prepared to accept the abolition of family life and the sanctity of womanhood, to surrender the concept of family justice, and indeed surrender to complete Axis domination; and the countries which propose to continue their belief in the family and family justice, and resist to the limit. We are obviously required to assist the countries which do resist with arms and ships, and to make it possible for the arms and the ships to go where they are needed. We have to assume that the communications will be cut by the Axis Powers wherever possible; and that if it is expedient for the Axis to try to cut these communications somewhere near us they will do so. We have to be prepared to prevent any such action against our own safety.

I should like to be able to talk these things theoretically and to eliminate military terms. I cannot do so, because unfortunately ideals today mean little unless they are defended by adequate force. It was no act or design of the United States which called this need for force into existence; and certainly we were the last great nation of the world to recognize that force alone was our ultimate safety. Today we do recognize that fact; and in my judgment, we must accept its implications.

America is indeed the most fortunate of countries and we, its citizens, are the happiest of peoples, but we are honest enough to realize that we have not yet reached the millennium. There is still much to be done.

Our standards of living must be made even broader. Our business and our Government can be made stronger. Our lives can be made happier. It is toward these desirable ends that we should eternally strive.

We have a civilization that is worth keeping for ourselves and saving for our posterity. At all times we should be ready and willing to give our lives, if need be, to preserve it.

You and I are the fortunate heirs of a great human achievement. It is our solemn duty to keep inviolate the ideals of liberty and of democracy for which man has struggled for thousands of years and has begun to realize only in the short span of the existence of the American Republic, and to pass them down to his children for their security and for their happiness. America calls us of the legal profession to be "strong in will. To strive, to seek, to find, and not to yield."

If you will permit me, for the days are troublesome and treacherous, I shall be serious for yet a little while; I hope not for too long. Quite as the musical ear, in listening to the latest opera, isolates strains from earlier music; so the educated or historical eye, in scanning the morning newspaper, detects in this contemporary scene much shameless imitation of things that have gone before.

Three and one-half centuries before Christ, the Greek peninsula and the hinterland were the modern world in miniature. The area, due to the chopped-up topography, was divided into city states, some democracies, some military dictatorships. Athens, Sparta, and Thebes were traditionally stronger than most of the others. Now in Macedonia to the north there was a king named Philip who had learned the secret of the phalanx during a visit he made to Thebes (and parenthetically exactly as the Germans learned about the tanks in the last World War from the British). Philip secretly trained a number of men in the use of the phalanx and started out on a career of conquest. Philip was a practical fellow. He softened his opponents wherever possible, history tells us, by what we would now call the fifth-columnist method. "No war" was his motto—except as a last resort. Philip announced, as history shows, that his idea was to unite the Greek people whether or no, saying in so many words that democracies had failed.

Down in rich and comfortable Athens, as Philip progressed on his conquest, the people and the leaders of the people divided, even in those days, into isolationists and interventionists. Demosthenes became the speaker for the latter; the Roosevelt-Willkie of his time. The Philippics, the three most famous orations ever delivered by mere man, were devoted almost entirely to the attempt to stir democratic Athens to the positive action of going to war with Philip while there were still allies to aid Athens. On the other hand, there were those in Athens who declared that Demosthenes was a war monger, who said that Philip only wanted living space and that when he had achieved living space then he would be different and they could get along with him. Don't say bad things about him, they advised. They opposed war taxes, and argued against military expenditures because they threatened inflation. They even fought proposed conscription for the army and labor, and cried "traitor" at those who in those days appealed for "union now" with Thebes.

They arose in the forum of Athens and asked how many times Athens had made war with Thebes. They demanded to know why Thebes had never given dominion to—let me go modern and instead, say India. They asked if Thebes hadn't sold the last League of Nations down the river. Indeed, history shows that they asked what Athenian would be such a weakling—so unpatriotic, as to refer to Thebes as the first line of defense for Athens. "Never," they said.

Icarus, the young man who attempted a nonstop flight from Crete to Syracuse, had fallen into the sea and had been lost, but there were other favored and publicized young men of Athens who argued that perhaps Philip represented the wave of the future. Plenty of people were willing to attend these meetings, even in those days, because many of the wealthy feared the loss of their property more than they feared the loss of Athens—while many of them were merely poor at mathematics, and could not figure the difference between the gamble today, with Allies, and the gamble tomorrow, without them.

So Philip sardonically advanced, reducing the city states one by one because Athens would not bring itself to assume the leadership of a defense league. In each place Philip set up a quisling government to the humiliation of decency and patriotism. Finally, he overawed the Phocians, who guarded Thermopylae; and with that pass, close to the walls of Athens, in his hands, it was all up with Athens. Too late the people of Athens realized that they were about to lose their comfort. They marched out at last, but they marched without allies, and were done to death at Chaeronia. Athens should have trained and built for the hour of crisis without reservation. It should have recognized Philip for what he was—destruction on the march. History says that Athens was a fool. I fear we have been highly foolish too.

It will avail us naught to ride the borrowed horse of isolationism from Bagdad to Sammara. We must intelligently do our part that there may be a world of freemen in which America may achieve its destiny to be a Nation of freemen.

Citation for Degree of Doctors of Laws Conferred Upon Hon. Francis J. Myers, of Pennsylvania, and His Commencement Address at Loyola College

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, July 27 (legislative day of Thursday, June 2), 1949

Mr. O'CONOR. Mr. President, at the ninety-ninth commencement of Loyola College in Baltimore on July 24, there was conferred upon a distinguished Member of the United States Senate, the senior Senator from Pennsylvania [Mr. MYERS], the degree of doctor of laws—honoris causa.

The Senator from Pennsylvania has been the recipient of numerous degrees not only from his own college, St. Joseph's in Philadelphia, but from other institutions, including Temple University, Philadelphia; St. Vincent's College, Latrobe, Pa.; and Villanova College.

In connection with the most recent award, however, there was presented a citation which so well portrays the outstanding accomplishments of the distinguished senior Senator from Pennsylvania, that it deserves the attention not only of the Members of the Senate but of all the citizens of our country.

From his rich experience in matters of government, the distinguished Senator addressed the graduates of Loyola in a scholarly yet thoroughly realistic manner, and made a profound impression upon the large gathering.

I ask unanimous consent that both the citation for the degree of doctor of laws and the Senator's splendid address be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the citation and address were ordered to be printed in the RECORD, as follows:

The president and associated professors of Loyola College extend to all who shall behold this document, greetings in the Lord:

The Society of Jesus regards with pride and cherishes with affection the students who have been instructed and formed in the educational institutions conducted by it, whether these be in Baltimore or in Philadelphia, in Chicago or in St. Louis, in Los Angeles or in San Francisco. The students of the Jesuit high schools and colleges throughout the United States receive in their formative years an identical training in the arts and the sciences, in religion and morality according to the precepts and the principles of the traditional Jesuit Ratio Studiorum. Hence it is that the graduate of one Jesuit college is equivalently a graduate of all Jesuit colleges.

FRANCIS JOHN MYERS attended our allied College of Saint Joseph in the neighboring city of Philadelphia. After a brilliant course of studies he was granted the degree of bachelor of arts, and turned to the profession of law. His talents and ability being speedily recognized, he was appointed assistant to the district attorney in Philadelphia and later to the attorney general of Pennsylvania. In 1938 he was elected to the House of Representatives, and so enviable was his record that his constituents in Philadelphia chose him as their Congressman for three successive terms. For the past 5 years he has been Pennsylvania Member of the United States Senate.

During the 11 years that he has served in Congress, he has proved himself a statesman of action and of vision, a legislator of wisdom and integrity, a crusader for human rights and international stability. He enjoys not only the confidence of the citizens of Pennsylvania but also the respect of his fellow Senators.

Wherefore, seeking to signalize him as a Jesuit alumnus, recognizing his achievements as a Member of Congress, and lauding his uncompromising fidelity to his faith, by virtue of the powers delegated to us by the sovereign State of Maryland, we hereby make and declare FRANCIS JOHN MYERS, doctor of laws, honoris causa.

That all the rights and privileges attaching to this degree be preserved unto him we have issued these letters patent from our hand, sealed with the official seal of the college on this the 24th day of July in the year 1949.

ADDRESS BY HON. FRANCIS J. MYERS, OF PENNSYLVANIA, AT COMMENCEMENT EXERCISES, LOYOLA COLLEGE, BALTIMORE, MD., SUNDAY, JULY 24, 1949

Commencement exercises—or at least the commencement exercises I sat through as a member of graduating classes a quarter of a century or so ago—had some pretty chilling aspects about them. Of course, we were all pretty excited on graduation day from preparatory school, then college after that, and finally, from law school. Each of those days

represented something completed, a job done, a kind of climax to what had beeen a considerable period of time, and, generally speaking, a good bit of work.

What chilled us, though, wasn't our elation at having finished a goal we'd undertaken. We were chilled by having the commencement speakers tell us—and they told us this every time—that the affairs of the planet were being dumped in our laps. We were told that it was up to us to straighten things out.

Now I'll confess that when they told us this, back in the twenties, it didn't look like too bad a prospect. At least, the prospects didn't appear as bad to us at the time as they must have looked to those who followed us and graduated in the early thirities when the world was locked in a terrible depression, or to those who a few years later graduated in the face of a war which enflamed most of the civilized world—as well as a large part of what wasn't very civilized.

As you leave college today there is another goal ahead of you—the great goal of peace—and to attain it, you share responsibility with every person in the world.

Quite evidently, not everyone in the world looks at peace through the same eyes as we. Peace, as we see it, is not any kind of peace—not peace that is bought with dollars and kept with guns—but peace that is based upon understanding and good will, and the knowledge and firm belief that we must love God and keep his commandments as nations as well as individuals.

Such peace is the fruit of wisdom.

I am not minimizing the importance of economic and military measures that have already been adopted or which are shortly to be considered in the cause of world peace. These measures—the European recovery program, the North Atlantic Pact, an adequate military defense here at home, the reciprocal trade program, the point-4 doctrine, and our participation in the United Nations—are, all of them, part of a closely interrelated whole. They are affirmative. They are constructive, and as effective tools for building peace, they are serving, and will serve us well.

They are the immediate safeguards of peace.

But in the larger view of things, peace must be built upon a more permanent foundation. An understanding of the causes and conditions of peace—and knowledge of the principles and institutions which make it possible are absolutely essential to its maintenance. True understanding is possible only when we know freedom from ignorance, freedom from prejudice, freedom from oppression, hatred, and fear—good habits of thinking—the ability to make critical judgments—and the desire to love what is right and just.

These form the firm foundation of peace. They are the fruits of education, of true liberal education in a liberal arts college like Loyola.

As technological advance has catapulted the world from the era of the water wheel and the horse and buggy into one in which we are daily amazed by some new miracle of science, there has arisen a disturbing tendency in our education system to emphasize atoms at the expense of the soul—to teach the mechanical workings of material things to the increasing neglect of the fundamentals of understanding which reflect the dignity of man and morality and true Christian living.

To a certain extent, I think it is understandable that increased attention has been devoted to mechanics and materialism. There certainly isn't any doubt whatsoever that scientific advances have added greatly to our capacity for a fuller and freer life in this world. And I am equally certain that none of us seriously contemplates a return downhill to a primitive standard of living. In the first place, none of us want to do so—and in the second place, it's entirely unnecessary for us to do so.

What we must do is restore a needed balance to large segments of our educational system. We must guard against substituting the adulation of a cathode-ray tube for the worship of God. We must be the masters, not the slaves, of materialism. And we must preserve the dignity of man, in the image and likeness of God, if life is to have any meaning.

I feel that our drift toward technical and vocational education is understandable—or to some extent understandable, at least. The complexities of the modern world demand experts—demand skills which take long years to develop. Specialized training is an obvious practical necessity if we are to operate the involved machinery of the twentieth century world.

Young people undertaking to train themselves for this kind of world have felt numerous pressures—pressures forced largely by time. They realize, of course, that many years must be devoted to preparing themselves for some vocation. They know that more and more schooling will be necessary if they are to compete for the best jobs. On the other hand, a great many have but limited resources for education. They are reluctant to continue draining their families for support—and are painfully aware that working their way through school is a difficult job at best. A great many young people have given serious thought to marriage while they were yet in school.

These pressures are realities, and all of us I know, have felt them, or some of them, at any rate. Under the circumstances, it isn't particularly surprising that young people in school would respond to them by demanding a kind of vocational training to acquire skills that they could put to work in the shortest possible time. These reactions are perfectly understandable, reasonable human reactions.

Without doubt, the interests of our people—and the lack of interest, for that matter—have had an important influence in shaping the course which many of our schools have followed. I say many, but certainly not all of them.

The pendulum swung far—very far—in many of our schools as the tide of materialism advanced. In recent years, I feel, the tide has turned in some of our great secular schools. The so-called Harvard report, which has generated so much comment, has asserted the need for balancing our educational methods with a strong emphasis on the humanities as a basis of building an informed, active, intelligent civic leadership and citizenry. Other schools, large and small, have in varying degrees adopted a similar view on this subject.

I believe that you in the class of 1949 at Loyola College may consider yourselves very fortunate indeed to have received the kind of education you have been able to obtain here from the Jesuit fathers. All of you will be able to go forth into the world with the assurance that you have trained your intellects in the methods of straight, clear-headed thinking; that you have learned tolerance and justice, understanding and reason.

Four hundred years of splendid scholastic achievement mark the traditions of the Society of Jesus in its struggle to preserve humanism in learning. Steadfastly, it has clung to its original objectives, firm in the conviction that it was rendering the highest possible human service in seeking first the greater glory and honor of God. Through the humanities and wisdom studies, philosophy and theology, it has sought to develop the intellect, the conscience and the taste in the light of both reason and revelation—and with the force of both passion and grace, it has striven to develop the whole man, the complete person. It has endeavored to equip a man spiritually, mentally, and morally so that he might live happily with himself and his fellow man. For four centuries, Jesuit colleges have been producing Christian gentlemen—true and finished men of character. And the art which tends to make the true man of character is as useful as the art of health or the art of wealth, and in the long run, of more service to mankind than both because ultimately it makes health possible, and gives wealth meaning.

You who leave here today carry with you this tradition. In the conduct of your personal lives, in the exercise of your duties and responsibilities as a neighbor, as a citizen, and as a human being, first class, you will find that this tradition will light for you the way to a full life and to a meaningful life.

One of the true lessons in the business of men living in the same world at peace and in harmony with other men is the lesson of the good example. Incumbent upon every one of you here today is the duty to carry out your own lives in order that you may always teach the lesson of the good example. This is a duty larger than a duty to yourself and your family. It is a duty to your country, to all mankind, and to God. And you here know the meaning of that lesson.

If we truly intend to achieve our goal of lasting peace in the world, the lesson of the good example is at this moment more necessary than ever before in all history.

Our sorest national and international problems have their roots in ignorance and hate. In your tolerance and understanding, you must carry forth with you the fruits of your learning. Now, more than ever, the influence of your tradition of liberal education is needed upon society. It becomes the sacred duty of those of us who have received so fully of its rich rewards to work strenuously to restore it to its proper place in our national way of life.

The problems of the future which must be solved in order that we attain peace, are, fundamentally, problems of human dealing with humans. There are no equations for solving these—and no pat formulas. Human answers are the answers to human problems. No thought-control machine, no lightning calculator, can do the trick.

Yes, you men of the class of 1949 have been trained to use your minds. This is the best possible preparation you can take on the great adventure that lies ahead.

By using your minds with the aid of grace to know the right; and by using your wills with the aid of grace to love the good, you can help good men reach the great goal of our time: Peace.

This year marks the four hundredth anniversary of the death of the first graduate of Loyola—St. Francis Xavier. I would like to close by repeating to you in full the graduation message which he heard from the lips of Loyola before he sailed for India: "Go and set the world on fire."

How Best Can We Preserve World Peace?

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, July 27 (legislative day of Thursday, June 2), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have inserted

in the Appendix of the RECORD an excellent address submitted by John Rodman, of Memphis, a student, in the Veterans of Foreign Wars oratorical contest, which he won.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOW BEST CAN WE PRESERVE WORLD PEACE?

(By John Rodman)

The air is calm now—calm compared with events of recent history. The breeze is dying, and the dark clouds hang imminently overhead. Lightning flashes faintly in the distance, and the low, ominous roar of thunder follows sluggishly. It is the lull before the storm. By no means an ordinary storm threatening our immediate future, for this tempest of war is mortal; it can be averted, not by the generals nor by the politicians, but averted by an element so important, so essential to our democracy that it has been practically forgotten. The omnipotent element of which we speak is the individual. You, I, all of us not taken as a group but as a person. Each individual, separate and distinct, each with likes and dislikes, each with personalities and temperaments, each with distinct peculiarities that differentiate us from other individuals. Too often today are these millions of eccentricities and characteristics lumped together in the term "average man," "common man," or "the man on the street." It is when the individual sleeps in a lulling sense of security or blindly follows without doing his own thinking that we have disasters. Such a disaster is now impending. There remains only for the individual to take his bearings, choose the best route out of the storm belt, and follow that route, letting nothing stop nor retard him.

It would be an easy choice if he considered peace alone as his objective, for peace may be had almost too easily. Simply submit to dictator rule and enjoy peace and tranquillity. But peace without liberty is worse than war. Together, liberty and peace make up 99 percent of that condition called happiness. Separately, they amount to less than 1 percent each. How can we attain them both? Of the many highways and byways out of our present predicament, which shall we choose?

We might take the highway of nationalism. It leads to State sovereignty, isolationism, and points right. It's a proud way, flags flying, national anthem playing, that good old "let the rest of the world take care of itself" attitude. Peace, prosperity, happiness—for a while. First the boom, then the bust—a nation finds out that it isn't totally independent of the rest of the world, finds that it can't exist shut off from sister and brother nations. The road to isolationism ends abruptly at the edge of a cliff over which nations spending too fast to see how the road ends must plunge headlong.

What has our individual to gain in nationalism? It would seem that nationalism and individuality of man can never be reconciled, for one is the very negation of the other. Nationalism is not government of, by, and for the person. The individual simply exists as a means of making the nationalistic state great and glorious. It was to the individual that Hitler wrote, "Thou are nothing, thy nation is everything." And only too often that type of nationalistic state reminds us of Mussolini's classic understatement, "I am the state."

If we do not choose the highway of nationalism, alias the road to ruin, what other alternatives have we? The highway of leagues, alliances, treaties, and confederations seems to be a peaceful enough route. It's a historical way with many ancestors. Remember the Articles of Confederation after the Revolutionary War, the League of Nations after World War I, today's United Nations, and now the Atlantic Pact? The Articles of Confederation failed miserably as a form of government; the League of Nations was unsuccessful in its primary purpose of keeping peace; the United Nations has fallen far short of the task for which it was intended; the Atlantic Pact as it is now is just another turn in the same old road. Who will deny that there are supreme representatives of the league system? Yet what has humanity gained from any of them?

The reason for failure lies not in the separate organizations but in the basic principles behind all such alliances. The smallest unit of any league is a nation, for it is an association of sovereign states rather than of individuals. It is a general assumption that civilization necessitates laws to insure each man's protection. When a law is broken, who is to be punished? In a Union, the individual who broke the law; in a league or alliance, the nation. How do you punish a nation? Either you boycott it or you invade it with armed might and destroy it. But how do you punish a sovereign state without punishing its thousands of innocent citizens? You do not, you cannot punish the state, for it does not exist. It is an abstract, collective term meaning the citizens of a certain locale. Will not the citizens then destroy the league, this Frankenstein their governments have created?

Thus it is that leagues collapse from the inside rather than from external pressure.

Also contributing to the downfall of this system is the fact that it is undemocratic. Its equality is the equality of nations, not of individuals. One vote would be given to the 4,000,000 Swiss, the same one vote to the 40,000,000 French, and likewise one vote to the 130,000,000 Americans. After man has so many times followed this road, never getting anywhere, it is inconceivable to think that he would do anything but avoid it in the future.

Shall we take one of these worn-out roads of league or of nationalism or shall we take the path to union? The union road is a gradual climb upward until you reach the highest peak, the pinnacle of individuality, world government. The union way is not a radical, new idea but a time-tested way, appearing new only because man discovered but 10 years ago the direction in which he has been heading all his life.

Ever since creation men have seen the advantages in forming unions, have formed them, and have been generously rewarded for their efforts. David Cort in his pamphlet The Great Union presents the basic, sensible reasons behind all combinations and mergers. One man alone would have to stand guard over his family and possessions 24 hours a day. If 24 men combine, each must stand guard only 1 hour a day. If millions combine, they are able to work and produce so freely that they can afford to hire men who do nothing but stand guard against fire, war, robbers, etc. It's the same principle applied in a mutual life insurance company: the larger the combination, the safer is the individual man; the larger the combination, the less contribution must be made by the individual and the freer he is to go about his business, liberated from fear and interference.

World government cannot be attained by one step but must be the final result of years of work and waiting. First must come understanding, then the will to do, next a nucleus must be formed of the world's free democracies to pioneer the way. With only democratic nations eligible for admission to this Federal Union of the Free, other countries seeing the advantages of union could join after changing their form of government. Eventually, the Federal Union would get to the point where it would comprise all the nations on the face of the globe except Soviet Russia. If, by that time, communism has proven unsatisfactory, as we believe it must, and the people of Russia bring about a change to democratic government, the Federal Union would then become a world union. If, by that time, communism has not proven unsatisfactory, it will mean that we have made the classic blunder of all time by believing in the rights and dignity of man.

Only by union can we achieve peace without sacrificing freedom. The nationalistic state enslaves the individual; the league system recognizes him not, for it is a merger of governments, not of individuals; only union, first partial then universal, recognizes and insures the rights of the individual, exists simply for his benefit, and gives him what he wants—liberty, peace, and happiness.

An Experience in Washington

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 27 (legislative day of Thursday, June 2), 1949

Mr. WHERRY. Mr. President, each of my colleagues and I have a great respect for the judgment of the small country newspapers throughout the Nation, which faithfully report and represent their communities and surrounding areas. One such newspaper has come to my attention from the State of Wisconsin. Its editor, Mr. William Hawley, recently visited the senior Senator from the Badger State [Mr. WILEY]. When Mr. Hawley went back to his home town of Baldwin, Wis., he wrote a very interesting description of his experience in Washington. Incidentally, he commented most favorably upon our colleague. I ask unanimous consent that the text of Mr. Hawley's very fine and deserved write-up be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN EXPERIENCE IN WASHINGTON

One of the very rare experiences that we had on our journey through this wonderful land took place in Washington. Wandering around the corridors of the Capitol Building, I ran onto Senator ALEXANDER WILEY. He asked about my family and immediately we went up to the gallery, picked them up, and proceeded to the Senate restaurant with the Senator. There we met Mr. and Mrs. Jon Lid, of the Norwegian Broadcasting System. The children, my wife, and I especially appreciated being in the Senate dining room, seeing the Senators as they came in, and, naturally, we enjoyed visiting with Senator WILEY and the Lids.

This all brings up the idea that the 1950 election is not far away, and while we were in the East we were informed that the Republicans at the convention in La Crosse decided to endorse candidates for the coming campaign. Incidentally, it was the first Republican convention I have missed in 25 years. I was sorry I was not able to be present.

While we were in Washington we were impressed with the fact that everybody seemed to know our senior Senator and spoke highly of him. It is significant that in the course of the short period of 10½

years there are only two Republican Senators who have higher seniority than Senator WILEY—namely, Senators VANDENBERG and BRIDGES.

Let me ask and answer a few questions about our senior Senator.

Does Senator WILEY know farm problems? Yes. For over 30 years he has owned and operated a dairy farm in Barron County, Wis. When Senator WILEY came to Washington farmers' mortgages were being foreclosed throughout Wisconsin. One of the first bills Senator WILEY introduced was to prevent the foreclosure of these mortgages. Ever since then he has been fighting the farmers' battle.

Is he a hard worker? Definitely. He works an average 80 hours a week these days. Folks who have called upon him in Washington or who have phoned him long distance have found him working far into the night, often on holidays.

What has he done to protect the dairy industry? The facts speak for themselves. He has fought for legislation to prevent farm prices from nose-diving and his bills would help insure the farmers' cost of production plus a reasonable profit.

Does he know the value of a dollar? Absolutely. ALEX WILEY started out his career working in the sawmills of northern Wisconsin for 15 cents an hour, 11 hours a day. He worked his way through college selling insurance, painting houses, clerking in the store.

What sort of a family man is he? He has raised a fine family with four grand youngsters and eight grandchildren—a model family of which he could be proud or any dad or grandad could be proud.

Is he a man of the people? He certainly is. There are no airs or pretenses about ALEX WILEY. He is plain speaking, plain acting, straight-shooting.

Is he respected in the Republican Party? Perhaps the best answer to this question is that in the La Crosse convention he was introduced by the Republican National Committeewoman from Wisconsin as the "most beloved Republican in Wisconsin." We should note, too, that he is the first ranking Republican on the Senate Judiciary Committee and the second ranking Republican on the powerful Foreign Relations Committee. This means that at long last, Wisconsin has a man high up in the ranks of the Senate who can be and is a real help to his people.

ALEX WILEY talks the farmers' language, because he knows farm problems from first hand. He fought the farmers' battles for manpower during the war when the farms were being stripped of all hands; he fought to assure foreign markets for farm produce. He fought against OPA rules that were damaging to the Wisconsin cheese industry, he fought to bring in foreign laborers to help meet the manpower shortage when Wisconsin crops were rotting in the fields. "Write to Senator WILEY and you will get fast and polite attention" has become a by-word which farmers in Wisconsin have rightly told one another.

For these and many other reasons, it was a pleasure for my family and I to visit our senior Senator.

Louvain Gets First Books From CARE

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of July 24, 1949. I hope it may soon be possible to bring before the House my bill, H. R. 5186, to allocate to CARE the money earned by conscientious objectors working on farms and in hospitals during the war. The total amounted to almost a million and a quarter dollars and was placed in a special account in the Treasury. To what better use could it be put than CARE's book program?

LOUVAIN GETS FIRST BOOKS FROM CARE

(By Shirley Barshay)

Last week a thousand dollars' worth of new books arrived at the library of the University of Louvain in Belgium. If about $5,000,000 worth more arrive, the Louvain library will have regained its prewar status.

Add to that the cost of rebuilding thousands of demolished schools and restoring and restocking countless libraries and museums, and you have some notion of the enormous task of educational and cultural reconstruction facing much of the world today.

The Louvain contribution was the first to be made under the new CARE book program, according to an announcement yesterday by Paul C. French, CARE's executive director.

"We feel that the book program is a logical extension of CARE service," French said. "Just as the CARE food and textile program indicates a willingness on the part of the American people to share those aids in personal rehabilitation, so the book program is a symbol of aid in community rehabilitation."

A professional committee, headed by Dr. Luther Evans, Librarian of Congress, has selected 1,200 titles of the latest outstanding scientific and technical books. These books will at least provide some connecting link with the vast and varied program in the United States in the last decade.

The whole program has been developed in cooperation with UNESCO, the Library of Congress, the American Library Association, medical and scientific associations, and governmental authorities overseas. The advisory committee on voluntary foreign aid of the State Department has approved the project.

MANY COUNTRIES LISTED

The aim is to help fill the needs of as many universities, libraries, medical centers, and scientific institutions in as many countries as possible. So far, the list of countries to be served includes Austria, Belgium, Czechoslovakia, Finland, France, the American, British and French zones of Germany and Berlin, Greece, Italy, Japan, the Netherlands, Norway, and the United Kingdom.

With the assistance of UNESCO and the ministries of education in the various countries, CARE's mission chiefs abroad have determined the areas of information which will be of the most immediate and practical value to the reconstruction effort. The major categories cover health and welfare, medicine, dentistry, applied science, nursing, agricultural and veterinary science, English language instruction, and teacher training.

The almost rudimentary book needs are pointed up in letters received by CARE missions. From the training school for kindergarten teachers in Frankfurt on Main came this request:

"Our building was occupied for more than 5 years by the Wehrmacht, and a proportion of our book stock was lost, which we have never been able to replace. We urgently need books on psychology, sociology, chemistry and physics, English instruction manuals and grammars, maternal and child welfare."

The Sankt Georgen College, also in Frankfurt, wrote: "The Sankt Georgen libraries were entirely destroyed by air raids. In addition, we lost many reference works which our professors attempted to store in hiding places, but which were found and confiscated by the Gestapo.

"Our book budget is now inconsequential because of the expense of rebuilding our ruined dormitories and lecture halls. We cannot even afford the most urgently needed scientific publications or second-hand books."

PURCHASED IN BULK

From priority listings of each country's institutions in greatest need, and from the institutions' own priority requests, CARE makes it possible for Americans to contribute to this fundamental area of rehabilitation.

The physical operation of the book program is similar to that of CARE's food and textile package program, except that books will be sent to institutions rather than to individuals. Bulk purchases of books are made directly from the publishers.

Delivery of the books abroad is guaranteed at the publishers' list price, with no extra charge for transportation or distribution. The discounts allowed CARE by publishers and ECA subsidies for bulk shipping make this possible.

CARE hopes that the majority of the contributions will be undesignated, but donors of $10 or more may specify the country, type of institution, and category or categories of books.

So far, CARE is the only organization providing this broad service. Of course, some help has already been sent from this country. For example, the Rockefeller Foundation gave to the University of Heidelberg a complete set of technical journals—the only one in Germany. And there is a constant pilgrimage of students and professional people from all over Germany to use the journals.

The directness of the CARE book program has already appealed to students in this country. Catholic University here is using a traveling poster exhibit describing the program, and students are making contributions. Library of Congress employees, who have been sending CARE food and textile parcels for more than a year, have already made one collection for the book program.

General Marshall, along with many other prominent individuals, has endorsed the program by saying that he hopes it will receive the widespread support it deserves.

Valley of the Dammed

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. LEMKE. Mr. Speaker, connected with every national improvement there are damages. This is especially true of irrigation, navigation, and flood-control projects. There is the taking of property and the destruction of homes. Not only do we take the homes of the living but we take the last resting place of the departed.

Our forefathers realized that private property rights would have to yield to public necessity, but they also realized that a just Government would compensate those whose property was taken. The constitution provides "that private property shall not be taken for public use without just compensation."

I leave it to the reader's good judgment whether Melvin and Louise Engel, who happened to have lived in the Valley of the Dammed, received just compensation or whether they were bluffed and threatened out of their home.

I include in my extension of remarks part 10 and 11 of the "Valley of the Dammed" by Bigelow Neal:

VALLEY OF THE DAMMED
(By Bigelow Neal)

PART X

"Thereupon he became entitled to have the just compensation safeguarded by the fifth amendment of the Constitution; that is, the value of the land taken and the damages inflicted by the taking was a sum as would put him in as good a position pecuniarily as he would have been had his property not been taken." (Unanimous opinion of the Supreme Court of the United States and written by Justice Butler in a case referred to by lawyers as *Campbell* v. *United States* (266 U. S. 368; 45 Supreme Court Reporter 115).)

In the foregoing chapters of this document I have attempted to show how a small body of men, known collectively as the Real Estate Division of the Army Engineer Corps, came to the valley of the Missouri to purchase or take or to condemn our lands.

I have shown you how they have openly defied the fifth amendment of the United States Constitution. I have shown how they have ignored the ruling of the United States Supreme Court as quoted above. I have told you of the things I have seen and heard them do and of what my neighbors have experienced at their hands.

Now I propose to take a piece of jetsam from the backwash of their destructive passage and lift it far enough out of the mire so that you can see this deadly machine, plowing its way up the river, in actual operation. You can see it in all its self-generated horror, a machine built and operated, not for justice or generosity or mercy, but solely for the taking of homes and the dispersal of peoples. And when you have finished, no matter how nauseated you become, I ask you to believe I shall have done here exactly as I have done throughout this narrative—told my story with every word picked to show you the pure and unvarnished truth.

And when you have finished, I ask you as one American of another, whether you be of the men and women who make up our legal and judicial system, members of the Department of Justice, Members of Congress, the Army Engineer Corps, or just the plain taxpayers who really are supposed to run this country, how long will you let this thing continue? Remember it affects not only North Dakota but every State and territory under our flag. It has been going on its cruel way for years. As it goes it gathers power, even the power to defy its own Government, its own superiors, its own conscience, every concept of Christianity, and every tenet of right. In the name of all the people—men, women, and children—hundreds of thousands of them, who must suffer much even under fair and just treatment, I plead with all of you to stop this cruel thing in its tracks and show to the world that we can extend the same justice and charity to our own people that we can show and boast of over all the world.

All right. We're all set LOW. Here we go with a story that a year and a half ago I would have sworn never could have been told in our country as long as the Stars and Stripes flew against the sky. It is the story, first, of a boy and a girl. I shall write it as they told it to me, as I have read it in their voices and as I have seen it in their eyes. It is the story of:

Melvin and Louise Engel

Melvin and Louise were married on a capital of hope and faith and strong hands. They had little else.

Melvin came from Iowa, just a boy in search of that thing which drove Columbus and his flyspeck squadron those thousands of lonely and hostile miles across the Atlantic. Slowly, a few miles at a time, he worked his way west into South Dakota. But there he couldn't find the thing he sought. So he turned north, following the Missouri up and up until at last he came to Garrison and to a job on a farm only a mile from where he lives or exists today. There at last he knew that he had come to the promised land.

It was a place in the valley of the Missouri where a strip of small but very bad Bad Lands broke into the high prairie and turned the land into a wild jumble until the last of the buttes was cut squarely at its base by the great river.

Here Melvin found areas of farmland sloping gently toward the timber and the river, while around and towering above them, were the buttes and peaks, the gray and the white of the clay, the blue and black of the coal veins and the whole splashed with the vermilion of scoria.

Then, too, as a born adventurer he was a hunter and a fisherman at heart. Here in the age-old hills were the deer and the badger, the wildcat and the skunk, the grouse and the prairie chicken, the catfish and the wall-eyed pike. What more could he ask? Nothing. At last he was satisfied.

Louise was a true daughter of the prairies. In fact, she was the kind of a girl the moving picture people try so hard to reproduce on the screen. Always she had lived on the prairies, a large share of it on the fighting top of a horse. The women in her family rode with their men on equal terms. And they rode without pulling leather.

But there were times when Louise could put aside her boots and spurs and overalls to appear at parties and dances as a very pretty girl indeed. And there Melvin met her or she met Melvin, or whatever it is that happens under those circumstances. So, of course, there had to be some slight changes in local history.

Now the wages of a farm hand didn't take into account a family or even a wife. If Melvin and Louise were to be married, it called for a home of their own and a self-supporting institution. In theory, 300 acres of crop would send them on the way to the happy everafter. But in practice, there was the matter of horses and machinery and household goods—even if there were a house. But something had to be done. So they did it. They got married.

Next followed the purchase of a cow or two, a few horses and a set of harness, a plow, and the renting of a farm from a man whose good judgment seems to have been even worse than theirs.

In turn came a baby, followed by drought, grasshoppers, and a full-grown depression. With responsibilities up one notch and assets down several, Melvin took his licking, sold out what little he had, set up housekeeping in an old cook car, and got a job 90 feet underground in a lignite mine.

With the low wages of the time, they lived. But they were both unhappy. This was not their dream at all. What had become of the green of the hills and the great valley they loved so much? Now it was only hard grueling, blistering, dangerous work for Melvin and endless hours of listening to the prairie winds roar over the cook car, while Louise wondered if her husband would ever come to the surface of the earth again—and if so, would he be alive?

And so, in the evenings, they went on with their dreaming. Not of the home they had almost won but of a newer and bigger and better home, a place that would be all their own. And the best way to dream of such things is to look in the catalogs for pictures of baby chicks and incubators and mowing machines and the like. In that way you can create a home out of nothing and actually live in it a good deal of the time—that is if you have an imagination worth its salt.

Finally after some years of hard work and pinching to save a little money, something happened in an unlooked-at direction. Louise's sister, Maria, came into possession of a half section of land, right exactly where Melvin and Louise wanted to live. Melvin saw a chance of a coal mine, at least half his own. So he purchased an 11-acre tract in one corner of Maria's farm and set out once again to make a home for Louise and the babies.

But now things were different because they were starting from scratch, without even a building. And his first task was to find some sort of shelter.

He found it in an abandoned house many miles away. The house had once been good. Its construction was standard, a story and a half with a liberal lean-to on one side. Ordinarily it would have been far out of reach for Melvin but the depression was still on; houses were worth about a dime a dozen and he got the building for $200.

The next question was to get it moved. Finally he hired a moving man with some equipment and agreed to pay $100 and 2 weeks' work for the actual moving. So with the help of neighbors and the incurring of a lot more bills for return work, the house finally came to rest on the hallowed 11 acres.

Next came the matter of a cellar; thence the discovery that too many hail storms had made leaks in the roof. The siding was badly weathered, too, and Melvin found that the windows and doors had to be new.

So they began, little by little, to put the house back into living condition. As it improved, it contained grain money, coal money, garden money, and even catfish money.

Too, the time had come when the catfishes had to do double duty because the first baby had become two and then the two had become five and they were going to be seven by the time this was written.

But the house wasn't all. They had to have a barn; they must have a place for chickens and pigs. There had to be a well and a fence around the land with likely another to enclose Louise's garden. And everything they bought meant that they had to go without many things that they sorely needed; sometimes it was even food.

But who cared. This was their home. It was all theirs. And they would sacrifice for it in real pleasure because of what it meant to all of them for the future.

And so they went on. They farmed and they worked the mine and both began to really pay. Because of the mine they incurred a heavy indebtedness in a tractor and a truck and some mining machinery. But they were sure they could pay for them because, after so many long years, luck was coming their way.

It was a beautiful location. The butte of the badlands threw a protecting arm around them on the north and west while to the south the land sloped away over fields to the timber, the river, and the bluffs beyond.

And so in the fall of 1947 a check of their house, made carefully and by disinterested persons, showed that it would cost $2,500 to replace the building, without figuring hardware or paint or wallpaper, cellar, foundation, or sales taxes.

Their other buildings, while not much to boast of, but fully serving their various purposes, figured on the same basis came to another $2,000. Then there was the coal mine where another 10 days' work would make ready for sale 2,700 tons for which they were getting $3 per ton. And, lastly, the value of the land, fences, and improvements.

And then one day late in October, the lightning struck. The bolt came fittingly just at dusk when its effects would be all the more blinding. It came in the form of a man. Of a man who said he represented the Army engineers and who had to have their home for the building of the dam.

When they asked him how much they would get and they heard the figure, they were actually numb with disappointment. But when, as they allege, he told them that, if they didn't sign the option, the Government would take the land anyway and they might get even less and when he said that, if they refused, they probably would have to get out of their home in a month or two, they saw the cold winter closing in and the utter hopelessness of it all. With nobody to go to for advice, given little time to think, knowing that they dealt with an all-powerful Government, able to drive them and the seven children out into the snow at will, Melvin and Louise signed the option, giving away all that they had worked and drudged and slaved for and the total sum they received was $900.

PART XI

Last week, in telling you the story of Melvin and Louise Engel, introducing the actual figures on the value of their buildings would have turned the story into a lesson in bookkeeping. Nor do I intend to do it here. But I do want to tell you how the figures were obtained and their totals.

You are to understand that no claim is advanced as to the actual sale value of the buildings. These buildings were built, part by part and from time to time, as Melvin and Louise were able to find the money. In some instances—like the granaries and the house—the construction is standard. Others are put together as the occasion seemed to warrant. Nevertheless, each building has been built well enough to serve its purpose and if these young people are to replace them on a new farm, it is fair to figure them stick by stick at the cost of lumber today. To be exact the figures are as of December 1947, the time the land was taken. Here they are for each building:

Granary	$276
Do	186
Do	134
Brooder house	114
Barn	373
Garage	258
Toilet	56
Hog house	92
Chicken house	141
House	2,503
Total	4,148

In the above figures labor was figured at about one-third of the cost of lumber but no figures are included for sales tax, waste in cutting, paint, hardware, interior shelving, or built-in fixtures.

The value of the land would run between $20 and $30 per acre. Here we take the lower figure and go on:

Land	$220
Fences	100
Well pump	15

This brings the valuation to $4,483.

Now we have the value of coal uncovered, except for 10 days' to 2 weeks' labor. The coal measured 2,700 tons. Melvin was getting $3 per ton.

Because the coal was on his sister-in-law's land and I'm not certain as to the terms of the deal between them, we'll play very safe here and show that he lost a half of the total or some $3,050, if we disregard the labor yet involved.

And so on the fatal night when the "negotiator" called, Melvin and Louise had a sum, probably in excess of $7,533 in lands, goods, and equities. And through that fear that came to them during their conversation with the negotiator, they signed away all they had for $900.

Here insofar as the purchasing of these lands is concerned, I rest the case of more than 100,000 men, women, and children in the hands of public opinion. Do you who read this feel that we should tolerate this policy?

Next week we'll devote largely to options. The week after, we'll begin with the land rental phase of this policy. Right now I'd like to clean up a few odds and ends.

I'd like to extend my thanks to all of those good people, newspapermen, Congressmen, employees of the Government, State officials, farmers, and just plain neighbors, for their many words of appreciation. I sat out here, actually one man alone with many powerful enemies and without a single visible friend. For a time, the only comment I had came from those who prophesied that I would spend the rest of my years in Atlanta or Leavenworth.

I went ahead on the theory that somehow God would take care of any man as long as he followed steadily in the footsteps of his own conscience. I reasoned that, as long as I told nothing but the truth, no harm could come to me. So far my reasoning has been correct and the men, who might have been my worst enemies, have joined the ranks of my friends.

But it did take more courage than I ever have needed before and I hope that I shall face no such call again.

So many requests have come in for the publication of The Valley of the Dammed in book form that some, at least modified, action may be necessary. First, we'll see how the calls total up. But many thanks to you who have made the requests to date.

When I started this story, filled to the brim—as it is—with highly explosive matter, I fully expected to be apologizing to someone oftener than once a week. I'm tempted to brag a bit by claiming that to get this far without being obliged to apologize proved not only that my cause is just but that I haven't told you a thing that the other fellow doesn't know doggone well I can prove.

But I have learned of two instances when I have hurt the feelings of other people unnecessarily. To them, then, I am dedicating this space, because neither I nor my unfortunate neighbors would have anyone hurt through the publications of this manuscript.

First, there's a lady. She's a mighty nice young lady, too. And she's one of those marvelous beings who can sit in a courtroom and put down on paper every word that is said in the room, no matter how excited the people who are talking become. She's not only the court reporter but, in addition, she's personal secretary to Judge Charles Vogel of the United States district court. In those various capacities she seems to have made a real hit with many of my associates and they have told me how she encouraged them by a smile at the proper time or a word or two of encouragement when they needed it most. Then I have another way of proving she is nice: Her name is Miss Betty Good.

And so, Miss Betty Good, I want to apologize to you publicly, that it may be read all the way from the CONGRESSIONAL RECORD to the sands of Waikiki, for ignoring you when I introduced the personnel of the United States district court to my readers. My idea was to teach my neighbors not to be afraid of your court and I seem to have omitted entirely one of the most effective fear smashers in the whole group.

When I advised my neighbors to go to Miss McMichael when they wanted to know whether it would be proper to speak to Judge Vogel, I meant only when they had cases of their own before the court, and any other means of attempting to see him might end in embarrassment to someone. I still believe I was correct. But I did fall down, and I fell badly, when I neglected to say that, if they wanted to talk to Judge Vogel on matters of ordinary business, or in a social way, that they should come to you because you truly do rule the roost in Judge Vogel's outer office. How about it? Do you feel better? I hope so.

Now we turn to a man. And, believe me, he's a man well able to take care of himself. But I did hurt him a little bit a few weeks ago and I want to make that right too.

About a year ago an agent of the Real Estate Division—let's not blame this on to the negotiators—told me that his department was much dissatisfied with the work of the Department of Justice. He said, "If we have any more trouble, we're thinking of setting up another Federal court in North Dakota, bringing in an outside judge and district attorney." Wouldn't that make you a little sore? It did me.

Later in a conversation with another agent—still not a negotiator—he said, "We don't like at all the work of the Department of Justice, but I suppose the hay is in their meadow and they'll have to put it up."

Still later, when I went down to the trial of my own case and found that our United States district attorney had been apparently superseded by Mr. Landrum, I jumped to the conclusion that the Real Estate Division had in some way made good its threat and in this story some time ago I said so.

But it seems that I was in error. Mr. Lanier tells me that he himself called in Mr. Landrum, simply because the combined business of his office was too much for one man to handle. And it follows—of course—that Mr. Lanier was not superseded in any sense.

I am truly sorry to have hurt him and so to him also goes my humble apology. Additionally, I might add my thanks because his action gave me something I value highly, the personal friendship of the other district attorney, Mr. Landrum, and an invitation to go fishing at Detroit Lakes. To both of these men go my best wishes and the devout hope that they get a royal licking every time they try a case against my neighbors.

Now I wish the United States district attorney for North Dakota and the court reporter for the United States district court would get together and cook up a policy of forgiveness to beam in my direction.

The Man Who Pays

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 27 (legislative day of Thursday, June 2), 1949

Mr. MUNDT. Mr. President, the money we are appropriating so freely in the Eighty-first Congress is not free money. Every dime and dollar that we spend comes out of the wages, out of the monthly income, and out of the family budget of some of our fellow citizens. Every time we make a Federal appropriation we reduce the net price that some farmer receives for his produce or the net profit that some merchant makes on the sale of a sack of flour or a suit of clothes; every time we spend more

than is necessary we decrease by more than we should the opportunity of some fellow American to save something for a rainy day or to enjoy lower costs of living so that he could provide better for himself and the education and enjoyment of his family. Controlling the public purse strings is a tremendous responsibility, Mr. President, and we must act with wisdom and prudence lest we build Government so large or Federal costs so high that opportunity and security cease to be the birthright of all Americans, both young and old.

In this connection, I ask unanimous consent to have printed in the RECORD a stimulating editorial from a significant newspaper—the World-Herald, published in Omaha, Nebr.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MAN WHO PAYS

"There is no free money flowing out of Washington."

Senator KARL MUNDT, Republican, South Dakota, reminds his constituents of that basic, but often forgotten, truth.

"We should all realize," says the Senator in his weekly newsletter, "that a big reason why it costs so much to buy an automobile, a tractor, a windmill, a plow, or a pair of pants is that the hidden taxes which Government places upon all production pyramids up so that the consumer pays the freight and that these tax payments are just as real as though they were deductions from one's take-home pay or quarterly payments on one's income tax. When Uncle Sam gives you something, he always sends along the due bill afterward. Only sometimes you find it is in the cost of the new shoes you have to buy or in the price of the shirt on your back."

The Senator believes that the hidden nature of these taxes causes a lot of illogical thinking about Washington's "free money." The emphasis is too much on personal income taxes and not enough on the pyramiding hidden taxes that boost the cost of living and help to maintain those high prices that somehow won't come down.

Taxes are paid in the sweat of every man who toils, as Franklin Roosevelt once said. There is no getting around it. One way or another, he pays, and all the big talk about running the Republic on the revenues derived from taxing corporations or wealthy individuals at higher rates is politically inspired "hooey." The little man always pays. The more his Government spends, the more he pays, and no amount of scheming and contriving can change the fact or soften its consequences.

What can happen, however, is that the people can be misled into believing that they get something for nothing; that somehow the huge $42,000,000,000 Government that watches over them takes less from them than it gives.

For the average American—for the overwhelming majority—that is simply not so. They are providing the "free money," not only in the direct tax payments they make to the Federal Government but in the purchase of almost everything they buy.

If all of us realized this, as Senator MUNDT says, Uncle Sam would look less like a benefactor and more like the waster of the people's substance he has become.

Mr. MUNDT. Mr. President, as indicated by the foregoing editorial, big government frequently becomes bad government. Placing too much power in the hands of too few men for too long a time has become one of the greatest plagues from which the people of the world are today suffering.

Self-government is the precious heritage of every American, but unless each of us works at this trade of governing ourselves and takes an active interest in what is done with our taxes and what is planned by the politicians we are apt to find this country suffering from the same evils and vices of centralized government that doomed Germany under Hitler, that destroyed Italy under Mussolini, that today condemn millions of Russians and others to the tyrannies of communism under Stalin, and that have reduced Great Britain from a thrifty, vigorous nation of tradesmen to a worried island of bewildered citizens staggering along under the top-heavy political and economic burdens of socialism.

Our American success formula of individual initiative, private ownership, political independence, and decentralized government has been neither equaled or approximated by any other era or area of the world. Let us work steadily at making it better and at extending its dividends increasingly to more and more people, but let us resist, like the plague, all attempts to scuttle it by substituting for its glorious freedoms the discarded and distorted political and economic systems which have brought unhappiness and misery to so many people of other lands.

The decisive battles for freedom in our generation—both political and economic—are to be won or lost on American soil. Victory or defeat will depend upon the action or the apathy of the average citizen as he accepts or rejects the fake lures of political and economic medicine men.

All over the world the tempting offerings of the welfare state—more accurately called the security state—are being offered unwary citizens under an artful camouflage which conceals but does not change the total state controls and state ownership which unerring throughout all of human history have resulted in political tyranny. Sometimes the bait is communism, sometimes it is nazism, or fascism, or socialism, or statism; or collectivism, or nationalization, or the planned economy. The path toward the empty mirage of something-free-for-everybody and come-and-get-it government is always different, but the destination is always the same—at the end of the road, the state is supreme and the individual is reduced to the cringing servant of the state.

Mr. President, the problems and the perils which we face are neither new nor novel. In concluding these observations, I ask unanimous consent to have printed in the RECORD a pertinent and thought-provoking excerpt from a speech made by Senator Benjamin Harvey Hill in the United States Senate, March 27, 1878.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Sir, there is a corporation we may well dread. That corporation is the Federal Government. I dread nothing so much as the exercise of ungranted and doubtful powers by this Government. It is, in my opinion, the danger of dangers to the future of this country. If this great, ambitious, ever-growing corporation becomes oppressive, who shall check it? If it becomes wayward, who shall control it? If it becomes unjust, who shall trust it? As sentinels on the country's watchtower, Senators, I beseech you watch and guard with sleepless dread that corporation which can make all property and rights, all States and people, and all liberty and hope, its playthings in an hour and its victims forever.

Repeal Excise Taxes

REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1949

Mr. HAND. Mr. Speaker, we have now apparently reached the point where everyone in and out of Congress is demanding the repeal, or the drastic modification of wartime excise taxes. I am glad to see the demand for action increase. As a matter of fact, I have always opposed the continuance of these wartime nuisance taxes, and was one of a small minority who voted against them 2 years ago.

There is no excuse for levying taxes on transportation, telephone calls, handbags, luggage, cosmetics, jewelry, and many other items. They are more than a nuisance; they tax people who can least afford to pay, and hamper and discourage business.

Mr. Speaker, the so-called cabaret tax raised from 5 percent to 20 percent during the war is an excessive tax, and in these days of business recession is proving ruinous to the business, and is causing increasing unemployment. There is no reason for it except the insatiable demand of the spenders for more money for the Government to squander.

The Hotel and Restaurant Employees Union, Local 508, of Atlantic City, has passed a resolution on this subject, and I want to call it to the attention of the House. The resolution follows:

RESOLUTION ON THE FEDERAL CABARET TAX

Whereas the wartime Congress raised the Federal tax on cabaret checks from 5 percent to 20 percent, with assurances to the public that with the end of hostilities the extra tax would be removed; and

Whereas this unfair tax is still in effect 4 years after VJ-day, with no sign of its reduction to the prewar rate by the Eighty-first Congress; and

Whereas this excessive levy has already exacted a heavy toll of unemployment among workers in the culinary, hotel service, and bartending trades by discouraging patronage of establishments offering entertainment with meals; and

Whereas such a tax is a discriminatory levy upon the public's right to recreation; and

Whereas with increasing signs of reduced spending by the public, there is certain to be a further loss of jobs by waiters, cooks, bartenders, and others employed in places

subject to the 20-percent cabaret tax unless this unjust impost is removed; and

Whereas it ill becomes our Government, at a time when unemployment is rising, to continue in force a measure which can only swell the jobless total, thus undermining living standards and accelerating an economic collapse: Therefore be it

Resolved, That Local 508, Hotel and Restaurant Employees and Bartenders International Union (AFL) go on record with the demand that Congress repeal the 20 percent cabaret tax outright, or reduce it to the prewar rate of 5 percent; and be it finally

Resolved, That copies of this resolution be forwarded to the chairman of the House Ways and Means Committee of Congress; to both United States Senators from the State of New Jersey; to all Congressmen representing members of this Local Union; and to our International Union.

Mr. Speaker, the Republican leader in the House the gentleman from Massachusetts [Mr. MARTIN] is demanding action on these excise taxes, and in that demand he is joined by almost all Republicans and a great many Democrats as well. I respectfully call upon the administration to respond to a universal demand for such tax relief, and to give us action now.

Has the Need Passed?

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Santa Rosa (Calif.) Herald of July 8, 1949:

HAS THE NEED PASSED?

According to a recent survey announced by the Federal Housing Administration, building contractors the Nation over are entering the low-price housing field in increasing numbers. The market for expensive architectural show places has been saturated, the report showed, and virtually all homes now being built are in the moderate and lower cost brackets.

Most builders cooperating in the FHA survey reported, too, that shortages of materials no longer plague the industry. And construction time has been reduced in the past year from an average of nearly 5 months per home to 4 months.

All the signs indicate that supply is fast catching up with demand for housing—that the home market is becoming more and more a buyers' one. That being so, Congress' action in passing a $16,000,000,000 public housing bill seems peculiarly ill-timed.

If such a program was ever advisable, 4 years ago was the time for it, when returning veterans were finding operation house-hunting a dismal experience—not now, when the housing shortage is finally being alleviated.

The natural decline in the market for homes means a substantial loss to hundreds of thousands of veterans and others who have bought homes at high prices since the end of the war. A still more drastic decline, forced by the artificial competition of socialized building, seems less than fair. And in addition, home owners will be in the position of subsidizing, through their taxes, a good share of the cost of Government-built homes for people who were unwilling to make the same personal sacrifices they did.

If the need for large-scale building of low-cost homes ever warranted the Government's entrance in the field, that need seems definitely to have passed.

Luxury Tax

EXTENSION OF REMARKS

OF

HON. HARRY J. DAVENPORT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following reprint from the Pittsburgh Sun-Telegraph on the wartime 20 percent luxury tax:

WOMEN, CHILDREN NICKED FIRST BY WARTIME 20 PERCENT LUXURY TAX

(By Mina Wetzig)

Is your baby's comfort a luxury?

Congress thinks so—it taxes you 20 percent every time you buy a bottle of baby oil or a box of baby powder.

And that's only the beginning—scores of items that junior's mama considers essential to her personal appearance fall under the "luxury" classification in the Federal government's 20 percent excise tax law.

Pity the poor working girl, too—she's a victim of the pocketbook plague that adds 20 percent every time she buys a "luxury" like a dollar lipstick. She'd be a mighty pale petunia in an onion patch of yelping men without it.

Congress wasn't being chivalrous when it tabbed "women and children first" to get nicked by the 20 percent tax on toilet preparations.

But to get back to the baby—the kid who needs a little something besides his three-cornered pants.

IF LITTLE TERRY ONLY COULD TALK

If 6-month-old Terry Connell could talk he'd likely say that the powder his mother sprinkles on him at certain crucial periods of the day was pretty much of a necessity. He's no diaper dandy—that powder's essential.

Terry's the son of Mr. and Mrs. Terrence J. Connell, 220 Lynn Drive, Pleasant Hills. And while he gurgles cheerfully during the powder sessions, they don't think his comfort is a luxury. And neither do other proud parents—Congressmen excepted.

While Mrs. Connell knows the luxury tax affects a lot of the necessities of her husband's life—his brief case, his alarm clock, his wallet—she agrees that it chiefly discriminates against women.

The tax on cosmetics is the big discriminatory factor. A woman's good grooming necessities are taxed, while there is no tax on the masculine counterparts of razors, shaving creams, razor blades.

GOOD GROOMING MILADY'S BUSINESS

Mrs. Connell is a former Conover model, so she is particularly aware of the pocketbook plague of the words, "plus 20 percent Federal tax." Good grooming is her business—and it's the business of every woman—housewise or typist.

Husbands and bosses alike would soon blow their tops if the women around them trotted about with their hair messy and their faces shiny.

Yet every woman pays an additional 20 percent every time she buys lipstick, powder, talc, shampoo, hand lotion, powder base, nail polish, deodorant—or any of the multitude of things a woman needs to keep that "sweet and neat" appearance.

It all boils down to one question: Is it a luxury to be attractive?

(If you're fed up with paying a tax on necessities, tell the Sun-Telegraph about it. Drop a letter to your Congressman, too, and enclose this clipping.)

Minding Our Own Business

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 27 (legislative day of Thursday, June 2), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Minding Our Own Business Still World's Best Plan," written by E. T. Leech, editor of the Pittsburgh Press, and published in last Sunday's edition of that newspaper. I think the editorial will be of great interest to all Americans.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MINDING OUR OWN BUSINESS STILL WORLD'S BEST PLAN

(By E. T. Leech, editor, the Pittsburgh Press)

This country of ours is a system of free individuals. That is what Lincoln meant when he called it a "Government of the people, by the people, for the people."

A lot of countries have claimed or now claim to be free. So long as a nation is not conquered and controlled by some outsider, that claim is true to a degree. But the real test is whether its individual citizens are free. Throughout history, most peoples have lost freedom not by conquest but to their own governments.

Outside governments may be dangerous, but none is so dangerous as the one at home. That is the one supreme lesson of political history. And the greatest wisdom of those who established our Government was that they knew it.

GREAT ENEMY

They thought of freedom in terms of the individual. And they realized that government—including the one they were setting up—is the great enemy of personal liberty. So they tried by all sorts of checks and balances and safeguards to put government in its place. The Constitution above all else is a document of restraints and prohibitions designed to restrain officials.

It is at this point—the emphasis on individual liberty—that the freedom established in America differs from the general definition of such freedom as has existed through most of mankind's life. And it is at this point that our liberty is now in danger.

We of this generation have worried a lot about losing our freedom to some outside system—personified first by the Kaiser, then by Hitler, and now by Stalin.

But the real danger is at home.

We can keep free from Stalin and any other outside dictator and still lose our liberty. We can lose it to Washington easier than any other way.

What we have had for 160 years is the right to mind our own business. To run our personal affairs. To succeed or fail, to

gain or lose, according to our own personal merits, efforts, and desires.

EXCESSES BARRED

These rights had to be curbed, of course, to bar excesses. One man's liberty must be limited when it infringes on that of another. But, by and large, we have had the highest type of freedom—individual.

Those 160 years are just a minute in the long course of time. Yet no other nation has enjoyed such a minute of liberty. In that short time, we have achieved higher living standards, more wealth, a wider distribution of goods, greater leisure, better health, a bigger reduction of poverty and suffering, and larger opportunities than any other people ever knew.

The job isn't perfect or finished, of course. Much that is bad remains to be corrected. Much that is good still is faulty or barely started.

So a lot of people become impatient. They want a short cut to utopia. And that short cut turns out to be the oldest, roughest, longest road in the world—worn by the tired feet of untold millions—the road to State control and lost liberty. It is strewn with promises never fulfilled and hopes which were dashed. It is littered with State planning which failed.

Yet, it is always tempting. Because there always are those who beckon us onto the road with promises that government will give something for nothing. They offer personal security at the cost of individual freedom.

CAN'T DO IT

That is the price which always is paid, and the security never is delivered. For government can't provide it. Government never created anything. It never built an industry. It never perfected an invention. It never created a moral code, produced a work of art or made a dollar.

All progress has come from the personal efforts of individuals. Of a very few people—just a tiny percentage of the whole. Yet, by their hard work, inspiration, superior mentality or plain desire to forge ahead, they did something of benefit to their fellows. That is the only way mankind has progressed. Civilization is the sum total of many personal accomplishments.

Man has done best only when allowed to mind his own business. He has done worst when government tried to mind it for him. That is why our American plan of free individuals has worked better than any other.

Financial Aid to Britain

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Wednesday, July 27 (legislative day of Thursday, June 2), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Symptom, Not Cause," published in the Wall Street Journal of July 27, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SYMPTOM, NOT CAUSE

Senator KEM, of Missouri, has proposed to deny foreign aid funds to nations that continue to nationalize basic industries. There is a growing disposition in the Senate to so amend the bill appropriating money for continuation of the Economic Cooperation Administration.

The proposal obviously is aimed primarily at Great Britain, which is proceeding with plans to nationalize the steel industry. If Congress adopted the Kem proposal and Britain afterward nationalized steel, American aid would be cut off.

There is a good deal of sense to the proposal. Preponderant opinion in this country certainly is against government ownership—even our "liberals" have to sugar-coat proposals which look to that end. Furthermore nationalization has been anything but a success. So it is a little difficult to see why the American people should pay taxes to buy an expensive plaything for some British Socialists.

Just the same the ban on nationalization does not attack the real weakness in the European Recovery Program. Britain could nationalize steel tomorrow or refrain from nationalizing and—unless a great many other things were done—Britain would not be appreciably strengthened or weakened; her ability to benefit from American aid would not be changed.

The reason Britain's situation deteriorates is the attempt at centralized management of her economy. It happens to be a Socialist management and nationalization is a Socialist fetish. But if the attempt were made under different auspices, the effect would not be radically different.

The managed economy demands that the citizen even in most trivial affairs must conform to a set of rules. In addition to the specific rules, the Government managers have the more powerful controls of taxation. The result is to destroy incentive to venture and to stifle ambition.

And that system cannot stop at national borders; at least not in a country like Britain, which must export and import in a large way. Through a system of quotas, prohibitions and currency juggling the system must be protected from impact from without.

Whether the Government owns the basic industries or whether it controls them through power to issue orders to private managers, the effect is the same. All production costs are inflated and rendered noncompetitive.

It is just as useless to think that financial assistance will help this situation as it is to think that loans will help a business conducted without regard to costs. Any money put in will be sooner or later swallowed by the wasteful practices.

Nationalization is a spectacular phase of the British program. But it is not the fatal flaw in the program; rather it is a symptom of the flaw. That flaw is the thought that production is no problem and that modern man only needs the right machinery to distribute the fruits.

Possibly if Senator KEM's amendment were passed the British would refuse further American aid because they would refuse to meet the condition set up.

We think that would be good both for the people of this country and the people of Great Britain.

Phoney War Scares

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 27 (legislative day of Thursday, June 2), 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Phoney War Scares," from the Washington Daily News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PHONEY WAR SCARES

President Truman and the State Department are undermining the public's confidence in their foreign affairs leadership by blowing hot and cold on the Russian situation.

In Chicago on July 19 Mr. Truman told a Shriner's convention the Russian threat was waning. Six days later, in support of his arms-for-Europe program, he told Congress the "massed might of the Soviet Union" was such that it might again resort to the threat or use of force.

To back that up, the State Department has disclosed that it will lay before Congress secret intelligence reports indicating United States agents had broken through the iron curtain and found that Russia is arming for war. Oddly enough, however, no responsible official in the Army could be found who seemed aware of any new information on this subject.

The President resorted to the dire-warning procedure when he was seeking reenactment of the Selective Service Act in March 1948.

The Russian problem is serious enough without whipping up war scares to frighten the American people into supporting the administration's program. Moreover, this wolf, wolf business has worn so thin that a reaction is inevitable if there is much more of it.

There is every reason to assume that communism will continue to be a threat to world peace for a generation or longer—if a showdown does not come sooner than that. Our plans should be made accordingly, for a long, trying, costly period of continuing vigilance. If the public understands that, support for essential preparedness measures will not be lacking.

But distrust and distaste will be created if the policy of recurring crises is pursued further on the theory that the American people are a lot of boobs who have to be artificially alarmed whenever the President wants an act passed by Congress.

Pay of Postal Workers

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1949

Mr. DAVENPORT. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following statement which I made before the Murray subcommittee of the House Committee on Post Office and Civil Service, on H. R. 4495 and Senate bill 1772, on Friday, July 22:

Now that the waning days of the Eighty-first Congress are on hand, postal employees across the length and breadth of the land are anxiously wondering what action the present session of Congress will take to alleviate the long-existing financial distress of the faithful, loyal postal workers.

Recently I have had a series of conferences with the leaders of the various postal organizations at the Pittsburgh Post Office, namely: Walter Skad, National Association of Railway Mail Service and Post Office Mail Handlers; Edward Coll, National Association of Postal Supervisors; A. P. Dudich, National Federation of Post Office Clerks; Thomas Flaherty, National Association of Letter Carriers; Seth Gambrell, National Alliance of

Postal Employees; Paul Letzkus, United National Association of Post Office Clerks; Mr. Johnston, custodial employees; and Vincent Dugan, MVS employees.

In the course of these conferences, I have come to a better understanding of the problems that beset the average postal worker, and it is with this new understanding that I urge the present Congress to enact the bills—H. R. 4495 in the House and S. 1772 in the Senate.

These bills contain the following provisions, among others: They provide for a general salary increase, which is so necessary to remove the present wage discrimination that now exists against the postal workers in these days of high prices. They provide for increased longevity grades to reward the faithful postal worker for his years of service. They eliminate the first four salary grades, thus enabling the Post Office Department to attract the highest type of personnel into the civil service who are not now willing to start at the extremely low salary grades presently in effect. They grant the postal employees equal parity with other Federal employees in the matter of annual and sick leave by increasing the present number of days to 26 and 15, respectively. They provide for the crediting of all past service in order that the older employees in point of service may enjoy the longevity grades which are so rightfully theirs.

Therefore, it is with the objective of securing the passage of S. 1772 and H. R. 4495 that I would like to present the following facts:

There are 495,000 employees serving the public in the United States post offices. They, together with their families, total up to millions of law-abiding hard-working American citizens. They represent a sizable segment of the Nation's population. It is an important segment, reaching into every city, village, and hamlet.

No one has better expressed the spirit of the post office and what it means to the national economy than Charles Sumner, noted public figure of the past, who wrote as follows: "Of all existing departments, the post office is most entitled to consideration, for it is the most universal in its beneficence. That public welfare which is the declared object of all the departments appears here in its most attractive form. There is nothing which is not helped by the post office. Is business in question? The post office is at hand with invaluable aid, quickening and multiplying its activities. Is it charity? The post office is the good samaritan—omnipresent in all the highways of the land. Is it the precious intercourse of friends? The post office is carrier, interpreter, handmaid. Is it education? The post office is schoolmaster, with school for all and scholars by the million. Is it the service of the Government? The post office lends itself so completely to this essential work that the national will is carried without noise to the most remote corners and the Republic becomes one and indivisible. Without the post office, there would not be that national unity with irresistible guaranty of equal rights for all, which is the glory of the Republic."

Yes, it is the postal employee who is "the ambassador of Uncle Sam to the American home." He, in what he represents, is one of the most important persons in the life of every American.

It is imperative, therefore, that he be permitted to earn an adequate livelihood. It is important that he be able to decently and adequately feed, clothe, and shelter his family. But he has not had this opportunity in the past many years. In spite of the admittedly inadequate pay raise given him recently, he is still debt-ridden. He is still forced to work at other jobs to the detriment of his health and well-being. He is still unable to give his children the opportunities enjoyed by so many others.

The passage of S. 1772 and H. R. 4495 means much to the postal employee. It means much more to the welfare of the entire Nation. Why? Let me tell you why.

1. Many postal employees are now working at part-time jobs. According to labor experts, an increase of a few hundred dollars annually in many of the low-pay public employment categories (such as the Post Office) would "take most of these part-time workers out of the competitive employment market. This, they point out, would result in a general economic improvement that would more than offset the additional cost of government." In these days of rising sporadic unemployment, this would be an important factor in alleviating such unemployment.

2. Increased wages to postal employees will mean increased spending. Most postal employees have done without many necessities they need in the home, such as refrigerators, washing machines, clothing, and a host of others. With increased wages, they will be able to buy some of these articles, thus creating a totally new market and providing a new stimulus to business. It is important to remember that this is a potential market of millions of new customers.

3. Presently, it is increasingly difficult to secure personnel for the Post Office because of low beginning salaries and the generally inadequate pay schedule. Furthermore, the labor turn-over is abnormally high. The expense involved in training postal employees to that high degree of efficiency so necessary to the expeditious handling of the mails is doubled and trebled, when such highly trained employees leave the service. Actually, it would be a measure of economy to so increase postal salaries that labor turnover will be reduced to the minimum. Furthermore, with the increasing of low starting salaries, the postal service will be able to attract the very highest type of personnel, who will be eager to make the service their career, if they can earn an adequate living.

4. Also, such a salary increase may mean much to the future of America. The hundreds of thousands of children in postal families will not be denied their chance in life to secure an adequate education, which may even include college, because of the inability of their parents to support them while they are pursuing their education. Those thousands of boys and girls presently attending high school, who desire to enter schools of higher education and who now are unable to do so because of their parents' need, may be able to do so if Congress grants an adequate postal salary increase. This will mean a better-educated, a better-trained group of citizens, who will some day guide the destinies of our Republic. The rewards of an adequate postal salary increase, in this instance, are incalculable.

5. Such salary increase will strengthen the morale of all postal employees, who have long labored under increasingly difficult financial conditions. And, as it is well known, it is the satisfied employee who is the best employee.

6. To those who say that salary increases would not be now in the interests of economy, I reply that inadequate salaries, in the long run, are not true economy. Rather, such economy should be secured by eliminating unnecessary services and improving the necessary activities of the Postal Department.

Therefore, it is for the above-enumerated reasons that I earnestly request the passage of S. 1772 and H. R. 4495. They are necessary bills. They are good bills. They should be enacted into the law of the land.

How Congress Treats Itself

EXTENSION OF REMARKS
OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excerpt from an article entitled "Nothing Quiet Along the Potomac," by Lawrence E. Smith, appearing in the July 1949 issue of the Independent Petroleum Association of America.

This article brings to light the interesting fact that Congress frequently gets the short end of the deal when its efforts at economy are thwarted by the multi-million-dollar expenditures of many of our executive agencies and bureaus.

There are times when one feels that Congress needs a good talking to. One of the occasions is when the hearings on appropriations for the legislative branch are published and all of the soul-searching over expenditures are revealed. Here is the branch of Government without whose authorization not a dime of the public money can be spent, planning all sorts of economies for itself, trying apparently to do all the economizing at its own expense. We would like to see a like degree of scrutiny of the budget requests of the bureaucracy.

The Appropriations Committee in effect puts Congress in the witness chair and challenges nearly every item outside the regular run of fixed necessities, such as salaries of Members and their staffs. Take this last time on May 20 when a subcommittee on the House side took testimony of such employees as the Architect of the Capitol, the Public Printer, the Librarian of Congress, and others. They had to make every statement stand up. Little things, such as replacing three revolving doors. Too expensive, said one of the Congressmen. Why can't you patch up the present ones? He dropped his objection when he was told that the present ones were hazards. Tourists were getting their feet and hands caught in the rickety things.

Mr. NORRELL, of Arkansas, was chairman of the subcommittee. He opened the proceedings by saying that the thought "We ought to take the leadership in practicing economy and doing the right thing, so that we may be an example to the executive departments." A worthy ambition and Mr. NORRELL deserves applause, but we are pretty certain that no executive department or agency is going to notice the example. Senator BYRD's latest report for the Joint Committee on Reduction of Nonessential Federal Expenditures said that in April the number of civilian employees in the executive departments increase by more than 350 per day which meant roughly a million dollars a day added to the pay roll.

The House subcommittee went into a lot of things. Mr. STEFAN, of Nebraska, called attention to the waste of cooled air in the summer and heat in the winter by leaving the front doors of the House Office Building open. The Architect promised to look into the matter. Snow removal turned out to be no problem last winter and only $60 of the $5,000 appropriated for the purpose was spent. There was promise of continued economy, for by spending $850 for a power mower

of a new type, the grass can be cut and when the time comes, the machine can be turned into a snow plow, also a sweeper that will do the work of 10 men. Some of the bureaus would not only buy the machine but would keep on the 10 men, too. Maybe another man would be added to drive the power unit.

It's going to cost $2,000 to run the little subway railway system from the Senate Office Building to the Capitol. That is for the coming year. Tourists love this feature. Senators sometimes can't get places in the cars and have to walk, although it was designed for them. The Botanic Garden, which is near the Capitol, needs $188,000, so the landscape gardener testified. About 200,000 visitors see the gardens each year. Mr. SCRIVNER, of Kansas, was a bit concerned over this nonlegislative activity, which began in 1820. Mr. NORRELL said the only consolation he got out of keeping this recreational feature was that if the Department of Agriculture ran it the cost might be $2,000,000 a year instead of less than $200,000.

Well, from the sound of things, Congress is going to wind up as usual by allowing itself to spend the bare minimum it can get along on. It even takes chances on its own safety. The Architect would like to do several things to strengthen the Capitol, making certain lasting repairs. The tendency, though, is to go on and patch. About a 10-percent cut in the budget of any of several of the big departments would enable the Architect to do the kind of job that would assure that the Capitol roof will not fall in, and the public welfare would not be disturbed in the slightest. But that's the way Congress is. It will go on half-soling its shoes and wearing patches on the seat of its britches. The departments will go on wasting dollars where Congress saves pennies until Congress itself does something about it.

Fourth of July Editorial in the Panama City Star and Herald

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. THOMPSON. Mr. Speaker, as chairman of the Special Subcommittee on Panama Canal Tolls, I have had many occasions to observe the people of Panama and to appreciate their underlying friendliness toward the people of the United States. There are so many outstanding examples of this fine trait that to attempt to enumerate them in the CONGRESSIONAL RECORD would be to fill a great volume. I have from time to time inserted in the RECORD some evidences of mutual regard which seem to me to be especially worthy of notice.

The attention of Members of Congress is invited to a copy of an editorial which appeared in the Panama City Star and Herald on July 4, 1949, and which follows below.

Special interest is always attached to expressions by this particular newspaper which publishes a daily edition, both English and Spanish. When I had the honor of visiting the office of this paper last spring, I was impressed by its up-to-date and altogether modern atmosphere, by its excellent news coverage, and by its objective and understanding editorials.

It is particularly noteworthy that the files of this newspaper go back to 1849 and so they provide the student of history with a matchless source of information concerning the use of the Isthmus of Panama for overland traffic, and later for the Canal, ever since the days of the gold rush.

ON THE FOURTH OF JULY 1949

Today we salute the great American democracy of the Western Hemisphere, the United States of America, on the one hundred and seventy-third anniversary of the proclamation of its independence as a free and sovereign nation, the first to be so constituted in the New World.

And today the Republic of Panama, the youngest of the sister republics of the United States, sets aside all senseless prejudices, suspicions, and unwarranted complexes to join officially with its elder American sister in the celebration of this anniversary.

Official Panama takes a day off today and all Government offices will be closed as an expression of official solidarity with the great northern nation. This action is the expression of the determination of President Domingo Diaz Arosemena to halt the drift away from the norms of solidarity and friendship which prevailed during the early days of association between the North Americans and the Panamanians. It was one of the pledges he made in his inaugural address that the old order of cordial relations should be restored in order to maintain and advance that very necessary good understanding which must exist between the two peoples brought together by the inscrutable designs of providence to live in close association on the Isthmus of Panama in perpetuity—forever and forever.

There can be nothing derogatory of sovereignty or national prestige in this display of solidarity by the younger republic toward the elder, because the United States of America has developed into an organism of which all men—men of every nationality and race—can be proud, because it is the creation of common workingmen who carved it out of a wilderness where they had fled in order to live in freedom.

The average red-blooded man can be proud of the effort which created the North American democracy without the aid of the audacious claimants of divine rights. It was created by the calloused hands of pioneering men and women, all inspired by a single desire: to be free to shape their lives as they thought best. They wanted to be free politically, free economically, and free to worship God as they thought proper. There can be nothing derogatory in joining such people in celebrating the anniversary of the advent of such a significant achievement.

And there is much to be gained from close and emulatory association with such people. From them we can learn that there is great profits for those who resolutely seek to enrich the natural fertility of the soil with the sweat of their brow. And we can learn also from their devotion to the Godhead to whom they looked for approval of their efforts, seeking to live in the ways of His laws. And because God was ever in their thoughts as they labored, He blessed their efforts abundantly and they prospered and became great spiritually and materially.

There is nothing derogatory in being friendly, cordially friendly with the Nation whose foundations were laid in that far away day in 1776, because its example is worth studying and emulating. Today, in the one hundred and seventy-third year of its national life, it stands at the forefront of the civilized nations of the world, materially and spiritually powerful, and generously shouldering the great burden of assisting a war-devastated and dislocated world back to economic normalcy through the unselfish use of the abundant resources with which God has blessed the efforts of its people. Panama, any nation, any free people can only feel pride in association with such a nation.

Today, the President of the Republic officially leads the Panamanian people in a welcome gesture of solidarity with Uncle Sam in the celebration of the Fourth of July. To President Diaz, therefore, is due the acknowledgments of the community for his moral courage in proclaiming the necessity of eliminating distorted prejudices which may have been engendered and fostered mainly for the purpose of serving political expediency.

We join with the Diaz administration and the rest of the Panamanian community in felicitations to Uncle Sam and his progressive Nation.

Protection of Government Employees Against Employment Hazards

EXTENSION OF REMARKS

OF

HON. WALTER B. HUBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. HUBER. Mr. Speaker, several weeks ago the newspapers of our country carried flaming headlines calling attention to the maiming and killing of hundreds of our citizens over the Independence Day week end. It is, of course, more sensational to be drowned at a public beach, or to be killed or crippled on the highway, yet a frightful toll of injuries and deaths occur yearly that do not make headlines.

Industry generally has recognized the problem of preventing industrial accidents, and great strides have been made. However, one segment of our society—those employed by municipalities, States, and the Federal Government—unfortunately, are all too frequently not afforded protection to the same degree.

I have here a letter which I received from Mr. George B. Hay, chairman, statistics committee, public employee safety committee of the National Safety Council, and safety and claims examiner of the city of Akron, Ohio, that I believe should be of interest to every Member of the Congress. Mr. Hay has made a study of this subject and was recently invited by the President to attend the Safety Conference in Washington.

NATIONAL SAFETY COUNCIL,
Chicago, Ill., July 11, 1949.

Hon. WALTER B. HUBER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN HUBER: I should like to call to your attention the undue risks incurred by persons in the employ of local, State, and other services of the Government. Since my subject involves, rather literally, matters of life and death and personal injury, as well as substantial financial loss to public employers, the letter is in the public interest

According to recent figures from the Bureau of Labor Statistics, Government employees currently total 5,773,000 persons. Of the total of State and local employees, some 2,330,000 are employed in noneducational pursuits. In other words, about 2,333,000 men and women are engaged on the State and local levels in occupations with hazards comparable to those of private industry. A large proportion of the 1,885,000 Federal employees are comparably engaged.

On the basis of data available, employees of government have by no means the protection against the hazards of their work that is provided employees in the major private industries in the country. Let me be specific: Industries reporting to the National Safety Council in 1948, representing an exposure of 13,600,000,000 man-hours, experienced an average of 11.49 injuries per million man-hours of labor. The average severity rate for these industries (days lost plus time charges per thousand man-hours of work) was 1.12.

Because local governments do not generally keep injury records on the American Standard Code basis, comparison with private industry experience must be made on the basis of figures collected by this committee from those standard-basis cities which have been cooperating with us.

Eight large cities have reported more than 40,000,000 man-hours of experience to this committee as of this date. The employees of these cities engage in public utility, public works, construction, maintenance, and other occupations directly comparable to those of private industry. The average frequency of these cities, as of June 14, 1949, was 30.7 lost-time injuries per million man-hours of work, and the severity rate was 1.34.

In other words, public employees experience almost three times the number of lost-time injuries under roughly comparable exposures as do the employees of private industry. The severity rates are favorably comparable.

The absence of a broad base of information on the injury experience of public employees is itself evidence that there is lacking among public employing agencies the kind of accident-prevention program, with essential records, that is used in private industry to control accident, health, and fire hazards.

Three years ago a group of public officials, aware of the problem, organized under the auspices of the National Safety Council to start a program of fact finding, publicity, and practical assistance, with the hope of interesting public employers, not only in the humanitarian reasons for safety work, but also in the tremendous direct cost of accidents in terms of compensation, public liability, and fire-insurance premiums, and the indirect losses in the form of personal skills, damage to equipment, and other consequences of accident.

The success of this committee's project has been only moderate. It will be substantially greater only when we have the attention of public executives in high position who see the accident problem as one directly affecting the cost of efficiency in government. Police officials, mayors, city managers, county commissioners, and governors are more and more coming to see the incongruity between highly publicized and successful campaigns to protect the public and the lack of comparable effort for their own employees.

The strength of this committee's position lies in the fact that accident rates have been drastically reduced by means and with materials already available. Forty years ago the working force in some of the more hazardous private industries were suffering injuries at the rate of 90 to 100 per million man-hours. These same industries, following intensive efforts to control hazards, are now reporting as low as two and three injuries per million man-hours.

Municipalities have, too rarely, also achieved reductions, though none that I know of has achieved an accident record substantially below the all-industry average of 11.49 reported above. In 1944 an aggressive safety program was undertaken, as in other cities, by San Diego. The San Diego efforts are indicated by the frequencies listed below.

Employee accident experience, city of San Diego—Number of lost-time injuries per million man-hours

(Yearly average)	1944	1945	1946	1947	1948	[1] 1949
Department of Public Works	82.3	46.63	37.39	30.11	35.16	29.09
Entire city average	37.03	28.35	23.33	23.34	24.22	18.25

[1] 5 months.

We think the figures are significant because they show the seriousness of public employment hazards without organized safety work (1944), and the control over these hazards which the public employer can have if he chooses to have it.

The San Diego experience is by no means isolated, but it serves the purpose of this letter. Milwaukee, Akron, Detroit, Baltimore, Cleveland, Tuscon, and Phoenix, and other cities have taken steps to put occupational hazards of their employees under centralized administration, with gratifying results. Their efforts are bright spots, they serve also to illuminate the fact that they are exceptions.

The members of this committee shall appreciate your interest and the use of whatever means you may find to inform employers in Government of the seriousness of their accident problem as it affects operating efficiency and expenditures.

There is an abundance of technical resource for the use of safety engineers in public service, and a large and increasing supply of safety training materials for supervisors and other employees. The public employer can, if he wishes, greatly reduce the current serious drain of public money and waste of human capabilities.

Accident costs are not costs at all. A cost implies that we get something for our money. For the public money spent on accidents which have already happened, the public gets nothing. Money spent for prevention, on the other hand, has been proved beyond doubt to be an abundantly fruitful investment of public funds, as well as a debt we owe to the people whose time and toil we buy.

Respectfully yours,

GEORGE B. HAY,
Chairman, Statistics Committee, Public Employee Safety Committee, and Safety and Claims Examiner, City of Akron.

The United States Should Not Withdraw From Berlin

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. JAVITS. Mr. Speaker, the news reports about possible withdrawal of important elements of the United States military government from Berlin to which I referred in my remarks on the floor of the House today are appended hereto:

WEST EMPHASIZES ITS DETERMINATION TO STAY IN BERLIN—PLEDGE MADE AS PROGRAM IS OUTLINED ON SHIFTING KEY PERSONNEL FROM CITY—PRESTIGE IS STILL ISSUE—UNITED STATES MUST REPLACE SEVERAL TOP OFFICIALS IN SHAKE-UP—CLAY ADVISERS TO LEAVE

(By Drew Middleton)

BERLIN, July 26.—Both the United States and British military governments announced today their intention of transferring key personnel from Berlin to western Germany and their unswervable intention to maintain the cause of the West in Berlin.

Whether in the face of German opportunism and Russian pressure these two objectives can be achieved is a matter of grave concern to a majority of western officials and German supporters of western policy here.

The British have an easier task than the Americans. During the present delicate period when the military-government organization is giving way to a German Federal Republic and an Allied High Commission they will lose only one chief of division, Sir Cecil Weir, economics adviser to Gen. Sir Brian Robertson.

The United States on the other hand faces the loss of a number of experienced officials. Against this must be balanced the possibility that John J. McCloy, United States High Commissioner-Designate, will be able to recruit men as able although naturally less experienced on his trip to the United States early next month.

LOSS OF KEYMEN EXPECTED

According to one highly placed United States Government official here, the American military government must prepare for the resignation or transfer of nine key officials. This is in addition to the transfer from Berlin to Frankfort of the remaining important officers of the military government, a move that understandably will increase present uncertainty in military-government offices.

This uncertainty and future loss of key officials led this source to describe the present situation as "disintegration of the American military government without means of reconstruction at hand."

Such descriptions of the present situation should be considered in the light of the warm personal loyalty that many of these officials feel for Gen. Lucius D. Clay and that they have expressed to the writer during the last week. This condition has been aggravated, in the view of American observers, by the contention that Mr. McCloy, General Clay's successor as military governor, has consulted more often with the group of experts that he brought with him from Washington than with the men who have had 3 and 4 years of experience in Germany.

HAYS SLATED TO LEAVE

A partial list of those who expect to leave the military government in Germany or who have expressed their desire to go includes Maj. Gen. George P. Hays, deputy military governor; Joseph A. Panuch, special adviser to the military governor; Brig. Gen. Charles A. Gailey, chief of staff of the military governor; Lawrence Wilkinson, chief of the economic division; Philip Hawkins, deputy chief of the economics division; Dr. Alonzo G. Grace, chief of the education and cultural relations division; Brig. Gen. Clarence L. Adcock, chief of the American section of the bipartite board; Col. Gordon Textor, chief of the information services division, and Maj. Gen. William Hall, director of intelligence.

In some cases, such as those of Generals Hall, Hays, and Gailey, the transfer is a

matter of Army routine. However, United States observers here believe that these experienced officers could remain if they desired to do so.

Dr. Edward H. Litchfield, director of the civil administration division of the office of military government (United States), announced tonight that he was resigning under protest.

Dr. Litchfield, it is learned from a reliable source, has agreed to remain in his present post for another month. It may be that a post will be given him under the new administration, a move that would be applauded by those who admire his grasp of the political situation in western Germany.

UNITED STATES FACES TWO PROBLEMS

The present situation, whether it can be called "disintegration" or "readjustment," comes at a difficult period. American political observers with no personal stake in the present changes hold that the United States faces two grave problems in Germany that cannot be solved to the satisfaction of the United States without the presence of an integrated and "happy" United States administration.

The first of these is the problem of returning power to Germans in the federal republic. This is complicated by the fact that during the present election campaign in western Germany leaders of all parties have called upon chauvinistic sentiments in German life, thus encouraging extreme nationalism which has been present for almost a year.

The second problem is that of Berlin. Gradual reduction of the airlift. Transfer of key United States and British personnel from the city and withdrawal of a strong segment of the United States Army garrison will by September 1 result in a situation in which the position of the western powers in the city will be weaker than it has been since the beginning of four-power organization.

Announcements by the American and British military governments tonight skirted this salient fact, in the opinion of some United States officials here.

The American announcement said that Mr. McCloy was "consolidating certain operations now being carried out in Berlin into operations already functioning in the Frankfort area."

Mr. McCloy stated, according to the announcement, that the shift could not be described as a shift in headquarters since he would maintain headquarters both here and in Frankfort and divide his time between the two cities.

Inevitably under the charter of the allied high commission, Mr. McCloy, as United States High Commissioner, must spend most of his time with the government of the federal republic. And since most of his policy-making officials will be transferred from Berlin to Frankfort it is likely that he will have less reason to visit Berlin than formerly, whether or not it is described as headquarters.

The announcement stated that "all elements of the high commission" dealing with four-power matters would remain in Berlin and that the United States military government for the Berlin sector as well as military and Air Force units would remain here.

The American and British statements both emphasized the intention of the two powers to retain the present position in the city.

UNITED STATES TROOPS SLATED TO LEAVE BERLIN—SIXTEENTH INFANTRY, GARRISON BACKBONE, TO BE WITHDRAWN UNDER OCCUPATION REORGANIZATION

BERLIN, July 25.—The Third Battalion of the Sixteenth Infantry Regiment, which has been the backbone of the United States Army's garrison in Berlin through the last year of the cold war, will be withdrawn this summer in accordance with a general realinement of the administrative and military organizations in Germany, a reliable source said tonight.

As far as can be learned at present no replacement is expected for this battalion although it is expected that a group of officers of the United States Air Force will be moved to Berlin sometime this summer.

These, however, will not constitute a tactical reinforcement and the task of maintaining order in the United States sector of the city will be left to the Sixteenth Constabulatory Squadron of four men and a single battalion of military policemen.

The troops withdrawal will follow soon after the completion of the transfer of about 200 key officials of the office of military government (United States) from Berlin to Frankfort, a move that is viewed with strong anxiety by a number of officials here because of its probable political consequences.

There are others, however, who feel that while at first the move may damage the west's position in eastern Germany and eastern Europe, in the long run it will not prejudice the west's standing in Berlin and the eastern zone.

The view as expressed by one of these officials is that although the west will try to paint the United States military and civilian shifts as a withdrawal, western deeds in Berlin during the last 18 months will outweight eastern words.

The details of the transfer of military government officials have not been communicated to those involved, although there is general knowledge, as there has been for the last week, that the move is planned.

At present there are between 500 and 600 American employees in the office of military government in Berlin. Of these about 200 are scheduled to move to Frankfort, including most of the chiefs and assistant chiefs of divisions.

In many cases their transfer will necessitate the transfer of a considerable number of secretarial help and clerks so that the total number involved in the transfer arrangements this summer will eventually be close to 400.

At a military government staff meeting today it was reported that the schedules of those slated for transfer were being worked out. One official said that the number of key officials who would go first might be fewer than 200, but declared that the complete transfer would involve that number or more.

UNITED STATES TO SHIFT STAFF FROM BERLIN; BOON TO SOVIET FEARED—MILITARY GOVERNMENT TO SEND 200 OF ITS KEY OFFICIALS TO FRANKFORT BY AUGUST 10—PLAN SHARPLY CRITICIZED—GRAVE POLITICAL CONSEQUENCES SEEN IF RUSSIA INTERPRETS IT AS AMERICAN WITHDRAWAL

(By Drew Middleton)

BERLIN, July 24—An administrative shuffle that will move the bulk of United States Military Government officials out of Berlin by August 10 will be announced this week, according to reliable sources in the military government.

Transfers of more than three-quarters of the key officials of the Office of Military Government (United States) from Berlin to Frankfort has been ordered for administrative efficiency, but it has aroused deep concern on the part of many officials who believe it will produce grave political consequences in the cold war.

One important official went so far as to describe the effect of this move, which German Communists and Russians are sure to interpret as American "withdrawal, as catastrophic."

According to the plan as it now stands, about 200 key officials will move from Berlin to Frankfort. All work in the Office of Military Government, which has had its main headquarters here despite the fact that most of its administrative functions have been performed in the United States zone of occupation.

SIXTY TO REMAIN IN BERLIN

About 60 officials of this office will remain in Berlin to continue the four-power talks that are now going on at three levels.

In addition the United States military government (Berlin sector) headed by Brig. Gen. Frank L. Howley will remain at approximately its present strength for the time being. No reduction is contemplated immediately in the garrison maintained here by the United States Army.

It is understood that the British military government contemplates a similar transfer in the near future.

News of this plan has caused the liveliest concern among many officials who have been fighting the cold war in Berlin. While they sympathize with the efforts of High Commissioner John J. McCloy to achieve administrative efficiency they doubt that efficiency is more important than the political consequences of the projected transfer.

A number of officials with whom this correspondent discussed the plan expressed fear that there might be a tendency during the present period of reorganization, which they agree is necessary, to forget the human factor in the struggle for Germany.

Here are some of the main objections to the plan as summarized by United States officials well informed on the tactical situation in the cold war in Germany.

1. The departure of so many key officials will be seized upon by the Russians as the principal theme for propaganda that the west is giving up Berlin and all ideas of German unity.

2. While there is strong opposition to allowing United States policy to be swayed by what Soviet propagandists may and may not do, the effects of such a campaign upon a nascent resistance movement in the Soviet zone of occupation and upon friends of the west in Poland and Czechoslovakia will be serious and perhaps decisive. "Is administrative efficiency more valuable than maintaining hope in the hearts of our friends in eastern Europe?" is the way one official put the problem.

3. News of such a move cannot help having an important effect upon the people of the three western sectors of Berlin who have considered themselves as supporters and even allies of the west against the Soviet Union and who are already troubled by the refusal of the western powers to allow the admission of Berlin as the twelfth laender [state] in the German federal republic.

4. Frankfort is already extremely crowded. It will be difficult to find billets for 200 officials, let alone their families who will follow them to the west German city.

The officials are to go first on temporary duty. Their families are to follow later. Because of the crowding in Frankfurt the best that can be promised officials at the moment is a bed.

Perhaps the most important immediate effect of moving the key officials is that it will be used in the midst of the west German election campaign by German Communists and by Nationalist Germans to prove that the Americans are more interested in partition that eventual German unity.

"It is absolutely necessary that we impress upon the Germans the United States' intention to continue to press for the unification of Germany," one source said.

Another said the United States stand in Berlin in the face of the Soviet blockade was a beacon to all eastern Europe. "We should try to maintain the position of Berlin as the bulwark of democracy behind the iron curtain," he declared.

The Strength of the Marine Corps Should Be Established at 6 Percent of All Our Armed Forces

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1949

Mr. MANSFIELD. Mr. Speaker, I am inserting in the RECORD the approval of the Marine Corps Reserve Officers' Association of S. 2177 and H. R. 5403–5457 providing for a Marine Corps established at a minimum of 6 percent of the strength of our armed forces. I am also calling to the attention of the Congress an article on these bills carried in the Government Standard of July 8, 1949. In addition, Mr. Speaker, I am inserting A Marine's Prayer by Maj. A. M. Watson, USMC, retired.

It is my hope that the Committee on Armed Services will either hold hearings on these measures in the near future or incorporate their provisions in the Tydings-Vinson so-called unification measure now under consideration.

The Marine Corps Reserve Officers Association today voiced approval of legislation introduced yesterday (S. 2177 and H. R. 5403–5457) providing for a Marine Corps established at a minimum of 6 percent of the strength of our armed forces. In this connection, following is a copy of the bill, and the statement of Col. Melvin J. Maas, United States Marine Corps Reserve, national president of Marine Corps Reserve Officers Association:

"A bill to create and assign duties to the office of Assistant Secretary of the Navy for the Marine Corps, and to fix the personnel strength of the United States Marine Corps in relation to that of the other armed forces

"*Be it enacted, etc.*, That there shall be in the Department of the Navy an Assistant Secretary of the Navy for the Marine Corps who shall be appointed by the President, by and with the advice and consent of the Senate, and shall receive the same compensation as the other Assistant Secretaries of the Navy. The Assistant Secretary of the Navy for the Marine Corps shall, under the direction of the Secretary of the Navy, be charged with the supervision of the United States Marine Corps and the coordination of its activities with other governmental agencies, and in addition, such other duties as may be assigned to him by the Secretary of the Navy.

"SEC. 2. The first sentence of section 206 (c) of the National Security Act of 1947 is hereby amended to read as follows: 'The United States Marine Corps, within the Department of the Navy, shall include land combat and services and such aviation as may be organic therein, and the personnel strength of the Regular Marine Corps shall be maintained at not less than 6 percent of the combined personnel strengths of the Regular Army, the Regular Navy, and the Regular Air Force.' "

STATEMENT OF COL. MELVIN J. MAAS

"The Marine Corps Reserve Officers Association strongly endorses the legislation introduced by Congressman MIKE J. MANSFIELD, and DONALD L. JACKSON, and Senator PAUL H. DOUGLAS and other friends of the Marine Corps, to provide that the strength of the Marine Corps shall be maintained hereafter at not less than 6 percent of the total strength of the armed forces. As a matter of fact, through recent history that is just about the strength at which the Marine Corps has been maintained. Sometimes it was a little more, sometimes it was a little less, but it has averaged about 6 percent of the total strength of the Army and Navy. The enactment of this bill into law would have a very fine effect all the way around. It would set at rest the rumors and fears that the Marine Corps was to be abolished, or reduced drastically. At the same time, it would enable the Marine Corps to do a much better job on its long-range planning. The Marine Corps is charged with the principal responsibility in time of peace, of taking leadership in developing amphibious warfare, and new weapons and techniques for amphibious operations. With the Corps' future settled and its relative strength known in advance, the marines can plan most effectively their part of the country's military security. Amphibious operations are the keystone of American defense plans. It is the marines who, in conjunction with the Navy, must seize and hold overseas bases from which the Army and Air Force can operate to strike at the enemy in his homeland, when and if we are attacked. The 6 percent proposal merely means that for every 94 soldiers, sailors, and airmen, there will be 6 marines. This is essential to give us a balanced security team."

MARINE CORPS STRENGTH SET AND ASSISTANT SECRETARYSHIP ASKED IN SENATE-HOUSE BILLS

Creation of the post of Assistant Secretary of the Navy for the Marine Corps and setting the personnel strength of the United States Marine Corps at 6 percent of the combined personnel strengths of the Regular Army, the Regular Navy and the Regular Air Force is proposed in S. 2177.

The bill was introduced by Senator DOUGLAS for himself and Senators GRAHAM, MCCARTHY, and FLANDERS and it was referred to the Senate Committee on Armed Services.

This measure, and its House counterparts, are strongly supported by AFGE as a means of safeguarding the proud and traditional role of the Marine Corps among the United States armed services.

STRONGLY SUPPORTED

There are 59 bills similar to S. 2177 introduced by Members of the House of Representatives, indicative of the widespread support that this proposed legislation has already received in Congress.

The National Executive Council of AFGE is interested in protection of the Marine Corps and national President Yaden declared that AFGE will give full support to these bills.

Full text of the Senate bill:

"A bill to create, and assign duties to, the office of Assistant Secretary of the Navy for the Marine Corps, and to fix the personnel strength of the United States Marine Corps in relation to that of the other armed forces

"*Be it enacted, etc.*, That there shall be in the Department of the Navy an Assistant Secretary of the Navy for the Marine Corps who shall be appointed by the President, by and with the advice and consent of the Senate, and shall receive the same compensation as the other Assistant Secretaries of the Navy.

"The Assistant Secretary of the Navy for the Marine Corps shall, under the direction of the Secretary of the Navy, be charged with the supervision of the United States Marine Corps and the coordination of its activities with other governmental agencies, and, in addition, such other duties as may be assigned to him by the Secretary of the Navy.

"The first sentence of section 206 (c) of the National Security Act of 1947 is hereby amended to read as follows: 'The United States Marine Corps, within the Department of the Navy, shall include land combat and service forces and such aviation as may be organic therein, and the personnel strength of the Regular Marine Corps shall be maintained at not less than 6 percent of the combined personnel strengths of the Regular Army, the Regular Navy, and the Regular Air Force.' "

A MARINE'S PRAYER

Now not to those
Who seek to write us off
By extinction complete,
Or failing that
To shackle and enthrall us
Into a state of impotence.
All our deeds in all our years
Plus all the glories we have won
Bespeak for us no such fate.
Our record fashioned in the flame
And thunder of war entitles us
And those who hold us in high esteem
To be heard ere the blow is struck
That will destroy us,
Or make of us
But a shell of our former selves.
Rise up all you
Now enrolled under our banner
And you who once have worn
The emblem that has set us apart
For a full hundred seventy years.
Rise up all you
Whose sons have served and died with us
Lift up your voices
To those in legislative halls
Protesting the wanton deed
That imperils our existence.
Make it crystal clear
That if our power to serve
The common cause
In true effectiveness be curbed,
You will in such event
Pray that our battle flags be furled
And our trophies of victory
Be vouchsafed a haven,
For all the Nation to treasure
And to see.

—A. M. W.
(Maj. A. M. Watson, U. S. Marine Corps, retired.)

MAY 1949.

The Military Housing Bill

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1949

Mr. MULTER. Mr. Speaker, the objection that has been raised to the conference report on the military housing bill, that it does not contain a provision against segregation is, in my opinion, captious. No suggestion was made that such a provision should be incorporated in the bill during the course of the hearings before the committees of either House. No such suggestion was made on the floor of the House when we passed it originally. The bill contains no grants, nor for that matter any loans. It merely insures loans that may be made for military housing. The objection is now urged by way of a motion to recommit the bill. To support such a motion

would effectually kill the bill, preventing the initiation and completion of that part of the President's program. It is essential that the motion to recommit be defeated. Those who are sincerely interested in antisegregation legislation can show that sincerity by signing Discharge Petition No. 7 initiated by Congressman DOLLINGER which presents the issue foursquare and will have equal application to this bill as it will to all other housing bills.

Section 132 of the Legislative Reorganization Act of 1946

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. MICHENER. Mr. Speaker, a few minutes ago the Speaker of the House, in response to a parliamentary inquiry propounded by the gentleman from Massachusetts [Mr. MARTIN], the minority leader, interpreted section 132 of the Legislative Reorganization Act of 1946. This ruling may become of great importance to future legislation considered in this session of Congress. Section 132 provides:

Except in time of war or during a national emergency proclaimed by the President, the two Houses shall adjourn sine die not later than the last day (Sundays excepted) in the month of July in each year unless otherwise provided by the Congress.

It seems to be generally conceded that there will be an attempt on the part of the leadership to continue the House in session after July 31 next, this prohibition in the Reorganization Act to the contrary notwithstanding. There are many Members of Congress who conscientiously feel that the intent of the Reorganization Act should be meticulously complied with insofar as sine die adjournment is concerned. There are other Members of Congress who do not feel that the Congress should adjourn sine die on July 31; however, regardless of what our feelings are concerning the advisability of adjournment, I am sure we all want to do that which is in strict compliance with the law.

It is conceded if our country is at war on July 31 or if there exists a national emergency proclaimed by the President, then section 132 will have no force or effect on adjournment. It is also agreed unanimously, I think, that the Congress can, regardless of whether a state of war exists or a national emergency has been proclaimed, by concurrent resolution of the two Houses of the Congress, totally destroy section 132 and determine a date of adjournment which will be positive and not subject to doubt or technical interpretation or misinterpretation. If this is true, then such a concurrent resolution would resolve all doubt as to the legality of acts of Congress performed after July 31, in this session of Congress.

This legal question has given me some concern and, to the end that we might have a legal opinion rendered by a nonpolitical, legal agency of the Congress, I requested such an opinion from the Legislative Reference Service—American Law Section—of the Library of Congress. The request was made on yesterday. I received the opinion this morning. The conclusions of the Legislative Reference Service are not in all particulars as I had interpreted the law; however, it seems to me it is well to have the views of this agency a part of today's CONGRESSIONAL RECORD to be considered along with the Speaker's ruling above referred to.

I attempted to have this brief inserted in the body of today's RECORD immediately preceding or following the Speaker's ruling. It was my thought that for future reference this procedure might be most helpful; however, there was objection on the part of a Member, whereupon I obtained the permission of the House to insert this brief in the Appendix of today's RECORD.

Since receiving the brief, I have not had an opportunity to read all of the Supreme Court cases cited upon which the conclusions in the brief are based. Reserving my right to differ with the conclusions reached, I include the brief, which is as follows:

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
AMERICAN LAW SECTION,
Washington, D. C., July 26, 1949.

To: Hon EARL C. MICHENER.

Subject: Section 132 of the Legislative Reorganization Act of 1946.

The first question is: Is the United States now at war under the provisions of this section?

War is that state in which a nation prosecutes its right by force. (*Prize Cases* ((1863) 2 Black 635, 666); *Verano* v. *DeAngelis Coal Co.* ((1941) 41 F. Supp. 954, 955). See also *Gitlow* v. *Kiely* ((1930) 44 F. (2d) 227, 233) and *Commercial Cable Co.* v. *Burleson* ((1919) 255 F. 99).) And the courts have held that generally speaking a period of war extends to the ratification of the treaty of peace or the proclamation of peace. (*Hamilton* v. *Kentucky Distilleries & Warehouse Co.* ((1919) 251 U. S. 146); *Commercial Cable Co.* v. *Burleson, supra.*) In *Stinson* v. *New York Life Insurance Co.* ((1947) 69 F. Supp. 860) the court declared with respect to World War II that "The United States continues to be engaged in war until the legislative or executive authority, or both, recognize and declare that the United States is no longer so engaged."

Section 132 of the Legislative Reorganization Act of 1946 (60 Stat. 812, 831) specifically provides that "Except in time of war or during a national emergency proclaimed by the President, the two Houses shall adjourn sine die not later than the last day (Sundays excepted) in the month of July in each year unless otherwise provided by the Congress." Inasmuch as the exception is based on two contingencies, viz, war or a national emergency, and neither contingency is defined, the exception "in time of war" would appear to be governed by the above court decisions and would extend to the proclamation of peace.

It should be noted also that the mere facts that hostilities have actually ceased or that various peaceful activities, such as demobilization, discontinuance of certain wartime controls or agencies, or the like, have been undertaken, do not of themselves terminate the war or the war emergency. (*Fleming* v. *Mohawk Wrecking & Lumber Co.* ((1947) 331 U. S. 111); *Woods* v. *The Cloyd W. Miller Co.* ((1948) 333 U. S. 138); and *Lewis* v. *Anderson* ((1947) 72 F. Supp. 119).) A "state of war" or a "period of war" still exists notwithstanding the unconditional surrender of the so-called Axis countries and the cessation of hostilities there being no final termination of the war, especially in view of the fact that in Germany there is no present existing government with which a treaty of peace could be negotiated. (See *Citizens Protective League* v. *Byrnes* ((1946) 64 F. Supp. 233, 234).)

For the purpose of completing the picture, some attention should be given to the exception relating to a national emergency. To clarify this provision we invite attention to the following statement taken from *Brown* v. *Burnstein* ((1943) 49 F. Supp. 728, 732).

"The various acts of Congress authorizing the President to take action in the event of a national emergency show that Congress throughout the years made little or no distinction between a state of national emergency and a state of war.

"Justice Story on February 2, 1827, in the case of *Martin* v. *Mott* (reported in 12 Wheat. 19, 27, 6 L. Ed. 537), expressed the opinion of the Supreme Court of the United States in a matter concerning emergency powers of the President. In that case defendant had filed a demurrer to an avowry, which demurrer alleged that a fine and forfeiture imposed by a court martial for failure to enter the services of the United States as a militiaman when thereto required by the President of the United States, was in error, because the necessary authority therefore was lacking. In the opinion Justice Story stated,

" 'The Constitution declares, that Congress shall have power "to provide for calling forth the militia, to execute the laws of the Union, suppress insurrections, and repel invasions;" * * * In pursuance of this authority, the act of 1795 has provided, "that whenever the United States shall be invaded, or be in imminent danger of invasion from any foreign nation or Indian tribe, it shall be lawful for the President of the United States to call forth such number of the militia of the State or States most convenient to the place of danger, or scene of action, as he may judge necessary to repel such invasion, and to issue his order for that purpose to such officer or officers of the militia as he shall think proper." * * *

" 'The power thus confided by Congress to the President, is, doubtless, of a very high and delicate nature. A free people are naturally jealous of the exercise of military power; and the power to call the militia into actual service, is certainly felt to be one of no ordinary magnitude. But it is not a power which can be executed without a correspondent responsibility. It is, in its terms, a limited power, confined to cases of actual invasion. If it be a limited power, the question arises, by whom is the exigency to be judged of and decided? Is the President the sole and exclusive judge whether the exigency has arisen, or is it to be considered as an open question, upon which every officer to whom the orders of the President are addressed, may decide for himself, and equally open to be contested by every militiaman who shall refuse to obey the orders of the President? We are all of opinion that the authority to decide whether the exigency has arisen belongs exclusively to the President, and that his

decision is conclusive upon all other persons. We think that this construction necessarily results from the nature of the power itself, and from the manifest object contemplated by the act of Congress. The power itself is to be exercised upon sudden emergencies, upon great occasions of state, and under circumstances which may be vital to the existence of the Union. A prompt and unhesitating obedience to orders is indispensable to the complete attainment of the object. * * *

" 'The power itself is confined to the Executive of the Union, to him who is, by the Constitution, "the Commander in Chief of the militia, when called into the actual service of the United States," whose duty it is to "take care that the laws be faithfully executed," and whose responsibility for an honest discharge of his official obligations is secured by the highest sanctions. He is necessarily constituted the judge of the existence of the exigency, in the first instance, and is bound to act according to his belief of the facts. * * * Whenever a statute gives a discretionary power to any person, to be exercised by him, upon his own opinion of certain facts, it is a sound rule of construction, that the statute constitutes him the sole and exclusive judge of the existence of those facts. * * * It is no answer, that such a power may be abused, for there is no power which is not susceptible of abuse. The remedy for this, as well as for all other official misconduct, if it should occur, is to be found in the Constitution itself. In a free government, the danger must be remote, since, in addition to the high qualities which the Executive must be presumed to possess, of public virtue, and honest devotion to the public interests, the frequency of elections, and the watchfulness of the representatives of the Nation, carry with them all the checks which can be useful to guard against usurpation or wanton tyranny.' "

We assume from the foregoing that the type of emergency contemplated by section 132 is exemplified by the "limited emergency" proclaimed by the President on September 8, 1939 (Proclamation No. 2352; 4 F. R. 3851; 54 Stat. 2643) or by the "unlimited emergency" proclaimed on May 27, 1941 (Proclamation No. 2487; 6 F. R. 2617; 55 Stat. 1647) neither of which has been terminated to date.

Perhaps it should be noted that Congress could have ended the war and the two emergencies for the purpose of this section when it enacted Senate Joint Resolution 123, Eightieth Congress (61 Stat. 449). By that act Congress terminated many emergencies and war powers by stating that in the interpretation of certain statutory provisions the state of war and the national emergencies should be deemed to have terminated.

The second question is: If Congress adjourns in the usual way on July 31, without taking any prior action, will it have adjourned sine die in accordance with section 132? Or what will be the situation?

The answer to this question is that if Congress adjourns in the usual way on July 31, it will not have adjourned sine die in accordance with the provisions of section 132. As we have indicated in answer to the first question, the United States technically is still in a state of war, and furthermore the terminations of the limited and the unlimited emergencies have not been proclaimed.

It is doubtful if section 132 in its present form is of any legal significance insofar as legislative acts of Congress are concerned. Supporting this assumption is the failure of codifiers to take cognizance of the provision either in the United States Code or in the United States Code Annotated. This section is part of title 1 of the Legislative Reorganization Act of 1946 and is subject, among other things, to the limitation found in section 101 which reads:

"SEC. 101. The following sections of this title are enacted by the Congress:

"(a) As an exercise of the rule-making power of the Senate and the House of Representatives, respectively, and as such they shall be considered as part of the rules of each House, respectively, or of that House to which they specifically apply; and such rules shall supersede other rules only to the extent that they are inconsistent therewith; and

"(b) With full recognition of the constitutional right of either House to change such rules (so far as relating to the procedure in such House) at any time, in the same manner and to the same extent as in the case of any other rule of such House."

Of interest, but not controlling, are the views expressed by President Jackson in opposition to an effort of the two Houses to fix by law the time for adjournment. Citing applicable provisions of the Constitution, the President said, among other things: "* * * The question of adjournment is obviously to be decided by each Congress for itself by separate action of each House for the time being, and is one of those subjects upon which the framers of that instrument did not intend that one Congress should act, with or without Executive aid, for its successors * * *." See 5 Hinds' Precedents of the House of Representatives, section 6638, page 855. It appears that Messrs. Webster, Clay, and Calhoun disagreed with the reasoning of the President.

For the purpose of this memorandum, we do not deem it necessary to resolve these differences or to determine whether or not the two Houses of Congress may fix a date certain, by the adoption of specific rules, which would automatically adjourn Congress without the necessity of further action on the part of either of the two Houses.

We do not deem it necessary to review the legislative background of section 132. For the present, the most that need be said of that section is that it merely represents an exercise of the rule-making power granted by article I, section 5, clause 2 of the Constitution to state a time limitation as a goal for the completion of the work of a session. This cannot substitute for the usual adjournment resolution at this time. The form of the resolution for adjournment sine die is set out in the House Rules and Manual, section 969, House Document No. 766, Eightieth Congress, second session.

Even if section 132 read, "The two Houses shall adjourn sine die not later than the last day (Sunday excepted) in the month of July of each year unless otherwise provided by Congress," and the Congress continued beyond that date and passed bills which were approved by the President, it is doubtful if the courts would go behind the certified copy as approved by the President to search for possible procedural deficiencies or conflicts in the rules of the two Houses. See *United States* v. *Ballin* (1892) (144 U. S. 1, 4), *Field* v. *Clark* (1892) (143 U. S. 649, 669–670, 673); and *Hubbard* v. *Lowe* (1915) (226 Fed. 135).

SUMMATION

The foregoing suggests the following conclusions:

1. Section 132 is at present of no legal consequence because a state of war still exists and the proclamations of the limited and unlimited emergencies are still in force.

2. Adjournment by Congress in the usual way on July 31, without taking any prior action, will not operate as an adjournment sine die.

3. While the question was not asked, there are doubts as to the effectiveness of section 132 even in the absence of a state of war or a state of emergency, and if Congress were to remain in session beyond the date fixed it is doubtful if items of legislation passed after the date could be successfully challenged.

Foreign Competition With American Industries

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1949

Mr. GORSKI of New York. Mr. Speaker, is it possible or could it be possible that our industries which have been established in the United States for years are to suffer the effects of closing their doors, of utter ruination because of our policy of doing business with foreign countries, who through the cheap labor they can employ can sell their goods in the United States at prices lower than our American industries can produce the same merchandise?

I cannot conceive of a policy that permits of goods being brought into the United States, at such ridiculous prices, that we are going to have to say to our American workingmen, "We are sorry, folks, but we must close down on our production, we simply cannot sell our merchandise, the goods that through your efforts and your conscientious endeavors to produce for your brother Americans, have enabled us to employ you and through you produce, because we cannot compete with the slave labor and the peon wages paid, in foreign countries."

Are we unduly alarmed over this situation? I must admit that I am. I do not presume to speak for all of the United States, though on this particular matter I feel that I could. I will confine my remarks to Buffalo and vicinity. If others, believe as I do, so much the better.

How can we say that such competition is so comparatively inconsequential, as far as American trade is concerned, that no harmful effect upon American industry and employment is to be anticipated and, therefore, American labor and industry should not be alarmed or unduly concerned because of the present competitive situation? Somewhere back in history, I seem to recall an old adage, that has left an indelible mark on many a memory, that it was a very poor policy to "lock the barn after the horse had escaped."

Our American industries and our taxpaying American citizens and employees are losing their means of livelihood because they are losing orders to the large wholesale buyers because they are underbid from 20 to 40 percent by representatives of these foreign industries. Have we forgotten the important part that taxes play in the operation of our Government?

It seems that somewhere during the past few months I have read of the fear of another depression, of the unemployment situation throughout the country. I have been concerned with the unemployment question but I have not become hysterical at the thought of another depression as I realize that the leaders of our Government and our industry can prevent such. If these foreign goods keep coming into this country at the present

rate of purchases made, we will find our next-door neighbor out of work because we have closed our eyes to the fact that the American standard of living cannot be lowered to the class of other countries.

Footwear, toys, religious articles, jewelry, pottery, and countless other pieces of merchandise are finding their way into this country at ridiculously low prices and we sit idly by and say there is nothing to worry about.

To the proposal that the Government should plan a construction program looking ahead toward the relief of unemployment, we hear nothing but shrill cries of fear and alarm at the thought of a socialistic government being set up. But do those same people who cringe at the thought of a proposed program for unemployment jump to the call of American industry and the American workingman when these afore-mentioned facts are vividly brought to their attention.

I have been corresponding with the pottery industry of Buffalo and our State and Interior Departments relative to the importation of Puerto Rican pottery. Perhaps it could best be said that the matter is being held in abeyance.

The pottery industry is one of Buffalo's oldest and one of which we are proud. Employer and employee have enjoyed a long and successful record of collective bargaining. The employer has been guaranteed a profit throughout these years and the employee has been able to maintain his home and family in what we have come to know as a decent American standard of living. This has been possible through fair competition but under existing regulations, these conditions are gone with the wind.

Let me cite the obstacles to a continuance of our American way of life. Prevailing rate of pay per hour, in the Puerto Rican pottery industry, 30 to 40 cents per hour. Am I justified in saying that such is slave wages. The average rate of pay for men and women in the American pottery industry is $1.45 per hour. Can I be ridiculed for asking for protection for the city in which I was reared and for the people with whom I have lived and worked. If the people of Buffalo are thrown out of work because there is no concern shown for their welfare, then we have reached the bottom of democracy in America.

I have asked the Department of the Interior the following questions as to Puerto Rico and existing conditions in the pottery industry and await a reply:

First. All Puerto Ricans are American citizens and therefore products made for export to the mainland are entitled to entry duty-free.

Second. All Puerto Rican enterprises are not subject to the Federal income tax law.

Third. The Puerto Rican government has exempted new enterprises (such as the Crane China Co.) from all insular income and property taxes for 12 years and a partial reduction for an added 3 years.

Fourth. A plant operating in Puerto Rico is not subject to the old age law of the Federal Social Security Act.

Fifth. Puerto Rico has also no unemployment under Social Security Act.

Sixth. A plant in Puerto Rico is subject to the Fair Labor Standards Act, but this minimum may be lowered if the welfare of the plant is somewhat jeopardized.

Seventh. The wage rates for Puerto Rico average only 36 percent of those for the mainland.

The Puerto Rican situation like that in other countries is extremely serious. The prices quoted by their representatives has demoralized the market. The uncertainty of continued business flowing into the plants has placed our workingmen in a limited area of doubt and darkness.

Yes, I believe that we should live and let live but not to the extent that our own are not considered in the same category as others. Let us have competition, it is a healthy condition but let us not have it one-sided. If we are to help build other countries then guarantee the citizens of those other countries the same right to live decently as that guaranteed to the American workingman. Pay them a living wage not a slave wage. We were all born equal, let us live that way.

[From the Buffalo Courier-Express of July 22, 1949]

LABOR—AS SEEN BY VICTOR RIESEL

WASHINGTON.—I don't know who Moscow's radio Comrade Lapitsky is, but he seems to have set himself up as an authority on me—and has been using the Soviet's Central Overseas Broadcasting Service to smear this column. Since the comrade beams his stuff in English at the United States, his hysteria is a tip-off to the local Reds to start some bullying of their own. Well, nobody will bully nobody. There are stories to be told—and they will be told.

Such as Truman's and State Secretary Acheson's softness for Russia's iron-curtained industries, for example, a tenderness and quiet appeasement which I learn here is throwing thousands of United States workers out of jobs and slashing the wages of others by as much as 50 percent.

It is Acheson's deliberate policy to do little to keep Soviet-controlled factories from flooding this country with hats, glass, kitchenware, jewelry, pottery, and scores of other items sold so cheaply that our factories are closing down and aggravating our unemployment situation.

Union leaders who complained in the past few weeks tell me they've gotten a fast brush-off from such men as the State Department's Richard Peltier and Willis Armstrong, acting on orders from Acheson and the White House.

These State Department people use some double talk about how the cold war would become Arctic-like if we irritated the Russians on this front. And that any further talks with labor people would so annoy the Soviets that future four-power negotiations would be affected, because Russia will be petulant and uncooperative.

In the words of one CIO chief, who has been lobbying for congressional help because he's disgusted with the frigidity of the State Department toward the job problem:

"There is little hope of anything being done for us as long as people remain in the State Department who believe you can still deal with Russia."

What the union people want is a higher tariff on imports, at least from the iron-curtain countries. These use forced labor so cheaply they can undersell American goods right in America. For example:

One New York hat manufacturer has complained that his mill in Czechoslovakia was seized by the Russians and nationalized with no payment to him. Now the products of his old plant have been flowing into America's market and underselling his local stuff. He offers his berets at about $6.50 a dozen. The Soviet-controlled Czechs, using his old mill, send similar berets to United States stores at $3.20 a dozen.

Can you compete with that?

And then there's the glass and pottery industry, about which the A. F. of L. has complained to the aloof State Department.

The striped-pants crowd today knows full well that since foreign imports began hitting our markets working hours in these allied industries have been hacked 40 to 50 percent below a year ago.

In pottery, many men are working 50 percent less than they did. Plants have shut down. Heavy curtailment is reported. In many areas the industry is dividing the work among its people rather than fire them.

In West Virginia, some employees have taken voluntary 20-percent wage cuts rather than see their employers go out of business. This is becoming a pattern.

A critical stage has been reached.

The "peril point" is one at which cheap foreign goods come in so fast, our own manufacturers can't sell their stuff and must lay off workers. But investigation here shows that Truman and Acheson are not alarmed by the peril point of Soviet imports at this moment.

Result: Increased joblessness.

And the problem isn't confined to Russian-controlled territory. The glass and pottery union leaders met here with Army people to see if they could stop Jap competition. Fishing unions, too, are worried about Jap imports, and have also called on the State Department, which swiftly passed the buck to the Fish and Wildlife section of the Interior Department. Real helpful, that State Department.

Also, the Japs are sending in about $1,000,000 worth of plastic toys. There are similar problems for men selling everything from fruits to nuts, to wrist watches.

But the administration isn't interested. Its specialty is the brush-off.

The Long Trail Ahead

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following remarks of United States Reclamation Commissioner Michael W. Straus, July 22, 1949, at the ground-breaking ceremonies for the Canyon Ferry Dam on the Missouri River, near Helena, Mont.:

This is a happy day for you, this valley, and for reclamation. Today marks a milestone in our progress and partnership. Today, after much long and good work, we actually start construction on Canyon Ferry Dam—a major development for the Nation, the Missouri Valley, and Montana. Nothing can and nothing will stop us now until this job is done.

But in our jubilation today, let us not lose perspective. Let us appraise the facts. This ground-breaking is but a turning point in the efforts of you and your Government for this area to achieve its destiny. The main

contract alone calls for 1,500 days of work before the dam alone is scheduled for completion, and a hundred other contracts still must be let. We must not rest until we have completed the long trail and our program is carried out.

We are late on this job. On this very site 144 years ago this morning our predecessors of the Lewis and Clark Expedition broke the first Government camp on this land and pushed on with the mission that added a vast new frontier to the expansion and enrichment of the United States. These works here today are but widening that frontier of natural resources, on which our health, happiness and economy rest. Since our predecessor pioneers on the ever-widening American frontier came by this spot, many men have used and abused these resources and this river. Our purpose here is to harness it and permanently put it to work to serve you, to irrigate your lands, to raise your food, to produce the low-cost electrical energy that sparks your industry and lightens your burdens and those of the Americans who will come after us.

We are late on this job. It was after years of effort that in 1944 the Congress authorized these works. Since then we finished winning one World War and went through a world economic convulsion, moving from a wartime economy of destruction to a postwar economy of construction. And all that time you and your Government performed the many necessary tasks that preceded making the dirt fly at Canyon Ferry. All honor to you and those who did those tasks well and thereby made this day possible.

Today we start building for the future and for permanence in a valley that Captain Lewis, who was the more articulate member of the Lewis-Clark partnership, described 144 years ago as a "beautiful plain, 10 or 12 miles wide," which has since that day witnessed stirring chapters of American history. Those pioneers did not foresee these chapters, including the story of the gold strike at Last Chance Gulch or the parade of the fortune seekers through Grasshopper Gulch to Confederate Gulch, any more than they foresaw this scene here today when we start fitting a permanent cornerstone into the economy of the great Missouri Valley near the top of which we stand.

Look beyond this dam site and this builder's gear, plant, and camp. What you see is important all right, and able technicians, craftsmen, and builders will do a good job in erecting this mighty structure. But don't let the dramatic scene here and the spectacular construction that will go on at this site for months and years blind or bedazzle you. Canyon Ferry is a truly major structure. Reclamation has built smaller and larger dams for the people of the West before and will do so hereafter. But nobody should be permitted to build dams just because they like to. Their only justification is the service they render and the benefits they bring. So, look beyond this dam site hundreds, and even thousands, of miles away to see the real significance of why we gather here today, with the Nation watching, to perform this significant ceremony.

Canyon Ferry is one of the key structures of the whole Missouri Basin program—a program that, in turn, is the high point of man's advance planning to date to conserve and put his limited water resources to work. The Missouri Basin plan could not exist, as now conceived, without Canyon Ferry, and Canyon Ferry could not exist without the Missouri Basin plan. Canyon Ferry is not a separate individual project; it is one unit of a basin-wide program—the Missouri River Basin project—a program that you, the people of Montana, assisted in developing to meet your vital needs. It also happens to be your principal part of that program, made possible by all the people of the United States through the act of Congress in 1944 adopting the Missouri Basin program. This program stretches from the farthest reaches of the river in the high country of Montana down through many States to the river's juncture with the Mississippi. A sixth of the Nation is embraced in the Missouri Valley and there the waters are to be conserved and put to beneficial use through a coordinated series of reservoirs, power plants, transmission lines, irrigation facilities, canals, and navigable channels. All these works together will only yield full benefits if planned and operated together. And it is to secure these benefits that all the basin States have banded together. And to insure them that, all of the contributing local and Federal agencies meet together with the governors of the States as they have been meeting in Helena the past 2 days.

Canyon Ferry is not the first of these works. Since work began on Kortes Dam in Wyoming in the spring of 1946 as the first unit to reach construction, Basin residents have from time to time met at gatherings such as this to take part in appropriate ceremonies. Each marked another big step in the titanic job of putting the Missouri to work. There are a number of yardsticks that could be used to measure the progress made on that program during the past three years, such as dollars, kilowatts of power, tons of crops, man-hours of labor, or acre-feet of water. But by any of those yardsticks, I am happy to report that the job on the Missouri Basin program, which you have entrusted, in no small measure, to your agents in the Bureau of Reclamation for irrigation and power production in the upstream States and along the tributaries, and to the Army Corps of Engineers for flood control, navigation and power in the downstream main reaches of the river, is going forward in high gear. Wherever you travel in the Missouri River Basin, you can hear the roar of dirt-moving machinery, the clatter of mixing plants, the snorts of bulldozers, and observe all other activities that indicate a construction crew is on the job. Today Reclamation has, under the Missouri River Basin Project, 11 major dams under construction and eight more to be started, I hope, within the year—a total of 19 dams to chain the Missouri to the plow and the power plant in our current construction program. Our vision must be truly wide and not limited by what the eye can see from where you stand or even by what can be seen anywhere in the basin in this year of 1949. Ultimately, about 100 dams will be built under this one basin-wide project. Whether it takes 100 years or less to do it, you and the people of this Nation will decide.

Today we are interested primarily in just one of these jobs—the Canyon Ferry Unit. The dam and power plant will cost some $30,000,000 at today's prices. That money is being advanced you by taxpayers all over the country, and the beneficiaries, irrigators, and power users, under the Reclamation Law, will pay back Uncle Sam over the years. But this single structure at this point will make possible initial irrigation of some 310,000 acres of new lands, as well as providing supplemental water to 196,000 acres, a total of approximately half a million acres—all in that part of the upper Missouri Basin above Fort Benton. It will do that in many ways, not only by holding and conserving water for irrigation in the reservoir behind Canyon Ferry, but also providing power which, in turn, will not only pump irrigation water but will also provide power for industry and farms and, in addition, bring back revenues which make possible the whole Canyon Ferry multiple-purpose project and aid the Missouri Basin program.

I won't waste my breath trying to sell irrigation to the people of this section of Montana—that's too easy. It could be about as hard as selling a sandwich to a starving man. We are only a few miles from famous Gallatin Valley, where irrigation has been practiced since the first settler who uncoupled his oxen from a covered wagon and broke ground. In many of your tributary mountain valleys can be found irrigation fields of hay, grain, and other feed crops—the economic backbone of your livestock and food industries. Any school child, teacher, farmer, banker, or public official hereabouts can tell you, as well as myself, what another half-million acres of irrigated land can do for the economy of the upper Missouri.

I will raise my voice to tell you about the power program. There has been some quibbling about it. So let's get it straight. Canyon Ferry was conceived, was designed, and is authorized as a multiple-purpose project. It is a public-power project. It embraces powerhouses and transmission lines. They are as much a part of Canyon Ferry as Canyon Ferry is a part of the Missouri Basin program. These power features are part and parcel of Canyon Ferry. The irrigation won't and can't stand up and pay off without the power. You can't have the Canyon Ferry with irrigation alone and without power any more than you can have ham and eggs without the eggs.

The reason for this is simple and no secret. The irrigation is going to need pumping. Pumping needs cheap power. Canyon Ferry can provide that cheap power for pumping. It can also provide a vast amount of power that can be sold with priority, as required by law, to public bodies and also to private corporations on a widespread market at low cost to make new industries possible and lighten your household and farm chores. And this widespread sale of the people's power to the people at low rates to perform these tasks gives us the market that makes the power possible and also provides the revenues to aid the irrigation.

You people sought and wanted a multiple-purpose dam at Canyon Ferry—a power dam as well as an irrigation dam. The State of Montana sought such a structure. The Congress of the United States authorized a multiple-purpose project and the law says that such projects shall be built with powerhouses and transmission lines by your Government to insure its feasibility, to insure low-cost power as an aid to irrigation and to be marketed with preference to public bodies, such as rural electrical cooperatives, municipalities, irrigation districts. The authorization act of Congress provided for federally owned transmission lines to secure these benefits. It did not provide that the power be penned into the powerhouse without public transmission lines so that private lines stand between the power-hungry people and the people's dam. The Bureau of Reclamation designed and today starts building such a project. I, for one, am satisfied that that is the way this project is going to be completed.

I say this because there has been some quibbling—there is even some today. At the moment, the local utility monopoly, the Montana Power Co., is engaged in an endeavor to persuade the Congress to nullify the reclamation law by withholding funds to prevent your Government from building the Canyon Ferry powerhouse and transmission lines. The company says it will do all that for the Government and all that the Government has to do is to build the dam itself for the power company. All the company wants is the Government to provide the dam, which costs much money, and the company will build the power plant, which costs comparatively little. The utility company will be a customer for some of the power anyway, but now it seems that the company thinks so well of the project that it wants to be the exclusive customer, preserve its monopoly, and let the public bodies, the REA cooperatives, and the like come second—and that's not what the law says. Such efforts, which I think are doomed to failure, are being made to change this program. The law will be followed by reclamation and it

won't be changed if you, the people of this area in the State of Montana, and your Representatives in Congress preserve and carry out the plan and program that you are embarking upon.

Here we are undertaking to add one link in the reclamation chain of the West—and a most important one. Under the reclamation program in the 17 States in which the people of all the United States have made an investment of over a billion and a half dollars to date, water has been brought to some 5,000,000 acres of arid and semiarid lands that in the last crop year alone produced crops valued at over half a billion dollars plus the greatest amount of electrical energy generated by a single organization anywhere in the world. In that 1 year $30,000,000 of public power revenues came into the Treasury from reclamation. That part of this national investment spent on purely irrigation works has produced crops in the last 3 years in excess of the total Federal investment in reclamation during the past half-century. That's a good investment of anybody's money.

During the past 50 years of the Department's century of conservation, the reclamation that western people have developed, working in cooperation with the Federal Government, was one of the firmest contributions to the Nation's strength and economy. It has been accomplished through reclamation laws that you of the West developed and the Congress of the United States passed.

There are certain basic principles of the reclamation law that you have developed, particularly, that one of the greatest of your basic resources, water, should be developed for the greatest good of the greatest number of people. The power policy of the Department of the Interior is a result of the expression of the desires of the people through congressional enactments. You have requested it, and past Congresses have written into reclamation law that reclamation should generate public power, transmit, and distribute it widely with preference to public bodies. Therefore, the Bureau of Reclamation's plans for the Canyon Ferry power plant provide for the Government's producing and transmitting a possible 300,000,000 kilowatt-hours of electrical energy a year. That is low-cost energy that will pump irrigation water, light farm homes, milk cows, process food and, through its sale, help pay for the project construction works. Just the same as the power from Grand Coulee Dam in Washington, the power from Shasta Dam in California, and the power from Boulder Dam down on the Colorado River perform their tasks, so in the years to come Canyon Ferry will take its place along with these other structures as a monument to the genius of the men of the West.

So many men of the West have already contributed, by their devoted efforts, to the point Canyon Ferry has reached on this day that I cannot enumerate them all. I must, however, mention some, including my admired friend, O. S. Warden. It is fitting that today he breaks this ground. Men of vision made today possible, and Mr. Warden is one. He came from the East, from Dartmouth College, from which college also came Daniel Webster, who once said about the mountain area—the area right here where we find ourselves today: "Not worth a cent. * * * A region of savages, wild beasts, shifting sands, whirlwinds of dust, cactus, and prairie dogs." While I don't think that O. S. Warden was a classmate of Daniel Webster, he didn't believe that statement. And when he came to Montana, somewhat after Lewis and Clark, he started to prove it wrong. Over the years wherever men of the West have planned to develop their water resources, I have found and been guided by the gentle, persuasive wisdom of Mr. Warden, who took me almost as a grandchild and showed me what could be done. In meetings in Phoenix, Omaha, Sacramento, Denver, Salt Lake City, Reno, as well as innumerable Washington conferences, Mr. Warden gave leadership and vision. He did not confine himself to this project for he was interested in all western and reclamation developments. But some way or other, before we parted, we always talked about Canyon Ferry and he sought ably to hasten the coming of this day. So, we all rejoice that Mr. Warden is here today to make his vision come true.

Before I left Washington, I sought to persuade your Senator, JAMES MURRAY, and Congressman MIKE MANSFIELD, of Montana, to fly here with me for they have long labored to bring this day to us. They told me to report to you that the only reason they are not here is that they can serve Canyon Ferry, as well as Hungry Horse over the divide to the west, and other Montana reclamation projects better right now at their posts in the Congress where matters of appropriations for this job and preserving the Canyon Ferry project as conceived and embarked upon are under discussion.

The real work of reclamation here will be done by veterans who are not from Washington but are the Bureau of Reclamation's field force and part and parcel of your community. Here today is Kenneth Vernon, the regional director of the upper Missouri Basin, and Bill Price, the Canyon Ferry project engineer, as well as many of their associates. They are your resident partners in this endeavor. Reclamation never has built and never can build a project without the aid of the community. These men will need help in the months and years ahead, and I know that you can trust and will help them.

So we can view Canyon Ferry in a broad perspective beyond the scene that here meets our eyes. We are building permanently for the happiness and welfare of posterity. This is but one milestone in the struggle of men, and achieving that milestone is your accomplishment. Another great day will come when this structure is complete and is put to work. It is built by men of Montana, and men of Montana must guard and cherish it and see that it serves its mission of providing power to lighten our burdens and food from irrigated acres down through the years. Serve and protect it on the long trail ahead, and it will serve and protect you in time of need as long as water runs downhill—perhaps, forever.

Error in Committee

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald Tribune of July 18, 1949:

ERROR IN COMMITTEE

A recent action of the Senate Appropriations Committee in cutting off pay allowances of $65 a month for cadets attending the United States Merchant Marine Academy and the State maritime academies in New York, Maine, Massachusetts, and California appears ill-advised and discriminatory. Out of their allowances, cadets must pay for uniforms, textbooks, various fees, dry-cleaning, laundry, and a host of other expenses. Deprived of the funds, it is conceivable that a great many would be forced to resign unless their families are in a position to meet such expenses.

All those now in attendance at the five schools entered with the understanding that the allowance would be continued until they were graduated. The Government should not now default on such an agreement. Cadets at the United States Military Academy and at the United States Naval Academy receive similar allowances and no move has been made to discontinue these—as no move should be—because of the need of educating new officers for our armed services.

The recent war proved the need of a strong merchant marine and a strong reservoir of men to man it. The Senate committee's ruling, if enacted into law, will have the effect of narrowing the field of selection of potential candidates to those whose finances will permit attendance. Some friends of the maritime schools predict that such procedure would mean their end. It certainly is not in keeping with democratic procedure. The full Senate should correct the committee's error at once.

Real Income of Military Men

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an interesting article from the current issue of United States News and World Report regarding the proposed military pay bill:

REAL INCOME OF MILITARY MEN—SIDE BENEFITS MAKE THE SERVICES ATTRACTIVE

Pay for the armed forces of this country now amounts to $3,980,000,000 a year. It is about to be increased by $304,000,000 a year, barring a last-minute hitch in Congress.

Raise in pay for men in military service is designed to bring their incomes plus allowances and pension benefits, into line with pay for comparable jobs in industry and civilian branches of Government. There is some confusion over the scale of income for different military positions at present and under the proposed plan. Confusion is related to the fact that income of men in service is made up of several elements.

A general, for example, gets much more than his base pay. Along with his job often go many perquisites, including car with chauffeur, or plane with pilot, many servants, all kinds of personal service that would cost much in private life. His direct income is to be much larger than it has been, under the new pay plan.

Base pay is to go up to $11,115 a year for a major general. It has been $8,800 a year.

Allowances will add to his pay. Rent and food allowances will rise to $2,304 a year. Since those allowances are tax-free, there will be a tax saving of $530 a year. Total value of these allowances will be $2,834 instead of $2,311 as at present. Value of allowance for a four-star general is $5,001 now, will be $5,898 a year.

Pensions will be higher. A general pays nothing toward a retirement fund, so any increase in retirement pay will bring another addition to his real income. The United States Bureau of the Budget figures that pensions and other deferred benefits available to a major general will cost the United States Government $2,823 a year at the new rates. Present value is $2,640 a year. The new schedule offers a man retiring as a major general

after 30 years' military service a pension of about $8,600 a year. The average executive in private life would find it highly difficult to save enough for retirement income of that size.

Total compensation for a major general is to have a value of about $17,000 a year if plans go as written. With flight pay, the total can reach nearly $19,000, compared with a top of around $16,000 possible now.

A major, for another example, will collect about 14 percent more income at the new rates.

A major with 13 years' service is a typical case. He will get a new base pay of $4,617 a year. Longevity pay will be $513; rent allowance, $1,260; food allowance, $504; tax saving, $290. It adds up to $8,518, including the value of higher pension benefits. At the old rates he got $7,475.

The major's opposite number in industry gets $6,852 a year, according to the Advisory Commission on Service Pay. A comparable Federal civil servant will get $6,400 a year if a pending raise of about $125 a year is passed. The major's income advantage is increased by free medical care, the privilege of buying at cut-rate prices in post exchanges, low-cost insurance, and so on.

A master sergeant is to share in the higher pay, too. With the raise, his base pay will be $2,381; longevity pay, $530; food and rent allowances, $1,188; tax saving, $180; value of retirement benefits, $815. He will continue to get about $240 worth of food, clothing, and shelter on a general-issue basis. Total compensation will jump to $5,334 a year, where it was $4,407, assuming the sergeant has 15 years' service. After 20 years' service, he can retire on about $159 a month, at the new rates.

The average man in industry gets $4,752 a year for work involving the same general responsibilities as those of a master sergeant, according to the Advisory Commission on service pay.

Privates first class get only $30 a year more in base pay under the new plan. No raise is proposed for recruits just beginning service. At present, privates get $2,526 a year and recruits, $2,448. That assumes a value of $1,296 a year for food, clothing, and shelter furnished by the Government.

Military pay in these lowest grades is slightly below the return from comparable work in civilian life, as long as no allowance is made for indirect benefits open to the soldier.

Main objective of the new pay scale is to make military careers more attractive, especially for middle-bracket officers. The armed forces say they cannot attract and keep career officers, of the caliber desired, at present pay rates. In their view, higher salaries are needed to offset some disadvantages that military life can hold.

The new pay system also is wanted to modernize the pay structure, in the belief that injustices have crept into it since its last overhauling, 40 years ago. Congress apparently is convinced of the need for pay revision, despite its added costs.

Federal Anti-Poll-Tax Act

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 26, 1949

Mr. REED of New York. Mr. Speaker, the issue involved in H. R. 3199, which seeks to make unlawful the requirement for the payment of a poll tax as a prerequisite in a primary or other election, is whether the Congress can legally enact such a law without violating article I, section 2 of the United States Constitution. Article I, section 2 of the Constitution provides as follows:

The House of Representatives shall be composed of members chosen every second year by the people of the several States, and the electors in each State shall have the qualifications requisite for electors to the most numerous branch of the State legislature.

I maintain that to vote for H. R. 3199 is to violate the oath of office which every Member of the House of Representatives is required to take before he can perform an official act as such representative or legislate as such. The oath is this:

Do you solemnly swear that you will support and defend the Constitution of the United States against all enemies, foreign and domestic; that you will bear true faith and allegiance to the same; that you take this obligation freely, without any mental reservation or purpose of evasion, and that you will well and faithfully discharge the duties of the office in which you are about to enter.

I wish to place emphasis not only on the obligation to defend the Constitution, but upon the words "That you take this obligation freely, without any mental reservation or purpose of evasion." These words were to prevent any sidestepping the sacred character of the obligation.

Why was article I, section 2, made a part of the Federal Constitution? It was put there to placate the fear of the several States that the new government then being framed would be so all-powerful that eventually it would destroy the States. The members of the Constitutional Convention were fully aware that unless this fear could be allayed on the part of the people of the States, ratification by the States would be impossible.

Now then, let me produce a witness on this point, one who sat in the Constitutional Convention. I refer to James Wilson, of Pennsylvania, who after his able and conspicuous service in the convention was appointed by President George Washington as an Associate Justice of the Supreme Court of the United States. It will be recalled, too, that Hon. James Wilson gave a series of lectures in 1790–92 as professor of law in the College of Philadelphia. Speaking on the provisions of article I, section 2, of the Constitution here are the words of Mr. Wilson:

By the Constitution of the United States, the Members of the House of Representatives shall be chosen by the people of the several States. The electors, in each State, shall have the qualifications requisite for electors of the most numerous branch of the State legislature.

This regulation is generous and wise. It is generous for it entrusts to the constitutions or to the legislatures of the several States, the very important power of ascertaining and directing the qualifications of those who shall be entitled to elect the most numerous branch of the National Legislature. This unsuspicious confidence evinces in the National Constitution the most friendly disposition toward the governments of the several States. For how can a proper disposition be evinced more strongly than by providing that its legislature, so far as respects the most numerous branch of it, should stand upon the same foundation with theirs, and by providing further that this foundation should be continued or altered by the States themselves.

This regulation is wise as well as generous. An attention to its genuine principle and tendency must have a strong effect in preventing or destroying the seeds of jealousy, which might otherwise spring up, with regard to the genius and views of the National Government. It has embarked itself on the same bottom with the governments of the different States: Can a stronger proof be given of its determination to sink or swim with them? Can proof be given of a stronger desire to live in mutual harmony and affection?

Now then this question of paying a tax as a qualification to vote was known and practiced by the Colonial States when article I, section 2 was made a part of the Federal Constitution. In the very lecture in which Mr. Wilson expounds, and explains the provision, article I, section 2 of the Constitution, he takes State by State and shows the qualifications requisite for electors of the most numerous branch of each State legislature. Referring to his own State of Pennsylvania he points out:

In the Constitution of Pennsylvania, the great principle, which animates and governs this subject, is secured by an explicit declaration, that elections shall be free and equal. This—

Continues Mr. Wilson—

is enumerated among the great points which are excepted out of the general powers of the government, and shall forever remain inviolate. The practical operation of this great and inviolable principle is thus specified and directed: In elections by the citizens, every freeman of the age of 21 years, having resided in the State 2 years next before the election, and within that time paid a State or county tax, which shall have been assessed at least 6 months before the election, shall enjoy the rights of an elector. (Constitution of Pennsylvania, arts. 3.31.)

Then Mr. Wilson refers to the State of New Hampshire with these words:

By the Constitution of New Hampshire, every male inhabitant, with town privileges, of 21 years of age, paying for himself a poll tax, has a right to vote, in the town parish wherein he dwells in the election of representatives." (Constitution of New Hampshire, pp. 11, 14.)

A review of the State constitutions of the time that article I, section 2 of the Constitution was formulated had more restrictions as a qualification to vote than any H. R. 3199 seeks to remove in violation of the Federal Constitution. Yet in the face of this, Mr. Wilson in his lecture delivered in 1790 after reviewing the qualifications of electors of the several States, says this:

By the same enumeration, we are enabled, with conscious pleasure, to view and to display the close approximation, which, on this great subject, the constitutions of the American States have made, to what we have already seen to be the true principles and the correct theory of freedom.

Again the same enumeration places in the strongest and most striking light, the wis-

dom and the generous confidence, which rested one of the principle pillars of the National Government upon the foundation prepared for it by the governments of the several States.

It never was the intention of those brave and able men who framed the supreme law of our land to insert article I, section 2, as a part of it to inspire confidence in the States to obtain their ratification and then insert a provision to enable Congress to disregard the pledge to the States. Those were not the days of duplicity and demagoguery. The true way, the honest method to meet this annoying question is by a constitutional amendment, not by an illegal usurpation.

I cannot support H. R. 3199 and be true to my oath of office.

Presidential Interference in Steel Controversy Is a Threat to Free Collective Bargaining

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, when President Truman projected himself into the dispute between labor and the steel industry he unwittingly struck at the principle of free collective bargaining. It was a move, no doubt, to gain political support but if carried to its logical conclusion might boomerang against organized labor. Political experts say his action was motivated by a desire to discredit the Taft-Hartley law and if an agreement is reached between the contesting parties the President and labor will say that the present law is not needed.

Mr. Speaker, Charles R. Hook, chairman of Armco Steel Corp., has issued a statement in which he points out some pertinent facts and conclusions. Under leave to extend my remarks I am including it at this point:

The reluctance of the steel companies to accept President Truman's plan for settling their dispute with United Steelworkers (CIO) by appointing a fact-finding board with powers to make recommendations instead of applying the Taft-Hartley Act has aroused many questions locally.

In an endeavor to shed light on the subject, Charles R. Hook, chairman of Armco Steel Corp., was asked to comment.

"Undoubtedly the President realized that a curtailment of steel production would be a severe blow to already declining business activity and wished to prevent it. However, the procedure he adopted is a step in the direction of breaking down the principle of free collective bargaining between the employer and employee, which principle the Administration has consistently advocated. This is not in the interests of either employee or employer," Mr. Hook said.

"The seriousness of the situation is because the procedure adopted may establish a pattern for settling labor disputes in the future," he continued.

"When the negotiations between the steel companies and United Steelworkers reached a deadlock, the President decided to appoint a fact-finding board, and that board has been charged with making a recommendation for settlement.

"The National Labor Relations Act of 1947 authorizes the President to appoint a fact-finding board when there is a national emergency, which board is required to report the facts to the President but without recommendation for settlement.

"The President has said there is no national emergency. However, in the present case he has gone beyond the National Labor Relations Act and has charged the appointed board not only to report the facts, but to make recommendations," Mr. Hook declared.

"We have no hesitancy in disclosing to the board any facts relevant to the situation. I repeat, we are opposed to the board including recommendations in its report because this breaks down the principle of free collective bargaining in connection with the settlement of the dispute by prejudicing the position of the respective parties before they have had an opportunity to negotiate upon the facts reported by the board.

"It is well known the President does not like the National Labor Relations Act, but since it is now the law of the land, I can see no justification for going beyond the provisions which would be used to cope with a national emergency. There are laws with which most of us do not agree. If all of us took the position we would ignore laws which we do not like, respect for law would be broken down," Mr. Hook concluded.

The Future of Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 27, 1949

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks, I wish to include an address delivered at the University of Alaska on July 1 by Hon. HENRY M. JACKSON, of Washington, on president emeritus day.

That day honored Dr. Charles E. Bunnell upon his retirement as president of the University of Alaska, a position which he held with great distinction for over a quarter of a century. Alaska and Alaskans owe a heavy debt to Dr. Bunnell and president emeritus day was a fitting occasion to acknowledge that debt.

Congressman JACKSON was a happy choice as principal speaker to do honor to Dr. Bunnell. His long-standing friendship with Alaska was reaffirmed by his excellent speech setting forth his belief in Alaska's future. At the conclusion of the ceremony an honorary degree of doctor of laws was conferred upon Congressman JACKSON by the university.

I am very pleased to be here with you today. For a number of years I have had a very deep and sincere interest in Alaska. Sometimes my interest has been commended—not rarely, I have been censured for it, and I am quite sure that oftentimes, even the staunchest friends of Alsaka have been somewhat preplexed by it.

Perhaps my interest in Alaska stems from my mother, who was born above the Arctic Circle in Norway. Maybe I have the aurora borealis in my birthright.

Seriously, though, the explanation is very simple. In Congress I represent your closest neighbor—my native State of Washington. Our future, and indeed that of the entire Pacific Northwest, is inseparably linked with yours; your prosperity is ours; your adversity we share; and unless your defenses are sound, we are vulnerable.

We are gathered to mark a milestone in the growth of an institution of higher learning. We honor a man who has devoted half a lifetime to the development of this institution from the day it opened its doors—to admit only 6 students—until today. We wish Godspeed to his successor, knowing that he assumes great responsibilities as he takes up the presidency of the University of Alaska.

There are many things which serve to pay tribute to Dr. Bunnell far better than I could ever hope to in words:

The buildings that stand on this campus;

The growth of the university from its initial enrollment of 6 to its present student body of well over 400.

The prestige the university has gained in its short lifetime;

The faculty which the university has been able to attract;

The spirit that pervades the university;

The many successful alumni who have left the university to make their contributions to society.

All these things pay their tribute to Dr. Bunnell. But perhaps the most eloquent tribute of all lies in the many people who have journeyed to Fairbanks—many of them from great distances—to honor their president emeritus.

As well as marking a milestone in the growth of this university, this day marks a milestone in Alaskan history. The Russians first settled in Alaska near Kodiak in 1784. They stayed for 83 years, until 1867, when they transferred the Territory to the United States. Today, July 1, 1949, Alaska has enjoyed an identical period of time under the American flag.

How has Alaska fared under that flag?

I think it is safe to say—as President Truman has said of the United States—that the state of the Territory is good. Settlement proceeds, overcoming past difficulties. New industries and businesses come into being. The population, like the cities, continues to grow.

But what is more important, Alaska is beginning to take shape in the minds of the Western Hemisphere as a place of great potential and a Territory of growing importance in the world of today.

For one thing, Alaska has grown in political stature in the minds of the Western World. The activity permitted to you Alaskans is limited by your organic act. Within those limits, though, you are doing your part to develop Alaska. You are signifying your good faith and energy in the way you are handling your own programs.

You have been ahead of many of our States in many social movements.

You gave women the right to vote even before the constitutional amendment took effect in the States.

This is extremely encouraging to those of us in Congress who are anxious that Alaska receive her due consideration. The reputation of Alaskans as a people capable of governing themselves is growing.

One might say that there has been a rediscovery of Alaska. While the Territory was actually discovered for the first time by the Western World 208 years ago this month, it might be said to have been discovered by the United States only 10 years ago. It was discovered partly because the spotlight of world affairs was focused more strongly on Alaska than it had ever been before. The strategic importance of Alaska was realized.

All of us are proud of the decade of leadership that Governor Gruening has given to Alaska. It is a record of courage and achievement.

This second discovery of Alaska has meant increased Federal activity in the Territory which has meant much to your economy.

But while Alaska's strategic importance from a military view may have been largely responsible for this rediscovery, it is time that America began to realize Alaska's importance to America in numerous other ways. For example, with American mineral resources dwindling, she will soon come to depend more and more on the rich storehouse of minerals that remains untapped in Alaska. The paper and pulp industry of Alaska has a bright future, and is destined to attract capital, income, jobs, and people—Alaska's greatest need.

Much remains to be done if Alaska is to realize the bright future that could be hers.

What does that future hold? Alaska has always had a predominant industry. Furs were replaced by gold. Gold was followed by fisheries, and fisheries by the mushrooming program of Federal construction.

But there is no reason why Alaska should depend upon one predominant industry, for the Territory possesses, virtually untouched, the keystone to diversified industry: Hyrdoelectric power—8,000,000 kilowatts of it, more than three times that of TVA. This is a resource which, during the brief period I have been in Congress, has brought about an economic revolution in my section of the United States. We know how to put that electric power to work in chemical industries and, what is more important, in the processing of metals. Bauxite ore is even shipped 2,000 miles to the source of low-cost power in the Northwest to be processed into aluminum. That will give you an idea of the almost magnetic attraction that hydroelectric power has for industry.

Less than one-half of 1 percent of your hydroelectric potential has been developed. Its development will have to be a job largely for the Federal Government. I hope that this potential will be efficiently developed in the interest of the public—so that the public will derive the maximum benefit from a blessing nature has given us.

I am told that it is highly likely that pulp and paper can become major industries here in Alaska bringing greater wealth and employment to the Territory.

Your Territorial Government is not blind to the potential that is Alaska's. The Alaska Development Board and other agencies are working with one industrial prospect in the field of hydroelectric power which alone would be responsible for increasing by 50 percent the present population of the Territory.

There is one problem that lies at the heart of Alaska's economic future which has concerned me greatly. That is the problem of securing efficient low-cost transportation to Alaska from the States. Some of you may know that I was the author of a bill in 1947 to subsidize Alaska shipping. While that law was not as effective as it should have been, I am hopeful that we will be able to formulate very shortly permanent legislation that will secure for the Territory the low-cost transportation that is so essential to its development.

I have indicated that the future of Alaska will depend largely upon the actions of the Federal Government. And those actions will never reach their maximum until Alaska has reached statehood. I am for statehood, and the sooner the better—the better for Alaska and the better for the Nation.

But along with statehood, there will come certain responsibilities for the people of Alaska. This university will play a great role in helping Alaskans meet this challenge. This is an institution of higher learning that stands on one of the few remaining frontiers of the world today. As we mark this milestone in the life of this university, we must also note some of the great responsibilities that fall upon it.

Whether we like it or not, America is today the trustee of Western civilization. We are without doubt the political and spiritual leader of the Western World. We strive, through the political and economic health of our Nation, to prove that our way of life is effective. We hope to win for the world that way of life.

We are the leaders of the world today partly because of our sheer physical power. We are first in our ability to make things—last year our economic machine turned out $250,000,000,000 in goods, and there was the buying power to consume it.

We are first in extending our citizens the highest standard of living the world has ever known. We are first in equality of opportunity.

And we are first militarily. We won the race of discovery. We have the atom bomb.

It is easy to sit back and look at that impressive list of "firsts" and be satisfied. But that is precisely what America cannot afford to do today—sit back and look at itself and be satisfied. We are leaders precisely because we have never been satisfied.

Instead of merely looking at the record, we must try to discover the reason for our achievement. And then we must, more zealously than ever, pursue that dynamic purpose.

I am convinced that we are the leaders of the world today because we have encouraged diversity. We have fostered competition. Our Nation is the home of nearly 150,000,000 people of all nationalities. In them we have the greatest amalgamation of ideas known to history.

We have not, by and large, been afraid of ideas. We have encouraged the adventurous mind—the striking out for new and better things.

Most of us believe strongly in our system of competitive enterprise. We can safely say, I believe, that our economic preeminence is due to it, not forgetting, of course, the wealth of resources given us by a bountiful nature.

But we must not forget that our political health and strength grow out of a like competition of ideas.

Our whole political system is founded on the principle that all ideas—save those which advocate the overthrow of our system by force and violence—are entitled to be entered into an open market place of ideas. But there they must take their chance with the rest. We believe that if ideas are good, they will, in time, prevail. If they are bad ideas, or if they are not suited to the times, they perish.

In my opinion, the greatest danger we face today is that we might, of our own volition, in fear and hysteria close that market place to some ideas.

To my mind, that would be an American disaster.

It would mean the undermining of our entire system.

It would mean the loss of our superiority.

Let me emphasize—closing the marketplace to certain ideas would not mean the stamping out of those ideas. The idea of dictatorship, whether of the right or left, has been compared to a cancerous growth. It flourishes in darkness; when exposed to the light, it withers away and dies. We cannot combat it so long as it remains in American darkness.

I strongly believe that those who would see the American market place of ideas closed to any system of human thought have lost faith that our American way of living and thinking has the strength to survive open competition.

I have not lost that faith. I am convinced that communism, or any other ism, will best be conquered in this country if it is brought head-on with our ideas—in the open.

Today, the question of our security is uppermost in the minds of most Americans—and I'm sure in yours also.

Is America strong and secure?

I am here to assure you of my personal belief that America is strong and secure.

But, as I have said, it is not sufficient to rest on that statement. It is essential that we examine the source of our strength.

Many share the mistaken belief that our security rests wholly in the atomic bomb. They believe that the most important thing to American security is keeping the secret of the bomb.

But security does not lie in secrecy alone. There is no doubt that the bomb gives us a tremendous political as well as physical advantage at the moment. But the Joint Committee on Atomic Energy, of which I am a member, has been told by one of the outstanding physicists in the world that keeping the secret of the bomb is a holding operation. True, it is a highly important holding operation, and it is being done with the utmost competence. But we cannot expect to be the sole possessors of the bomb forever.

We live in a fast-moving world. Today's weapons may be on tomorrow's scrap heap.

We won the race of discovery only because American leaders had courage and vigor. A full year before our entry into the war, this country began to pour great sums of money into a project which they knew might not succeed in time.

Where would be be today if President Roosevelt had not had the courage and the foresight to undertake such a venture?

What if he had been a man who said "It can't be done"?

There was a chance that it couldn't be done—in time. But we took the chance. We embarked on a Nation-wide effort at discovery. We enlisted the greatest brains available in the land.

Many of those brains were not American brains: as Edward R. Murrow pointed out, Albert Einstein, a German refugee, and Enrico Fermi, an Italian, might well have been among the displaced persons of modern Europe, and we might have lost the battle of the atomic scientists.

But America took those men in. It gave them freedom and let their great minds roam where they might.

America took vigorous action.

We refused to say, "It can't be done."

Therefore I say our security lies not in the bomb itself, but in our ability to keep pace with invention. It lies in our freedom, our ingenuity, our courage.

The problems of our modern world grow more immense each day. As an example:

The peace and prosperity hang perilously upon the health and well-being of the American economic machine. Yet what a delicate machine it is. A small piece gets out of adjustment, and the whole machine wants to fly to pieces.

We cannot afford to let it do so any more, not only for our own sakes, but for the sake of the world.

Personally I am not a defeatist. I believe the machine can be kept in good operation. But to do that will take vigorous and courageous action.

A half-hearted step may be worse than none at all. A half-hearted step may be like tightening a bolt on the machine half way, and then counting on the bolt to withstand any strain. There will be no room for the people who like to say, "It can't be done."

Defeatism must be a thing of the past.

I believe that these thoughts carry two main lessons for this university.

Over half of the university is devoted to a liberal arts curriculum. Through this curriculum the university shapes the minds of students who are destined to become citizens of this leading Nation of the world.

In my opinion, it is highly important that this university make very sure that its students are exposed to a market place of ideas that is truly open.

The dean of Harvard College has recently said:

"The world is full of dangerous ideas, and we are both naive and stupid if we believe that the way to prepare intelligent young men to face the world is to try to protect them from such ideas while they are in college. Four years spent in an insulated nursery will produce gullible innocents, not tough-minded realists who know what they believe because they have faced the enemies of their beliefs. * * * We have confidence in the maturity and intelligence of students. We have confidence in the strength of American democracy. There is no danger from an open Communist which is half so great as the danger from those who would destroy freedom in the name of freedom."

I believe that this university must share this confidence in its students. We do not kill ideas by trying to ignore them; we only hamper the creation of new ideas.

Many of the fields of knowledge taught in the liberal arts curriculum are not exact sciences. I refer particularly to the so-called social sciences—history, political science, and economics.

These are comparatively young studies. They do not lend themselves yet to exact formulas. We are still groping for many of the answers in these fields. This groping has torn the world in two.

But because these are inexact sciences, it becomes all the more important that none of the avenues of thought be blocked to student or teacher. For if any avenue remains unexplored, then we shall never know whether or not it contains the truth.

Our American strength grows out of the interplay of many kinds of ideas from many kinds of people. Just as we would not limit the variety of people in America, so we should not want to limit the variety of ideas.

The University of Alaska will bear another great responsibility. With the completion of the Geophysical Institute, the university will devote more and more of its time to basic Arctic research. An essential companion institute for which we are all working at the University of Alaska is an Arctic Institute of Health. May it soon become a reality. The question of survival of the free peoples of the world have now turned to these northern latitudes. We must not leave a stone unturned in this vital field of Arctic research. Our survival may depend on it. We are now behind. We must overcome the lag without delay. This university should be the center of that research for the Western World. Let us marshal our forces for this great task.

Basic research represents the greatest adventure known to modern man in his search for knowledge. It represents the type of thing at which Americans have excelled, and in which the strength of America lies.

For the basic researcher sets out not even knowing what he expects to find. He sets out on an unmarked sea of the unknown, trying to find the signposts that may lead the scientists who follow to new continents of truth.

In a sense, the project to develop the atomic bomb might be considered basic research. It is true that the end result was in the minds of the scientists from the outset. Yet time was a factor; if the bomb had been perfected too late, its value would have been small indeed. The atomic scientists knew this. Yet they took the chance. They expended money, energy, and ingenuity, because they refused to believe that it couldn't be done.

In this field of basic research, it is equally important that no avenue of research be blocked. The mind of the scientist must be completely open to observe the facts as he sees them.

I have said that the problems of the world grow daily more complex. I have said that their solution requires vigorous action. But vigorous action without intelligent understanding may be worse than no action at all.

This places one final obligation and responsibility upon this university—merely because it is an institution of learning in a part of the free world.

Those who study and learn here will depart to become citizens of the leading Nation in the world. If that Nation is to be a good leader, its citizens must be informed. They must know their responsibilities. They must understand precisely what these responsibilities mean. They must understand the problems that face this Nation and that face the world. They must know the source of America's strength.

The University of Alaska is the sole place of higher learning in its part of the world. It stands in a country where men have not been afraid to strike out into unknown lands. It must preserve this tradition in the fields of knowledge that remain unexplored.

Frontiers lie neither north, south, east, or west. They lie whether man and his mind meet a barrier and an opportunity. The frontiers of the mind are everywhere. They provide an opportunity—a challenge.

May this university and those who study here regard these frontiers as challenges—not as obstacles. May they cross these frontiers as Americans always have—without fearing the unknown.

Why I Voted Against the Gore Agricultural Bill

EXTENSION OF REMARKS
OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, July 22, 1949

Mr. SABATH. Mr. Speaker, for over 40 years I voted for all bills in aid of agriculture, for I believed that agriculture should receive a fair compensation for its livestock and crops. Such compensation resulting from the fruits of their labor provides the farmers with sufficient purchasing power to enable them to obtain necessities for themselves and their families, and also the necessary farm implements which absorb the output of manufacturers and naturally creates work and employment for the manufacturer, the businessman, and laborer.

The financial crash of 1929 increased in velocity until 1932, when it had engulfed not only business but extended to cover every phase of our economy. Sixteen million people were unemployed, and an additional 16,000,000 people were employed part time on extremely meager wages, which made it virtually impossible for them to purchase sufficient food for their families. Consequently the prices of farm products fell far below the cost of production.

President Roosevelt relieved somewhat the sad plight and condition of agriculture by recommending legislation that aided the farmer, the manufacturer, and provided work for those unemployed. I naturally voted for all legislation which aided, among other things, agriculture as such.

During the war, I continued to support farm-relief legislation, which had as its purpose the stimulating and encouraging of greater production. This aid to agriculture in the form of price-support provisions increased the cost of food to the consumer. But the same conditions do not exist today. The farmer is prosperous today and does not need that aid and support of the Government which has cost the Government since 1933 directly over $15,000,000,000, and indirectly an additional $11,000,000,000. Unfortunately, this aid to the farmer which took the form of price-support programs in the main, did not hold down the cost to the consumer at a reasonable level commensurate with his ability to pay.

Therefore, I have supported the principles advocated and urged by Secretary of Agriculture, Mr. Brannan, some of which were embodied in the Pace bill. This bill intended to bring about the reduction of food costs to the consumer, but unfortunately, the Republicans, aided and assisted by the Dixiecrats, prevailed in their combined vote against relief to the consumer.

Yes, I advocated and supported the Pace bill because it tended to give some relief for the first time to the consumers by bringing down prices of foodstuffs they buy. Since the intended relief was voted down by the Republicans and reactionary Democrats, I cast my vote against the Gore bill knowing that it would be the incentive to continue the high prevailing prices on all foodstuffs.

What I feared is already taking place, for on Friday, July 22, the newspapers published the fact that the prices on foods such as meats, poultry, fruits and vegetables are increasing and will increase still further, thus making it impossible for the wage earner to provide sufficiently for his family on his present wages. Consequently he will be compelled to demand an increase in his wages.

The situation calls for early and favorable action on the minimum wage bill which I shall insist upon and demand. Properly on Friday, the day following the vote on the agriculture bill, the House Chaplain prayed for equity and justice and rightly so, because he must have realized that the vote on the agriculture bill demonstrated a lack of both equity and justice—indeed was entirely devoid of the necessary virtues of equity and justice.

Mr. Speaker, I read with interest an editorial appearing in the Chicago Sun-Times of July 26, 1949, which I recommend for reading by the Members of the House. It is entitled "A High-Price Vote" and comments on the action of the House with respect to this legislation as follows:

A HIGH-PRICE VOTE

What the House did last week in rejecting a trial run of the Brannan farm program was to vote for higher 1950 prices on farm products.

The House, through a coalition of 79 Democrats and 160 Republicans, voted to retain for another year the high wartime levels of price support.

It rejected both the Aiken law, which would have lowered the support levels substantially next year, and the administration's modified Brannan plan, which would have changed the method of supporting farm income on certain test commodities, in such a

way as to permit the consumers' price to find its own level.

If the House had retained the Aiken law, the Government next year would have supported the price of eggs at 45.3 cents a dozen or less. Instead, the House voted to support eggs at 47.6 cents a dozen. Under the Brannan plan, the market price would be allowed to find its own level, while the Government paid the farmer enough to bring him a return of 45.8 cents a dozen.

Clearly, then, the House did not reject the Brannan plan because it contemplated too high a level of price support. On eggs, at least, the Brannan support level was actually lower than the wartime level which the House voted to continue.

Nor did the House reject the Brannan plan because it might cost too much. The high wartime supports will cost a great deal; Senator AIKEN says it may come to $5,000,000,000.

What the bipartisan coalition voted for was a particular method of supporting farm prices at a high and rigid level. It voted to keep farm prices up by keeping consumers' prices up. It voted for the expenditure of public funds to buy farm products and keep them out of the hands of consumers.

We hope that is not going to be the verdict of the Senate as well. The Brannan plan should have a fair trial. On some commodities, such as hogs, it contemplates what may well be too high a level of price support. But that could be adjusted.

The important thing is that the Brannan plan, while supporting farm income, would permit consumers to consume any surpluses. We think that is much better than destroying the surpluses, or dumping them overseas. If Congress decides otherwise, the issue should be taken to the country in next year's congressional elections.

Judges and Politics

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. TOLLEFSON. Mr. Speaker, an editorial appearing in the Washington Post July 26, 1949, points up a situation which is of serious concern to all thinking people who believe that our judiciary should be nonpartisan and nonpolitical. It is to be hoped that the Attorney General will not only give consideraiton to the appointment of at least one Republican to the District Federal bench but will actually recommend it. However, the record of appointments to the Federal bench since 1933 does not offer much encouragement.

The editorial follows:

JUDGES AND POLITICS

There have been reports that the Attorney General is considering the desirability of recommending a Republican for one of the six new judgeships being created for the District's Federal courts. This is a story which might be labeled: Interesting if true.

Of the 18 judges on the Circuit Court of Appeals for the District and the District Court, one is a Republican. Should all of the new appointees be of the opposite political faith, that would result in a division of 23 Democrats, 1 Republican. A check made not long ago showed that of the Federal judges appointed throughout the country since 1933 there were 222 Democrats and 9 Republicans.

It is very true that partisan political affiliations should never be a controlling consideration in the selection of a judge. But it is also true that one important source of strength of the Federal judiciary arises from public confidence in its nonpolitical character. That confidence ought not to be impaired by overloading the courts with judges of one political faith, if, when all factors are considered, equally competent men can be drawn from the ranks of both parties.

The Future of Great Britain

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. BURDICK. Mr. Speaker, just now the economic situation in England presents a startling situation. With all the money we have dumped into the British lap, they appear to be no better off, obviously worse, than when we started backing her up with our money. Each side, the Conservatives and the Socialists, blame the other. It appears from this distance that neither side is to blame for the proximate cause of the situation. To explain just what I mean let me say that England is too small a country to maintain her population. The following table will be of interest:

	Square miles
England	50,328
North Dakota	70,665
Montana	147,138
Texas	267,339

In other words, North Dakota is larger in area than England, Montana is three times as large, and Texas is over five times as large.

England, Scotland and Wales together only have an area in square miles of 88,745. Here again North Dakota is nearly as large as England, Scotland, and Wales, while Montana is almost twice as large as the combined area of the British Isles. Texas is three times as large as the British Isles. The populations range as follows:

British Isles	47,835,000
North Dakota	557,000
Montana	509,000
Texas	6,414,804

The total population of North Dakota, Montana, and Texas is 7,480,804. The total population of England, Scotland, and Wales is 47,835,000 or nearly seven times the population of these three States. The combined areas in square miles of North Dakota, Montana and Texas is 485,142 square miles. The area of England, Scotland, and Wales is 88,745 square miles. That means 500 people to the square mile are trying to live in England, while in the three States named 15 people per square mile inhabit the area.

Does Great Britain have great agricultural areas? No.

Does England have coal? A poor grade coal and down deep; it costs too much to mine it. The supply is also limited. North Dakota alone has more coal than all of Europe.

Does England have forests? Nothing of consequence.

Does England have any natural resources that could ever hope to sustain the population. No.

England in the past has survived because it has been a colonial empire, and the resources of her colonies have been brought to England by exploitation of the people who produced the raw material. England then manufactured this material into goods and shipped them in international trade around the world. This trade made her a great sea power which was necessary to protect this shipping. Heretofore many countries traded raw materials to England for manufactured goods. We used to send most of our cotton to England. But a great change has taken place in recent years: The British Empire is breaking up. For centuries India kept England going, but only through the exploitation of the people of India. India now is an independent nation, and England will have to give up more of its colonial possessions just as soon as the people of the other colonies are able to free themselves.

Added to this, other nations like the United States are beginning to do all of their own manufacturing. New England became a great manufacturing center and no doubt interfered with manufacturing in England. The process is going on further in this country, for now shirts, once made in England or New England, are made right down there where the cotton grows. The whole movement, even in America, is to recede from the large centers and build plants all over the country. North Dakota alone has two packing plants and one large flour mill. You can see how this process is going on even in America. Minneapolis was once the largest flour manufacturing city in the United States, but other points are developing, like Buffalo, N. Y., and local mills all over the West. It is a movement of decentralization.

North Dakota, for example, has no ill feelings against the large manufacturing centers of the country, but they have discovered that its immense virgin soil that once could stand exploitation cannot always stand the strain. What is the logic of paying freight on cattle to Chicago and freight on the processed meat back again when both of these charges can be eliminated and just to that extent bring more money to the producers? What is the logic of paying freight on wheat to Minneapolis, and Buffalo or Liverpool, and paying the freight on flour back to the starting point, when both charges can be eliminated, to the great advantage of the producers?

The day of the great foreign trade of England is over. She will soon have to rely on her own resources. She has weathered along since the war because this country has loaned her billions. We, for some unknown reason, are trying to tail up a decaying empire. The statesmen of England should tell the people that it is impossible for 47,000,000 people to maintain themselves in a tiny country without resources. There must be, and there inevitably will be, a decentraliza-

tion of the people of the British Isles. A large part of the population will have to move out and find locations where there are natural resources, and where these people can make their own living. They cannot rely on our present weakness in sending them billions to be taken out of the hard-working taxpayers of the United States. We will soon reach a point, if we have not already, where we cannot collect taxes or borrow money enough to prop up an empire that is now wholly unnecessary. English pride may be all right, her kings and queens may be all right, her nobility may be all right, but she must make up her mind to support them herself. That is her business and not ours.

A Serious Charge—If True

EXTENSION OF REMARKS
OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 25, 1949

Mr. MURDOCK. Mr. Speaker, at the close of the House session today, I listened carefully to the remarks of the gentleman from California [Mr. JACKSON] in a lengthy address in which he painted the central Arizona project in colors so black as to make a pile of coal look like a snowdrift by comparison. I listened, even though I had heard the same thing said many times before by well-paid, clever lawyers who appeared as witnesses before my committee and other committees of the House and Senate during recent years. Time after time, one of these lawyers, who is revealed by the registration of lobbyists to be one of the highest-paid lobbyists in Washington, has appeared as a witness against diverting any Colorado River water into Arizona and has painted Arizona's efforts in the same dark colors that the gentleman from California [Mr. JACKSON] used today. Always I have thought on hearing him of the lawyer described by Abraham Lincoln, who "by an arrangement of words could prove that a horse chestnut is a chestnut horse." The 2,000 pages of printed testimony given before committees over which I have presided amply demonstrate the ability of those who oppose Arizona's effort to get her own water out of the Colorado to surpass even the old Athenian sophists in making the worse appear the better cause, with this difference that these modern sophists make the best appear the worst cause. They not only attempt to prove that black is white, but in this case they make a tremendous effort to prove that white is black.

About the only thing I found in Mr. JACKSON'S address today with which I could agree was, in substance, that something big is involved here and that Congress and the American people should look into it. I heartily agree with that sentiment, and I thank the gentleman for his powerful influence in attracting attention to the controversy between our States over the vital waters of the Colorado River. Let my voice be heard above the voices from southern California as I ask my colleagues to give this problem the serious study which it merits and not to jump to any hasty conclusions. The very future of more than one great State in the lower Colorado River Basin hinges upon this problem and hangs in the balance.

I thank the gentleman from California [Mr. JACKSON] for yielding to me several times today, although he did not yield as often as I asked him to yield. The gentleman from California [Mr. JACKSON] followed the trend of the opposing witnesses in various committee hearings to the effect that the Bureau of Reclamation engineers and other officials in the Department of the Interior have been worse than stupid in favoring and justifying the legislation for the central Arizona project. Other high officials of Government have been quoted as opposing the plan, whereas I was under the impression that some of these same officials even outside the Department of the Interior are friendly toward the proposal. That is as much of a puzzle to me as is the quotation which he attributes to the Commissioner of Reclamation in opposition to the project, when I know that he personally favors it.

The gentleman from California [Mr. JACKSON] read a lengthy list of contributors to a fund to promote the central Arizona project and to assist the sponsors in the enactment of legislation now before Congress in behalf of it. He seemed to think that there was something sinister about large sums of money being thus donated. I am interested in knowing how the sum of money raised and spent in central Arizona to promote this legislation compares with the sum of money raised in southern California and spent mostly in Washington to defeat it. There is a comparison of expenditures that ought to be made known for the information of Congress, and in that connection this curious fact ought to be explained as to exactly who the real opponents of the central Arizona project are and why they oppose it. Apparently the opposition comes mainly from southern California. Is it possible that only southern Californians can see the terrible thing, as they picture it, that the representatives of Arizona are attempting?

Along with the list of contributors helping to finance the move for the central Arizona project, the gentleman from California [Mr. JACKSON] also included a list of large landowners whom he implied would profit enormously by this use of the taxpayers' money. I interrupted him to call attention to the fact that, when this project is put through, the reclamation law with its 160-acre limitation will take effect, and no such large holdings as he mentioned will profit the present landholders. We made satisfactory arrangements in regard to more than a million acres of land in the State of Washington, which were formerly privately owned by large landowners, that they might be irrigated by the Bureau of Reclamation without speculative gains by the former owners. That is a matter which can be easily attended to and will be attended to in the carrying out of such a program.

So far as the land within the Salt River Valley project, a Federal reclamation project, is concerned, there is no violation of the 160-acre limitation, excepting the very small percentage which is unavoidable. Testimony before my committee reveals that the 242,000 acres of land within the Salt River Valley project are owned by 14,000 owners and that the average ownership on that large portion of the contemplated project now averages less than 20 acres to the owner. These are facts.

If one will take the two lists which the gentleman from California [Mr. JACKSON] furnished for the record, it will be interesting to examine the names on each list. It will be seen that with one exception the large landowners mentioned are not the contributors either as individuals or as associations. The largest contributor mentioned, of course, is the Salt River Valley Water Users' Association, but the $36,000 contributed is merely 15 cents per acre. Some of the other large contributors are mining companies like the Phelps-Dodge Mining Co., which does not own a foot of land to be irrigated. How much land does the telephone company, another contributor to this fund, own? Is there anything sinister about the chain of Safeway stores contributing to this effort? Why should not big business and little business, with heavy investments in Arizona which are about to be periled, contribute money to sponsor legislation which will save the economy of the State? There is nothing hidden about these lists and figures which Mr. JACKSON gave us. I presume he got them from the Clerk of the House of Representatives. If he did not, he might have done so, for they are on file there. This list is also contained in the hearings on H. R. 934.

To my knowledge, not a dime of the money which has been put up to sponsor and help this legislation, of which I am one of the authors, has been spent to give parties in Washington hotels to influence Members of Congress to favor this legislation. Yes, we have had lobbyists from Arizona here, but they have been jostled by more numerous lobbyists from southern California. There are lobbyists and lobbyists. The ones whom I know from Arizona are here fighting desperately for the future of that great and promising commonwealth, which is the youngest in the sisterhood of States.

During the hearings on H. R. 934, many authorities were quoted, and I—seeking to support the bill—threw in a quotation from the very highest authority. That quotation was: "Where there is no vision, the people perish." I do not think I gave the wrong impression by giving only a part of a quotation, but a wrong impression can be given by partial quotations. Many partial quotes heard in this controversy are comparable to condensing the quotation: "Let him who stole, steal no more" into this: "Let him who stole, steal." I urge my colleagues not to get a wrong impression from any opponents of Arizona in her desperate struggle for her own water by any partial quotations or half-truths.

Court Picketing

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 27, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the San Francisco Chronicle of July 19, 1949]

BAN COURT PICKETS

There is irony, as well as danger, in the fact that a conference setting out to protect civil rights should wind up with a rousing invitation to delegates to join in picketing a Federal courtroom.

Yet this irony occurred over the week end at the Bill of Rights conference in New York. Thirteen hundred delegates from 33 States were invited to form a national picket line outside the Federal Building where 11 Communists are on trial for conspiracy to overthrow the Government. Owing to the fact that the trial was adjourned by Federal Judge Medina for the day, the picketing did not come off yesterday, as planned. But picket lines have previously been thrown about the same court.

Picketing a court is a direct impairment of the judicial process. Maintaining the integrity of the judicial process is one of the main concerns of the Bill of Rights. Thus the delegates to a Bill of Rights conference make a mockery and fraud of their profession of concern with the Bill of Rights if they picket a court.

The sham of this particular conference's interest in the Bill of Rights is not surprising on being revealed. What is illustrated by the call for a court-picketing line, however, is the need for a law banning this type of outrage upon justice. We have urged Congress to make it a Federal offense to picket a Federal court anywhere in the land. Recently, the House Judiciary Committee approved a bill to punish this activity by a $5,000 fine or a year in jail. We again urge Congress to speed the bill's passage. There should be no further toleration of courtroom picketing. It is a plain abuse of and obstruction to justice. It is indeed an act which, if frequently repeated and not checked, would lead in time to the overthrow of the American form of government just as surely as would any of the acts with which the 11 Communist defendants inside the courtroom are charged.

[From the New Orleans States of July 23, 1949]

THE BILL THAT WOULD STOP COURT PICKETING

The legislative branch of the Federal Government appears ready to take positive action soon toward helping the judicial branch. That welcome assistance, expected in a matter of weeks, would be enactment of a proposed law to outlaw the picketing of a Federal court.

Impetus to the passage of the antipicketing measure comes from the conduct of sympathizers surrounding a Federal court in New York, where 11 Communist Party leaders have been on trial for 6 months. Before the trial plods to its end, the present bill is likely to be law.

Reports from Washington say the bill has been approved unanimously by the Judiciary Committees of both Houses and has been placed on the docket of measures which are expected to pass with unanimous consent. Sponsors of the bill say messages of endorsement have come from all parts of the United States. Bar associations and judicial conferences have given their approval.

The pending legislation is aimed at remedying a special difficulty. That is to prevent an obstruction of the administration of justice where contempt and intimidation-preventing statutes are not applicable. The new law would apply to those who picket a Federal court or the homes of judges, jurors, or witnesses, "with intent to interfere with, obstruct, or impede the administration of justice."

That was the intent, obviously, of the pickets in the New York case. At times their antics have been so boisterous as to interfere with the free movement of witnesses and attorneys. Their placards have been bold attempts to influence the action of the judge—even to the point of making demands.

Fundamental in the system of justice under which we operate is the tenet that guilt or innocence will be decided by a dignified court, as free as possible from pressure, influence, and bias. The system is designed to preclude mob rule. Court picketing, as in the New York case, constitutes an attempt to inject an element of mob-rule procedure into our courts.

We hope Congress will avoid delay in completing action on the antipicket legislation. We hope special care will be taken to keep the bill from being lost in the shuffle, should Congress speed up its efforts to get out of Washington in a hurry this summer. The judicial branch would be denied necessary assistance if the proposed measure were allowed to die.

Speeches Before Americans for Democratic Action, Full Employment Conference

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, July 28 (legislative day of Thursday, June 2), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a series of speeches given before the Americans for Democratic Action Full Employment Conference, held at the Shoreham Hotel, July 19, 1949, and a resolution adopted at that conference.

I have checked with the printing clerk and have found that the material will take up 6¼ pages in the RECORD and the printing cost will be $500.

There being no objection, the speeches and resolution were ordered to be printed in the RECORD, as follows:

SPEECH BY CHARLES M. LAFOLLETTE, NATIONAL DIRECTOR, AMERICANS FOR DEMOCRATIC ACTION

On behalf of Americans for Democratic Action, may I express our appreciation of your presence. You will note, I believe, that I did not say, "I welcome you." That would have implied that this was ADA's conference. It would have implied that you had come to hear what we had to say. Neither is true. This is your conference as much as it is ADA's. I believe you have come here for the same reason we have: to try to find ways of expanding the American economy to the point where full production, full employment, and adequate purchasing power can be assured.

We are here because we agree that those who are able and willing to work must have that opportunity. We believe that empty pantries in the homes of American workers and unsalable crops on our farms are un-American. We declare that those who shrug off the hunger of the children of the unemployed as necessary to normalcy are guilty of subversive activity. We say that the loss of billions of dollars' worth of goods and services through unemployment and production cut-backs must not be forced on the American people by those who shout for economy—for this is waste, not economy.

In opening this conference, I could dwell on the fact that today, just as they did 20 years ago, a significant number of corporations are advising the magazine, Factory Management and Maintenance, that a depression, difficulty in getting jobs, and even breadlines are the things that will help most to increase productivity. But I shall not, for there are men here today who stood in those breadlines. I could point out that one Ralph B. Blodgett, writing in the University of Illinois Bulletin of August 25, 1945, said, "It is to be hoped that depressions are never abolished, for they have many desirable features. * * * Smart folks take advantage of the boom, they are ready for depression-time bargains, bargains in everything from a suit of clothes to a railroad." I could elaborate on this despicable philosophy, but I shall not, because there are men here today who have suffered more from that philosophy than I.

I could point out that the basic purpose of the congressional sponsors of the Economic Expansion Act of 1949 is to afford a climate wherein competitive free enterprise can confidently enter a period of expansion with an assured adequate consumer purchasing power, so as to avoid the dislocation of 1929 to 1933. But the sponsors are here to speak for themselves far more comprehensively than I.

Perhaps, however, it will not be remiss for me to call for an understanding of the seriousness of the circumstances under which we meet and of the basic rightness of the cause which we do not plead but assert.

We assert that the people of the United States do not exist to sustain an economy, but that the economic system of this country exists to meet the legitimate needs of the people. By every test of the American ethic, it is clear that those who own the means of production and distribution hold it at the sufferance of the American people and subject to their power. Acting through their Government and within the limits of the Constitution, the people exercise the right to have such property used for the promotion of their welfare. Any other construction of the American democratic ethic would define the United States as a nation in which the people were given the freedom to assemble in debating societies and the monopolists and extortionists the freedom to pick their pockets. We refuse to be frightened into the hands of domestic reactionaries by a Hallowe'en pumpkin labeled the Welfare State, held in the quaking hands of elder statesmen whose own welfare is adequately cared for and who never believed in the New Deal anyway. The masses of the people who voted the New Deal into power still await the full life it gave them the vision to see was theirs—and the promise that some day they would attain it.

Our heritage includes the unalienable rights to life, liberty, and the pursuit of happiness. It was to secure these rights that this Government was instituted. The pursuit of happiness is far different from spending our lives in the pursuit of a job controlled by a man whose sole right to own job-producing property is that given him by the government of the people. Liberty is the right to enjoy equal treatment and justice under law. It is not the license to use property in such a manner that a vast percentage of the American people cannot get

enough real wages to consume the goods produced. And the law, unless it represents the consent of the governed, is not the law which the Declaration of Independence guarantees us as a part of our heritage.

The American people have accepted the proposition that a private enterprise economy regulated by the people through their Government can be so managed as to give us the heritage which the Declaration of Independence proclaims. But the burden is not upon us to prove our right to insist that this system be run for our welfare. The burden is upon the forces of privilege, the elder statesmen, and those for whom they speak, to prove their willingness to help assure the realization of our heritage while they continue to enjoy the personal bounty which the system has brought them.

The issue is clear. We assembled here are determined that the American heritage shall be fulfilled. We demand the end of un-American economic exploitation, and the complete realization of the full life to which the people are entitled.

EXCERPTS FROM REMARKS OF LEON H. KEYSERLING, VICE CHAIRMAN, COUNCIL OF ECONOMIC ADVISERS

I am glad to be with you this morning, because your very name—Americans for Democratic Action—strikes a responsive note in my own thinking. I believe that economic policy in the United States must draw its sustenance from our native American experience and problems, which are too different from those of other lands to make analogy useful; I believe that whatever we do must be democratic in concept and execution—must grow out of popular understanding and acceptance—in order to be successful; and I believe in action rather than in drift.

I shall begin by departing from meticulous observance of the topic assigned to me—the current economic situation. Every literate person knows the detailed facts about the current economic situation, and has been regaled or perplexed, according to his lights, by recent reports setting forth these facts in full. All that I want to say specifically on the assigned topic is this: We have seen once again that our economy is not self-stabilizing and that an inflationary boom contains the seeds of its own undoing. A careful reading of the reports of the President and of the Council of Economic Advisers since January 1947 will reveal that the dangers in the inflationary boom were clearly depicted, and that the descent to lower levels of employment and production has occurred almost precisely in the sequence and manner which was foretold in the absence of sufficiently strong preventive policy. This should afford some confidence in the value of economic analysis, although that analysis has by no means reached perfection. We also know that many affirmative policies adopted to strengthen our economy in this generation have thus far served as braces to hold the decline within moderate proportions, and this should give us faith in the value of affirmative policy.

Aside from the facts being well known, there is still another reason why I do not want to concentrate my discussion upon the details of the current economic situation. We are now in no economic emergency which would make it necessary for us to rush pell-mell into an improvised program of action that discarded longer-range considerations. With more than 59½ million people employed now, as against 46 million in 1939, and with about 4 million unemployed now as against 8 million then, the prime significance of our current concern is not that we are in great difficulty but rather that we have become sufficiently conscious of our domestic obligations and our place in world affairs to be satisfied with nothing less than full employment and full production. The attainment of this objective is an enormous task never before so consciously undertaken. It requires that we begin now, but it demands that we concern ourselves not only with matters of the moment. A full employment program is in its essence a long-range program, and the current economic situation fortunately gives us the time to start working in this direction.

So instead of discussing a lot of detailed facts about the economic situation, I want to set before you some ideas and principles relating to a full employment program. To achieve and maintain full employment requires an enormous reorientation in our thinking—a reorientation which should be shared by industry, labor, agriculture, and Government—a reorientation which rests in the final analysis upon the arduous task of popular education.

In short, whether or not we regain and maintain full employment and full production depends upon policies easily within our reach if they gain popular acceptance. Unlike other countries, we are not confronted with the almost insuperable problems of inadequate resources, wartime decimation, industrial underdevelopment, or intense internal friction. We have all the resources, and I believe we have sufficient knowledge, to achieve any reasonable goals that we may set.

Because our future depends so largely upon the climate of popular opinion, it may be helpful to trace four successive stages in our thinking about our economy.

In the first stage, the prevalent view was that the business cycle was as immutable as the laws of the seasons, and that there was nothing mankind could do about it except to be resigned. This stage is gone forever, and we do not need to set up artillery to knock over straw men.

In the second stage, beginning with 1933, the prevalent view was that we could take action to work our way painfully out of the depths of a great depression. But in sober retrospect, we realize now that action forged in the heat of a Nation-wide economic conflagration could not be wholly effective. As I have said, we still had 8,000,000 unemployed even in 1939. We made gains in humanizing the concept of government, and in strengthening our economic system, but the cost of the depression was a higher price than we should ever want to pay again.

The third stage in popular thinking came with the passage of the Employment Act of 1946. Not many people have noticed that this act says not one word about dealing with a depression. It centers attention upon preventive action, upon using all of our available resources to maintain maximum levels of employment and production so that a depression is avoided before it has a chance to get started. In this connection, the anti-inflationary program repeatedly urged by President Truman had a vital significance which transcended its details. Never before in American history, in a time of such high prosperity, did a President of the United States focus so much attention upon the steps needed to maintain that prosperity. Unfortunately, public opinion was not quite ready for this course of action, and we are not so well off now as if it had been.

The unique importance of the Midyear Economic Report of the President, sent to the Congress last week, is that it does not move backward from the third stage of preventive action to the second stage of taking action after a depression is upon us. Instead, it moves forward to a fourth stage—the recognition that we must set affirmative goals, not merely to hold our own or to avoid or overcome an economic downturn, but instead to define the character and composition of an expanding economy and to devise policies to achieve that expansion.

The heart of this new approach, popularly expressed, is the goal of lifting our national output to $300,000,000,000 within a few years. I want to devote the rest of my remarks to bringing before you the dynamic quality and implications of this approach.

First of all, the goal of a $300,000,000,000 economy releases us from the bondage of economic forecasting, as that useful device has too frequently been misused. We used to be prone to worry ourselves so much with attempting to forecast when or how a recession or a depression was coming, when and how much unemployment would increase, when and how much businessmen would start to cut down on their investments, that we became distracted from realization that instead of forecasting the evils that might or could happen if we did nothing we should be concentrating attention upon what we want to have happen and marshal our resources toward that end. President Truman does not forecast a $300,000,000,000 national income; he simply states that we have the resources and ability to get a $300,000,000,000 national income if we roll up our sleeves and go to work. This goal involves a program, not just a promise.

To grasp the significance of this goal and to move toward its achievement, it is not sufficient to state it in aggregates alone. As we start striving for a $300,000,000,000 economy, there are seven broad areas in which our efforts should concentrate.

First, the end objective of our economy is to improve standards of living and to spread those improvements more widely over the whole population. This is not only a social objective; it is also an economic objective, because we cannot have full demand for what we can produce without higher levels of mass consumption, particularly among middle- and low-income groups. Therefore, as one facet of the objective of a $300,000,000,000 economy, we should ask ourselves what minimum standard of living are we aiming to achieve for the American family, whether it be $3,000 a year, or four thousand, or five thousand, depending upon the facts. The idea of a minimum health and decency budget for urban areas, already endorsed by the Congress in the authorization of specific studies, should be expanded into an all-embracing target for American living standards that we can and should attain.

Second, we should work out systematically a definition of and the policies necessary to achieve agricultural abundance. I believe, personally, that the Brannan plan is an encouraging step in this direction. We need to examine further what agricultural output, in the context of a $300,000,000,000 economy, will be sufficient to provide the kind of nutrition and variety of diet which every American family should enjoy, as well as to service the needs of industry at full production. Simultaneously, since agricultural price-support policy has already involved us in the task of determining what part of the Nation's dollar should go to the farmer, we need to think through still further what levels of farm income related to other kinds of income will move us toward the achievement of parity of income and standards of living and cultural opportunities for those living in rural areas.

Third, we need to appraise the amount of expansion in our basic industries, and in our transportation systems, which will support and nourish a $300,000,000,000 economy.

Fourth, we need to look upon resource development and the expansion of social security and health and other welfare activities, not as programs to which an economy in distress turns for temporary relief, but rather in terms of the magnitudes that a flourishing economy can afford to undertake and should undertake.

Fifth, we need to rationalize our foreign economic policy with our domestic economic policy so that each complements the other at expanding levels of output and income.

Sixth, we need gradually to build our tax system into the framework of our general economic objectives, so that taxation will serve the dual purpose of raising sufficient

public revenues and making its maximum contribution to those business incentives and that income structure which will help us to achieve a $300,000,000,000 economy.
